Dravo, Neville Chemical and Pittsburgh-Des Moines Steel added new laboratories last year. A new 4-lane paved highway runs the length of the island.

"Few people realize that Neville is one of the key industrial centers of Allegheny County," Mrs. Wiley boasted. "We have lots more room, too," she declared.

This is not news to Mr. Palmerine or the membrs of local 61, who know the fertile, agricultural history of Neville Island.

"We will just grow along with the island," Mr. Palmerine grinned.

President Eisenhower Replies to Plea for Aid to Israel

EXTENSION OF REMARKS
OF
HON. ALBERT P. MORANO
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 31, 1958

Mr. MORANO. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include the text of a letter which I received from President Dwight D. Eisenhower in reply to a request from me that consideration be given to the application of mutual security aid to the State of Israel.

Israel has demonstrated during the 10 years of its existence its determination to defend its independence at all costs. It has demonstrated effectively its opposition to international communism which now threatens the peace of the Middle East.

I am happy to hear that our Government is giving thought to material assistance for this freedom-loving state in the midst of Communist encroachment.

President Eisenhower's letter follows:

THE WHITE HOUSE,
Washington, July 25, 1958.

The Honorable ALBERT P. MORANO,
House of Representatives,
Washington, D. C.

DEAR MR. MORANO: I appreciate your July 18 letter and fully subscribe to your position that the United States must continue its support of those nations which are being threatened in the Middle East. This Government is, of course, keeping closely in touch with the Israeli and other friendly governments in the Middle East area and with all free nations concerned with developments in this region. In addition, as you no doubt are aware, our efforts to have these problems resolved through the United Nations have not ceased.

I can assure you that the United States will take whatever action is found to be appropriate and necessary. As consideration of these matters progresses, I shall not fail to keep in mind the interest and concern you have expressed for the welfare of the State of Israel.

With warm regard.

Sincerely,

DWIGHT D. EISENHOWER.

The Gentleman Is Mistaken

EXTENSION OF REMARKS
OF
HON. CHARLES O. PORTER
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Friday, August 1, 1958

Mr. PORTER. Mr. Speaker, in the Appendix yesterday I found an insertion, of which I had had no notice, by the gentleman from Wisconsin [Mr. WITHROW] who criticizes me and Romulo Betancourt, the leader of the Democratic Action Party in Venezuela.

The gentleman is confused. He says he telephoned me when the Alaskan statehood bill was before the House because he saw I had arranged for an hour of time. He says that I told him I was not going to speak on Latin American affairs but that then I went ahead and did just that. The gentleman is mistaken. He never telephoned me then or at any other time.

If the gentleman's feeling, based on an erroneous recollection, is that I avoided debating him on Latin American policy, I am at his service at any time convenient to him. He has seen fit to defend Trujillo Senior and Trujillo Junior on the floor of the House, a matter I am prepared to debate with the gentleman on the floor or elsewhere.

The gentleman states that he is not surprised that my remarks against communism in Venezuela were not printed in the press there and adds, "if they were said." If the gentleman had undertaken to inform himself in any measure, he would have learned that I made many statements about the Communist menace when I was in Venezuela and that, ultimately, these statements were with a few exceptions published widely in that country.

The gentleman states that he declined to be briefed by the State Department. My respectful suggestion is that he reconsider that decision.

As for his remarks against Romulo Betancourt, I cannot take them seriously because it is evident that the gentleman again is both uninformed and misinformed.

Valley Aids Space Battle—Booster Engine, Gas for Explorer IV Created Here

EXTENSION OF REMARKS
OF
HON. JOE HOLT
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 31, 1958

Mr. HOLT. Mr. Speaker, our community is proud of the part we are playing in our country's conquest of outer space. Many men and women with a variety of technical skills helped develop the booster engine and worked on the fuel necessary for Explorer IV. An article pertaining to the development of the engine and fuel follows:

VALLEY AIDS SPACE BATTLE—BOOSTER ENGINE, GAS FOR EXPLORER IV CREATED HERE

Another satellite boosted into space with the help of a valley-developed engine and high-energy fuel orbited over southern California yesterday. An hour and 20 minutes after the United States Army's Jupiter-C rocket, the heaviest thus far, thundered skyward and, upon assuming an orbit acquired the title of Explorer IV, the Temple City tracking station reported it was overhead.

The time was 9:50 a. m.

BUILT IN 1956

Though, a station official said, the Explorer IV was not visible, its track being followed entirely by radio, it was probably passing through the space somewhere above the Rocketdyne plants in Canoga Park and the Santa Susana Hills where the Army Redstone engine and the fuel hydyne used to provide its first stage boost were developed and tested.

The engine used on Explorer IV was built 2 years ago at the main plant in Canoga Park, officials said yesterday.

After thorough checks, it was transported to the Rocketdyne test section at the Army Ballistic Agency, Huntsville, Ala., in the fall of 1956.

SHIPPED IN JUNE

Acceptance tested, it was formally delivered to ABMA in December 1956 and was shipped to Chrysler Corp., the missile contractor, in Detroit in January 1957. There it was mated with the missile.

The complete Redstone was transported back to ABMA in July 1957 and stored.

UNIVERSITY OF MICHIGAN LIBRARIES

Static tested as a complete system in April 1958, it was then ready for shipment to AFMTC, Patrick AFB, in June of this year.

The Redstone engine is the most thoroughly proved of the American ballistic missile program, Rocketdyne scientists contended.

GIVES 98 PERCENT OF THRUST

"The Redstone has performed with extreme reliability on three previous Explorer launches as well as in tests of its normal mid-range use," they said.

"With Explorer IV, as with previous Army satellite launches, the Redstone engine is using Hydyne, a high-energy fuel developed by a Rocketdyne team of scientists and engineers working with the ABMA.

"In furnishing the first-stage boost, the Redstone engine provides 98 percent of the total effective impulse to place the satellite in orbit.

"INCREASE SPEED

"It is programed to thrust the upper stages of the Jupiter–C to orbital altitude.

"These succeeding stages increase the speed, but not the altitude of the vehicle.

"Rated in the 75,000-pound thrust class, the engine develops its propulsive power through the combination of liquid oxygen and alcohol.

"GIVEN HEAVY TESTS

"Designed for combat reliability and for manufacture by conventional methods, the engine entered developmental test in 1950.

"Consecutive, full-duration firing tests that followed proved out the reliability of the design, and the engine went into production in 1952.

"It was the first rocket engine with a thrust of more than 50,000 pounds to reach this level of development in the United States.

"STOOD TIME TEST

"A pioneer in American rocket technology, the engine received additional recognition for reliability after Explorer I went into orbit."

It was learned then the engine had functioned flawlessly after being in storage for almost 14 months, the company spokesmen said. The engine was a 2½-year-old model—an advanced age for rocket engines.

The seventh model of the engine will soon be delivered to the Army and to Chrysler Corp. from the Canoga plant.

Tribute to the Late Herman Griffin

EXTENSION OF REMARKS

OF

HON. STROM THURMOND

OF SOUTH CAROLINA

IN THE SENATE OF THE UNITED STATES

Friday, August 1, 1958

Mr. THURMOND. Mr. President, last month, in Anderson, S. C., an act of heroism resulted in the death of one of the finest young men of the community.

Herman Griffin, while driving past a lake, observed an 8-year-old boy in the water who was struggling for his life. Without hesitation, Mr. Griffin went to the aid of the child. Tragically, both were drowned.

I believe that full recognition should be given Herman Griffin for his heroic act.

I ask unanimous consent that a news article from the Greenville News of Greenville, S. C., entitled "White Man Gives Life Trying To Save Negro," be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Greenville (S. C.) News of July 25, 1958]

WHITE MAN GIVES LIFE TRYING TO SAVE NEGRO

(By Sara V. Liverance)

ANDERSON.—A 27-year-old white man lost his life early Thursday afternoon in an unsuccessful attempt to save a young Negro boy from drowning in Cleveland's Lake on Lewis Street Extension.

Herman Griffin, 27, of West Market Street Extension, a furniture salesman, gave his life in an attempt to save that of Ezelle Wideman, 8, of Watson Street.

Two other small Negro boys, who were with the Wideman child, were almost hysterical and unable to give a clear account of what happened.

Anderson firemen who were called to the scene recovered Griffin's body in 10 or 12 feet of water about 15 feet from the shore. The child's body was 18 or 20 feet from the shore.

The pond is on the property of Lester Cleveland, and is posted with "No trespassing" signs for swimming, boating, and fishing. A high wire fence surrounds the pond.

Apparently Ezelle, Joel Wiles, 7, and Charles Belton, 11, all of Watson Street, got into a boat tied up at the bank. Wyles and Belton said some older Negro boys, whom they did not know, pushed the boat away from the shore. It is believed the child became frantic and jumped out. His screams and those of the other two children attracted at attention of Griffin, driving a pickup truck along Lewis Street. He went to the aid of the child. The other children said he had Ezelle who was struggling and fighting, and was within 10 feet of the bank, when Ezelle got away from him and sank. Griffin went under, apparently in another effort to reach the boy, and did not come up.

Grady Wright, Gene Latham, Elmer Sanders, and Hazel Loftis, of the Anderson fire department, answered the call, which was received at 12:15 p. m. They recovered Griffin's body within a short time, and got Wideman out in 15 or 20 minutes. They worked over both victims for a long time, trying to revive them.

Dr. Mason Young and his nurse arrived on the scene and assisted in the efforts, administering heart stimulants. Dr. Young advised taking the victims to Anderson Memorial Hospital in the rescue truck after he detected a weak heartbeat in Griffin. However, both were pronounced dead on arrival at the hospital.

Deputies Norman Wilson, M. F. Driver, and Leroy Wilson answered a call to the scene.

Coroner J. Olin Burton, who was called to the hospital after the drowning victims had been taken there, said he did not feel an inquest would be necessary.

Alaska Land and Statehood

EXTENSION OF REMARKS

OF

HON. E. L. BARTLETT

DELEGATE FROM ALASKA

IN THE HOUSE OF REPRESENTATIVES

Friday, August 1, 1958

Mr. BARTLETT. Mr. Speaker, a speech was written in connection with the Alaska statehood debate but not delivered which is of such interest and importance in describing the land situation there that I consider it advisable even now, with the statehood bill having become a law, to place the speech in the RECORD. It follows:

Settlement in Alaska is sparse and on the edge of the unused. Into the Territory's raw and differing areas there is an immigration of men and institutions, seeking to use and develop latent resources. Development is the keynote in the Territory. Its growth prospects instill the hope of great reward and spur great efforts by its people.

There is economic motivation but there is also the driving energy of Alaskans as evident in their homesteading in the wilderness, their building in the cities, and the establishing of new industries in many places. This vitality and hopefulness together with action now to promote its economic growth would assure the extension of the economic heritage of an expanding America.

Growth aspiration and economic opportunity go together. Each is a means to the other. Traditionally, in America, economic prospects have been brightest on the frontier. About the pioneer fringe of an earlier America it has been said "the most significant thing is that it lies at the hither edge of free land." Alaska is in about that position today.

The Territory of Alaska is of tremendous size. It is about one-fifth the size of the United States or about twice the size of the State of Texas. It contains 586,400 square miles of which 571,065 square miles or approximately 365 million acres is land. Of this about 270 million acres is federally owned land or public domain land. Popularly this has come to be regarded as free land though of course this is not literally true.

All of the public domain is not usable land. Of the vast total, only about 2,870,000 acres are subject to cultivation. An estimated 125 million acres is forest land. Estimates of range land vary from about 5 million acres for nearly year-long grazing lands to a total of about 20 million acres for both seasonal and nearly year-long grazing lands. Approximately 120 million acres have been classed by the United States Geological Survey as geologically favorable for oil and gas development. The roughly estimated and inferred coal reserves involve a large acreage containing a total of more than 100 million tons. Prime recreation lands are spread over large areas of Alaska and for the most part are not intensively used. Settlement lands for home-site, business-site, and town-site purposes is largely an adaptation of varying forms of raw land of which only a relatively minuscule amount has been subjected to use.

The lease and disposal of the public domain includes the granting of use and disposal of unreserved Federal lands under a great variety of public-land laws for homestead, home site, trade and manufacturing, headquarters, industrial, and commercial, grazing, small tract, recreation, institutional, town site, rights-of-way, and other purposes. In the appendix is a summation of the principal land use and disposal laws operative in Alaska. Provision of lands for these and other purposes ordinarily is a response to applications for the use of or title to land by private individuals or companies, public or semipublic organizations or institutions, or Federal, territorial, or municipal Government agencies. Effective action on the applications nearly always involves an examination of the land and the qualifications of the applicant, and under certain of the land laws a classification of the land for specific forms of use and development.

The lease and disposal of mineral resources include the letting of deposits of oil and gas and coal under the mineral leasing laws and the patenting of metalliferous and nonmetalliferous mineral lands under the mining laws. The lease or patenting of mineral lands is in response to applications filed by private individuals or companies. Effective action on lease applications fro-

quently involves an examination of the land and the qualifications of the applicant while those on patent applications nearly always involves a determination of the validity of the mining claims.

Free land, or what is more correct, land at nominal cost, is commonly regarded as the certain fillip for further development. In reality this popular concept is partly true, especially if there are reasonably operative land and mineral laws under which use or title to idle resources can be obtained. Also if there is intelligent, prompt, and equitable administration of the public domain under such land and mineral laws. That these are generally being obtained in Alaska, after long years of neglect, is recognized but much more needs to be done.

The present complex system of public land laws is clumsy and difficult to apply. This is understandable since many are simply extensions of laws designed to fit conditions in the States. To the extent that they are ill adapted or inflexible, they tend to hamper development.

In general, an enterprise, whether it be private for home, business, or recreational purposes, or public for institutional, community, or Territorial purposes, must be shaped to conform with a specific land law. On the other hand, the Alaska Lands Act, recently adopted by the Territory, is simple and flexible to apply. Under it the land provisions can be tailored to fit the needs of a particular enterprise. This legislation would supplant the multitude of Federal laws and regulations governing land use and disposal in the Territory when Alaska received its own land patrimony.

Settlement in Alaska has been impeded by some of the laws of American pioneer days. Homesteading is an example of this. Homesteading was the vanguard of permanent settlement and development in central North America. It usually came after the more migratory occupance of fur traders, cattlemen, and miners. Over a million good farms in the breadbasket of America began as homestead entries or locations on the public domain. Homesteading became a part of the American folkway to be followed by more intensive farming by the equipped farmers and in places with special economic-geographic advantages by industrialization and urbanization of our modern economy.

In Alaska it was generally expected that settlement and development would proceed in a similar manner. First agricultural occupancy came through homesteading. Parts of Alaska especially the middle Tanana Valley and the upper look Inlet areas have witnessed considerable homestead settlement, but wherever it has occurred most of it has been temporary with little land development. The Homestead Act alone without a complement of those special aids to agricultural settlement needed in Alaska has not been a successful vehicle for rural occupation and development.

Many of those most concerned with land settlement in Alaska advocated various alternative forms of agricultural settlement more suitable for Alaskan circumstances but it is in the nature of folkways to outlive the conditions which created them and ordinary homesteading continues to this day. With statehood it would be possible to put land and people and money together in aid of agricultural settlement under a system which would work. Alaska needs the produce of 30,000 to 40,000 additional acres of farmland.

Beyond the provision of effective land and mineral laws and efficient public land administration, however, there is a further and complementary need. There is a requirement which is basic to Alaska's settlement and development through successful application of good public land laws and administration. It is the adequate provision of what is called the economic-social "infrastructure" on which the apparatus of production from land and mineral resources can be based. That is the set of basic facilities needed for production such as a minimum of roads, power stations, schools, harbors, hospitals, housing, and Government buildings. Much has been done by the Federal Government to meet some of these needs but a large backlog of public works remain to bring Alaska to an adequate level for development. With local control over resources as well as the provision for public services of all kinds there can be the full measure of coordination required to bring development in a northern environment. Development of basic facilities can be assured at the proper place and at the proper time to foster economic growth at least cost.

Experience over a long period has shown that it is only when effective land and mineral laws, efficient public land administration, and a basic economic-social infrastructure are provided that orderly, economical, and permanent settlement and development occur on America's northern public lands in which private initiative plays its full part, and then only if all are carefully knit into a suitable pattern of area development. The Alaska Lands Act has an area development concept underlying its provisions while the Federal land law system has an individual tract concept as basic to its provisions. The 40 acres and a mule approach to land development in a land like Alaska simply has not worked.

Settlement by the modern pioneer has tended to be in cities in Alaska just as elsewhere in the more northern lands. In 1950, a total of 96,833 people or 75 percent of the Territory's population lived in the greater area or recording districts of the 12 largest cities and towns, and the relative importance of the larger cities is increasing.

The fact that Alaska is predominantly occupied by city and town dwellers was not really recognized until a few years ago when the Alaska Public Works Act was adopted by the Congress. Alaska's needs, present and future, include more community facilities and services and housing to accommodate the white-collar and blue-collar pioneers on the last frontier. Our Federal Government has not fully recognized this fact of life in Alaska. The Federal townsite laws for Alaska are still piecemeal, complicated, and archaic.

The provisional constitution for the State of Alaska adopted at a constitutional convention at College, Alaska, on February 3, 1951, recognized the importance of urbanism on the Alaskan frontier. It provides for a simple and flexible system of local government adapted to the needs of the people of Alaska. It establishes just two classes of local governments, boroughs, and cities with cooperation between them encouraged by provisions for intergovernmental agreements and the representation of members of city councils in borough assemblies. The constitution recognizes, in short, that urban centers are the foci of the scattered settlement of the northlands—that they are the interchanges for goods and ideas that connect region with region and mold the way of life in Alaska.

I am concerned, as I know you all are, about the development of Alaska for the sake of Alaska. It is developing under Federal custody, to be sure, but not fast enough. I am convinced that if Alaskans were the masters of their own house, it would be developed more rapidly and effectively. I have tried briefly to demonstrate why I think so. An environment that affords incentives to growth can be more readily molded on home grounds by a State government than in the faraway Halls of Congress. National policies and programs, legislation and regulations, administrative plans, and action to promote growth, have tended to be too little, too late, and too cumbersome.

Perhaps, if I were considering the interests of Alaska alone, I would be concerned but not really anxious that Alaska obtain statehood. In view of the obvious need for America to continue to grow to fulfill its obligations at home and to meet its responsibilities abroad, however, I am more than anxious that it do so. I fear, that unless it obtains statehood so that it can fully contribute to the growth of America, we are not being prudent about our Nation's destiny.

As long as America had a frontier being developed it was able to expand its productive capacity at the rate of 4 percent annually. With the closing of the frontier our economy slumped but it became revitalized by the demands placed upon it by World War II and the Korean war. The building of our northern frontier in Alaska, under peace and the more favorable growth conditions statehood would provide, may well be the potent revitalizing force our economy needs. It would, I am sure, help the Nation toward the 5 percent annual growth we need.

Development of the public lands of the United States has produced an economy of relative abundance, a people of comparative plenty. It seems but prudent to continue along the same economic path. Statehood for Alaska is but another milestone in this path. Economically, it seems, the Nation needs to turn the milestone now.

The need of the United States for development of Alaska to meet the material requirements of Americans and their technological economy by 1975 is abundantly clear. Take account of the supply of natural resources in the United States and the prodigious demands to be placed upon them by an expanding economy for a rapidly increasing population. Economists believe that by 1975 our consumption will exceed production by 20 percent. Conservationists believe that many lower grade resources will need to be brought into use by 1975 through development of new technologies and improved extraction processes. The resources of Alaska, oil, gas, coal, timber, forage, soils, minerals, and waterpower, the bone and sinew of our economy, have a certain place in this picture. They need to be drawn into use to be sure we have a stronger America each year.

The balancing of resource supply with consumption is a challenge to innovation, to inventiveness, and to statesmanship. Statehood now will help. The America of tomorrow needs Alaska statehood today.

Assuming it is our purpose to one day grant statehood, and, as you all know by now, we are committed to do this, it is in the national interest to do so now. Many of the latent resources of Alaska will be in national demand and in demand by the free world a few years hence. I have tried to show that Alaska as a State can better provide the incentives for development than a national government far away. Industry is now actively engaged in appraising Alskan resources, some with thought of immediate investment in development, but some with the future in mind. Business, large scale, the kind that can develop the resources of the giant of Alaska, is in need of lead time for planning development. It needs that, but also it must know the rules of the game. Effective planning now requires knowing whether development will be under Alaskan rules or national rules. For sake of development for a stronger America, the stage needs to be set now by granting statehood so private enterprise can confidently press forward plans for resources development. Statehood now amounts to national prudence.

Lastly, I, as you, have been alarmed by the economic progress of the Soviet Union. It is forcing development everywhere with which to support worldwide economic warfare. In the Soviet Union astonishing development is occurring in its northern lands. Develop-

UNIVERSITY OF MICHIGAN LIBRARIES

ment there is certainly strengthening its economy and its military posture. There is no question we are not doing as well. There can be no doubt we need to do more than now to develop the resources of our northland for use in aid of defense and economic development of the free world. A State government and a National government working together is the best combination I know of for the task.

In summary, Alaska's growth is needed for Alaska's sake. It is needed in aid of national growth. It is needed in aid of the free world. Accelerated development that would be encouraged with statehood is common national prudence. Statehood now, it seems to me, would serve a national purpose.

Our Good Senator, Ed, and Charity Martin

EXTENSION OF REMARKS
OF
HON. JAMES G. FULTON
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 18, 1958

Mr. FULTON. Mr. Speaker, it is with real pride that we in Pennsylvania mark the careers of Senator ED MARTIN, of Pennsylvania, and his loyal wife, Charity Martin, as they complete their joint public careers in Washington, D. C., with the close of this term of Congress.

We personal friends, as well as the many admirers of this charming couple, wish Charity and ED a rewarding life as they return to their lovely home and fellow townsmen in the beautiful old town of Washington in western Pennsylvania.

Charity and ED have served together in so many public capacities in Pennsylvania for the good of our people that no other couple in the history of Penn's Woods has been rewarded with so many elected and appointed positions, in our State and local governments. In addition, they have rendered outstanding service in the Presbyterian Church where ED and Charity have served in many capacities. Likewise, ED has been honored many times as a general in the United States Army to whose service he has been devoted through the years.

It is a pleasure to call to the attention of Congress and the American people the editorial from the Pittsburgh Press of July 27, 1958:

AWARD OF MERIT

An unusual event took place last week in the United States Senate, which is often a forum of heated debate. Nine Senators rose in turn to pay spontaneous tribute to one of their number.

The Member they honored is Senator EDWARD MARTIN, of Pennsylvania, Republican, who is retiring from the Senate at the end of this year after a notable career in public life.

The Senators who expressed their esteem of the Pennsylvania Senator included both Republicans and Democrats. Many of them are fellow members of the Senate Committee on Public Works, of which Senator MARTIN is former chairman and now ranking minority member. (Senator MARTIN could not be present because he was helping a couple of Pittsburghers plead for Federal help for the Crosstown Boulevard.)

In general, the Senators told the story of ED MARTIN, which is familiar to most Pennsylvanians. Born in a log house in Greene County, he achieved notable success in many fields, served his country in three wars; headed the 28th Division, Pennsylvania National Guard; went up the ladder of politics, and was elected by the people of Pennsylvania to almost every post within their power to fill, including auditor general, State treasurer, governor, and Senator.

Senator FRANCIS CASE, South Dakota, Republican, saw Senator MARTIN's career as "an example of the rewards offered in the United States, under the American system of free and equal opportunity, to the youth of our land, no matter how humble may be their origin." Senator ROBERT S. KERR, Oklahoma, Democrat, believes the Pennsylvanian to be "one of the great men I have known." Others expressed themselves in similar vein.

We of Pennsylvania have good reason to know ED MARTIN's caliber, for he has served us, in one capacity or another, for these past 60 years, and many of our people have served with him in various endeavors, in war and peace. All who know him will want to associate themselves with the remarks of his fellow Senators, which were richly merited.

Self-Employed Individuals' Retirement Act of 1958

SPEECH
OF
HON. WILLIAM L. SPRINGER
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 29, 1958

Mr. SPRINGER. Mr. Speaker, H. R. 10, more commonly known as the Jenkins-Keogh bill, to encourage the establishment of voluntary pension plans by self-employed individuals, has been legislation long in the making. I have been familiar with this legislation and have been trying to get such a bill before the House since 1952. It is good legislation and in the public interest.

I. PURPOSE

This bill permits self-employed individuals to take a current income-tax deduction for a limited amount of investment in a retirement annuity, or a specific type of retirement trust. Penalty provisions are provided for withdrawing the amounts during the lifetime of the self-employed individual if they are withdrawn before he is 65 years of age. On the other hand, he must begin to withdraw these amounts not later than when he reaches age 70.

II. REASON FOR THE BILL

This bill will give greater equality of tax treatment between self-employed individuals and employees. At the present time employees of a business may postpone tax on retirement income savings if the employer pays into a qualified pension plan. In that case, the business firm gets immediate deductions for amounts contributed to the plan and the employee is not taxable until he draws his benefits under the plan.

Likewise, those of us who have favored this legislation believe it is reasonable that self-employed persons should have the same right under the law to obtain equivalent tax treatment on retirement savings.

The bill will be effective for the taxable year beginning in 1959.

III. SUMMARY OF THE BILL

A. Eligibility: The bill applies to all self-employed persons who are subject to the tax on self-employment income—for social-security purposes—except that certain categories such as doctors and ministers, who are exempt from the self-employment tax, will be eligible for the deduction under this bill. The deduction, however, will not be available to a self-employed person who is subject to the self-employment tax if in the same year he has earnings which are covered in a qualified pension plan or if during the year he draws benefits under a qualified employer plan.

B. Deduction: Self-employed individuals will be permitted to deduct from their adjusted gross income an amount paid as a premium in a retirement trust fund. This deduction will be limited to 10 percent of the net earnings from self-employment for any 1 year. The deduction under this bill may not, in most cases, exceed $2,500 in any 1 taxable year. The deduction may not exceed a total of $50,000 during the lifetime of the self-employed person. No deduction is allowed for any year after the taxpayer attains age 70.

C. Type of retirement policy: The retirement policy for which an individual may take a deduction must fundamentally be an annuity or an endowment policy issued by a domestic life insurance company. The policy may provide life insurance benefits, but these may not extend beyond age 70. The policy may provide for an endowment not later than the time the self-employed individual reaches age 70, or it may provide a life annuity or a joint and survivor annuity to the insured and his spouse, beginning not later than when the self-employed individual reaches age 70. The policy must be nonassignable.

D. Restricted retirement funds: Instead of purchasing an insurance policy, the deduction may be obtained by making deposits in a restricted retirement trust fund. This trust must be established for the exclusive benefit of one or more participating individuals. The trustee must be a bank. The investments of the trust are limited to stock or securities listed on a registered exchange, stock of a regulated investment company, Government bonds, or face-amount certificates.

The income of a restricted retirement trust fund will be tax exempt. The trust may distribute income or corpus to participating members at any time. When the members attain age 70, the trust must begin a program of distribution of that member's interest, which must be completed before he attains age 80.

E. Reporting requirements: The bill requires each bank trustee of a restricted retirement fund and each insurance company which has issued a restricted retirement policy to file such returns and information as the Secretary may prescribe. It also requires each self-employed individual to furnish certain information to the trustee of his restricted

retirement fund or to the insuror of his restricted retirement policy.

F. Effective date: This bill applies to taxable years beginning after December 31, 1958.

I personally am much pleased that the great Committee on Ways and Means has finally brought this legislation to the floor. This bill gives relief and encouragement to the small, independent business and professional man, including doctors, dentists, lawyers, accountants, engineers, and consultants, and others who make up the life of the smaller communities of this country.

For a long time the big companies have had deductible pension plans for which income-tax credits could be taken by the corporations.

All of us realize that in many instances the professional and small-business man has a very limited period of good income. It takes the ordinary professional man quite a few years to get started. When he reaches his peak income his years are few until retirement. There was no way in which he could accumulate a small nest egg for his old age before taxes. This legislation takes recognition of that fact.

Also, it encourages savings. In recent years this has been one of the shortcomings of our tax system. This legislation recognizes that.

This bill is good legislation, in the finest American tradition.

Senator Hubert Humphrey, of Minnesota, Writes on Hopes for Disarmament

EXTENSION OF REMARKS
OF
HON. RICHARD L. NEUBERGER
OF OREGON
IN THE SENATE OF THE UNITED STATES
Friday, August 1, 1958

Mr. NEUBERGER. Mr. President, an article in the August 1958 issue of the Progressive magazine has served to demonstrate once again the thoughtful leadership in the field of foreign policy exercised by our brilliant colleague, the distinguished junior Senator from Minnesota [Mr. HUMPHREY]. He serves as chairman of the Disarmament Subcommittee.

Senator HUMPHREY's article is entitled "Turning Point for Disarmament." In it he stresses that a nuclear test ban, safeguarded by adequate inspection provisions, could help to liberate the world from the crushing economic and psychological burden of evermounting armaments of all kinds.

I ask unanimous consent, Mr. President, that the able article on our hopes for disarmament by the distinguished Senator from Minnesota, who is our recognized spokesman and advocate in this field, be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

TURNING POINT FOR DISARMAMENT
(By Hon. HUBERT H. HUMPHREY, of Minnesota)

When the technical experts of the United States, the Soviet Union, and other countries convened recently at Geneva to explore the requirements of inspection for a suspension of nuclear weapons tests, the event was widely greeted as a turning point in the disarmament problem. The vital significance of their meeting was that the great military powers, after years of futile talk, delay, and obstructionism, were finally getting down to cases and were penetrating to an area of the disarmament problem where there might be meaningful accomplishment.

Lack of political practicality has long bedeviled disarmament negotiations. For a great many years we toiled away at a proposal for controlling nuclear arms—the so-called Baruch or United Nations plan—that, as we look back on it now, was too elaborate and advanced in its aims. It was a comprehensive proposal envisaging international control of fissionable material from mine pit to end product. While in many respects the Baruch proposal was one of the noblest offers ever made by any nation, it was impractical because it misread the acceptability of the proposal to a government that feared contact and interchange of information between its own people and non-Communist countries. Time and technology inevitably took their toll of the Baruch plan, and eventually our scientific inability to detect hidden and rapidly swelling stockpiles of nuclear bombs made it obsolete.

In an effort to adjust to technical and political realities, international discussions then shifted to plans for disarmament by phases or stages. Last year the administration settled on what it euphemistically called a "first step" proposal. But this proposal, containing interlocking provisions for ending nuclear weapons tests and production, for cutting back armed forces and conventional arms and for inspection against surprise attack, was entirely too complicated for a first step. To expect a tightly sealed entity like the Soviet Union to embrace in one gesture a package like that was naive. To continue to cling to the package after its acceptance became utterly hopeless was, and still is, incomprehensibly obtuse.

When the negotiations broke down at London last year, commonsense dictated that the package be broken up and subdivided, particularly since there was no logic in keeping all of the provisions locked together. It was plain to see that an initial step had to be relatively small and simple, if it were going to be politically acceptable as well as technically feasible. To be of substantial disarmament value it had to check the forward rush of the arms race. All signs pointed to a suspension of nuclear tests as one of the most logical steps. A ban on tests would be relatively uncomplicated scientifically, and it would check the arms competition—which is in large part a technological competition—at a key point, the development of nuclear weapons.

The mounting pressure from world public opinion has created an opportunity for the nuclear powers to demonstrate their will to slow down the arms race. But the Eisenhower administration has dragged its feet. Its stubbornness has cost us dearly in the eyes of the world. It was foolish of the administration to believe that the Kremlin would ever hesitate to seize an opportunity to score a propaganda point. When Moscow announced several months ago a conditional suspension of nuclear tests, I called on our own Government to press for an international agreement to suspend tests with inspection. The administration has not thus far been able to reconcile its own differences of opinion over whether a suspension of tests with inspection should be sought.

Part of the battle revolves around the question whether there can be an effective inspection network to check on a nuclear test moratorium. Dr. Edward Teller, director of the Livermore Radiation Laboratory, maintains that the Soviet military nuclear experts could cheat on a complete test ban. Dr. Hans Bethe, of Cornell University, a leading physicist on Dr. Killian's Scientific Advisory Committee, says they could not get away with sneak testing. A conclusive answer to the question cannot be found if the question is viewed solely in scientific terms.

Much of the controversy over inspection could be allayed if two principles were kept in mind. First, there must be an inspection system which is effective and adequate. We could not permit ourselves to be drawn into an agreement under which we would deprive ourselves of an important weapon in our armory while the other side secretly continued to arm itself with that weapon. Such a situation would not contribute to peace and would only hasten the conflagration we are trying to avoid. Inspection has to be good enough so that every country knows there is a great probability it is going to be caught if it tries to cheat on the agreement.

As long as an inspection system possesses this amount of certainty, we would have a high degree of assurance that no signatory of a suspension pact would run the political risk of sneaking an illegitimate test explosion. The military advantage it might get from a sneak test under such conditions would probably be so limited it would be far outweighed by the political disadvantages of getting "caught in the act" and thus ignominiously causing termination of the agreement, incurring the opprobrium of world public opinion, and, most important, causing the arms race to continue unabated.

What the perfectionists overlook is that there is a risk in whatever course we take. The second principle, therefore, is that there must be a balancing of risks between one course of action and another. This is the way we usually solve the problems of life. In disarmament we must weigh prudently all the dangers of continuation of the nuclear-arms buildup toward an unpredictable climax against the risks that might be involved in a suspension of tests with an inspection network. We must balance the danger of spreading nuclear weapons know-how to fourth, fifth, and innumerable other countries against the danger that the U. S. S. R., which has, according to public reports, made about 50 tests to our approximately 100, might try to sneak a few more.

The joint study group which was conferring at Geneva as this was written can be a major breakthrough on the inspection front. For years the United States has been insisting on adequate nuclear inspection and other forms of disarmament. The Soviet diplomats have stalled, squirmed, evaded, and several times raised our hopes mightily with concessions that appeared to be consequential but eventually turned out to be more smoke than substance. In general they have refused to be pinned down on the inspection issue. In the hope that a nonpolitical approach might get results, I have suggested several times that experts from each side study the general inspection question from a purely technical aspect. Finally, Khrushchev turned his habitual "nyet" into a reluctant "da," and accepted the offer of President Eisenhower to have technical groups study inspection for test suspension.

The administration deserves much credit for going ahead with studies for inspection of a test ban. But it has struck a sour note in refusing to modify its nuclear disarmament

UNIVERSITY OF MICHIGAN LIBRARIES

policy. The President asserted that the technical studies would be without prejudice to the respective positions of the United States and the Soviet Union "on the timing and interdependence of various aspects of disarmament." In plain English, this meant that the United States did not consider that the technical studies on inspection for a test suspension, if successful, would commit us to negotiate at a political level for an agreement on a test ban separate from the disarmament package. As I was writing this the administration was still feverishly debating with itself whether a test halt should be entered into independently. Yet, how long does the White House think it can deny the logic of events? What if the American and Soviet technical committees agree on what constitutes effective and reliable inspection for a suspension of tests? Is the administration, which insisted on creating the technical committee, still going to clench its teeth in determined refusal to go along? To dispel any misimpression the world might have of United States intentions in participating in the technical study, the President should immediately announce the willingness of this country to agree, separately and distinctly from other disarmament measures, to negotiate at a political level for a suspension of nuclear weapons tests if the technical committee agrees on the inspection requirements.

One question I am often asked is whether I really believe that the secretive U. S. S. R. will ever accept a reliable inspection system. This is going to be a tough mouthful for the Soviet leaders to swallow, but there is genuine evidence that they will come around to it. First, there is a great deal of evidence that they want a lessening of their arms burden. Economic pressures in the Soviet economy—mounting consumer demand, dwindling manpower reserves, and the multiplying complications of an expanding industry—are working to restrict the labor and materiel going into the military effort. Some of our experts on Soviet Russia now believe that top Russian officials are beginning to see more clearly that they cannot have an internation agreement to limit armaments without accepting some kind of inspection.

But the proof of the pudding is in the eating. When the technicians' committee reports, we shall then have a sharper picture of how far the Soviet Union is prepared to go. The number of inspection stations will be a key issue. There is a close correlation between the number of inspection stations and the extent to which a test ban can be effectively inspected. The larger the number of stations the smaller the size of a nuclear test explosion that can be reliably identified. But if the number of stations should be radically limited, then the likelihood of confusing earthquakes with underground explosions would increase. The greater the number of stations, the greater the chance any explosion would be correctly identified.

The really significant thing is to get a test ban in effect and an inspection system in operation. Installation of an inspection system would be a political breakthrough of momentous proportions. It could be a landmark of the greatest historical importance in free world-Communist relations, a turning point toward peace in our time. Opponents of a nuclear test ban often miss this vital political factor.

The arguments for continuing tests to develop defensive weapons against enemy intercontinental missiles or for small clean tactical weapons to limit the threat of all-out nuclear war may be justified within a purely military frame of reference. But such a frame of reference is much too narrow. A purely military frame of reference will sooner or later eventuate in a purely military result.

Our frame of reference must encompass broader considerations, in particular the acceptance of the fact that differences between the Communist bloc and the democratic West must be resolved through peaceful competitive coexistence. History teaches that the most antagonistic ideological opponents have an interest in survival, and sooner or later learn to reach a peaceful modus vivendi. This is why disarmament is primarily a political rather than a military problem. This is why an inspection breakthrough into the Soviet Union outweighs the military value of the development of new varieties of nuclear weapons.

Those who insist that a cutoff of nuclear weapons production be linked to a nuclear test suspension should be more perceptive of the political realities and view this whole problem of disarmament in more of a time perspective. A temporary inspected test termination would constitute a natural step toward a prohibition of nuclear arms production.

The President has often insisted that a cutoff in the production of nuclear material for weapons purposes is the heart of the nuclear weapons problem. Bulganin and Khrushchev have also asserted that the discontinuance of the manufacture of atomic and hydrogen weapons should be among the aims of disarmament. Since both governments have individually proclaimed this as a goal of nuclear disarmament, I propose that this and perhaps other specific disarmament goals be jointly affirmed in principle by both governments. The best time to do this would be at the time a test ban agreement is concluded for it would then refute any impression that the test ban was the only disarmament we wanted.

Both supporters and opponents of a temporary nuclear test suspension should realize that it would be only a beginning. It is only the first phase of our total disarmament blueprint. As a test ban comes closer to realization, we must stress our purpose of progressing to other phases of arms control; otherwise the momentum we desire as one of the main effects of the ban might be lost. By pressing inexorably onward to bring into operation a nuclear weapons test suspension and the rest of our disarmament blueprint, we shall bring closer the day when we can rid the world of its burdens of fear, hate, and want. The inauguration of a test ban now could start the wheels of international reconcilation turning and initiate a movement that will eventually bring genuine peace to the troubled peoples of the world.

Hon. John A. Burns of Hawaii

EXTENSION OF REMARKS
OF
HON. E. L. BARTLETT
DELEGATE FROM ALASKA
IN THE HOUSE OF REPRESENTATIVES
Friday, August 1, 1958

Mr. BARTLETT. Mr. Speaker, I am glad to have the opportunity to present here my estimate of the effectiveness of the work in this Congress of Delegate JOHN A. BURNS, of Hawaii, in connection with statehood. It is my opinion that had JACK BURNS been a man of narrow vision instead of broad statesmanship it is quite possible that Alaska would not have achieved statehood in 1958; and if Alaska had failed it is certain as certain can be, in consideration of all prevailing circumstances, that Hawaii would not have been admitted to the Union alone. If JACK BURNS had insisted upon coupling the two bills a great storm would have been raised but no constructive accomplishment would have been made. That is an absolute fact. But nevertheless that is the course of action which might well have been followed if JACK BURNS had been a less dedicated and devoted servant to his people than he is. He could have perhaps gained some temporary political credits at home if he had moved to link the two statehood bills. In refusing to do so, he not only demonstrated political courage of a rare type which ought to be appreciated by his constituents but he did something more important for them—he brought Hawaii statehood ever so much closer.

Years ago when Hawaii was ahead in this search of the two Territories for political equality by way of statehood I took the position that if one went through the other could not remain far behind. That is as true today as it was true then. I firmly believe now as I believed then that Hawaii is justly entitled to statehood and I dare say that Alaska's delegation in the 86th Congress will be proud to associate themselves with those pressing for early and affirmative action on Hawaii statehood.

In the meantime, I want to join my colleagues in paying tribute to Delegate BURNS. In a speech I made a couple of weeks ago at Ketchikan I was happy to state a belief that his actions in this Congress not only were important in the attainment of Alaska statehood but brought Hawaii statehood that much nearer. I do not think any other conclusion can be reached after an appraisal and assessment of what JACK BURNS has done. He is entitled to and will, I know, receive as much credit at home for all of this as he has from those in a position to know here in Washington.

Life's Wonderful, and So Is Business

EXTENSION OF REMARKS
OF
HON. JOHN C. KLUCZYNSKI
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Friday, August 1, 1958

Mr. KLUCZYNSKI. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include herein the following statement which briefly outlines the aims and purposes of the Life's Wonderful Club.

This is a most unusual and inspiring organization which I am happy to say started in my own congressional district in Chicago by the Spector Freight System, Inc., one of the largest and most important motor freight carriers in the United States. Its own headquarters and principal terminal is located in the heart of my district at 3100 South Wolcott Street and from this center its services radiate into every State of the Union.

The president of Spector Freight System, Inc., Mr. W. Stanhaus, a longtime friend of mine, and one of the important civic leaders of Chicago, has informed me that membership in this unique club

has now reached the staggering total of only a shade below the half-million mark and is still on the upswing.

Mr. Stanhaus has furnished me with considerable information concerning this club and I am quoting herewith a brief digest which I believe should receive the national attention it deserves:

Various well-known companies have made splendid contributions in time, money, and effort toward the objective of speeding general recovery throughout the Nation out of the recession.

Spector Freight System, Inc., has been proud to play a modest role in seeking to aid this national recovery.

Back in April a few of Spector's salesmen conceived the idea of a club within the firm to be called Life's Wonderful, and So Is Business. It was a simple idea designed primarily as a company morale booster to inspire increased optimism and confidence.

To the great astonishment of these salesmen the idea spread enthusiastically and rapidly to the 3,000 company employees scattered in our 14-State area stretching from Kansas on the west, through the greater part of the Midwest, to Massachusetts, and the northeast Atlantic seaboard.

In joining, the member signs a credo pledging himself to make no less than two optimistic remarks daily. He receives a membership button, a membership card, but he has no dues and no meetings. The button is a large, yellow sunburst with the club's name printed in large letters thereon.

As the drivers began to wear these dramatic buttons on their long, cross-country trips, interest speedily was created among drivers of other companies and these in turn began joining and wearing buttons. The idea caught fire nationally in a few weeks and soon the club was represented in every State.

Requests for membership became so numerous that Spector was obliged to accede to public insistence to embark on a national public-service campaign with free buttons and other material. Moreover, we set up a special department to service these requests.

We will reach the half-million mark almost any day now and membership requests continue to pour in.

If this idea has served a useful purpose in rekindling confidence and optimism in our national economy we will feel amply rewarded for our efforts. If confidence and optimism were desirable objectives when this program was launched in April they are infinitely more vitally needed today with our Nation facing new international dangers.

Government Spending

EXTENSION OF REMARKS
OF
HON. STROM THURMOND
OF SOUTH CAROLINA
IN THE SENATE OF THE UNITED STATES
Friday, August 1, 1958

Mr. THURMOND. Mr. President, one of the greatest threats to the security of this Nation lies in the danger that the Federal Government will spend itself into a state of collapse. Nothing would please the rulers of the Kremlin more. The bankruptcy of the American Government would fit in very well with the objectives of world communism.

During this session of Congress, too many Members have thrown caution to the winds in authorizing new spending programs. We cannot afford to skimp on appropriations vital to our national security, but there are many domestic programs which should be sharply reduced.

A forceful editorial on this subject entitled "We're Off on Another Money Spree" appears in the August issue of Nation's Business.

I ask unanimous consent that the editorial be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

WE'RE OFF ON ANOTHER MONEY SPREE

A frightening silence has marked our entry into a new fiscal year.

By July 1959 the Federal Government will be at least another $12 billion in debt. This will push the total Federal debt close to $290 billion.

This fiscal forecast has been made with an air of finality and accepted with quiet resignation.

A year ago the announcement that Federal spending was expected to total $72 billion for fiscal 1958 united the people at large and Congressmen in a drive toward Government economy. This drive showed many places where continued effort could eliminate waste and inefficiency. It justified hope of eventual tax reform, sensible depreciation rates and a lessening of public demand that the Government constantly expand its paternalistic services.

Then Russia demonstrated an unexpected technical competence and at the same time our own business growth hesitated. To parry these dissimilar threats the single cure was proposed:

"The Government must spend more money."

Economy talk henceforth became unpatriotic.

Although estimates for expenditures in fiscal 1959 reach up to $80 billion and anticipated Government income may drop to $68 billion, few voices are raised in protest.

As Representative CLARENCE CANNON, of Missouri, told the House of Representatives:

"The most alarming feature is that nobody is alarmed. I cannot recall a single instance in which any Member of the House in all the debate on these bills appropriating millions and billions of dollars has referred to the effect which the expenditure would have on the balance in the Treasury, the national debt, or the financial preparedness of the Nation for war or other catastrophe.

"It has grown unpopular here on the floor even to mention balancing the budget."

In this atmosphere Congress added its bit to the budget's imbalance by increasing several appropriations even beyond the budget requests. It raised the supplemental appropriation for the Labor Department by $20 million. To the Interior Department, for which $414.8 million was asked, it granted $459.6 million; to the Treasury, which asked $699.3 million, it gave $704.6 million; to independent offices for which $5.9 billion was asked, the House proposed $6.5 billion, the Senate $6.1 billion.

If the road to national salvation were really paved with dollars such free spending might be commendable.

But Robert E. Merriam, Deputy Director of the Bureau of the Budget, has pointed out, "Neither changing needs nor an interruption in economic growth provide any excuse for loading vast new expenditures on the Federal Government; for unnecessarily shifting responsibilities from private enterprises or from State and local governments."

In fact, both sputnik and the recession have made the goals of last year's economy drive more urgent than ever.

Government inefficiency will hinder rather than help a missile program, no matter how much money is available for spending. A business system will grow faster if freed from the blight of Government competition, restriction, and waste.

The Government must spend what is necessary to meet challanges to our safety or prosperity. But we need to remember that it is not the spending that brings security. We had money enough to get 9 satellites to the launching pad but only enough technology to get 3 into orbit.

Dollars spent carelessly or for the wrong things can do more harm than good. The way to prevent this kind of spending, as Mr. Merriam says, is for all of us "to know what is going on, to make our voices felt, to participate in decision making."

The goals of last year's economy drive are still attainable. They will contribute to defense and prosperity. The type of citizenship that dares to speak up against reckless spending is needed today as it has seldom been needed in the past.

"We have played into the enemy's hands," Mr. CANNON told the House. "We are bankrupting the Nation at a time when we should be saving our money, reducing our debt and preparing to meet the enemy, both economically and militarily."

This Tax Plan Would Boost Business

EXTENSION OF REMARKS
OF
HON. E. ROSS ADAIR
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Friday, August 1, 1958

Mr. ADAIR. Mr. Speaker, the senior Senator from Indiana, the Honorable HOMER E. CAPEHART, recently introduced S. 3718—a bill providing for more rapid depreciation for tax purposes. In the August issue of Nation's Business, there is an interview dealing with this. Under unanimous consent, I include it herewith, as the article contains some very worthwhile information:

THIS TAX PLAN WOULD BOOST BUSINESS—IMMEDIATE SPUR TO THE ECONOMY WOULD COME FROM PROPOSED CHANGE IN DEPRECIATION BASE

Moves to encourage investment in new plant and equipment could spark the next boom, many economists believe.

Senator HOMER E. CAPEHART, Republican, of Indiana, is author of pending legislation which he is convinced will do just that.

Capital expenditures are expected to plunge this quarter to an annual rate of $30.3 billion from the $37.8 billion annual rate of the third quarter last year, according to the most recent Federal survey.

Senator CAPEHART, chairman of the board of Packard Manufacturing Co. and operator of a 2,400 acre farm in his home State of Indiana, is the ranking minority member of both the Senate Banking and Currency Committee and the Joint Committee on Defense Production.

He was elected to the Senate in 1944.

In this interview, Senator CAPEHART describes the economic impact his proposal could have:

"Question. Senator CAPEHART, what are you advocating as a possible stimulant to the economy?

"Answer. I am advocating legislation to permit larger tax deductions immediately on new capital investments. My bill would reduce the useful life (which is the basis the Internal Revenue uses for allowing depreciation for tax purposes) of all capital assets or goods bought or contracted for in

UNIVERSITY OF MICHIGAN LIBRARIES

calendar 1958 and 1959, be it buildings, machine tools, farm equipment, adding machines, typewriters, air conditioning, new store equipment, or any of the hundreds of items covered by the broad term of capital assets.

"The bill would apply to all of them, so that its advantages would accrue to all on the same basis, an estimated 10.5 million business units, including our farms.

"Question. How would this stimulate the economy at this time?

"Answer. It would encourage businesses and farms to purchase immediately every conceivable kind of a capital asset because the bill provides that payment of part of the taxes could be deferred.

"However, there would be no loss to the Government in tax revenue over the useful life of the product. The purchaser would have an immediate saving but in the end he would pay the full amount of tax.

"Specifically, the depreciation period for any capital investment now based on an estimated useful life up to 15 years would be reduced by half. That part of the estimated life of a capital asset over 15 years would be reduced by two-thirds.

"So with a shorter life to base the depreciation on, more of the cost of the investment could be deducted as depreciation each year. But, of course, depreciation deductions would not extend over as long a period as the present schedule of useful lives provides. If a taxpayer should choose to take the deductions over longer periods, he could do so, since my bill sets minimum, not maximum, useful lives.

"Question. Could you cite specific examples of how businesses could take advantage of this bill?

"Answer. For a farmer, a new tractor could be depreciated within 5 years, instead of 10; a combine could be depreciated within 7.5 years instead of 15; a corn crib could be depreciated within 12.5 years instead of 30.

"The small factory owner could depreciate tools and dies in 1.5 to 2 years instead of 3 to 4 years; heavier machinery and tools could be depreciated in 7.5 to 9 years instead of 15 to 20.

"For heavier industry, a new plant of average construction could be depreciated in 16 years instead of 40. Rental housing—homes, apartment buildings, and office buildings—average construction could be depreciated in 16 years instead of 40.

"For transportation systems, the beneficial effect of this bill on our railroad system would be tremendous. Because they could depreciate it more rapidly, it is my best judgment the railroads would immediately acquire hundreds of millions of dollars worth of new equipment.

"Of course, the bill would also be applicable to other forms of transportation.

"The bill would provide an incentive for wholesale and retail stores to carry out renovation programs, new store fronts, new fixtures, and so forth, that they may need and have been anticipating in the future.

"Question. What would be the advantage of a depreciation measure such as this over, say, pump-priming legislation?

"Answer. There would be many advantages: First, under this plan you do not forgive any taxes, you only postpone them. Pump priming requires taxes immediately.

"Second, pump-priming projects require many months and sometimes a year or two to plan before they can be started. Under this bill you would put men and women back to work the first day the bill became law.

"Third, under pump priming, projects may well be several hundred miles away from the unemployed person's home, requiring many either to travel long distances to work or denying them the right to work on pump-priming projects. Under this bill these people would no doubt be able to get the same job they were formerly laid off from, or at least obtain jobs in their own neighborhood.

"Fourth, pump priming primarily only helps the unemployed. This act will not only find jobs for the unemployed, it will likewise guarantee the stability of existing jobs by increasing the business of all producers and processors in the United States.

"Question. Could your bill be expected to reverse the present decline in plant and equipment investment?

"Answer. My best judgment is it would not only reverse the decline, but likewise would increase the investment in plant and equipment over any previous year.

"Question. Would your bill advance technology or provide more modern productive capacity?

"Answer. The purpose of the bill, of course, is to provide jobs for the unemployed, and guarantee the stability of existing jobs, without costing the taxpayers any money.

"However, it has another big advantage: It will enable manufacturers, processors, retailers, and farmers to revitalize, rebuild, and modernize their existing facilities; to buy new bookkeeping equipment, farm implements, air conditioning, and dozens of similar and useful items.

"Question. How would this legislation eventually affect the Federal budget picture?

"Answer. The Government would collect less taxes immediately, but, in the end, it would collect all the taxes that it collects under existing law.

"However, many people believe there would not even be an immediate loss to the Federal Treasury, because the bill would provide so many additional jobs and new businesses that the taxes paid on them would offset the deferred tax payments. The Federal Government, as a result of the improved, modernized, enlarged facilities, might, in years to come, collect more taxes rather than less, and be in a position to balance the budget or to reduce the national debt, or both.

"Question. If your bill should not be passed this year, will it be reintroduced next year?

"Answer. I feel so strongly that such legislation is in the best interest of the United States, particularly of the wage earners, that I should continue to introduce and fight for such legislation as long as I am in the Senate.

"Question. If the economy should take a marked upturn soon, would the legislation be just as vital?

"Answer. I think the legislation would be just as vital, because we should have overhauled our depreciation tax laws many years ago. The depreciation tax laws of the United States are less liberal than any other industrial country in the world.

"Question. Senator, would you care to expand on that any?

"Answer. Yes. In Germany, for example, expenses incurred for short-life assets can be fully deducted from income in the year of acquisition. In the Netherlands, too, fixed assets of small value may be written off in the year they are acquired. Another stimulant is a credit against tax for improvement and purchase of capital assets. This credit is in addition to normal depreciation so that a taxpayer spending more than a minimum limit is allowed the equivalent of depreciation of 120 percent of cost over the life of the asset. This allowance for investment is a trend discernible throughout Europe as an excellent stimulus for investment.

"Question. Who should be the most enthusiastic about this bill?

"Answer. It is obvious that the most enthusiastic supporters would be the men and women who want and need jobs, and the men and women who run the 10 million business units which could provide these jobs.

"Question. Senator, what can wage earners and businessmen do to get this type of legislation enacted in Congress?

"Answer. Immediately contact their Congressmen and Senators, and the Secretary of the Treasury, and the President of the United States, express their interest in the legislation and urge its enactment."

The Late John J. Dempsey

EXTENSION OF REMARKS
OF
HON. JOSEPH M. MONTOYA
OF NEW MEXICO
IN THE HOUSE OF REPRESENTATIVES
Friday, August 1, 1958

Mr. MONTOYA. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include material relating to the former Representative from New Mexico, John J. Dempsey:

[From the White Haven (Pa.) Journal of March 12, 1958]

JOHN J. DEMPSEY

In the years before and after America's entrance into the Second World War, Luzerne County played a leading role in Government and defense through native sons in key posts.

For example, the Chief of Naval Operations was a Wilkes-Barrean. The only commodore in the Navy was from here. A four-star general, with headquarters in the Pentagon, was an Ashley product. A lieutenant general in command of the Philippines was a White Haven native. A member of President Roosevelt's Cabinet was from Larksville. Pennsylvania's Governor was a Plymouth breaker boy. The list was long.

Among others, it included the name of John J. Dempsey, who first saw the light of day in White Haven, where he launched his career as a waterboy, subsequently becoming an outstanding executive in New York and Oklahoma and eventually winding up in New Mexico, where he served as Governor. In the years that followed, he went to Washington, where he was Representative in Congress, Under Secretary of the Interior, and member of the Maritime Commission. He was one of a distinguished company.

Representative Dempsey, who died in Washington last night at 78, went a long way in business and in Government service since quitting familiar boyhood scenes. It is a privilege to salute the memory of another local boy who made good.

[From the New Mexican of March 13, 1958]

DEMPSEY COMES HOME

John J. Dempsey comes home to Santa Fe for the last time tomorrow, having served his adopted city and State long and well.

There isn't room here to even touch upon what the New Mexico Congressman accomplished in his 78 years. His service is too well known to need repeating.

But two incidents in recent days serve to illustrate better than we could the kind of man he was.

The first came at Washington. Dempsey was already suffering from the illness which cost his life. He had orders from his doctor to remain in bed.

But he left his sickroom to return to Congress and lead a final fight for passage of a bill to force faster construction of the Navaho Dam—a project which then appeared doomed by the administration economy move.

Dempsey won his final battle—as he had won so many others for New Mexico. It's quite possible that this last example of his putting interests of his State above his own cost Dempsey his life. He suffered a relapse and never recovered.

The first incident, we believe, serves to show the sort of Congressman New Mexico

had in Dempsey. The second shows the type of man he was.

The Republican city convention was just getting underway here. Attending were men and women who had unsuccessfully fought Dempsey in the political arena for more than two decades. But those Republicans took time out from planning their campaign against "our political enemies, the Democrats," for a minute of silent prayer for a Democrat they knew as their friend.

[From the Farmington Daily Times of March 18, 1958]

CONGRESS PAYS HIGH TRIBUTE TO DEMPSEY

(By Helene Monberg, Times, Washington bureau)

WASHINGTON.—New Mexico suffered a grievous loss last week in the death of the late Representative John J. Dempsey, Democrat, of Santa Fe.

For "Governor Jack" Dempsey was one of the most beloved, effective, and respected Members of the United States House of Representatives.

Dempsey's death leaves Representative JOSEPH M. MONTOYA, Democrat, as the sole Representative of 800,000 New Mexicans in the 435-Member House. That's a rough assignment for any man, particularly a freshman Congressman. MONTOYA has been in the House only 10 months. Fortunately for New Mexico, he is both conscientious and competent.

MONTOYA LEADS TRIBUTES

Led by MONTOYA, 60 Members of the House representing both parties and all sections of the country rose to pay tribute March 12 to their 78-year-old colleague who died March 11 of uremia following a virus attack. MONTOYA offered in the House and Senator DENNIS CHAVEZ, Democrat, offered for himself and Senator CLINTON P. ANDERSON, Democrat, in the Senate resolutions expressing the profound sorrow of Congress. The 3 New Mexicans and 7 other Congressmen attended Dempsey's funeral in Santa Fe March 15.

No part of the State has suffered a greater loss than the San Juan Basin. But Dempsey left northwest New Mexico a mighty legacy before his death. Dempsey, February 26, secured adoption of an amendment to the second supplemental appropriations bill directing the Department of the Interior to make an immediate start on Navaho Dam. As was his custom, Dempsey secured leadership approval of his amendment before offering it. It was adopted on the spot, without debate.

NO DISSENT

Of the action, Representative WILLIAM A. DAWSON, Republican, of Utah, stated: "This amendment was most difficult to obtain. Yet, because of the high regard Members on both sides held for Jack Dempsey, it was adopted without a dissenting vote. This was one of the finest and most deserving tributes which could be paid to our esteemed colleague."

The Dempsey amendment killed administration opposition to immediate construction of the Navaho Dam. Sure that the amendment would clear the Senate (as it did on March 10) the administration on March 3 gave the green light to immediate construction of Navaho. Dempsey learned of the administration's reversal from his sick bed, and he was gratified.

Dempsey had been suffering from a virus infection for some time. He went to Capitol Hill to present his amendment against his doctor's orders. It was the last time he walked into the House Chamber. Two days later he was taken to the hospital. A week later complications developed. Blood transfusions were started March 8 to no avail. The end came 3 days later.

HE HAD MANY FRIENDS

New Mexico has many problems, and it needs strong allies. Dempsey was therefore a most valuable Member of the New Mexico congressional delegation. He had a genius for personal contact, and a host of friends. His varied and colorful background made him known from the Hudson to the San Juan.

Born in Pennsylvania, the son of a coal miner, Dempsey became a successful businessman in Brooklyn as vice president of the Brooklyn Rapid Transit Co. He went west in 1920, and became an independent oil operator and president of an asphalt company in Oklahoma and a realty company in Santa Fe.

From a successful business career he turned to politics. He served as National Recovery Administration Director in New Mexico in 1933, and as a member of the Maritime Commission and Under Secretary of the Interior in 1941–42, during the Roosevelt administration. He was governor of New Mexico from 1943 to 1947. He served 7 nonconsecutive terms in the House, from 1935–41, and from 1951 to date. Only one top political office was denied him. He failed three times in his bid for the Senate.

"NATURAL" IN HOUSE

Dempsey was "a natural" in the House, which is run by the southerners and the Irish. Dempsey was Irish to his fingertips, and was tolerant of the conservatism of the South. So he had powerful allies in each group.

In 1935, the first year he was in Congress, he sponsored the original Soil Conservation Act. After 3 years of House service he landed two choice committee posts, House Rules and the original Dies committee, investigating un-American activities. At the time of his death he was a member of the House Public Works Committee and the Joint Committee on Atomic Energy. He was particularly interested in highway and actuarial resources legislation.

He was atcive in securing passage of legislation providing a bonus for former prisoners of war, including 4,000 New Mexicans at Bataan; the Upper Colorado Storage Act and channelization of the Rio Grande. He had a remarkably high batting average in securing approval of his bills. Of 6 measures passed last year of particular interest to New Mexico, Dempsey sponsored 2 which became law—a change in the 1910 Enabling Act to permit the State to invest in sound common stock, and continued operation of the Barnalillo County Hospital.

WORKED FOR SCHOOLS, ROADS

As wartime governor of New Mexico Dempsey was active in backing legislation to strengethen the State's school system and to improve its highways, health, and housing conditions.

As affectionately viewed by his colleagues, Dempsey was a discerning but kindly man endowed with a colorful personality and background and an infectious and often earthy sense of humor. He was a man of strong convictions but he knew when and how to compromise—the true mark of any successful legislator. He had courage bordering on recklessness.

He was a strong believer in the American tradition of free enterprise, but he fought hard for Federal welfare programs for his State. He had a great attachment for his country and for the West, for his religion and for his family.

KNEW HIS JOB

House Speaker SAM RAYBURN, Democrat of Texas, a close friend of Dempsey, said of his House service: "He knew how to do his job. * * * He was an effective man on the floor of this House."

Representatives of the upper basin States lauded his work in behalf of the upper Colorado storage project. Republican WAYNE N. ASPINALL, Democrat of Colorado, said: "Very few except those who were most closely allied with him * * * realized what a tower of strength he was in that battle." Representative KEITH THOMSON, Republican of Wyoming, stated: "He typified the spirit of America and the West. His word was his bond. He was a man of courage and action."

Of Dempsey, Representative ROBERT HALE, Republican of Maine, said: "I always enjoyed his gracious personality which I thought reflected a life well lived, many friends well loved, and service freely and finely given."

Congressman Jack Dempsey also had a heart as big as the Irish land of his forebears.

Faubus' Victory Is People's Rebuke for Misuse of Federal Troops

EXTENSION OF REMARKS
OF
HON. L. MENDEL RIVERS
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES

Friday, August 1, 1958

Mr. RIVERS. Mr. Speaker, I am pleased to submit, herewith, an editorial from the Charleston (S. C.) News and Courier entitled "The People's Rebuke for Misuse of Federal Troops in the South":

FAUBUS' VICTORY IS PEOPLE'S REBUKE FOR MISUSE OF FEDERAL TROOPS

The landslide victory of Gov. Orval Faubus is a rebuke from Arkansas for the use of Federal bayonets to compel racial mingling in public schools.

In our opinion, the outcome of Tuesday's election—more than 2 to 1 for Faubus against the aggregate vote of both his opponents—reflects the feelings of southerners generally. It is a restatement of the spirit of independence that created the United States of America. It is a heartening signal that the Republic is not yet dead.

There will be great wringing of hands in the do-good press and elsewhere both here and abroad. What will Asia say? What, indeed, will the Kremlin say?

Propaganda mills will be grinding. Was it not Faubus who first drew bayonets by using the National Guard in Little Rock?

Our position is this: Whatever may be said for or against Governor Faubus—and before Little Rock he had been regarded as a liberal with the backing of the Arkansas Gazette—the issue became much bigger than Faubus. The issue became the justice of the President of the United States using the Army to coerce citizens of a sovereign State.

Citizens of Arkansas met the issue squarely. The issue was not separation of the races in public schools. All three candidates opposed integration. They differed over means of resistance.

The issue was not, as we view it, even a vote of confidence in the use of the National Guard. The issue was State versus Federal authority over a matter of local concern.

In this instance, the Eisenhower doctrine has met defeat. The use of United States troops on foreign soil involves other issues. We are not today comparing Arkansas with Lebanon, with Korea, or with any other theater of military operations.

Some operations involve the risk of nuclear war.

In Arkansas, the risk is destruction of the American Republic. Of the two dangers it

UNIVERSITY OF MICHIGAN LIBRARIES

is difficult to decide which is the more serious.

President Eisenhower, by ordering the paratroopers to Little Rock; Harry S. Ashmore, executive editor of the Arkansas Gazette, by helping to bring in the troops, and many another critic of Governor Faubus have helped to put him back in the governor's office. But for them, Faubus today might be a political has-been.

If popular government is to survive, even the bleeding hearts must bow to the will of the people freely expressed at the polls. Otherwise the police state is already here.

Boating Safety

EXTENSION OF REMARKS
OF
HON. WILLIAM E. McVEY
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Friday, August 1, 1958

Mr. McVEY. Mr. Speaker, recently the House passed H. R. 11078, a measure designed to meet some of the problems brought about by the ever increasing use of small boats on the waterways of our country. An excellent editorial on this subject appeared in the Chicago Heights Star under date of July 22, 1958, which I should like to commend to the attention of my colleagues. The editorial follows:

BOATING SAFETY

Greatly increased interest in boating appears to have brought with it an upturn in reports of tragedies resulting from what can be a fine form of recreation.

This is not surprising, when you consider that in many cases there are no regulations comparable to the most lax restrictions on motor vehicle operation.

According to Ed Mongeon, American Red Cross director of safety services for 16 Midwestern States, small boat accidents are responsible for about 1,400 fatalities each year—more than one-fifth of all annual drownings. There are 7,100,000 small recreational boats on American inland and coastal waterways, with an estimated 35 million devotees of the sport, Mongeon said. Outboard motorboats, of course, are in the majority of small craft.

Boating enthusiasts at all times should be familiar with the currents, as well as capricious weather conditions. And in this era of heightened popularity, they need to be more conversant than ever with the rules of the road.

The Red Cross executive listed these important safety rules which can prevent needless boating accidents:

1. Stay ashore in bad or threatening weather. Learn to recognize signs of storms so that, when out in a boat, you can return in time when bad weather threatens.

2. Don't overpower your boat. Many boats carry the Outboard Boating Club of America plate telling the maximum horsepower the boat's outboard motor should have. If your boat does not have such a plate, consult a reliable marine dealer for the information before buying your outboard motor.

3. Don't overload your boat. One adult passenger to a seat is considered a good rule of thumb.

4. Avoid sudden or excessive bursts of speed.

5. When in trouble, think—don't panic.

For the sake of boating safety, Mongeon suggested:

1. Know how to swim.

2. Before leaving shore, tell someone where you're going, and then stick to this cruise plan.

3. Provide a life preserver for every passenger. Insist that nonswimmers wear a life preserver when in your boat.

4. Equip your motorboat also with oars, an anchor and line, a fire extinguisher, a first-aid kit, a whistle for signaling, and, if you go out at night, flares for signaling.

Stay with the boat if it is floating after a mishap, he adds.

The American Red Cross has special small-craft safety courses offered without charge. Information about the American Red Cross small-craft program may be obtained at Red Cross chapter headquarters.

Boating will continue to be one of the best summer pastimes if all operators will take advantage of every opportunity to become as skillful as possible.

A New Nobility

EXTENSION OF REMARKS
OF
HON. H. R. GROSS
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Friday, August 1, 1958

Mr. GROSS. Mr. Speaker, I submit for reprinting in the RECORD an editorial from the Chicago Tribune of the date of July 28, 1958, dealing with the move to create a new-fangled nobility in this country.

The other body of Congress, as the editorial suggests, will be well advised to consign this bill, H. R. 488, to the legislative junkyard.

The editorial follows:

A RIBBON TO STICK IN HIS COAT

Some very dim views of the likely composition of the new American nobility were expressed in the House last week when that body voted a new Federal award to be known as the Medal for Distinguished Civilian Achievement. Mr. Eisenhower has been agitating for legislation of this sort since 1955, and a similar proposal was advanced when Mr. Truman was in the White House.

Representative GROSS of Iowa remarked dispiritedly that he supposed that likely candidates for the honors list would consist of public busybodies like Eric Johnston, Paul G. Hoffman, and Nelson Rockefeller. Johnston was the organizer of a Washington pep session in support of Federal aid and Hoffman a former administrator of the giveaway. Rockefeller, currently the "modern Republican" choice for nomination as Governor of New York, held a number of posts under both the New Deal and the Eisenhower administration and likes to present himself as the very embodiment of the enlightened millionaire.

Of course, Mr. Gross' fears are well founded. The awards generally may be expected to go to stuffed shirts, and it is inevitable that they will be regarded as a form of political payoff for services rendered.

The Constitution frowns on titles of nobility, but the merit medal bill is an obvious attempt to create a kind of German silver aristocracy. At best, it is unnecessary, for the rewards of constructive accomplishment are sufficient in themselves and cannot be enhanced by a medal conferred in the name of a politician. There are plenty of learned societies and professional groups associated with the arts and literature which already give respected awards for eminent attainment. The Government does not have to intrude itself in such matters.

When it does, it creates the impression that the State has somehow become responsible for excellence in the individual. That is the impression Russia seeks to foster when it gives Lenin (formerly Stalin) prizes and the various other awards at Government disposal to herald Communist achievement. We should avoid copying the Soviet practice, for civilian medals conferred by governments inevitably imply that the recipient is at the service of an ideology.

Let us trust that the Senate has better sense than the House and junks this scheme.

The Menace of Disinterest

EXTENSION OF REMARKS
OF
HON. RICHARD B. WIGGLESWORTH
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 24, 1958

Mr. WIGGLESWORTH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Constantine Brown appearing in the Washington Evening Star of July 31, 1958, entitled "The Menace of Disinterest":

THE MENACE OF DISINTEREST—EVENTS ACROSS WORLD SEEN AFFECTING ALL IN UNITED STATES, INCLUDING "SO WHAT" TRIBE

There are a lot of Smiths and Joneses in the United States. But there is a name more legion than either of these old reliables, although it never appears in telephone directories. The name is "Sowhat."

A typical Sowhat, or So What, if you will, may be found in every city and town, every country crossroads store, every club and bar in America. Oftentimes Mr. So What will be a leader in his community, a civic worker, a churhgoer. He may be, and often is, a member of a legislature or a city council. He is prosperous in business or in one of the professions. He is levelheaded, sound, careful, thoughtful, responsible, and conservative.

But when something comes along outside the ken of his daily activities, something having to do with events and developments far from his own habitat, he spreads his hands, shrugs his shoulders and says, "So what?"

So, what if the Russians are fomenting strife and discord in the Middle East (or Asia, or Africa, or South America)? That's a long way from here. Besides, what can we do about it? What do we care if a bunch of bedsheet-wearing desert nomads get worked up about whatever sheik or sultan or king they happen to have, and shoot a few people while they look for a new government?

Why, asks Mr. So What crossly, are we talking about intervention, sending American troops into foreign climes, spending billions of dollars on foolishness, just to try meddling in some foreign matter that has nothing to do with the daily routine in which Mr. So What has his complacent being?

Above all, complains Mr. So What, why are our Senators down there in Washington, and our President and the Secretary of State and all those officials great and small spending all their time fooling around with all this foreign talk when they need to get down to business and get business up for us Americans?

And why are all those politician fellows getting all worked up about a few American-

type Communists and their pals who might like to betray their country's survival to a foreign ideology and a menacing military aggressor?

The trouble with Mr. So What, all thousands of him, is that he stops at the questions. He asks why because he is annoyed at the disturbance to his comfortable ways. But his why does not bestir him to find out why.

And the tragedy is that Mr. So What, as we said when we introduced him, is not a dolt, a ne'er-do-well, or even a run-of-the-mill citizen. He is a leader, or is looked up to as such at least, in his community. Yet he sets the example to his fellow citizens of lesser stature, and the example is the hands-spread-out "so what" when matters lie outside his immediate interest.

It may be submitted that this So What fellow is probably more of a danger to the free world, to freedom in America and everywhere else in the still-remaining and rapidly dwindling area of the world that is free than 10 times his number of diligent Communist agents, or a hundred times his number of just plain Communist subjects.

If one is to argue with a So What, the annoyed reply one gets is petulant: "What can I do about it anyway?" The answer to that one is just "plenty." Not at all by getting all excited and frenzied, worked up into a lather, or emotionally intoxicated. But just getting familiar with the world situation, at the same time realizing, like the great English poet, John Donne, that "every man's death diminishes me, for I am a part of mankind." Putting the two together—a knowledge of events and their significance, plus the realization that in this shrinking world no man can resign from the common destiny of mankind—will bring an end to the "So Whats" quite definitely.

These days, the events taking place in the Middle East, in Asia or Africa or Greenland or Antarctica are of immediate concern to the men and women of the United States. They can, and probably will, affect the lives and fortunes of every man, woman, and child in America, not to mention the millions of people everywhere else.

Perhaps we who deplore the So Whats can begin by making everyone we meet provide the answers to his own querulous question.

Engineer Commissioner for District of Columbia Col. Alvin C. Welling Nominated for Promotion to Brigadier General

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Friday, August 1, 1958

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Washington Star of July 31, 1958, which comments on the nomination of Colonel Welling to be a brigadier general:

MERITED PROMOTION

President Eisenhower's nomination of Col. Alvin C. Welling for promotion to brigadier general is gratifying to the community which has become his temporary home and to which he has contributed so much as Engineer Commissioner. Colonel Welling has earned the coveted star, not only because of his distinguished record in the Army as a wartime and peacetime officer in many parts of the globe but also because of his impressive efforts to build a greater National Capital.

Taking over the engineer commissionership from Maj. Gen. Thomas A. Lane just a year ago, Colonel Welling plunged with characteristic energy into the midst of some particularly troublesome local problems, including the bridge dispute, the routing of 240 through the District, etc. He has played a major role in solving the bridge and highway difficulties, in addition to devoting attention to many other District and metropolitan area matters. We are pleased to salute General-designate Welling as he continues his fine work for Washington.

Jacob Nelson "Nellie" Fox

EXTENSION OF REMARKS
OF
HON. EMMET F. BYRNE
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Friday, August 1, 1958

Mr. BYRNE of Illinois. Mr. Speaker, in a season when the Chicago White Sox need an act of Congress or a shot in the arm in their pursuit of the Yankees, it is refreshing and stimulating to have Nellie Fox playing his usual brilliant game from day to day.

Everyone admires a competitor whether it is on the athletic field or in business, industry, or labor.

In a season when the Comiskey family is playing the judicial circuit it is nice to know that Nellie Fox is wearing the regimentals of the White Sox.

I would like to call attention to the following article in Bob Addie's column appearing in the Washington Post and Times Herald of today:

CHICAGO, July 31.—Perhaps the most remarkable ballplayer in the majors today is Jacob Nelson Fox, a little man who plays second base for the Chicago White Sox.

They call him "Nellie" and he's chiefly distinguished for carrying the biggest wad of chewing tobacco west of Rocky Bridges. Nellie is the sort of guy who always makes the right play at the right time.

A couple of years ago Casey Stengel was marveling at the many talents of Nellie Fox.

"You take these all-star games now," Casey was saying, "and you see a lot of big fellas who can drive it out of the park. But this little fella (Fox) has won me more all-star games with his nub hits than all the big men."

Fox's forte is driving the opposition crazy with his slipper-slappery hits which know no geographical bounds. He's likely to push a ball into left, center, or right. On occasion, he can pull a ball with authority.

Last season, his Chicago mates were kidding him about his lack of power.

"I can hit home runs when I have to," Nellie defended himself. "But trying for homers isn't smart baseball. I'm a little man and I've got to meet the ball."

Actually, Nellie hit six homers last year but the important thing is that he led the league in hits. He's led the American League in hits three times and it appears he'll do it again. He always gets around 190 hits a year and his nuisance value is respected by every club.

Fox is perhaps the best bunter in the majors today. He lays down what is known in the trade as "a dead fish." It's a bunt which starts out fast and suddenly stops like a billiards expert putting English on a cue ball.

Nellie plays percentage baseball. He's a dangerous man in the late innings when a run is needed by his side. He personally beat the Nats in the first two games of this series.

In the first game, he tripled and then apparently was caught off third when the next batter, Jim Landis, grounded sharply to Ossie Alverez. Fox gave a great broken-field performance which would have done credit to a halfback. He avoided the tag, got back to third, and eventually scored the winning run.

He was the key man Tuesday night, too. Russ Kemmerer was going along on a 1–0 victory with nobody on and one out in the ninth. It was Fox who beat out a scratch hit to Alverez to pave the way for Sherm Lollar's homer. Nellie kept the Sox "alive." He's been keeping them alive for years with his incredible fielding and hitting.

His pickup from the Philadelphia Athletics was the best deal Chicago ever made. He was traded even up for Joe Tipton, a second-string catcher, back in October of 1949.

It must be admitted that Fox hardly looked like a star when he was with the A's. He batted .255 in 88 games for Philadelphia. The late Clark Griffith was looking for a second baseman about that time and called up his old friend, Connie Mack, about the possibility of getting Fox.

"I wouldn't advise it, Clark," said Mr. Mack. "He's a little fellow who is a good glove man but I doubt he'd hit enough for you."

So Fox went to the White Sox. He was no ball of fire there in his first year, batting only .247 in 130 games. But he batted .313 the next season and has been around the .300 mark ever since.

Fox isn't exactly as tiny as people make him out to be. He's listed as standing 5 feet 10 inches and weighing 160 pounds. He's probably around 5 feet 8 inches and weighs 150.

Since Albie Pearson came into the league, Fox considers himself a giant. He teases Pearson about being a midget. Yet, like all little guys, Fox has a sympathy for his fellow midgets in the endless battle of the Davids against the Goliaths.

He's helped Pearson quite a bit, stressing to his younger rival the importance of getting basehits instead of going for homers.

Fox is what is known as a choke hitter as distinguished from a chokeup hitter. In baseball, there's an ominous sign in which a player draws his finger across his throat indicating that another player chokes up in the clutch—or fails under pressure.

Nellie doesn't choke up but he does choke his bat to get increased mobility. The pesky, little guy is always pushing hits past the opposition and drives the enemy to distraction.

Nellie Fox is a great example of the made ballplayer who came up with modest talent and blossomed into a star through determination and desire. Horatio Alger, the patron saint of poor boys who rose from rags to riches, could have had a good story in Nellie Fox.

Is This Neutrality?

EXTENSION OF REMARKS
OF
HON. ROBERT C. BYRD
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 24, 1958

Mr. BYRD. Mr. Speaker, I remember a brilliant statement on the futility of

UNIVERSITY OF MICHIGAN LIBRARIES

neutralism by Carlos P. Romulo some months ago in which the distinguished spokesman from the Philippines exposed the moral nakedness of this position in face of the depredations of communism.

An equally pertinent commentary on the subject is at hand in the form of a timely editorial from the Logan (W. Va.) Banner, entitled "Is This Neutrality?" It deals with the "self-styled" neutrality of India's Nehru, and it reads the Nehru record in this respect.

I commend the editorial to the attention of my colleagues:

IS THIS NEUTRALITY?

If you put a stopwatch on Indian Prime Minister Nehru's reactions to various moves by the United States and the Soviet Union it would prove rather embarrassing to him in his self-styled neutrality.

When American troops landed in Lebanon, at the request of the Lebanese president and under specific orders not to fight, Nehru was right in there with his condemnation.

But when Russia in 1956 sent the Red Army into Hungary, at nobody's request, to crush a genuine revolt against Soviet domination with cruel and bloody force, Nehru could not find his voice. Only after weeks did he grudgingly concede that the affair had its bad aspects.

By his own highly peculiar standards, Nehru may indeed be a neutral. But it is not a neutrality that many can admire or wish to copy.

Judge Carrick Buck, Dedicated Public Servant

EXTENSION OF REMARKS
OF
HON. JOHN A. BURNS
DELEGATE FROM HAWAII
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 29, 1958

Mr. BURNS of Hawaii. Mr. Speaker, as a result of a recent appointment by the administration, the Honorable Carrick H. Buck, 24-year veteran of the Circuit Court, First Circuit, Hawaii, is replaced on the bench thus depriving the people of Hawaii of irreplaceable and invaluable experience in a jurist accorded the highest respect by every member of the bar, as well as the citizenry of Hawaii.

An editorial from the Honolulu Star-Bulletin, a dedicated Republican newspaper, points out that this distinguished and eminent jurist leaves the bench on "the changing whims of political fortune." It is my memory that her appointment was to fill a vacancy on the bench, not to replace an incumbent.

Judge Buck has earned, in the minds of all Hawaii, the high praise paid her in the editorial. Hawaii regrets her departure. Having known the judge as a personal friend and having had occasion, as a police officer and a jury commissioner, to work with her, I am personally well aware of her conviction in Hawaii and her moral courage to act in accordance with her convictions. It is extremely unfortunate that she has been replaced.

The editorial follows:

SALUTE TO AN ABLE, FIRM JURIST

After nearly a quarter-century on the Territory's circuit bench, Judge Carrick H. Buck has been replaced as judge of Oahu's first circuit by the just-appointed Judge Edgar D. Crumpacker, former assistant United States attorney.

Thus, Judge Buck leaves the bench as she first assumed it, on the changing winds of political fortune.

So long as our circuit judges are appointed at Washington, so long will the inevitable result be appointment partly, at least, on a basis of Republican or Democratic Party allegiance. Judge Buck came to the bench under Democratic auspices.

Carrick Buck's name will live in Hawaii court annals as the first woman judge to preside over one of its circuit courts. Also as a circuit judge with unusual length of service.

But more importantly, her service will be remembered as that of a competent jurist, a meticulous researcher in civil actions, a firm and courageous dispenser of justice in criminal actions.

Her mother was the first woman lawyer in New Mexico, where Carrick Buck was born soon after the turn of the century. Judge Buck was barely old enough to vote when, in 1921, she was admitted to the California bar.

She came to Hawaii in 1923, was associated in law practice with the late Frank E. Thompson, then served as assistant United States attorney, the same post from which her successor has now been chosen.

President Franklin D. Roosevelt appointed her to the Kauai Circuit Court in 1934. She moved to the Oahu courtroom in 1942, to serve continuously until she stepped down this week.

Although Judge Buck is an ardent Democrat, her sense of justice is all American. Her dedication to the high principles of her calling have won the admiration and respect of bench and bar alike.

Her long tour of duty on the bench ended this week. The record she has made as an able, impartial dispenser of justice continues.

Farley Will Try

EXTENSION OF REMARKS
OF
HON. PETER F. MACK, JR.
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Friday, August 1, 1958

Mr. MACK of Illinois. Mr. Speaker, under leave to extend my remarks I wish to include an editorial from the Galena (Ill.) Gazette:

FARLEY WILL TRY

Your editor was seated in a Southern Pacific diner headed east out of San Francisco several years ago. Suddenly the steward ushered a huge hulk of a man to the empty seat across the table. "I'm Jim Farley," boomed the big fellow as he offered his hand. "What's your name?" Then he eat down.

Thus we were off on an interesting 3-day trip to Chicago which offered many opportunities to chat with the famous Democratic politician. In his warmhearted, informal way, Farley expounded his thinking about many of the great issues of the day. There was no pettiness in his judgment of others then basking in the national limelight, though it was apparent that he had been keenly disappointed by the turn of events which removed him from Democratic councils.

Now he has announced that he will seek his party's nomination as United States Senator from New York. The incumbent IRVING M. IVES, a Republican, is not seeking reelection. It is conceivable that Farley, now board chairman of the Coca-Cola Export Corp., could stage the political comeback of the year. The man who rose from the lowly office of town clerk in Stony Point, N. Y. (1911) to become the mastermind of Democratic politics in the early New Deal days may still have what it takes.

Leader's Clemency to Murderers

EXTENSION OF REMARKS
OF
HON. JAMES C. DAVIS
OF GEORGIA
IN THE HOUSE OF REPRESENTATIVES
Monday, July 28, 1958

Mr. DAVIS of Georgia. Mr. Speaker, the Northeast Philadelphia Chamber of Commerce publication for June 1958 carried the following paragraph:

RIGHTS VERSUS OBLIGATIONS

The Governor's proclamation of an NAACP Day, which has been hailed by the National Association for the Advancement of Colored People in a 4-day program called Let Freedom Ring, seems entirely out of place, in view of the rampant hoodlum attacks in Philadelphia, directly chargeable to young Negroes. It is obvious that too much emphasis has been placed on citizenship rights and not enough emphasis on the obligations of citizenship, especially among our ambitious minority groups. May we suggest the Governor proclaim a Good Citizenship Day, with the admonition of all persons of good will to forget their petty bias and work for better citizenship.

The Philadelphia Inquirer of March 20, 1958, has this to say about his clemency to murderers:

LEADER'S CLEMENCY TO MURDERERS

Clemency to murderers has become the shameful hallmark of the Leader administration at Harrisburg.

Governor Leader has again, in his commutation of life sentences given 11 convicted murderers, displayed his contempt for justice and his disregard for the proper protection of our citizens from crime.

His latest acts of leniency, on the recommendation of his mollycoddling board of pardons, take their place in a succession of similar acts that have sprung the prison doors for murderers and, in effect, nullified the sentences of the courts.

Commutation of a life term in prison makes the convict eligible for parole. Every time Governor Leader takes this step he earns applause wherever lawbreakers may gather, particularly in the cell rooms of our State penitentiaries. But his leniency to killers can only produce among the law-abiding people of our Commonwealth feelings of deep dismay and disquiet.

Among those whose life sentence was commuted in the latest batch—which embraced a total of 35 commutations and 4 pardons—was Aaron M. Gore, who had been convicted of the brutal killing of a policeman, Henry J. Hicks.

Gore and a companion, both 15 at the time, were running away from their homes in North Jersey on Christmas Eve, 1946, when they were picked up in Philadelphia by Hicks. The patrolman attempted to take them to the station house so they could be returned to their families when the two suddenly attacked him. Gore shot him with an automatic pistol; his companion, Keith Donaldson, bludgeoned him with a club. Donaldson was found guilty of second-degree murder, sent to White Hill Industrial School and released after 5 years.

FBI Director J. Edgar Hoover termed the murder a "brutal and senseless killing" and a "shocking spectacle."

Governor Leader, on the other hand, sees reason for leniency to the killer. In his commutation of Gore's sentence, there is, as usual, cold disregard for the victim and his family.

Patrolman Hicks left behind him that Christmas Eve his widow and their six small children.

"Why," asked Mrs. Hicks, when she was told of Leader's action, "do they send murderers to jail if they are going to let them out? Who will this man kill next? What other family will suffer?"

Those questions demand answers from one man, Governor Leader, and they will nag at his conscience the rest of his life.

What would he say to Mrs. Hicks and her fatherless children? What would he say to the family of Edith Snyder, the 16-year-old girl who was shot to death by Robert D. Heineman, as she was doing her homework in her Abington home on April 25, 1940? Heineman is among those whose life term has been commuted by Governor Leader.

What would he say to the family of James F. Gannon, who was shot and killed on his 30th birthday during the holdup of a south Philadelphia taproom in 1942? A man convicted of first-degree murder in that case has had his life sentence changed by Governor Leader.

Beyond all else, what has the Governor to say to the people of Pennsylvania to justify his outrageous mass clemency to this group of savage criminals?

At a time when the police and the courts are trying desperately to stem crime, when teen-age delinquency has become an acute national problem, the spectacle of a Governor of Pennsylvania opening prison doors for persons convicted of the most heinous crimes is an appalling one, and one that George M. Leader will be held accountable for by the people.

The above comments do not come from my section. They come from Pennsylvania people.

The Pennsylvania Governor is making quite a record for himself in encouraging crime and pandering to minority groups.

Morris Ernst: Friend or Foe?

EXTENSION OF REMARKS

OF

HON. CHARLES O. PORTER

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Friday, August 1, 1958

Mr. PORTER. Mr. Speaker, in Puerto Rico, where democracy thrives, the Dominican tyranny is not popular, to say the least. Earl Parker Hanson, columnist for the Island Times, on June 13 and 27, 1958, wrote about Morris Ernst and Trujillo. Under leave to extend my remarks, I include the two columns:

[From the Puerto Rico Island Times of June 13, 1958]

MORRIS ERNST: TRUJILLO'S ENEMY

(By Earl Parker Hanson)

A cry of shame and sorrowful disbelief arose from a thousand decent American Liberals when Morris Ernst, famous as a fighter for human rights and freedoms hired himself out for a special purpose to the worst, most ruthless, most murderous, most despicable, of modern Latin American dictators.

The Basque scholar, Galindez, well-known enemy of the Dominican Republic's Generalisimo Rafael Leonidas Trujillo Molina, had disappeared in New York. The American flier, Gerald Murphy, had disappeared in Ciudad Trujillo. Overwhelming circumstantial evidence, uncovered in half a dozen careful investigations, pointed to a connection between the two disappearances, and to a diabolical plot, engineered by Trujillo and his highest henchmen, to do away with them both. The Dominicans ignored the United States Government's official charges of forgery in their official documentation of the case, submitted to rid them of blame. They also ignored Washington's official requests for complete and frank assistance in investigations of the mystery, which had stirred up great popular interest.

Trujillo's reputation suffered, and so did his tourist business. His henchmen and boughten public relations people, however, including some of the lowest professional Communist-hunters in the Americas, issued a lot of foul red herrings to the effect that Galindez was a Communist, and probably a crook to boot, who was short in his accounts as an agent for the Basque government in exile, and that Gerald Murphy was no better than he should have been.

That kind of stuff didn't impress the American public very deeply, so el benefactor put put three men on his payroll, among whom Ernst was the best known, to make an impartial investigation which was to be widely disseminated if it cleared Trujillo, and remain unpublished if it did not.

Former admirers of Ernst pointed out that when a lawyer takes a fee he can be impartial only on the side of his client, and that for a man like Ernst to undertake to whitewash a man like Trujillo in the matter of just one disappearance, was the equivalent of having set out 15 years ago to whitewash Hitler (for a price) by trying to prove that he hadn't caused the death of one specific Jew named Moishe Greenburg.

Now the Ernst report is out and widely distributed and if one of Ernst's ideas in taking on the job was to get his name in the papers, he made the grade. The job got on the front pages, and into the editorial sections, of dozens of papers with the stature of the New York Times and the New York Evening Post, to say nothing of el Mundo. Headlines read "Ernst Exonerates Trujillo"; the stories and editorial comments said just the opposite. They said that Ernst didn't prove a thing that his effort was merely a lawyer's brief for a client, and poor one at that. They said that the supposedly impartial report didn't tackle any of the evidence that pointed directly to Trujillo, and that it even aped the original Trujillo technique of implying that Galindez was a crook and short in his accounts—as though a smear like that, of a man who can't answer back, had anything at all to do with the question of whether or not Trujillo had him done in.

The sloppy, evasive, innuendo-filled report broke the case wide open again by drawing indignant comments from all over. Even my friend Tom Hayes abandoned his usual "Yes and then again No" technique and came out with a ringing denunciation of Ernst in a very fine, indignant column in el Mundo.

At-a-boy, Morris Ernst. Even though you didn't do it in such a way as to win anybody's respect for yourself, you sure played a well-deserved dirty trick on the Dominican Monster. Nobody seems to take your report seriously, but it did get into the papers, it did revive interest in the Galindez case, it did unlease new forces and efforts against your employer and yourself, and it did strengthen rather than weaken popular suspicion of that employer.

And if Trujillo should come to feel that he was rooked, because in hiring you he thought he was hiring a meticulously honorable man, an impartial fighter for the truth, if he should come to entertain a suspicion that the man he hired has shown himself to be something else, and that Trujillo therefore got a gypping, why so much the better.

I'm all for gypping Trujillo, let the gyps fall where they may.

[From the Puerto Rico Island Times of June 27, 1958]

THEY'RE SQUEEZING POOR MORRIS ERNST

(By Earl Parker Hanson)

It's like I said: when Morris Ernst took on the job of chief whitewash artist for one of the lowest, most brutal, most murderous figures in the modern political world—which has produced some beauts along those lines—he not only managed to get his name in the papers, but also to play the dirtiest trick that a lawyer every played on his client.

I never saw anything like it. Here a lot of people made a lot of independent investigations that all pointed in the same direction—to the abduction of Galindez in New York, to his subsequent murder in the Dominican Republic, to the later murder of the American flier Gerald Murphy—all by the henchmen, and under the general direction, of el benefactor, Generalissimo Rafael Leonidas Trujillo Moina, to whose great bounty everything in the Dominican Republic must (had better) be credited publicly and gratefully, including confinement in loony-bins, jails, torture chambers, and cemeteries.

The usual howl that all this was the work of the Communists didn't do much good because the damning investigations were carried on by the FBI, the New York police, a Washington grand jury, and Henry Luce's Life magazine, and were spurred on relentlessly by a Congressman from Oregon with a history of having previously associated with such organizations as the Rotary Club, the church, some baseball teams, the Cub Scouts, and the bar association. Not only didn't the United States public believe that those people were Communists, but it had also come to regard at least some of them as among the world's most careful and highly skilled investigators. So the United States public generally concluded that when a magazine like Life came out with six pages, virtually accusing Trujillo point-blank of having ordered and master-minded the crimes, there must be something to it. So for a time there was a news-angle in the growing public apprehension that something sinister and terrible was going on, and that Uncle Sam was having his nose twisted by a two-bit Caribbean generalissimo.

But stories need constant new news angles to sustain them, and after a while the Galindez-Murphy case began to fade from the front pages. So then, who stepped into the picture but that well-known liberal fighter for human rights and decency, Morris Ernst, who undertook to make a new investigation for a good price, which was announced to be impartial in Trujillo's favor. And, brother, when a man of Ernst's untarnished reputation agrees to so tarnishing a job, that is news, and now there was a new peg on which to hang the whole story—and possibly Ernst's reputation as well. A new mystery, that of Morris, How Could You? was added to the two old ones. A new disappearance too, that of Ernst the stalwart liberal. In effect, the story became known as the Galindez-Murphy-Ernst case.

For the better part of a year, nothing much happened as far as the papers were concerned. One had the feeling that those who had evidence and information were holding it back, waiting for the appearance of Ernst's report so they could then dump it in his lap.

O. K. the report came out, and, to judge by its public reception, it was a pretty sloppy

UNIVERSITY OF MICHIGAN LIBRARIES

whitewash job. One magazine expressed the prevailing feeling that it was so sloppy that—if that was the best that an experienced lawyer and investigator like Ernst could do—it was the most damning document produced yet in proof of Trujillo's guilt.

So now there is another news-peg and the case is wide open again. You have seen the front page, and all of page 10, of the New York Times of June 23, presenting the most clinching evidence produced yet, against Trujillo and of a sure tieup between Murphy and Galindez, and handling the whole story together with a running commentary on the holes in Morris Ernst's report. That evidence has been available for a long time; only now has it been released, and I have a strong suspicion that there is more to come, and that the case against Trujillo grows stronger daily as a result of Ernst's high-priced messing around.

What with all that, and his son spending a million dollars a year in the United States just so he could flunk a United States Army educational course, poor Trujillo must be coming toward the bottom of his pockets.

It's like I said, Morris, more power to you.

The Russian Communist Empire: Its Historical Roots and Its Present Vulnerabilities

EXTENSION OF REMARKS
OF
HON. EDNA F. KELLY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 25, 1958

Mrs. KELLY of New York. Mr. Speaker, it is safe to say that the American people generally have not yet come to understand the real nature of the Soviet Union, its historical past and its present fundamental weaknesses. Once this understanding is attained, I feel certain that our people would support every imaginative effort aimed at weakening our enemy, short of war. In fact, the process of weakening the U. S. S. R. empire from within would in itself reduce the possibility of armed hostilities.

In the Soviet Union itself there is a whole new field of possibilities open to us for winning the cold war. If nationalism is a potent and dominant force in the Middle East today, which indeed it is, then this same force is even greater in scope and intensity among the many captive non-Russian nations in the Soviet Union. It simply does not make sense for us to permit Moscow to exploit the force of nationalism against us in the Middle East while we shamefully neglect to support this force and all its aspirations within Moscow's empire. But, again, I am certain that as we quickly come to understand the patriotic nationalisms of the nations in the U. S. S. R. such as Lithuania, Estonia, Latvia, White Ruthenia, Ukraine, Georgia, Armenia, Azerbaijan, Turkestan, and other non-Russian nations, we will take the initiative on every level to support the liberation and independence of these captive countries.

Remarkable strides toward this necessary understanding are being made today. A good example of this appears in the two articles written recently by Dr. Paul H. Hallett in the Register, an outstanding national Catholic newspaper. The first article, dated July 6, is entitled "Without Moscow Would Communism Have Spread Over Earth?"; the second, dated July 20, raises the question, "Why not disintegration of the U. S. S. R.?" The facts and ideas advanced by Dr. Hallett deserve the most careful reading by our Members of Congress. The article entitled, "Lands and Nations in the U. S. S. R." to which Dr. Hallett refers, appears in the July 18 issue of the CONGRESSIONAL RECORD, pages 13011–13016. Because of their basic importance, I request that these two articles of the Register be printed in the RECORD, as follows:

[From the Register, Denver, Colo., of July 6, 1958]

WITHOUT MOSCOW WOULD COMMUNISM HAVE SPREAD OVER EARTH?

(By Paul H. Hallett)

A thesis ably propounded by Prof. Lev Dobriansky of Georgetown University is that the dynamism behind Communist conquests of non-Russian peoples is but a continuation of the old Russian power urge, which began in the 15th century.

A work by Dr. Dobriansky called Lands and Nations in the U. S. S. R., now running in the Ukrainian Catholic weekly, Amerika, shows a Tsarist antecedent for almost every Soviet manifestation. In the light of current Russian aggressions and attempts of our Government to stop them, the words of a Polish 16th-century King, who threatened with death English sailors who should attempt to run arms into Muscovy, have a prophetic note:

"The Muscovite," said the King, "who is not only our opponent of today but the eternal enemy of all free nations, should not be allowed to supply himself with cannons, bullets, and munitions or with artisans who manufacture arms hitherto unknown to those barbarians." Those who helped build up Russian technocracy in the twenties and thirties might have pondered that warning.

Messianism, the belief that Russia is destined to lead the world, is an old note in Muscovite history. It was given classic expression in 1524 by the monk Philoteus who wrote: "All Christian empires ended and were absorbed by one empire—that of our autocrat, the Russian Tsar * * * Two Romes have fallen, and the third exists; but there will be no fourth." The first Rome in Philoteus' concept was that of the Popes, the second, Constantinople.

Even the nobles who were driven out of the land by the Bolsheviks sometimes expressed sympathy for Russian conquests made under the Communists. A fair example is Alexander Romanoff, Grand Duke of Russia, who wrote that "to follow the example of the early Romanoffs * * * meant to admit that the Soviet Government should be helped and not hindered in its experiment and to wish it would succeed where the Romanoffs failed."

Famous is the prediction of Alexis de Tocqueville in his Democracy in America, written in 1835: "The American struggles against the natural obstacles that oppose him; the adversaries of the Russian are men; the former combats the wilderness and savage life; the latter, civilization with all its weapons and its arts; the conquests of the one are therefore gained by the plowshare; those of the other by the sword * * * Yet each of them seems to be marked out by the will of heaven to sway the destinies of half the globe."

If anyone doubts that Communist conquests are nothing other than Muscovite conquests let him consider how long Eastern Europe would remain behind the Iron Curtain without the threat from the East. Only China (with its conquests of North Korea, North Vietnam, and Tibet, once parts of the Chinese Empire) has become Communist without great Russian armies, though not without Russian intrigue. Communism as such, without Muscovite help, has as yet not demonstrated its ability to take over a single nation.

[From the Register, Denver, Colo., of July 20, 1958]

WHY NOT DISINTEGRATION OF THE U. S. S. R.?

(By Paul H. Hallett)

This is an age of civil strife. Everywhere we are told that the Western World is disintegrating. We behold France pouring out her lifeblood on the Sahara sands, though she has an army of 450,000 men in Algeria as against perhaps 125,000 rebels. Still the war shows no signs of abating.

Everywhere in the free world we see a revolt of subject nationalities, fomented by Moscow, and nowhere is rebellion encouraged to rise in the Communist-dominated world.

But why not an assertion of the nationalities within the Red empire that might bleed it to death?

Dr. Lev Dobriansky of Georgetown University, prominent in Ukrainian-American circles, sees no hope of a revolt inside Muscovy proper, or what is known as Great Russia. The people there have no tradition of freedom, as do some of the subject peoples within the swollen U. S. S. R.

What is called for convenience "Russia" is a complex of 15 subject states, and 150 nationalities and tribes. The attitude of the members of this "union" toward Great Russia and communism has been demonstrated abundantly in the Ukraine, not to speak of satellite East Germany, Poland, and Hungary, where short-lived revolts have taken place.

In the period 1917–22, writes Dr. Dobriansky, had the national republics of Georgia, Armenia, Ukraine, Turkestan, Azerbaijan, White Ruthenia, the Far East Republic, and others succeeded in resisting the Red Russian armies, would there have been a Soviet Union, followed later by an expanded empire? "Obviously not."

Dr. Dobriansky urges that we conduct political warfare aimed at the very heart of the Russian Communist empire. It is impossible for us to expand freedom in the world, or even to preserve existing freedoms, by giving the enemy the prime advantage of continually creating tensions on this side of the Iron Curtain.

"With the minimum danger of precipitating any hot war, we can employ diplomatic, political, psychological, and cultural weapons in an area that is even more important than the satellite one."

A study of Russian history will reveal that even in Tsarist days Russian expansion was won by duplicity and propaganda as much as by force of arms. Ever since the Napoleonic wars Russia has never won a major war unaided, but diplomatic action and subversion have been responsible for her territorial gains.

Karl Marx, whose materialism Russia took over but who did not create Russian aggression, observed a century ago: "Russian diplomatic supremacy owes its efficiency to the imbecility and timidity of the Western nations. * * * There is only one way to deal with a power like Russia, and that is the fearless way." Those words are even truer today.

Max Ascoli on the Middle East

EXTENSION OF REMARKS
OF
HON. HENRY S. REUSS
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Friday, August 1, 1958

Mr. REUSS. Mr. Speaker, Max Ascoli, the perceptive editor of the Reporter, has some sober thoughts in the current issue of the Reporter on the hard choices facing us in the Middle East:

THE WORST YET

Since the end of the fighting in Korea, our country has undergone a series of traumatic experiences and each new shock has led us only to bitter soul-searching. When the Hungarians revolted, we did no more than wish them luck, secretly hoping that the other satellite peoples would not follow their example. Then, one after another, came all those technological Russian achievements that made our vaunted supremacy in gadgets and weapons more than questionable.

The latest traumatic experience is proving to be far more shattering than any we have previously undergone. This time it has not been caused by lack of action. Rather, we have found ourselves acting in Lebanon as if in a trance, with the Lebanese people and the rest of the world staring at us in dismay or in anger.

What are our marines doing there, particularly since Lebanon is a jumping off place to nowhere? They are not supposed to fight the rebels, and the rebels themselves, for all the massive military suport they are supposed to have received from the United Arab Republic, do not seem inclined to do much fighting anyway—a disposition shared by the regular Lebanese army.

The United States Marines have always been a redoubtable military outfit, but these Marines from the Sixth Fleet, it has been repeatedly stated, have the latest weapons. So have our ships and so have our planes. Yet what at the utmost might have been needed in Lebanon was a police force with night sticks. Actually, the U. N. observer teams were such a force and were guaranteeing the transition from the Chamoun government to one selected by compromise among the belligerent Lebanese faction. Compromise seems to have been the overriding aim of the Lebanese civil warriors. But when President Chamoun cried out for help, the Marines landed.

The incongruous quality of the whole operation was matched by the equally incongruous, and nearby unanimous approval by responsible Americans of the President's decision. It was a case of patriotic support given for patriotism's sake to an action that had been taken for action's sake. True, it was said that the President could not do otherwise, which may mean that he had let himself be maneuvered into a position where he had no alternatives, and where, therefore, a show of strength was determined by impotence.

It may be said that our British allies acted more or less the way we did. Yet once again they showed that patriotism does not require unanimous approval of whatever action the men in power may see fit to undertake.

Perhaps our intervention in Lebanon was made necessary by our previous policies. It was inevitable just as it was frivolous, and for this inevitability and frivolity the Republican administration is not solely responsible. How many times have we heard that it is America's destiny to be the guardian of all nations, great and small? To keep the independence and integrity of Middle Eastern nations was the avowed aim of the Eisenhower doctrine. No political aggregate that has come to be called a nation can—so it seems—ever get rid of its independence and integrity, nor can it ever be relieved of the burden of sovereignty. Even the fact of having no economic or political viability is no exemption from nationhood—an extraordinary extension of the Wilsonian principle. And no nation can change its internal order except via due process of an utterly unwritten, utterly unfathomed law.

This maniacal conservatism, this worship of the status quo, is counteracted by an equally maniacal acceptance of all nationalisms, of all movements for national independence. At present, Soviet Russia has become the champion of wholesale nationalism—provided of course it does not benefit Hungarians or Poles. Soviet Russia is riding high, while we have assumed the role of the world's arch-reactionary. Yet this playing with the sovereignty and independence of nations, whether to defend them at any price or subvert them at any price, is exceedingly reckless. It is an unchallengeable fact of international life—and particularly in these days of free-for-all nationhood and nationalism—that for the extravagances of the minor powers it is the major ones who pay.

The potential arbitrariness of the two major nations finds some check in the peculiar conditions of our bipolar, multinational world. Fortunately there are also intermediate powers endowed with different degrees of strength and influence—and we have found out only too well in the days following the Lebanon landings what a check these powers can exert. The small nations too, no matter how improbable some of them may be, have a role to play—witness the General Assembly of the United Nations.

In the world of the United Nations conditions have come into existence which make a new dimension of democracy—democracy in international affairs—not only conceivable but actual. The extraordinary thing is that in this new game of international politics the greatest democracy in the world consistently manages to be the loser.

Seaway Just Adds to Other Ill Winds

EXTENSION OF REMARKS
OF
HON. FRANCIS E. DORN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 22, 1958

Mr. DORN of New York. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the first of three articles by Mr. Eckert Goodman which appeared in the New York Daily News on July 22, 1958 which deal with the effect of the opening of the St. Lawrence seaway on the port of New York:

SEAWAY JUST ADDS TO OTHER ILL WINDS

(By Eckert Goodman)

(First of three articles)

Three weeks ago a dull boom rumbled across the stilled St. Lawrence River Valley 5 miles north of Massena, N. Y. It reverberated up and down the Atlantic seaboard and echoed into coastal areas of Europe, Africa and South America. But nowhere did it resound with more impact than in the port of New York.

The explosion, blasting a temporary dike across the river's north channel, marked the last major step in the creation of the half-billion dollar St. Lawrence seaway, which next year will open the Great Lakes to sizable, ocean-going freighters for the first time.

The long-argued, Government-sponsored international seaway poses the latest and, perhaps, most dangerous challenge yet to the future growth and prosperity of New York. For it will be in direct competition with our city's single biggest and most important economic asset—its hard-pressed port and maritime industry.

If you live or work within 25 miles of the Statue of Liberty, you're among 13 million inhabitants of a 1,500-square-mile area generally designated as the Port of New York.

ONE OUT OF EVERY FOUR IS LINKED TO PORT

One out of every four people you see in a bus or subway owes his livelihood directly or indirectly to port activities. A second person in each quartet is supported by income from occupations which cater to the needs of "port workers."

Altogether, the port's waterborne commerce is estimated to produce an annual income of $6.3 billion—more than a quarter of all wages earned in the metropolitan area.

The 450 square miles of water encompassed by the New York Harbor's 8 land-locked bays are regularly plied by liners, freighters, and tankers representing 170 different steamship companies.

These vessels register an average of 26,000 arrivals and departures a year as they tie up and cast off from two hundred-odd piers capable of berthing simultaneously more than 400 ocean-going ships along nearly 800 miles of waterfront.

No other port in the world can duplicate New York's tremendous seaborne traffic, the almost $9 billion value of its annual cargoes, or its abundance of maritime services and facilities.

Yet New York's preeminence as the world's greatest seaport has been steadily declining for almost a generation; and its share of America's foreign trade has taken such an alarming dip in the last decade that we have reached what Mayor Wagner recently described as a time of crisis.

NEW YORK SHARE SHRINKS RAPIDLY

Thirty-five years ago, New York handled more than 28 percent of the Nation's foreign cargoes and a whopping 40 percent of its general cargo. By last year, the figures had shrunk to 13.2 percent and 24.9 percent, respectively.

Soaring imports of bulk commodities such as oil and mineral ores from South America, Africa, and Canada, and coal exports to Europe have already pushed the ports of Philadelphia (including Trenton and Camden, N. J., and Wilmington, Del.) and Hampton Roads, Va. (Norfolk, Portsmouth, and Newport News) ahead of New York in terms of total tonnage. And Baltimore is pressing close behind.

But it's in the field of highly profitable general cargo, in which New York has traditionally specialized, that there's cause for real concern.

General cargo, sometimes called package cargo, represents the blue chips in a port's foreign trade, the gilt-edged securities of its maritime industry. It consists of individual items of all sorts, from automobiles and breakfast foods to xylophones and zwieback.

SPECIAL TREATMENT OFTEN IS REQUIRED

Such merchandise requires special packing, handling, forwarding, individual bills of lading, high insurance, and innumerable other services not involved in the movement of bulk cargo, which is usually shipped by the boatload and handled mechanically.

In 1925, New York boasted 16 million tons of this cargo, 3 million more than it checked off last year. And during the last 10 years, the port's portion of the national total has dropped at an average rate of over 1 percent a year.

Where has this precious cargo been going? Mostly to coastal ports south of New York

UNIVERSITY OF MICHIGAN LIBRARIES

along the Atlantic seaboard and on the Gulf of Mexico.

Last year, for instance, New Orleans, which has beaten out Baltimore for second place in the general cargo sweepstakes, rang up an almost 14-percent gain—more than 3 times the increase registered by the country as a whole and 35 times New York's.

The factors responsible for the port of New York's decline are numerous and not always clear cut, but most local maritime authorities agree on the following major ones:

New York's largely antiquated finger piers—some of them half a century old—and other outmoded waterfront facilities, which make cargo handling relatively slow and inefficient (hence, expensive).

A Government-established freight rate differential, which discriminates against New York by making it cheaper to ship goods by rail between the Midwest and southern ports, including Philadelphia.

The movement of large segments of industry such as upstate rug factories and New England textile mills to the Southwest, and the development of huge new steel, oil refining, chemical, plastic, and other industries in the South.

The practice of pier owners in some ports of offering steamship operators use of their terminals at bargain rates or for free, in order to encourage trade.

The rapid growth of interstate trucking, which has largely supplanted New York's coastwise shipping, and now causes costly, time-consuming congestion in overburdened waterfront streets and on piers which were designed for the loading of horse-drawn drays and lighters.

New York's past history of waterfront crime and strikes, which cost industry millions of dollars, often forced shippers to redirect their cargoes, and ultimately received the sort of worldwide publicity which provided perfect ammunition for promoters of competing ports.

The unprecedented expenditures by smaller ports since World War II on the development and promotion of modern facilities and harbor improvements, while New York marked time.

The toal lack, until recently, of any concerted effort on the part of local government or the maritime community to sell the port of New York or attract new business.

The so-called rail differential, which many authorities consider the most important single factor in New York's shipping decline, was set by the Interstate Commerce Commission in 1877. It was designed to give southern ports a fair shake in competing against New York and Boston at a time when seaborne cargo rates were lower from the two northern ports.

FINALLY MAKE EFFORT TO ADJUST RATES

In 1935, ocean rates from all eastern seaboard ports were equalized by general agreement among the steamship companies, but nothing was ever done to even the rail rates.

As a result, a Midwest shipper can save an average of 2 cents per 100 pounds by sending his goods through the port of Philadelphia and at least an additional 1 cent per 100 pounds by routing them through Baltimore, Norfolk, and other southern ports. In the case of New Orleans, the saving is frequently as high as 6 cents.

Within the past few years determined action has been taken by eastern railroads, the Port of New York Authority, the city administration, and local maritime groups to have the inequitable rail rates readjusted. "But," as one port observer commented, "the effort should have been made years ago."

The same thing could be said in regard to regulation of New York's gangster-dominated, goon-controlled longshore industry, the putting into effect of a hard-hitting port promotion program, and the modernization of the city's cargo-handling facilities.

Ten years ago the Port of New York Authority, the nonpolitical bistate port development agency Al Smith helped to create, offered to take over and rehabilitate New York's one-hundred-and-sixty-odd municipally owned piers.

CITY NIXED OFFER AND DID NOTHING

The proposal was turned down by the city because, as Marine and Aviation Department Commissioner Vincent A. G. O'Connor puts it, "It was felt that New York could do the job more profitably."

"The only hitch," O'Connor hastens to acknowledge, "is that the city failed to do anything."

This isn't quite true, because in the intervening decade, while the port authority was building 14 modern terminals in Newark and Hoboken, the city did get around to replacing a North River pier (No. 57) which had burned down.

But only in the last 3 years has a city administration managed to shift out of neutral into what could become a high-gear, municipal-port-reconstruction program.

SAYS CITY NOW PAYS FOR ITS PAST SINS

"New York," remarked a veteran steamship official, "is belatedly paying the price for its past sins.

"For years nearly everyone in and out of the local shipping industry just took the port for granted. There was a general feeling of indifference about its welfare and a smug assurance that its position was unassailable.

"Groups most vitally dependent for their existence on the port's foreign trade had developed an attitude of mutual distrust combined with selfish opportunism and shortsighted expediency.

"Now a lot of smaller seaports are teaching the giant a lesson."

"Gulliver," added another official, "could have brushed off the Lilliputians like flies if he hadn't fallen asleep. By the time he woke up the pygmies had him pretty well pinned."

Business, Labor Versus Politics

EXTENSION OF REMARKS
OF
HON. JOHN D. DINGELL
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Friday, August 1, 1958

Mr. DINGELL. Mr. Speaker, we hear a tremendous din from reactionaries who dislike labor and who believe that labor never should enter the political arena.

From time to time amidst these false charges raised by the opponents of labor comes a gleam of truth. Such a gleam of truth appeared in a fine article written by Mr. John Herling a distinguished columnist appearing in the Washington Daily News of Thursday, July 31, 1958. That article set forth the real fear of the reactionaries over labor's political activities. They just don't like labor acting at the ballot box to protect gains made at the collective bargaining table.

The article follows:

BUSINESS, LABOR VERSUS POLITICS

(By John Herling)

From here on out, you are going to see, hear, and feel more business and labor in politics than you bargained for. Organized business has clearly sounded the alarm that now is the time for all good organization men to come to the aid of their corporations.

The defeat last Saturday of William M. Blakely, Texas multimillionaire, supported by oil, utility, and real estate interests, by RALPH YARBOROUGH, the incumbent Democratic Senator, has proved a bitter pill for the business-in-politics boys. Senator YARBOROUGH, considered a liberal by Texas standards and unabashed advocate of liberal economic policies, had the support of plain folks and organized labor.

Mr. Blakely made no bones about whom he represented. He is as class conscious as they come. His record as an interim Senator for 3 months revealed him to be quite uninhibited in his espousal of business interests. Labor spokesmen charged he was politically incapable of distinguishing between private enterprise and the public good.

Actually, leading American business is suffering from a split personality. Through spokesmen like Senator BARRY GOLDWATER, Republican, of Arizona, floods of words of warning have poured out over the airwaves and the pages of the CONGRESSIONAL RECORD. Fists are shaken at organized labor for its activity in political education. Business prophets predict that from labor in politics will come the worst national diseases. They are apt to talk of the power of labor bosses—especially when they fail to win the support of organized labor.

Over the past 10 years, American labor has developed a deeper belief in the importance of political education for the obvious reason that the American standard of living is tied up with Government policy. This belief has not been matched always by political competence. The need for political action goes back to the founding of the A. F. of L.—when it was plain that policies were then frequently made by legislators and politicians reflecting big industry. Congressmen and Senators came out of the legal and financial stables of these huge enterprises. For labor, political action became a matter of self-defense.

This week, General Electric has issued the latest of its directives to its executives: Get into politics—from the local level up. Question: If General Electric pushes into politics, with all its billions, its huge network of plants and banking interests, how can it object with a straight face to organized labor's activity in the field?

The facts are clear: Business has always been in politics. American labor—except in a few exceptional cases—has never yet had the same effectiveness in the political arena. What business fears is that organized labor will become more effective as the union members begin to understand how profoundly political participation affects their interests. Right now, labor's political power is exaggerated, but its political potential has business scared.

Medical Mission Sponsored by Baptist World Alliance, Headed by Dr. Robert A. Hingson, of Western Reserve University, Take Dramatic Story of Jet Inoculation to Peoples Around the World

EXTENSION OF REMARKS
OF
HON. FRANCES P. BOLTON
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 10, 1958

Mrs. BOLTON. Mr. Speaker, in April of this year I inserted a medical report on jet inoculation as a public health tool in the control of contagion and epidemics. At that time I told also of the

highly successful mass polio and influenza inoculation programs carried out last year by the post office employees of the greater Cleveland area in cooperation with Western Reserve University School of Medicine.

An important and exciting medical mission is now taking the story of jet inoculation and other modern methods and drugs to peoples around the world. Sponsored by the Baptist World Alliance and headed by Dr. Robert A. Hingson, of Western Reserve University in Cleveland, the mission left San Francisco in June. Accompanying the group as its only reporter is Mrs. Josephine Robertson, veteran medical reporter for the Cleveland Plain Dealer, whose colorful stories are being serialized in their columns.

Other members of the team are: Dr. and Mrs. John C. P. Cleland, surgeon and obstetrician from Oregon; Dr. and Mrs. Gobe A. Payne, pediatrician from Hopkinsville, Ky.; Dr. and Mrs. Eugene H. Dibble, director, John A. Andrew Memorial Hospital, Tuskegee, Ala.; Mr. Edward C. Dixon, documentary photographer for mission, Cleveland; and Mr. John C. Lawson, sales manager, Z. & W. Manufacturing Corp., Cleveland.

Mr. Speaker, believing that my colleagues would like to know something of the adventures of the mission as it travels from country to country, I, under unanimous consent, include with my remarks an editorial and news item from the Cleveland Plain Dealer of June 24 together with the first report of Mrs. Robertson. Subsequently it is my hope to insert the entire series of articles:

PLAIN DEALER WRITER GOES ON WORLD MEDICAL TOUR

The Plain Dealer has assigned Josephine Robertson, its medical reporter for the last 20 years, to accompany the volunteer medical mission sponsored by the Baptist World Alliance in its coming around-the-world flight and report its progress through Asia and Africa.

This mission is the first of its kind and is expected to set a pattern for mutual medical aid through the world. It is a person-to-person movement that seeks to make medicine more effective and reach out to more and more of the earth's people.

It may become an important historical event in the direction of international friendship and world peace. Many such teams are expected to follow its precedent.

The mission will not be concerned with religious, racial, or political differences, but only with whether a human being is sick and needs help. It will include Negro as well as white members and will represent various Christian denominations.

It is an attempt to break through differences, to meet world neighbors in friendship and work with them in this humanitarian field of agreement—namely, healing.

Mrs. Robertson will be the only medical writer on the mission team. She will air-mail accounts of its work from many places, beginning with Honolulu.

Its itinerary continues thus: Tokyo, Seoul, Hong Kong, Manila, Iloilo, Rangoon, Moulmein, Gahauti, Calcutta, Delhi, Teheran, Rome, Zurich, Brussels, Athens, Beirut, Jerusalem, Cairo, Khartoum, Nairobi, Johannesburg, Durban, Leopoldville, Brazzaville, Lambarene, Lagos, Kano, Barcelona, Madrid, Lisbon, New York.

The mission leaves San Francisco Tuesday.

John S. Mills, president of Western Reserve University, hailed the round-the-world flight on behalf of medicine as being "in the best tradition of American world responsibility."

"We are proud that Dr. Robert A. Hingson, director of anesthesia at Western Reserve University's medical school, is a member of the mission," Dr. Mills said.

"The Cleveland Plain Dealer has a long history of reporting faithfully and accurately developments in medical care to the community.

"It is to be congratulated for extending its interest and concern to the world community by sending its medical writer, Josephine Robertson, with the mission.

"We live in a time which demands tangible manifestation of the fact that all men are brothers. This world medical mission is a true expression of the desire of private citizens of the United States to share the benefits of advanced medical care with their fellow men."

MEDICAL MISSION TEAM BRIEFED 5 HOURS PRIOR TO HOPOFF

(By Josephine Robertson)

SAN FRANCISCO, CALIF., June 23.—After a 5-hour briefing at the Mark Hopkins Hotel our around-the-world medical mission team is armed with admonitions for its unique humanitarian adventure.

We are scheduled to set forth upon it by plane to Honolulu, leaving on the last minute of tomorrow.

The admonitions concerned health hazards and conduct. Dr. Robert A. Hingson reminded us that the mission involved danger to all. The Western Reserve University professor is head of the mission.

READS LONG LETTER

"We will go into the slums and jungles," he said. "We will get our hands dirty. Some of us may not get back. Some of us may get sick and have to be left behind. Our job is to go on, once we have put our hand to the plow. If any of you think your decision was unwise, now is the time to withdraw."

No one spoke up.

A long letter from Dr. Robert S. Denny, associate secretary of the Baptist World Alliance, Washington, was given to each missioner. The alliance is sponsoring the mission. Dr. Gabe A. Payne, pediatrician and team member from Hopkinsville, Ky., read the letter aloud.

"Expect a certain percentage of things to go wrong," he read. "Things go wrong when traveling in the United States. When they go wrong, smile and say: 'That's the way the ball bounces.' * * *

"Wait to complain. Wait to criticize. Wait to condemn. Hurry to praise. * * * On duty and off, if you ever get off, which I doubt, avoid every appearance of evil. * * * The places you go, the things you do, the things you say.

"In some mission areas smoking is taboo. Then refrain. I would strongly suggest that you refrain from drinking any alcoholic beverages."

URGES CHECK OF CUSTOMS

"You ladies will want to check the local customs on makeup and whether to wear hats and dresses with sleeves. * * * You will go to some places where you take off your shoes to enter. Don't make fun of this. To these people this is holy ground. Other people will have strong convictions about smoking, drinking, maybe dancing. Check the local ground rules and conduct yourselves accordingly. * * *

"What has religious connotation to one people may not to another. Even though you may differ with it, respect it. * * * Remember we believe in every man's inalienable right to worship God according to the dictates of his own conscience."

Dr. Denny defined the purpose of the team in this sentence: "You are looking for the needy areas of the world, and you will seek to bring the resources of the world to meet these needs, both while you are there and when you come home."

His letter concluded with a statement that the team would get more from the trip than the people served, since Christianity when given away left more than before for the giver.

WRAP-UP FOR DR. CLELAND

Dr. John Cleland, surgeon, obstetrician and team member from Oregon City, Oreg., said that his part in the mission represented the culmination of his life and destiny, and that it was in that spirit that he hoped to cooperate with the other members.

There is an increasing ground swell of support for the mission through contributions of medical supplies, and funds for their delivery to the appropriate places for the team's use. Gifts have passed the $300,000 mark. After the team's departure, supplies may still be contributed through Dr. Denny's office at the Baptist World Alliance headquarters in Washington.

The briefing was held in a suite furnished by Edward C. Dixon, a documentary photographer for the mission and president of Continental Hospital Industries, Inc., of Cleveland.

PLAIN DEALER WRITER TO BE ENVOY OF PRESIDENT—MRS. ROBERTSON TO REPRESENT IKE GROUP

A letter on the way to Tokyo will appoint Josephine Robertson, Plain Dealer medical reporter, good-will ambassador for President Eisenhower's People-to-People Committee.

Mrs. Robertson left Cleveland last week on an around-the-world medical mission to Asia and Africa. Mrs. Robertson is the only medical writer on the mission team.

The letter from the Committee will reach Mrs. Robertson in Tokyo next week. Mrs. C. R. Henderlider, director of volunteers at Euclid-Glenville Hospital and a member of the President's Committee, said yesterday.

"It will serve as an introduction to everybody in the areas where Mrs. Robertson is visiting," she added. "This mission is the kind of thing we of the People-to-People Committee have dreamed of—people of the profession becoming acquainted with people of the same profession in other countries."

The only Clevelander to serve on the President's Employ-the-Physically-Handicapped Committee, Mr. Henderlider has traveled around the world and is convinced that exchange of information on a global basis engenders friendships among the peoples of the world.

"This is a perfect deal," she said, speaking of the medical mission project preparing to launch it globe-girdling journey today from San Francisco.

The President's Committee functions under the aegis of the State and Labor Departments. Its 150 members represent every section of the United States.

EXCITING MEDICAL MISSION

Today an exciting medical mission will start from San Francisco on an around-the-world tour, and Cleveland will have a special interest in its work.

It will be headed by Dr. Robert A. Hingson of this city and will include several other Clevelanders. The Plain Dealer is proud that its medical reporter, Mrs. Josephine Robertson, will accompany the mission, the only newspaper representative on its roster.

The mission, sponsored by the Baptist World Alliance, but with adherents of numerous faiths among its team, will show physicians and civilians in many foreign lands how American medicine does its work. New vaccines, equipment and procedures will be used; medicines and apparatus will be donated where they will do the most good.

UNIVERSITY OF MICHIGAN LIBRARIES

This is American private initiative at its best. The good that may result from it in saving lives and developing new patterns of medical education in faraway places will eddy on, long after the tour is complete. It is hoped that other teams later will follow.

This work reminds us of words recently spoken by John T. Connor, president of Merck & Co., Inc., before the Manufacturing Chemists Association: "Let us remember that in the long stretch of history, disease has ranked with hunger as man's worst enemy. War, so far, has run a poor third."

Connor then quoted Thomas A. Dooley, the young Navy doctor who in 1954 helped poor people of Vietnam fleeing the Communists. Dr. Dooley, who recently visited Cleveland, wrote:

"We had witnessed the power of medical aid to reach the hearts and souls of a nation. We had seen it translate the brotherhood of man into a reality plain people could understand.

"It made me proud to be an American doctor. But it also left me baffled. For why did our foreign aid planners, with their billion-dollar projects, ignore the enormous possibilities of medical aid? Since those possibilities were Christlike in power and simplicity, I could not understand it."

Connor, in the bulk of his speech, outlined Russian medicine and noted: "Should the Soviet Union continue its present rate of progress for another 5 years and then start exporting trained medical teams to sell communism as the only way to fight disease, it will surely be treading on our tails as we search for friends among the underdeveloped people of the world."

An added beauty of the medical tour starting out from San Francisco tonight is that it has no political strings attached, no commitments to sell an ism. Its purpose is to help and to instruct. May God be with it, for it is Christlike in power and simplicity.

Community Facilities Act of 1958

EXTENSION OF REMARKS
OF
HON. CHARLES A. WOLVERTON
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Friday, August 1, 1958

Mr. WOLVERTON. Mr. Speaker, on the motion to adopt the rule making the Community Facilities Act of 1958 in order, I was not recorded as voting for or against the rule but with a general pair.

It is my desire to make plain the reason for such action on my part. I am in favor of the general purpose or objective of legislation to assist needy municipalities in obtaining necessary facilities such as water, sewerage, and other public works. In many instances it has been shown that such could not be obtained, particularly by small municipalities, without the payment of an exorbitant rate of interest and, in some cases, the necessary loans to finance such were not procurable at any price. I would gladly vote for such legislation in a reasonable amount and with reasonable limitations. However, the bill reported by the Banking and Currency Committee of the House, and, which this rule would bring up for consideration (S. 3497), is so unreasonable in many particulars that I deem it wise to require the committee to give further consideration to the subject and report a more realistic bill.

The best evidence that the bill was not what it should have been can be drawn from the fact that the chairman of the committee addressed the House and announced that he would offer several amendments for the purpose of removing certain objectionable features. Of course, it was plain that this offer upon his part was with the evident intention of trying to get the rule for consideration of the bill adopted. This was a very unusual procedure and there was no certainty that the amendments he would offer would be adopted. If not, then we would still have an unsatisfactory bill.

It seemed to me that the proper course for me to pursue under the circumstances, being in favor of legislation on the subject, but not in favor of the particular bill as offered, was to refrain from voting on the committee bill as offered, and await further action by the committee. It is my hope that the committee will recognize not only the necessity for some legislation, but, that it must be reasonable in character as to the type of the facilities and terms upon which loans may be made, and the overall amount to be appropriated. A bill that would meet these requirements would be entitled to more favorable consideration than was accorded the bill presently reported by the Committee on Banking and Currency, and, which the proposed rule would bring before us for consideration.

Bipartisan Foreign Policy

EXTENSION OF REMARKS
OF
HON. PETER F. MACK, JR.
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Friday, August 1, 1958

Mr. MACK of Illinois. Mr. Speaker, as a stanch supporter of bipartisanship in the conduct of our foreign relations, I was particularly impressed by an editorial which appeared in the Washington Daily News on Friday, July 25.

Under leave to extend my remarks, I wish to include this editorial:

EISENHOWER-TRUMAN-HOOVER

There is great merit in the proposal of Senator WILLIAM KNOWLAND that President Eisenhower call into consultation our two living ex-Presidents, Herbert Hoover and Harry S. Truman.

The United States, heading for another summit conference, desperately needs a clear and firm policy. We need national unity in support of whatever course is taken.

Mr. Hoover and Mr. Truman, having carried the heavy responsibilities of the Presidency, are uniquely fitted to understand its trials. Mr. Truman, our last Democratic President, has upheld Mr. Eisenhower's action in Lebanon with patriotic disregard for partisan politics.

Conferences among these three men would, in our opinion, increase the assurance of the country that what is being done must be done—that every resource is being used to assure that we act wisely.

The President has stated that American military intervention in Lebanon may have serious consequences, which is a diplomatic way of saying it may lead to war. Another consequence might be appeasement which eventually, also, leads to war.

This is a situation demanding extraordinary action. Though no one can share the President's final responsibility, his predecessors should be able to help him.

And he needs help because—

THE UNITED STATES IS ON THE HOOK

The United States Government is going along with the Soviet demand for another summit conference not because it wants to, but because it has no choice.

Khrushchev has President Eisenhower on a propaganda hook, and he can't get off for the moment. All of the President's logical and patient explanations to our allies that a summit meeting will do more harm than good—like the Geneva summit conference—unless there are preparatory agreements proving Khrushchev's good faith, are ignored.

The President can stand out against Khrushchev but he can't stop the stampede of our allies. Prime Minister Macmillan has been forced to bow to summit demands of his British Labor Party critics. The nationalistic Canadian Government insists on such a conference almost at any price.

So we have been maneuvered again into an exceedingly dangerous position, where the President will be the butt of Khrushchev's poisonous slanders as the guilty aggressor charges the innocent with his crimes.

There is only one saving aspect, so far as we can see. This is the President's insistence that the summit meeting be held within the framework of the United Nations. This is an important move to salvage what little power and prestige the U. N. has left after long sabotage by Russia and others.

But even this U. N. gain is not yet assured. Though Khrushchev, Nasser, Nehru and company have accepted the summit-U. N. link nominally, there are already signs they will try to evade it in fact. This requires close watching.

Rafer Johnson Sets New World's Record for the Decathlon Event

EXTENSION OF REMARKS
OF
HON. HARLAN HAGEN
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Friday, July 18, 1958

Mr. HAGEN. Mr. Speaker, a splendid young Negro athlete from California has again demonstrated to the Soviet Union and other critics of our country that we produce the best, under a system of incentives and freedom which they would label inefficient and decadent.

The athlete I refer to is Rafer Lewis Johnson, a resident of Kingsburg, Calif. In recent games in Russia Rafer bested all competition in the decathlon event and in doing so established a new world's record for the event and reinvested the United States with leadership in a field which was earlier brought to a high point of United States leadership by Bob Mathias, of Tulare, Calif.

Rafer is to be congratulated on the fact that his accomplishments are not confined to the athletic field. He is a student leader at UCLA academically and otherwise.

I now make reference to a story which appeared in the July 29, 1958 edition of the New York Times which is a tribute to our greatest athlete:

At 3:30 p. m. yesterday in Kingsburg, Calif., Mrs. Lewis Johnson, a short, hefty woman known to all as "Dimples," was briskly ironing a basketful of clothes and listening to music on the radio, when the announcer cut in and said:

"We interrupt this broadcast to bring you an important bulletin from Moscow. Rafer Johnson, star athlete from UCLA, set a new world's record for the decathlon.

Mrs. Johnson smiled; she was happy, but not terribly surprised. Nor was anyone else in Kingsburg taken by surprise. In that central California town, population 2,310 citizens, Rafer Lewis Johnson, 22, is regarded as a kind of Ulysses.

SNAKES AND SPIDERS

For the last 5 years the local sports writers have been trumpeting Johnson's athletic glory; so much has been written, been said, and been repeated that nowadays his claquers merely retain an assured calm when Johnson does it again.

Johnson's father, Lewis, a 6-foot 5-inch former railroad worker, said, "Ray (as he's called by close associates) sure is a nice boy. He was always a playful child; always wore a smile. Main thing about him was he liked a litle joking, you know. He liked to buy those little rubber snakes, and spiders, and set them down at the breakfast table. He'd get me upset; he'd get a big kick out of that."

Rafer Johnson was born in Dallas, Tex., the second of six children (the first born, a girl, died) to Lewis and Elmer Johnson (Elmer's father wanted a boy, and gave his daughter a boy's name). Later she gained the nickname "Dimples."

BOY WHO BROKE BATS

Rafer shifted with his parents from city to city as a boy, and switched schools with the frequency of a career officer's children. His father was not entirely happy with his jobs, but a decade ago, when they moved to Kingsburg, they finally settled down.

"I recall Rafer as a grade school kid," said Benton Bowen, sports editor of the Kingsburg Recorder. He was a fine sandlot baseball player, but we remembered him as a kid who broke bats. He hit the ball so hard that he was forever breaking bats."

His sterling achievements as a high school athlete established him as a celebrity in central California, and when he went to the University of California at Los Angeles he was a marked man.

Through all his success, Rafer Johnson has maintained a quiet, modest disposition. He is supposed to have never had a street fight as a child, and when asked by Bowen last month how he liked Russia's Vasily Kuznetsov, the man he beat yesterday, Johnson replied, "He's a nice fellow. All the athletes I've ever met have been nice fellows."

Johnson never says anything controversial, has no stern opinions about anything, and is not generally regarded as good copy by track reporters. Yet everybody likes him. And, in school, he is extraordinarily intelligent. He is president of the UCLA student body and maintains a close-to-A average. He wishes to become a dentist, having never had any trouble with dentists in his lifetime.

QUICK TO LEARN

"Johnson picks up things faster and better than most athletes," said Coach Ducky Drake, of UCLA's track team. "You tell him what to do and he can do it immediately. A lot of kids are shy and look away when they're talking to you. Not Rafer. He is literate."

Injuries, mostly knee trouble, have plagued Johnson in his college years. He went to the Olympics in 1956 with an injured knee. Still he finished second in the decathlon to Milt Campbell.

Among the world's shotputters, Johnson now is in a classless society: he is all alone at the top. He is a shotputter who can also run 100 yards in 9.8 seconds; the 220 in 22 seconds; the 120-yard hurdles in 13.8 seconds, and the 220 low hurdles in 22.7.

As a sprinter he has high jumped 6 feet 2½ inches, pole vaulted 12 feet 9½ inches, and broad jumped 25 feet 5¾ inches. He also loves to ski, race boats, and take pictures. But he doesn't like to have his own picture taken.

A Sense of Congress Resolution

EXTENSION OF REMARKS
OF
HON. JOHN D. DINGELL
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Friday, August 1, 1958

Mr. DINGELL. Mr. Speaker, in the near future the President of the United States is expected to attend a summit meeting with Nikita Khrushchev and other world leaders. At that time one of the principal subjects of discussion will be the Middle East and the very real threat of war in that area.

Certainly the question of Israel's continued existence will be raised.

A first premise of American policy must be that there will be no sell-out of Israel. Israel's right to continue to exist as a free independent sovereign nation with her territorial integrity preserved must be a basic American policy. There must be no compromise on Israel's continued free existence.

Ten years ago the restoration of Israel was supported by the United States and other free world countries. America was among the first to recognize this new sister democracy. This nation, which has given haven and sanctuary to more than 900,000 Jews, reclaimed a desert wasteland, and developed a vigorous economy and free democratic institutions, has earned its right to stay forever free.

Certainly the President must press for a program jointly with Russia in guaranteeing the borders and territorial sovereignty of all nations in the area. A similar guaranty should be made through and by the United Nations.

The conference should include discussion of assistance both by the United States and Russia independently, and through the U. N., in the resettlement of the Arab refugees who are causing grave economic and political disturbance during their period of meager existence privation and suffering in Jordan, the Gaza Strip and elsewhere.

The discussion must include a serious effort to achieve a U. N. police force sufficiently strong in number and in authority to prevent border raids, gun running, and military operations of any sort large or small. Economic assistance should be offered to those nations which will assist in restoring peace to the area.

To assist in this I am introducing a "sense of Congress resolution" in the hope that other Members who feel as I do may express their views on this subject. I hope this will manifest the sense of the Congress and the people of the United States that there should be a real U. N. police force to deal with the tension and strife we see in the Mideast.

Seaway Will Open Five Lakes Full of Rivals

EXTENSION OF REMARKS
OF
HON. FRANCIS E. DORN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 31, 1958

Mr. DORN of New York. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the second of three articles by Mr. Eckert Goodman, which appeared in the New York Daily News on July 23, 1958, which deal with the effect of the opening of the St. Lawrence seaway on the port of New York:

SEAWAY WILL OPEN FIVE LAKES FULL OF RIVALS

(By Eckert Goodman)

(Second of three articles)

The St. Lawrence seaway, whose opening next year will touch off incalculable new competition for the already hard-pressed port of New York, has been described as America's fourth coast and a gateway to the world's eighth sea.

It has also been called one of international shipping's biggest bundles of unknown quantities.

A 360-mile-long chain of interlocking lakes, locks, canals, and dredged riverbed between Lake Erie and Montreal, it will provide a continuous 27-foot channel for ocean freighters.

Thus the seaway is a vital link in a 2,400-mile inland waterway leading from the Atlantic Ocean north of Nova Scotia into the heart of America's Midwest, which claims two-fifths of the country's manufacturing and almost half of its farm production.

Disregarding the $650 million St. Lawrence power project, whose three dams now pen up in a 25-mile-long lake what used to be the International Rapids, the seaway is largely an improvement of an existing 14-foot waterway which has been in use on the St. Lawrence for over a half a century.

IT'S BIG ENOUGH FOR MOST FREIGHTERS

But its 27-foot depth and 7 new 800x80-foot locks will enable an estimated three-fourths of the world's ocean-going shipping to reach such inland cities as Buffalo, Cleveland, Detroit, Chicago, and eventually Milwaukee, and Duluth.

The waterway's joint United States-Canadian tolls committee has estimated that it will attract some 25 million tons of shipping in its first full year of operation and more than 50 million tons annually by 1967.

Half a dozen United States steamship companies, including the Grace, Isbrandtsen, and United States Lines, have announced that they intend to operate on the seaway; and its recent designation by the Maritime Administration as part of essential foreign trade routes to Europe and South America assures them of operating subsidies.

About 80 percent of seaway cargoes are initially expected to consist of bulk commodities like wheat, coal, and iron ore. But there are confident predictions that the proportion of high revenue producing general cargo, which every port on the Great Lakes is hoping to attract, will rise from a base of a million tons a year to nearly 7 million annually within a decade.

UNIVERSITY OF MICHIGAN LIBRARIES

COULD COST US ABOUT 200,000 JOBS

Five years ago, Port of New York Authority analysts estimated that the seaway could divert more than 3,500,000 tons of general cargo a year from New York, an amount which could ultimately result in a loss of 200,000 jobs and a $1 billion payroll.

Since the study was made, the figures have been revised downward, but it is still generally agreed that the seaway will be a constant threat and could have a seriously damaging impact on the port's foreign trade and, hence, the city's whole economy.

The main advantage, claimed for the seaway is, of course, lower shipping costs. At present, the average Midwest shipper has to spend about as much to get his merchandise on a New York pier as it costs him to ship it to Europe. Even with toll charges and the extra distance they'll have to sail, steamship operators are sure they can do a lot better than that—and some of them seem to have more or less proved the point.

INLAND STUDY SHOWS A 20 PERCENT TO 40 PERCENT SAVING

A group of Great Lakes manufacturers recently announced that a careful study, including generous allowance for unknown factors, had convinced them that the seaway would reduce their freight costs to Europe by between 20 percent and 40 percent, depending on the type of commodity.

A Milwaukee manufacturer has reported that he saved $5,000 in transportation charges by shipping a power shovel to France abroad one of the small, specially built foreign freighters which have been plying the St. Lawrence for years. And another claims an economy of $30,000 on the piecemeal movement of a medium-sized cement plant to Spain by the same little ships.

Midwestern seaport enthusiasts also like to point out that, by seaway, Cleveland will be 200 miles closer to Hamburg, Germany, than New York, and Duluth is almost 500 miles nearer Rotterdam by water alone than via New York by rail and water.

AND NOW: THE OTHER SIDE OF THE COIN

But even the most ardent seaway devotees are forced to admit that all is not clear sailing ahead, and a good deal remains to be spent and done if the trade route is to measure up to their highest expectations. Here are some of the problems:

1. The seaway will be closed down every year for 4 months, between early December and mid-April, by ice plus winter storms which make inland navigation hazardous.

2. The 27-year-old Welland Canal, which circumvents Niagara Falls and its rapids by lifting and lowering ships 326 feet in 8 locks between Lakes Erie and Ontario, is already jampacked on occasion and could easily become, with its partially one-way passage, a serious bottleneck.

3. The seaway's 27-foot-deep channel—in contrast with New York Harbor's 45 feet and Philadelphia's 37—cannot be safely navigated by ships with more than 25½ feet of draft, and is too shallow to admit more than 5 percent of today's American merchant marine freighters fully loaded.

4. It will cost at least $141 million in Federal expenditures to dredge deeper channels between the Great Lakes and leading into its harbors, and an outlay of some $100 million more by the 57 ports themselves to open the entire 2,400-mile route to sizable ocean commerce.

5. It is still hard to estimate ship operation costs accurately because definite tolls, while suggested, have not yet been set, and use of the present waterway is free.

6. A whole new midwestern maritime industry must be created and trained to insure efficient financing, insuring, forwarding, and handling of foreign general cargo.

BUT SEAWAYERS SAY THEY HAVE ANSWERS

But seaway proponents claim to have answers to most of these problems. During the winter, while the St. Lawrence is closed down, they explain, bulk cargoes can be safely and economically stored; and railroads and trucks can be reutilized, even at their threatened higher rates, to transport general cargo to eastern seaports.

Besides, a method of preventing ice from forming by the release of air bubbles from underwater pipes has proved successful in certain Canadian and Scandinavian harbors, and eventually it may even be feasible to pump relatively warm water from the Great Lakes into the river to keep it from freezing over.

The capacity of the Welland Canal, which supposedly can handle double the 23 million tons of shipping a year it now accommodates, can be doubled again by construction of a new set of parallel locks, when traffic warrants the expense. Meanwhile a schedule can, perhaps, be worked out to prevent traffic jams.

As for the seaway's 27-foot depth, most steamship companies say they can operate their freighters profitably even if they aren't loaded down to their Plimsoll lines, by taking on and discharging portions of their load at Quebec and Montreal, or by carrying cargo which is bulky but relatively light.

THEY'RE ORDERING SHIPS SPECIALLY FOR SEAWAY

In addition, both Grace and United States Lines report that they have on order freighters specially designed for seaway use. This is also the case with several European companies, one of which, Holland's Oranje Line, has announced that it will put two specially built cargo-passenger vessels into service between Chicago and Rotterdam next summer.

Contracts totaling $42 million for dredging and deepening Great Lake channels have already been let by the United States Government, and work is proceeding apace under supervision of the Army Engineers Corps in such farflung areas as the Detroit River and St. Mary's River, which flows out of Lake Superior, 600 feet above sea level.

The Great Lakes' ports themselves have earmarked millions of dollars for waterfront reconstruction and harbor improvements, and are cautiously contemplating the expenditure of millions more. Chicago, for instance, which has embarked on a $37 million port-expansion program, anticipates spending three times that amount within the next 10 years.

Milwaukee is in the midst of building an $11 million pier and general cargo terminal; Duluth has begun construction of a $10 million waterfront installation; and Toledo, with a new $5 million railroad dock near completion, envisions spending $25 million more on port expansion as soon as it has been assured of a 27-foot channel.

It's in the export fields in which New York is now predominant—automobiles, industrial machinery, electrical apparatus, steel products and fresh and frozen meat—that the port is apt to be most sorely challenged by the seaway.

WE NOW HAVE 83 PERCENT OF AUTO EXPORTS

Last year 83 percent of the Nation's automotive exports passed through the Port of New York. While most cars are shipped in knockdown condition for assembly after arrival, some are not; and a Milwaukee businessman pointed out a few weeks ago that from $160 to $200 a car was being saved on vehicles sent unboxed from Great Lakes ports.

Remarked the general manager of Willys Motors recently: "When it costs us $5.50 to get a jeep to the pier in Toledo, as against $53.62 when the port of New York is used, we are talking about a competitive advantage we thus have in the foreign country where the jeep is delivered."

THE GREAT LAKES ARE IN THE BIG LEAGUE

Another ominous note for the future was sounded by President Lewis A. Lapham of the Grace Line, speaking before a group of Wisconsin industrialists.

"The port of Milwaukee," he advised them, "may not immediately rise to such fame as the Braves, but they are both in the big league to stay.

"Ships always follow the cargo * * * and you need have no fear, the house flags of the world's fleets are in the lakes to stay."

Social Security Amendments of 1958

SPEECH
OF
HON. EDWIN B. DOOLEY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 31, 1958

The House in Committee of the Whole House on the State of the Union had under consideration the bill (H. R. 13459) to increase benefits under the Federal old-age, survivors, and disability insurance system, to improve the actuarial status of the trust funds of such system, and otherwise improve such system; to amend the public assistance and maternal and child health and welfare provisions of the Social Security Act; and for other purposes.

Mr. DOOLEY. Mr. Chairman, the approval by the House by an almost unanimous vote of H. R. 13549, the 1958 Social Security Act amendments, is a source of gratification to the Representative from New York. The Ways and Means Committee of the House is to be commended for reporting this timely measure which will have a salutary effect on so many families. The infirm, the disabled and the penurious need sorely the financial assistance this bill will provide, if enacted into law.

It is an established fact that there has been an upward incidence in the cost of living since the benefit increase of 1954. To those people who have little monetary resourcefulness, any rise in the cost of living has painful results. The sorrowful letters received from many of my constituents bear testimony to this fact.

Many felt that the $3 minimum increase should have been double that amount. But the Ways and Means Committee used good commonsense by doing all it could do, while at the same time keeping the social-security fund in balance. The bill provides a method of increasing the tax revenue necessary to strengthen and maintain actuarially this valuable program. The 7 percent increase may not be acceptable to all who favored an upward revision, but it is equitable and desirable in the light of all the circumstances.

Today our system of social security is an integral and accepted phase of our life. Millions of citizens know that when they reach a certain period they will not have to depend on charity for sustenance, but will enjoy the benefits of a trust fund to which they, their employers and their Government have contributed.

Even as the situation now is, there is room for improvement. The payments, generous though they are, remain inadequate for the costly demands of everyday life. A study will have to be made as soon as possible to ascertain what

can be done to provide more adequate payments while at the same time keeping the system in balance with adequate contributions from future beneficiaries.

It is my belief that the above-mentioned measure constitutes a most timely and beneficial piece of legislation. It concerns millions of Americans; it affects the very mainstays of our system of economy.

The Age of the Goof-Off

EXTENSION OF REMARKS
OF
HON. ROLAND V. LIBONATI
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, June 9, 1958

Mr. LIBONATI. Mr. Speaker, it takes an experienced man to write the truths of life as enumerated in the sparkling editorial that appeared in the Washington Daily News on May 27, 1958. It is plumb full of good sense and spells out everything the public has been thinking about. Everybody wants to be identified with a title, a high-sounding one that would awe the common mortal and please the family, especially the frau.

Which reminds me that a certain friend of mine was given a sumptuous banquet attended by over 300 guests—he was being honored for having attained the high honor and trust reposed in him by the governor of the State—in appointing him a notary public—the issuance of said certificate, at that time, to any citizen over 21 years of age and filing of a petition signed by 50 citizens with 2 sponsors. Of course, many of the guests being of foreign birth and new arrivals conceived the idea that the professional status of the title "Notary Public" in their homeland was the same namely as special avocate. Speaker after speaker, in his foreign tongue, eulogized the guest of honor for his literary and legal attainments. I beg to state that the recipient of these superlative praises, had in his early youth manicured the floors of a kindergarten with a mop—what an education.

The bank official family are no exception with their junior classification of vice presidents. And the political bodies, with their chief engineer, chief assistant engineer, assistant engineer, and second assistant engineer; and then the chief, deputy chief, executive secretary to the chief, and in the administrative offices as the secretary to the executive assistant, secretary to the administrative assistant, and so it goes on. So let us enjoy the pleasing chuckles of the succinct editorial, the Age of the Goof-Off:

THE AGE OF THE GOOF-OFF

"I am skeptical," the man said, "about this thing we are in * * * this thing that is about to "saucer out" or "bottom out"—this recession or depression or whatever.

"Because look. There never was a depression before when prices continued to climb. There never was a depression before when people had money, but wouldn't take it out of the bank. I think the economists are wrong, because this is not an economic thing. I think people are just bored with us—with you and me—with the things we sell, the way we sell them. And it's better to have a prospect furious with you, than to have him bored.

"But mediocrity of salesmanship is only a part of our national pattern. For this, in America, is the great era of the goof-off, the age of the half-done job. The land from coast to coast is populated with laundrymen who won't iron shirts, with waiters who won't serve, with carpenters who will come around someday maybe, with executives whose mind is on the golf course, with teachers who demand a single salary schedule so that achievement cannot be rewarded, nor poor work punished, with students who take cinch courses because the hard ones make them think, with spiritual delinquents of all kinds who have been triumphantly determined to enjoy what was known until the present crisis as "the new leisure." And the salesman who won't sell is only a part of this overall mess.

"I think—and I hope to God it is true, that our people are becoming sick of this goofing off. Maybe we are gradually beginning to realize that history is repeating itself. The Russians are doing a wonderful job as the barbarians in our modern historical drama. But we are outdoing them in our superlative imitation of Rome. We may lack a few of the refinements of Rome's final decadence, but we do have the 2-hour lunch, the 3-day week, and the all-day coffee break. And, if you want to, you can buy for $275, a jewelled pill box with a built-in musical alarm that reminds you (but not too harshly) that it's time to take your tranquilizer."

Sounds like somebody who hates salesmen, doesn't it? But it isn't. The foregoing Dutch rub to salesmen was administered to the national sales convention here by a fellow who loves salesmen. He's one himself; Charlie Brower, president of Batten, Barton, Durstine & Osborne, the advertising firm that is to salesmanship what Dinah Shore is to showmanship. Mr. Brower's words are applicable, it seems to us, to ourselves and we suspect they might be read with profit by others in Washington, too. He has a solution—not new, but still good; and also an alternative:

"What you and I have to do; patiently, and day by day, is to teach those over whom we are given supervision, that work can be fun—that the only real reward that life offers is the thrill of achievement.

"We have got to work, or a stronger nation will put us to work."

Amen, Charlie.

Omnibus Labor Bill

EXTENSION OF REMARKS
OF
HON. JOHN E. HENDERSON
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 30, 1958

Mr. HENDERSON. Mr. Speaker, the omnibus labor bill passed some time ago by the Senate has now been referred to the House Education and Labor Committee which, I understand, may undertake hearings next week. This bill contains a number of provisions which, I know, the House committee will want to study carefully. Some of these questions are referred to in an editorial which appeared in the July 27 edition of the Sunday Times Signal, of Zanesville, Ohio. They are worthy of careful consideration. The editorial is as follows:

OMNI-BUST

The Kennedy-Ives omnibus labor-reform bill contains so many sleepers that it is a poor substitute for the bill Americans had the right to expect.

This pseudo-reform bill ties the hands of employer and deprives their employees of a bona fide free choice.

For example:

It would be a crime for an employer, at a company dinner, to express his appreciation to employees for the fact that they are still able to deal with each other.

It would be a crime for an employer if he loans money to an employee or gives a wage increase or any other benefits during or before an organizing drive.

It would, by making it a crime for an employer to directly or indirectly influence an employee's thinking, actually deprive the employees of their right to free choice to organize if they wish.

The bill, basically, means that the employer would have to remain silent. He would not know what or when to report to his employees.

Good employer-employee relations are based largely on communications. If this right is abridged it can only breed misunderstanding, distrust, and suspicion.

We do not believe that Americans want this kind of a labor bill. It will reform nothing; rather, it will place an even heavier burden on the men who make the jobs.

The Case for a Standing U. N. Army

EXTENSION OF REMARKS
OF
HON. STEWART L. UDALL
OF ARIZONA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 30, 1958

Mr. UDALL. Mr. Speaker, last week the other body passed a sense of Congress resolution urging the United Nations to create a permanent U. N. police force. A motion to reconsider the action taken on this proposal was defeated yesterday in the other body by a vote of 66 to 14.

Contemporaneously, a subcommittee of the House Committee on Foreign Affairs, chaired by the gentleman from Missouri [Mr. CARNAHAN] held fruitful hearings on this vital question, and I am hopeful that favorable action will be taken by the committee—and the House—before Congress adjourns.

An excellent statement of the case for a standing U. N. police force was presented in the New York Times magazine last Sunday by Sir Leslie Munro, ambassador from New Zealand to the United States, and that country's permanent representative to the U. N.

Ambassador Munro's provocative article follows:

THE CASE FOR A STANDING U. N. ARMY

(By Sir Leslie Munro)

During these critical days in the Middle East, all thoughtful men and women reflect, in an unhappily divided world, on the ways in which peace may be preserved. I believe that they are ready to take out an insurance policy to avert a cataclysm. I further believe that the insurance policy is a permanent United Nations force.

Reflect on this: On July 15 the United States landed a force of marines in Lebanon for these purposes as expressed by

UNIVERSITY OF MICHIGAN LIBRARIES

President Eisenhower—"to protect American lives * * * and by their presence to assist the Government of Lebanon to preserve its territorial integrity and political independence." The President went on to say that he hoped "the United Nations would itself take measures which would be adequate to preserve the independence of Lebanon and permit of the early withdrawal of the United States forces."

In other words, Mr. Eisenhower asked for a United Nations force to replace the American marines now in Lebanon. Moreover, the United Kingdom landed forces in Jordan which it is ready to withdraw as soon as the Security Council is in a position to insure the protection of the political independence and territorial integrity of Jordan. Surely these developments raise once again the question whether there should be a permanent United Nations Emergency Force in being.

I think, first, that it is a matter of urgency for the General Assembly to have at its disposal a permanent corps of observers, ready at our headquarters in New York to go to any part of a disturbed world at the request of a government threatened with aggression or subject to subversion. Secondly, I believe that the Assembly should consider the establishment of a force which would be immediately available on its authority, or on the authority of the Security Council and at the request of a sovereign government whose territories are in jeopardy.

This force would be under the immediate direction of the Secretary-General, subject to the overall authority of the Assembly (if the Assembly created the force) or of the Security Council (in the unlikely event that the force was the creation of the Council, where the Soviet Union would probably veto its formation). I do not suggest that the international force be stationed in one place. Member states should agree to provide contingents immediately available for stationing in areas where tension has arisen.

How large should such a force be? The United Nations Emergency Force in Egypt is close to 6,000 mean. The marines and other forces in Lebanon number 9,400 at the time of writing. There may be other areas requiring in the future a force of a size similar to those now in Egypt and Lebanon. I would think that at a minimum the nucleus of a permanent force would be 20,000.

Until such a force were called on, its cost would be borne by the various member states holding contingents available. When called into use, then the United Nations would have to discharge considerable costs, which in the case of the UNEF amount to approximately $20 million a year.

I doubt that the force could be made up of troop contributions from the great powers. The differences among the great powers are, unfortunately, too serious to allow them to contribute except indirectly—perhaps by way of supply. I would hope that the small powers, which have played so great a part in the pacification of the Gaza strip, could now decide, through the Assembly, to make components available for a permanent force to be effective in any part of the world disturbed by a crisis.

The purpose of such a force would be to stand as a symbol of the United Nations and to act as a deterrent. It would assure the inviolability of frontiers; there are few aggressors who will flout public opinion in an area where an effective U. N. force is either functioning or is about to function.

One concept of this force was set forth in that valuable book, Strengthening the United Nations, a report of the Commission To Study the Organization of Peace: "If UNEF were to be made permanent, and continued to enjoy the power of world moral opinion, it might become a deterrent to local hostilities or to the spread of such conflicts into global catastrophes. It should remain lightly armed, and would in no case be a combat force. It could not be used to fight a war to stop a war, but it would have certain peace-preserving functions.

"A permanent force of this kind could be used for observation, patrol and guard duty in troubled areas. It could patrol ceasefires, armistice demarcation lines and demilitarized zones, maintaining a separation of the parties and preventing breaches of the truce."

Lester Pearson of Canada, who played such a prominent part in the creation of the U. N. E. F., has made the following suggestion in respect to a peace supervision force: "By its very nature such a force would not be expected to fight its way into a country. Indeed, since it would be deployed upon recommendation of the United Nations, it could enter a country only with the consent of the government of that country. This consent would normally take the form of an agreement between the government concerned and the Secretary-General, acting on behalf of the United Nations.

In a case of direct aggression, especially if it were one of magnitude, probably in the first instance forces of the great powers would be immediately involved and it would be only later that the permanent international force would be used.

But the democracies have been much more successful in repelling direct aggression than they have in resisting subversion. The situations which can arise in respect of indirect aggression are numerous and cannot be defined in advance. In fact, the very definition of aggression has proved one of greatest difficulty and controversy.

A government may have been subverted and overthrown with startling rapidity. The question may then arise and be fiercely disputed as to whether what happened is a matter of purely domestic politics. I could imagine the Assembly being reluctant to call the emergency force into use in a matter where there was a question whether it was domestic in character and where the Assembly would have to weigh the international consequences of an intervention which might lead to a third world war.

In the case of Lebanon, had a permanent force been in being, and had its use been requested by the Lebanese Government, then I think the Council or the Assembly, as the case may be, would have made the force available. This seems to me an inevitable conclusion, since the Council did prove ready to send an observer corps to Lebanon.

The question of a U. N. force is as old as the U. N. itself. In the words of the charter, the Security Council may "take such action by air, sea, or land forces as may be necessary to maintain or restore international peace and security." But because of the opposition of the Soviet Union and its power of veto in the Council, that body has been unable to create an international force disposable at its direction.

As long ago as 1947, the Assembly of the U. N. considered the question of keeping order in Jerusalem. My predecessor as New Zealand Ambassador, Sir Carl Berendsen, said most forcefully, then and later, that whether the Assembly decided to create a trusteeship of Jerusalem or open a special temporary regime in the Holy City, the Assembly would require means of enforcement of law and order, just as the enforcement of law and order is an essential requirement in every city of the world, however calm, however peaceful. Apparently and unfortunately, Sir Carl was in advance of his time in suggesting an international force to preserve the peace in and around Jerusalem. But in the light of subsequent events in that area, who can doubt that he was right?

It is true that, following an aggression by North Korean troops in 1950, the Security Council did condemn this attack, and forces under the leadership of the United States and consisting of men from 16 nations successfully repelled the aggression. These forces formed a great fighting unit, but they were not representative of the United Nations as a whole although they truly represented its ideals and purposes. Their cost, which was great, was not paid by the United Nations. Their Commander in Chief was not subject to U. N. direction.

Then came the Suez crisis of 1956. The force created subsequent to the intervention of the Anglo-French troops in Egypt and now famous as UNEF, was not one provided by the permanent members of the Security Council. It came from the smaller powers, as I believe a new permanent force would have to come.

The work that UNEF has done and continues to do is of far-reaching importance. Through its supervision as a police force—not a fighting force—it has preserved peace in two most contentious areas of the Middle East—in the Gaza Strip and the area of Sharm el Sheikh. Fortunately UNEF still remains in these areas.

Several difficulties arise in respect to supervisory forces like UNEF which are created by the Assembly and not by the Security Council. In the first place, the normal presumption appears to be that they can remain in the country where they are established only so long as the government of that country thinks fit. One can respect this presumption because a sovereign state is entitled at will to have its territories free of all foreign troops. But in the modern world and in situations such as that of Suez, it seems that we may have to revise our notions of sovereignty. Certainly it was the view of my government in 1957 that the departure of UNEF from Egyptian territory should be a matter for the Assembly to decide—by a two-thirds majority—not Egypt or any other country.

A second difficulty is the cost of forces like UNEF, which is very considerable. But considerable as it is—the yearly cost of UNEF is roughly half the annual budget of the United Nations—this cost is a trifling insurance premium against the risk of war. It was not without some trouble that the Assembly last year passed a resolution, opposed by the Communist bloc, whereby the expenses of UNEF are to be borne by the members of the United Nations in accordance with the scales of assessments adopted by the General Assembly for the financial years 1957 and 1958. The passing of this resolution insured that the maintenance of UNEF should be a collective responsibility, resting on the full membership of the United Nations.

This is the principle of financial responsibility which I would advocate if a permanent United Nations force were to be established by the Assembly. The reluctance of many nations to meet the bill for a permanent international force is, I am afraid, one of the greatest difficulties in the way of its establishment.

Even if a permanent international force were established, there would be critics who would say that the United Nations would not act with sufficient speed to use it. There is, of course, much substance to this criticism. Prime Minister Macmillan, in the House of Commons, said that his Government in sending troops to Jordan could not wait for the United Nations, which in any case had no available force. On the other hand, under the impact of urgency and crisis, the United Nations did act with great energy and speed in the Suez situation.

For all the criticisms and all the difficulties, I still think that the attempt to create a permanent international force and a permanent team of observers must be made. I respect the view of those who say that the U. N. should proceed on an ad hoc basis, dealing with each crisis as it arises and calling for contributions to an international force as it is require. But have not the crises in Lebanon and Jordan shown this attitude to be unsound?

Perhaps when this article is published a special Assembly will be in session. Such a session can deal only with the matters for which it is summoned. Thus, the special Assembly could not set up a permanent force. But the regular Assembly, which will meet in September, will have before it from the Secretary General a study of the experience derived from the establishment and operation of U. N. E. F. This study could serve as a basis for Assembly action.

The next regular Assembly faces an immense responsibility, in which leadership will be expected from the great powers on the establishment of a permanent force on something like the lines I have proposed. The need is great. The time may be short.

Another First for Private Power

EXTENSION OF REMARKS
OF
HON. HUBERT B. SCUDDER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Friday, August 1, 1958

Mr. SCUDDER. Mr. Speaker, an example of what private business can and will do under proper public utility commission regulation came to light in a very dramatic manner last week. It was the announcement that Pacific Gas & Electric Co., which operates under California Public Utilities Commission regulation, plans to produce electric power from the natural steam of geysers located in Sonoma County in the First Congressional District of California.

It is another first for Pacific Gas & Electric Co. This will be the world's first all privately financed geothermal plant. Other outstanding firsts for this same publicly regulated company include the all privately financed nuclear electric powerplant at Vallecitos and the plan for a 60,000-kilowatt nuclear plant to be placed in operation near Eureka, Calif.

Of course, these facts do not please the Federal or nothing advocates. They believe such progress can be made only by Government-owned plants. They are the same group that oppose partnership development of the Trinity River project. They say the only way the public can be protected is for the Government to do the job, but actual experience in California proves this to be untrue.

A full account of this important new development of private power was printed in many of the newspapers of California, and under leave to extend my remarks, I wish to include one of these news stories from the Santa Rosa Press-Democrat of July 23, 1958:

PACIFIC GAS & ELECTRIC CO. TO BUILD STEAM POWER PLANT AT GEYSERS

THE BIG GEYSERS.—Pacific Gas & Electric Co. has announced plans to produce electric power from natural steam from the steam from the steam wells drilled here by Thermal Power Co., San Francisco development firm.

First stage of the development will be installation of a 12,500-kilowatt generating plant on the hill east of Big Sulphur Creek, in the heart of the volcanic area.

Thermal Power Co. President Dan McMillan said his company has an estimated 26,000 kilowatts available on the hillside, with another 12,000 kilowatts under development.

Pacific Gas & Electric Co. engineers—whom he described as real happy with the development are designing the special low-pressure power plant now, he said.

The letter of intent signed by Pacific Gas & Electric Co. brings to fruition predictions by Thermal Power Co. made early last year.

Thermal Power Co., the developers of the natural steam, and Magma Power Co., which has the lease on the property, have agreed to supply steam to the plant at 100 pounds pressure and a temperature of 348 degrees Fahrenheit.

Pacific Gas & Electric Co., it was learned, plans to run a 30,000-kilowatt capacity line out of the area in the first stage of the development.

The first plant's cost is estimated at $2 million. The design, engineers say, will involve 50-year-old techniques because of the relatively low pressure available at the site.

The development will be the first thermal power plant—power taken from the earth itself—in the United States, and will be the first privately financed thermal power development in the world.

Government-subsidized plants are in operation in Italy, and similar developments are underway in New Zealand and Mexico.

The letter of intent signed by Pacific Gas & Electric Co. and Thermal Power Co. calls for further development of the steam-producing area.

Mr. McMillan said Pacific Gas & Electric Co. will "take all we can produce." Estimates of the ultimate development here have been 200,000 kilowatts or more.

The Magma Power Co. lease covers 7,000 acres of land, owned by the Geysers Development Co., the original firm that attempted, in the early 1920's, to produce electric power from the volcanic earth.

The first wells—7 were drilled in 1922—were left to expend their energy in the steam geysers after promoters were unable to sell the power commercially. Present developers say that failure was due to an overabundance and low demand for electric power at that time.

The actual source of the steam is believed to be primarily water from the rocks of the earth, heated by magma, or molten rock from the center of the earth which has in this area leaked near the surface.

City Makes Strides in Fight for Survival

EXTENSION OF REMARKS
OF
HON. FRANCIS E. DORN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 31, 1958

Mr. DORN of New York. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the third and final article by Mr. Eckert Goodman which appeared in the New York Daily News on July 24, 1958, dealing with the effect of the opening of the St. Lawrence seaway on the port of New York:

CITY MAKES STRIDES IN FIGHT FOR SURVIVAL

(By Eckert Goodman)

(Last of three articles)

There is no question but that the port of New York is in healthier all-around condition today than it was a decade ago, when warning signs that it was on the downgrade were being given little more than nodding attention, and virtually nothing had yet been done to brake its impending slide.

It remains to be seen, however, how much lost time can be made up in an industry in which time is such a precious commodity that truck companies figure 10-minute traffic delays in their overall operating costs, and steamship lines take a loss of around $5,000 for every day a freighter lies idle.

Nevertheless, a great deal has already been accomplished in the way of improved waterfront conditions, and a lot more is in the works or planned. Here are some highlights of New York's port picture as it shapes up today, including both plus and minus aspects:

The bistate Port of New York Authority, which already controls 20 percent of the port's deep-water, general-cargo piers, is well embarked on a tremendous 20-year, $380 million marine terminal and harbor development program, designed to provide new cargo-handling facilities and upland wharfage areas equal to any in the world.

BROOKLYN WILL GET MORE BROAD PIERS

broad piers—one has just been completed—in broad piers—1 has just been completed—in place of 25 obsolete, narrow ones, along a 2-mile stretch of Brooklyn waterfront south of Brooklyn Bridge; (2) addition of 11 new ship berths and a 115-acre upland development at Port Newark, and (3) the dredging of 2 new, 35-foot harbor channels which will lead to a projected 703-acre terminal for 24 vessels at Elizabeth, N. J.

In addition, the city of New York, lifting anchor at last, is being carefully piloted by Marine and Aviation Department Commissioner Vincent A. G. O'Connor along a council-approved, 6-year, $200 million pier-construction course, to which $50 million has already been committed.

The self-sustaining program envisions the replacement of 16 old North River piers with half as many modern ones, and the construction of about a dozen additional piers in Brooklyn, and along the 1¾ miles of run-down East River Manhattan-side waterfront between Broad and Jackson Streets.

ONE SOUR NOTE: HIGH RENTALS

New North River terminals for the Cunard and United States Lines are included in the plans, along with a huge, square, four-berth pier now under construction for the Holland-America Line at the foot of West Houston Street.

The Holland-America setup, like two similar ones slated to be built by the city for Japan's Mitsui Line and the Moore-McCormack Lines on Gowanus Bay and Creek in Brooklyn, is designed to get pier traffic off crowded city streets. It will contain a spacious over-the-water court for trucks and cargo loading, and space for 725 parked cars on the roof.

The only sour note in all this new port development is the fact that modern construction costs make the rental of such self-amortizing facilities relatively high, and lessees can only hope that the estimated 25 percent to 40 percent they expect to save through more efficient cargo handling and faster turn-around will enable them to get by.

Holland-America, for instance, has agreed to pay almost $1¼ million a year in rent (an amount which Port Authority cost experts have challenged as unrealistically low), and Moore-McCormack will be on the hook for $487,000 annually—more than twice what it is paying for its two present Brooklyn piers.

At the dedication of the Maersk Line's new port authority-built terminal in Brooklyn last June, A. P. Moller, managing owner of the steamship company, commented:

"Our pier rent will be quite a good deal higher than hitherto * * * but we will just have to hope that handling of cargo will prove considerably cheaper than before, and that the much better facilities will bring us more cargo."

UNIVERSITY OF MICHIGAN LIBRARIES

HAIL LABOR PEACE AS BRIGHTEST SPOT

Increasing improvement in labor peace and stability on the New York waterfront during the last 5 years has been hailed as the brightest spot in the recent past and hope for the future of the port.

Last year there were only 13 work stoppages—none of them lasting over a day—compared with an annual average of 75 to 80 strikes a few years ago, and an all-time high of 92.

Largely responsible for the improvement has been the grievance machinery set up under recent contracts between the ILA and the 156-member New York Shipping Association, whose chairman is an indefatigable ex-newsman named Alexander P. Chopin.

It provides for pier-level settlements, whenever possible, by official troubleshooters dispatched to the scene; hearings before a joint labor relations committee, and, if necessary, the submission of disputes to a mutually acceptable arbitrator.

This year, however, there has been a series of jurisdictional strikes by white collar pier workers, picketings by teamsters and localized wildcat strikes.

There's still considerable disagreement about longshore seniority rights, hospital benefits, added safety precautions and the growth of automation in cargo handling. So there's no assurance that, despite contract provisions, serious labor trouble will not flare up at almost any time.

However, last year's signing of the eastern seaboard's first master contract, binding on labor and the shipping industry from Portland, Maine, to Hampton Roads, Va., offers a bonus advantage.

It makes it unlikely that New York will ever again have to suffer from the loss of millions of tons of cargo to competing ports during a local strike—something which has happened on a number of occasions in the past.

The long-embattled, bistate waterfront commission, created 5 years ago to reform and regulate the longshore industry, is still vastly unpopular.

It is particularly resented by employers of waterfront labor who are required to (as they put it) "shell out $2 million a year to be policed," and money-grubbing bosses of certain ILA locals who have found it harder to operate some of their more lucrative rackets and shakedowns.

NOT AN INSTITUTION RUN BY INMATES

But no disinterested port observer denies that however successful or unsuccessful the commission may have been in its efforts, it has charted paths through what was formerly an impenetrable jungle and created relative order out of what came close to being utter chaos.

"Naturally," remarked a former port official, "any agency with the power to suspend and revoke its own work permits and hiring licenses is going to be feared and hated.

"Maybe the waterfront commission hasn't always been right in its evaluation of criminal records, curtailment of casual labor and substitution of hiring hall information centers for pierhead shapeups. But it has been conservative in what it has done—and in any event the port of New York is no longer an institution being run by the inmates."

INSURANCE CLAIMS TAKE SHARP DROP

The commission also has helped to reduce pierhead pilferage, together with the small but vigilant security bureau, which was founded by maritime interests 11 years ago when waterfront larceny was at its height.

Today, it's generally agreed that losses through theft are less than $30 out of every $100,000 worth of cargo—about one-tenth of the annual losses claimed by New York department stores from shoplifting or by hotels from stolen property.

Since World War II, the percentage of insurance claims for stolen cargo has dropped from 33⅓ percent to 17 percent, and most marine underwriters agree that New York's pilferage losses are now proportionately at least as low as those of any other general cargo port in the country.

Readjustment of the so-called rail differential, which discriminates against New York by providing Midwest shippers with lower freight rates to and from southern ports, is currently under consideration by the Interstate Commerce Commission. But even if that agency issues a favorable ruling, port authorities feel certain that the issue will be in litigation for several years.

SEEKS UNIFORM PIER CHARGES

The same thing probably applies to the Federal Maritime Board's effort to set up uniform standards for pier charges and services, so that railroad terminal operators in southern ports can't offer steamship lines preferential rates for the use of their facilities.

Promotion of the port of New York had, until recently, been fostered virtually 100 percent by the port authority, which last spring opened new London and Zurich trade development offices, in addition to the four it operates in this country and a fifth in Rio de Janeiro.

Three years ago, however, Mayor Wagner established a 12-man city council on port development and promotion, and 1956 witnessed the creation of an industry-backed port resources information committee, which last winter issued a handsomely illustrated 192-page New York port handbook.

FIFTEEN GROUPS UNITE TO PROMOTE PORT

Last year, 15 local trade and maritime agencies formed a joint committee for promotion of port of New York, currently under the chairmanship of William F. Giesen, hard-driving general manager of the Maritime Association of the Port of New York.

But the opposition has also grown formidable. During the past 15 years, 13 competing ports have opened trade promotion offices in the city, and steamship companies are increasingly establishing new Midwest headquarters to push their seaway trade.

What many maritime authorities feel is most urgently needed today is a single, cooperative well heeled port promotion campaign, designed to sell the advantages of New York all over the mercantile world. For the stakes are high, and time, for the world's greatest port, is rapidly running out.

Bishop Dagwell, Portland's First Citizen

EXTENSION OF REMARKS

OF

HON. EDITH GREEN

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 9, 1958

Mrs. GREEN of Oregon. Mr. Speaker, a short time ago, there came across my desk a booklet two-hundred-odd pages in length, mysteriously entitled "Twenty and Five-tenths Percent: A Compilation of Public Records—1,411 Protestant Episcopal Rectors," published by a so-called publishing committee, giving as its address a post office box in Cincinnati, Ohio.

Listed inside the booklet were the names of many persons. Below the name of each person was set forth the names of various organizations and descriptions of public statements with which the individual had allegedly been affiliated.

No statement of purpose is contained in the booklet. All is left to innuendo, smear, and implied accusation that somehow the individual's connections with these organizations were inimical to the security of the United States.

These smear tactics, employing the well-known and equally well-discredited tactics of "guilt by association" should be roundly condemned.

Listed in the booklet was the name of a man whom I have known and respected for a long time. He is the bishop of the Episcopal Diocese of Oregon—a man loved and revered throughout my State—a man who has labored long and hard for causes which would be of maximum benefit to the people. His loyalty to his country has ever been beyond question.

The bishop of the Episcopal Diocese of Oregon does not need me to rise to his defense. He needs no defense. His life and his works speak eloquently of his character, his integrity, and his love of country.

When, in February 1957, the Right Rev. Benjamin Dunlap Dagwell, bishop of the Episcopal Diocese of Oregon, was awarded the B'nai B'rith brotherhood award, Rabbi Julius Nodel, of Portland, Oreg., had this to say to him:

No person in this community is better deserving of this award. Bishop Dagwell has literally practiced what he preached and never has limited his services to the sanctuary confines.

Last January 15, the Portland Realty Board of Portland, Oreg., honored Bishop Dagwell as Portland's "first citizen for 1957." The report of the realty board's committee, which selected Bishop Dagwell for this very much deserved award, is a testimonial to a man whose life has been dedicated to the good of his fellow man and whose deeds are eloquent tribute to a man whom all Oregonians honor, respect, and admire.

Vague innuendoes and smear tactics will not detract from the good which Bishop Dagwell's deeds have wrought in strengthening Oregon and the Nation.

Under unanimous consent, I include the report of the realty board's committee which selected Bishop Dagwell as Portland's first citizen for 1957 in the CONGRESSIONAL RECORD:

After several sessions where a considerable list of worthy names were considered, the seven members appointed to serve on the Portland Realty Board's secret committee voted unanimously, on the first formal ballot taken, to designate as Portland's first citizen of the year 1957, the Right Reverend Benjamin Dunlap Dagwell, who will retire next July after 22 years of distinguished service as Bishop of the Episcopal Diocese of Oregon.

This is the second award bestowed this year on Bishop Dagwell, he, in both instances, being the first cleric ever so honored in Portland.

Because of his outstanding record in the field of inter-faith work and for "his active influence and courage in making real the religious idea of the fatherhood of God and the brotherhood of man," Bishop Dagwell was last February declared winner of the annual B'nai B'rith Brotherhood award.

"No person in this community is better deserving of this award," said Rabbi Julius Nodel in conferring the honor. "Bishop Dagwell has literally practiced what he preached

and never has limited his services to the sanctuary confines."

The clipping files of Portland's newspapers are bulging with accounts of Bishop Dagwell's long running fight for fair employment practices, better housing, civil rights and civic responsibilities. His has truly been a voice of wisdom and human understanding in the community.

Bishop Dagwell has been referred to as the editor's dream who makes good newspaper copy by taking the "sacred cow" of public opinion and swinging it by the tail. The newspaper index file in the Portland Public Library contains 31 cards referring to interesting articles relating to Bishop Dagwell and his activities.

Known as the breaker of precedents, Benjamin Dagwell began his career in Portland by ignoring the custom that a new bishop should be consecrated in the field in which he had worked, being the first bishop in the history of the Oregon Diocese to take the solemn vows in Oregon. In explaining why he desired to part from the tradition established by his four predecessors, Bishop-elect Dagwell said, "I want to be in the presence of those with whom I am to labor when I take my vows and receive episcopal authority."

In 1940 while addressing the 52d annual diocesan convention, Bishop Dagwell again proved that he is not a man to let tradition stand in his way by advocating a streamlining of church services, contending that the sermons and prayers dragged out and were too long.

While he must soon retire from his official post in the church, Bishop Dagwell will not be lost to Portland. Last year a group of his admirers and friends formed a charitable organization to be known as the Benjamin Dagwell Foundation which was launched with contributions totaling $30,000. As additional sums accumulate in the foundation, funds may be used for a wide range of charitable, social, welfare, health (including mental health) or educational purposes. Knowing that Bishop Dagwell has been responsible for many acts of kindness and charity, the foundation was formed to honor him, and he has agreed to remain in Portland after his retirement, on his 68th birthday, to serve as administrator of the foundation.

When Benjamin Dagwell became bishop, he said he did not intend to occupy the swivel chair in his office very much of the time and remarked that, being unmarried and not tied down with duties at home, it was his desire to travel over the diocese as extensively as possible in the hope that he might know every man, woman, and child in the diocese as a family. Recently it was reported that in 4 months' time he had traveled 12,000 miles, 2,200 by ship, 4,500 by air, and the rest by automobile, driving much of this distance himself. During that time he visited 61 churches, some of them several times, and confirmed 750 persons at 57 services. Bishop Dagwell has been especially effective in persuading a number of local churchmen to enter seminaries and holy orders and has helped many young seminarians through school.

In addition to his work over the diocese, Bishop Dagwell has served as president of the board of the Good Samaritan Hospital which has been greatly expanded and modernized under his leadership, as president of the board of St. Helen's Hall, the Good Samaritan Hospital in Corvallis and the Rogue River Valley Hospital in Medford. For 7 years Bishop Dagwell served on the National Council of Protestant Episcopal Churches.

For a number of years Bishop Dagwell served as chairman of the Portland Housing Code Commission, a responsibility he accepted because, he said, "I am interested in how my fellow man lives." He has also served as chairman of the Fair Practices Committee. Here in Portland our First Citizen has served on a number of boards and directorates including Reed College, Goodwill Industries, Oregon Tuberculosis Association, Portland Remedial Loan Association, Portland Council of Churches, Portland Chamber of Commerce and has served as a member of the Board of Overseers of Whitman College, and as a director of the Deaconess Training School in Berkeley, Calif.

He has served on the governing board of Willamette View Manor, which is sponsored by the Methodist Church, and has worked earnestly and effectively in the organization campaign for the Rogue Valley Manor, a 284-apartment structure to be erected in Medford as a Christian home for people of moderate means under the sponsorship of the Presbyterian, Methodist, and Episcopal Churches of Oregon. Bishop Dagwell is a member of the Newcomen Society and chaplain of the Oregon chapter of that distinguished organization.

In referring to Bishop Dagwell at the service commemorating the 10th anniversary of his consecration, the late Bishop Matthews said, "Without ever losing his characteristic quality as primarily a religious leader, Bishop Dagwell has nevertheless exercised his unusual gifts, mental, moral and spiritual, in matters of public concern. He is a Christian gentleman with never the breath of suspicion that he is a self-seeker in the tempting field of personal aggrandizement or publicity. He is indeed a leading citizen."

Though a man of great courage and deep convictions, Bishop Dagwell is essentially a quiet, gentle man with a shy, engaging smile and a delightful sense of humor. He is a capable leader and a highly efficient administrator, but even when he is busily engaged in handling a difficult problem, he can cheerfully endure an interruption and flash a twinkle in his eye as he grants some simple personal favor. Whenever he is called, be it at any hour of the day or night, he always responds promptly and graciously.

Such are but a few of the admirable personal traits of the modest yet eminent church leader who is loved throughout the west—Benjamin Dunlap Dagwell, whom we are proud to salute and acclaim as Portland's first citizen for the year 1957.

PRINTING OF CONGRESSIONAL RECORD EXTRACTS

It shall be lawful for the Public Printer to print and deliver upon the order of any Senator, Representative, or Delegate, extracts from the CONGRESSIONAL RECORD, the person ordering the same paying the cost thereof (U. S. Code, title 44, sec. 185, p. 1942).

CONGRESSIONAL DIRECTORY

The Public Printer, under the direction of the Joint Committee on Printing, may print for sale, at a price sufficient to reimburse the expenses of such printing, the current Congressional Directory. No sale shall be made on credit (U. S. Code, title 44, sec. 160, p. 1939).

LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any executive department, bureau, board, or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section relating to estimates shall apply to reports or documents not exceeding 50 pages (U. S. Code, title 44, sec. 140, p. 1938).

Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on House Administration of the House of Representatives or the Committee on Rules and Administration of the Senate, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U. S. Code, title 44, sec. 133, p. 1937).

GOVERNMENT PUBLICATIONS FOR SALE

Additional copies of Government publications are offered for sale to the public by the Superintendent of Documents, Government Printing Office, Washington 25, D. C., at cost thereof as determined by the Public Printer plus 50 percent: *Provided*, That a discount of not to exceed 25 percent may be allowed to authorized bookdealers and quantity purchasers, but such printing shall not interfere with the prompt execution of work for the Government. The Superintendent of Documents shall prescribe the terms and conditions under which he may authorize the resale of Government publications by bookdealers, and he may designate any Government officer his agent for the sale of Government publications under such regulations as shall be agreed upon by the Superintendent of Documents and the head of the respective department or establishment of the Government (U. S. Code, title 44, sec. 72a, Supp. 2).

PRICE OF THE CONGRESSIONAL RECORD

The Public Printer is authorized to furnish to subscribers the daily RECORD at $1.50 per month, payable in advance.

Remit by money order payable to Superintendent of Documents, Government Printing Office, Washington 25, D. C.

CHANGE OF RESIDENCE

Senators, Representatives, and Delegates who have changed their residences will please give information thereof to the Government Printing Office, that their addresses may be correctly given in the RECORD.

RECORD OFFICE AT THE CAPITOL

An office for the CONGRESSIONAL RECORD is located in Statuary Hall, House wing, where Mr. Raymond F. Noyes is in attendance during the sessions of Congress to receive orders for subscriptions to the RECORD at $1.50 per month, and where single copies may also be purchased. Orders are also accepted for the printing of speeches in pamphlet form.

Appendix

Address by Hon. William F. Knowland to California Republican State Central Committee

EXTENSION OF REMARKS
OF
HON. WILLIAM F. KNOWLAND
OF CALIFORNIA
IN THE SENATE OF THE UNITED STATES
Monday, August 4, 1958

Mr. KNOWLAND. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a speech I made at Sacramento yesterday.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

SPEECH OF UNITED STATES SENATOR WILLIAM F. KNOWLAND, REPUBLICAN NOMINEE FOR GOVERNOR OF CALIFORNIA, REPUBLICAN STATE CENTRAL COMMITTEE MEETING, STATE CAPITOL BUILDING, SACRAMENTO, CALIF., AUGUST 3, 1958

Fellow Californians, this historic chamber brings back nostalgic recollections of the first State Republican convention I attended as a delegate and subsequently my service as a State assemblyman 26 years ago.

For more than half of my life I have sought, to the best of my ability, to serve the people of California as State assemblyman, State senator, and a Senator of the United States.

For this experience and this opportunity I shall be eternally grateful to the people of this, my native State, as long as I shall live.

On the world scene and in our Nation's Capital at Washington, grave events are producing major decisions—decisions which, for better or for worse, will have a great bearing on the lives and activities of all of us.

Our western civilization and our country are being challenged today as never before from without and from within.

The bold experiment—representative government—of our forefathers is confronted in our time by the destructive forces of communism, crime and complacency.

The history of governments and peoples from the beginning of mankind to the present day shows that twin evils of decay and tyranny must always be recognized and fought by resolute citizens and their public officials.

The American blueprint for freedom—recognition of a higher moral law to which governments are accountable, the Constitution of the United States with the separation of powers between the legislative, executive and judicial branches, and the division of powers between the Federal and State Governments—is being threatened by the growing influence of those who encourage compromises of expediency.

In 3 months' time the 6 million voters of our State will go to the polls to make a decision that will have a great impact on them and millions more in California for years to come.

Before this day arrives, we must focus the public's mind on what we stand for and where we propose to lead their affairs if accepted by the electorate.

They are entitled to know this before and not after November 4.

I want to discuss with you today what I believe to be three basic and fundamental questions: First, our objectives; second, our opposition this year; and third, a controversial issue.

First. What do we propose as our objectives? I am not speaking here in terms of political success, for that is naturally the objective of all political parties.

I am speaking now in the terms of objectives to serve all of the people of California. We could summarize in a phrase that our goal is to provide at the State and Federal level, the most humane, responsible, efficient and economical government that dedicated and experienced public officials can provide.

The problems of government in California now and for the foreseeable future are keyed to the population increases which within 20 years will see us as the largest State in the American Union.

Today our State is an expanding industrial, commercial and agricultural empire, larger and more productive than many sovereign nations. It is larger than 56 of the 84 independent nations constituting the membership of the United Nations.

In the next few years, our people face difficult and critical problems of government and administration which demand in public service the highest performance of competent solution and deliberate and decisive action.

We know that one of the most pressing problems in our State government is the fiscal condition of our State treasury. Right now the necessary expenditures to operate our government are being met by borrowing from reserve funds set aside for other purposes.

This takes me back to 1933 when I first went to the State legislature and at that time we also were faced with an unbalanced budget. As a member of the economy bloc, we made substantial reductions in governmental costs and we worked out a revised revenue system which met our basic requirements for the next quarter of a century.

In the central fields of business and agricultural development, in the promotion of industries, services and professions; in highway, home, hospital, and recreational expansion; in the control of crime and narcotics, our objectives will be to provide our citizens with government dedicated to advance their well-being and not those of powerful political-pressure groups.

In my judgment, there is a need now to reorganize the executive branch of the Government and to eliminate a duplication and overlapping of responsibilities. The State under my administration will live within its income.

With courage and common sense we can meet and solve the problems confronting our State and Nation.

We want and we shall have a solution to our water problems so that all sections of our State will share the agricultural, industrial, and urban growth which they are destined to have.

As Californians we want and we shall have an educational system second to none in the Nation.

We must construct nearly 6,700 classrooms every year to take care of the proper needs of our school children. That amounts to 130 new schools annually. We propose to give our educational needs the highest priority and to meet the challenge of new schools, additional teachers, and adequate financing.

We want and we shall have an attractive economic climate to bring new industry into our State and to encourage present industry to expand its capital plant so that we may have more jobs at good wages for our constantly increasing population.

We want and we shall have strong and effective unions that are responsible to their members and to the general public as well.

The power of certain national and international labor organizations is increasing to the point where the selection of candidates for public office solely depends on their willingness to produce the programs outlined by the organization involved.

Reported contributions from union organizations in 1956 showed that out of $1,078,822 all but $3,925 went to the candidates of the Democratic Party.

We want and we shall have safer highways for our motorists. This not only requires constant improvement in design and construction but it also requires the augmentation of our California highway patrol.

We want and we shall have a sound system of social security in keeping with our responsibilities and within our fiscal means.

We want and we shall have a sound fiscal structure for our State government which requires a balanced budget, the maintenance of our State's credit and a tax system that will attract and not repel the capital for our growing needs.

The labor boss allies of my opponent are the sponsors of proposition 17 which jeopardizes our State's fiscal system, threatens our educational and social security progress and will repel new industry and capital from investing which is so essential for the creation of new jobs. This measure should be overwhelmingly rejected.

We want and we shall have protection for our children and ourselves from the threat of narcotics; from the growth of crime and violence which the shocking figures of the FBI revealed.

The second basic question which deserves some discussion today is our political opposition.

For my part, I intend to place the full light of the facts upon the vacillating actions and the inconsistencies of my opponent both as a candidate for Governor and in carrying out his public responsibilities.

"Buster" Brown and his imported Chicago machine-type political organization seek to impose a package deal on the historic Democratic Party and on the people of this State. This is not good for California.

He has busted the historic Democratic Party and has been the instrumentality by which CIO–COPE is gaining control over his party. Their ultimate hope is to take over this State, Michigan fashion.

In this campaign my opponent's public record will be given all the light it will stand. And it will not stand much.

My opponent has been attorney general of this State for almost 8 years, with more powers than any law enforcement official in any of the 48 States.

A survey of his record reveals that his performance of duty never catches up with either his public statements or his campaign promises.

In the more than 7 years he has held the most powerful attorney general's office among the 48 States our population has grown 32 percent; crime is up 76 percent; aggravated assault is up 112 percent; auto theft is up 130 percent; rape is up 100 percent; burglary is up 89 percent; man-

UNIVERSITY OF MICHIGAN LIBRARIES

slaughter is up 70 percent; theft is up 63 percent, and robbery is up 58 percent.

These are statistics in which we as Californians take no pride and they are indicative of the failure of the attorney general's office under the incumbent to give the type of leadership from its chief legal officer that the State is entitled to have.

He has stated in recent months that there is no organized criminal element in our State, but the head of the intelligence of the Los Angeles Police Department testified before a committee of the Senate that mobsters and gangsters are moving into California's industries and labor unions at an alarming rate.

Californians have reason to be concerned by the reported influx of members of the eastern and midwest criminal syndicates into our State. There is ample reason to believe that they are seeking to gain control of some of our labor organizations and by the investment of underworld funds to penetrate the economic structure of California. The objective is the ultimate political domination of our State.

Our local police officials are among this Nation's top crime fighters. They deserve maximum support for their first line battle to control the criminal menace and to render our people, homes, and communities safe in California.

But the best efforts of our policemen and local public officials are handicapped unless effective and dedicated political leadership is provided. My opponent's record during the past 7 years shows his failure to provide this leadership.

The responsibilities of the governor as chief executive authority of this State are large. There are 8 constitutional offices, 24 departments, 128 boards and commissions and 46 independent agencies.

Under existing law, State narcotic enforcement comes under the attorney general. In recent months it has become obvious that not even this one office has received the necessary supervision or executive direction from the attorney general.

Recently he criticized the hardworking Federal Bureau of Investigation for allegedly presenting California's crime increases in an unjustifiable and unfavorable light.

After charging the Bureau with using incorrect statistics, Brown's own department released its crime statistics, and this revealed that the two crime reports differed in their crime increase rates by one-tenth of 1 percent.

During the 6 months prior to the primary election, my opponent was extremely busy getting around to all parts of the State and making political statements. He should have been devoting more time to the responsibilities of his office in view of the serious crime and narcotics problems in our State.

In reading his public comments during that period, I was struck by the feeling that possibly there were two Mr. Browns—a northern Brown and a southern Brown. His statements on the same subject were different in different places.

I wonder if my opponent really believes the people of this State think such artful juggling is a qualification to be Governor of California. To a particular California audience in the North, Mr. Brown is a conservative Democrat. To an audience in the South, he is a liberal Democrat.

In Los Angeles, he is for a bill of rights for union members. In Albany, he believes such protections would destroy unions.

In Los Angeles one day, Mr. Brown advocates no increase in taxes. In Oakland the day before, he stated we are going to have new taxes whether we like it or not.

My opponent cannot fool all the people all of the time. And I intend to be on the scene to help make sure that he doesn't.

The third and last basic question I want to discuss with you is a controversial issue.

The issue of voluntary unionism in California, or right to work as some call it, is a subject on which men of good intentions honestly differ.

My views are known and I have not abandoned them nor do I have any intention of so doing.

I want to emphasize at this time what it is and what it is not.

It involves the freedom of our working people and this basic human right should not be a partisan issue.

Before you is the portrait of our first Republican President who spoke the eternal truth that this Nation cannot endure half slave and half free.

In recent months our people have been dismayed and disturbed by the evidence of mounting corruption and arbitrary abuses of power among certain union barons.

We recall Lord Acton's warning that "power corrupts but absolute power corrupts absolutely."

Unless the members of organized unions have the power to control their union officers and curb the unscrupulous activities of wrongdoing bosses, their reign of control and domination will place in jeopardy the future and well-being of not only union members but the entire fabric of the American way of life.

I would like to read a brief statement to you made by a prominent American in recent months:

"We think of human bondage in the United States as a thing of the distant past, ended nearly a century ago. The grim fact is that in recent years there has grown up among us a new form of slavery—insidious, semisecret and sinister.

"Today's captives are those rank-and-file union members who have fallen in helpless thrall to crooks and gangsters disguised under the title of 'labor leaders' or 'employer representatives.'"

Continuing with his statement, "from my study of the evidence, I estimate that those now in bondage must number more than 1 million. Some put the figure as high as 4 million—which happens to approximate the number of American slaves in 1860."

Now did BILL KNOWLAND make that statement? No. Did any official of the Republican Party make that statement? No. Those are the comments of a leading Democrat, Senator JOHN MCCLELLAN, who as chairman of the Senate select committee investigating such matters had just finished the first year's work of that committee.

The outlawing of compulsory unionism will put an end to the unhealthy conditions that are destroying the benefits of our union movement. It will place in the hands of each union member the power to preserve his own dignity as a human being. He will be able to say thereafter to his union official that if he is not treated with respect, if his dues are embezzled or used for purposes not to his benefit, if he is not given the right to a voice in his union's affairs, then he will have the right to get out of his union and he will not be penalized by the loss of his employment.

To me, this objective is worth the risks of political defeat and the distortion of political motives.

Mr. Brown and his labor boss supporters state the passage of the initiative will mean the end of collective bargaining. As the chief law officer of the State he knows that collective bargaining is guaranteed by both Federal and State law and is guaranteed by the initiative proposal.

But collective bargaining must not degenerate into collective bludgeoning.

I am not prepared to stand idly by and see a combination of Hoffa and Bridges gain the power to strangle the economic life of our country or of California.

They state that voluntary unionism will mean the loss of the benefits and reduction of wages for our workers. Yet in the 18 States that have right-to-work laws, the record shows the increases in wages and employment are greater since the enactment of the laws than in the compulsory unionism States. And there has been a marked increase in new industry in these States as well.

Under voluntary unionism as well as under compulsory unionism the collective bargaining contract will protect all the workers in the bargaining unit without discrimination.

They charge me with attempting to foster voluntary unionism for the objective of curtailing union membership in California. This is the same charge they used against me for supporting the Taft-Hartley Act, which they called a "slave labor law." But the record shows that union membership has increased throughout the Nation by 17 percent since the Taft-Hartley law was passed in 1947.

The record of union membership in the States where voluntary has replaced compulsory unionism shows increases in union membership, not decreases.

My efforts in behalf of our working men and women is a matter of public record. In Sacramento, 25 years ago, when I started my public career, I helped draft the basic unemployment compensation law of this State. I supported the legislation which successfully outlawed the "yellow dog" contract that had been preventing workers from joining unions. In Washington, I opposed a President of the opposite party who attempted to draft railroad workers into the Army.

I believe in and support strong and effective unions. But they must be responsible to their members and to the public.

No permanent or constructive progress is possible in our institutions if they are based on compulsory membership.

Membership in our churches, our veteran and our farm organizations, and our community societies is voluntary, and their influence for good is increasing with our national expansion. We would not want it otherwise.

Having been active in public life for a quarter of a century, I am not unmindful of the penalties and the abuse of public service.

My opponent and his labor-boss allies have conducted as flagrant a campaign of misrepresentation as I have ever seen waged in this State. But, as a former President of the United States put it, "If you can't stand the heat, you should stay out of the kitchen."

In each job I have undertaken, including 3 years in the Army, from June 1942 until I was appointed to the Senate on V–J Day, on August 14, 1945, I have filled out my contract of service.

I would not have become a candidate for Governor of this State unless I had fully intended to devote all of my time and effort during the next 4 years to the heavy responsibilities of that office.

As the nominee for Governor, I am giving my wholehearted support to the entire ticket.

In order that our citizens may decide which candidate is best qualified to lead our State, I now propose to my opponent that we join the issues of this campaign before the jury of the people of California and that we have a series of joint appearances, starting on or about September 1, which will include public meetings at Eureka, Redding, Sacramento, Stockton, San Francisco, Oakland, San Jose, Modesto, Merced, Fresno, Bakersfield, San Bernardino, Riverside, Los Angeles, Long Beach, San Diego, and such other places as may be mutually agreed upon.

Let these meetings be in public parks and townhalls. Let no admission be charged and the public to be invited to hear, to ask questions, and to make up their own minds after

listening to both candidates for governor and both sides of the story.

This is not the year nor is this the season for men of little faith to dominate our thinking or our actions.

Fourteen million of our people have a vital stake in the election this year. As great as has been our progress since our admission into statehood in 1850, we are still on the march to new horizons.

Need I remind this audience that the odds to start with were strongly against our Thirteen Colonies winning a struggle against the mightiest empire of that time.

A defeatist might have increased the odds to 50 to 1 against the tattered and poorly equipped Continental forces at Valley Forge. A doubter would have overlooked or discounted the actions of George Washington, a man of faith, on his knees seeking and receiving divine guidance.

Bull Run was followed by Appomatox.

Pearl Harbor, Corregidor, Bataan were followed by the surrender to MacArthur aboard the *Missouri*.

From a small, weak colony of 3 million in 1776 to 170 million in 1958—through war and peace, prosperity and adversity, our Nation has grown and we have held on to our freedoms when others have voluntarily or under duress abandoned theirs.

As a people our problems are great, but so are our opportunities.

With a fighting spirit and a determination to face with courage the issues of our day we can and we will carry this State on November 4.

Role of America in the Middle East

EXTENSION OF REMARKS

OF

HON. LISTER HILL

OF ALABAMA

IN THE SENATE OF THE UNITED STATES

Monday, August 4, 1958

Mr. HILL. Mr. President, my distinguished colleague from Alabama [Mr. SPARKMAN], a member of the Senate Committee on Foreign Relations, is recognized as one of the leading spokesmen today in the field of foreign relations. He is also recognized as being among the best informed on the subject.

In March of this year the Senator delivered a very able address to the Student Conference on International Affairs at the Alabama Polytechnic Institute on the role of America in the Middle East. Many of the points and predictions he made at that time regarding the dangers to peace in the Middle East have become significant in view of the recent developments in that troubled part of the world.

Because of the timeliness of the views and conclusions expressed by the Senator in the address, I ask unanimous consent that it be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

AMERICA'S ROLE IN THE MIDDLE EAST

(Address delivered by Senator JOHN SPARKMAN, of Alabama, at student conference on international affairs, Alabama Polytechnic Institute, Auburn, Ala., March 28, 1958)

For me it is always a pleasure to return home. In these times the legislative program in Congress is so demanding that it is not easy to get back home very often while Congress is in session.

The situation in Congress was such that I could be with you today, and I am very glad. There is another—an even more important reason that I am pleased to be here. It stems from the nature of the subject which you have asked me to discuss with you today.

It is a source of great gratification to see the young people of the schools represented here turning their attention increasingly to international problems. In this new era of human existence the Nation's survival and progress in freedom depend not only upon our ability to grapple intelligently with local, State, and Federal difficulties but also with problems that are worldwide in scope. Moreover, the need to face and to meet this type of problem is likely to grow rather than to decrease in the years ahead.

One of the most intricate of the international difficulties which face the Nation is that complex of problems that goes by the general name of the Middle East question. If you find the Middle East sufficiently baffling to make it the subject of discussion, you need not ascribe your bewilderment to any inherent shortcomings in your own perception. You have a good deal of company. The Middle East has baffled and continues to baffle men in the State Department who have done nothing but study the region for years. Indeed, I suspect it sometimes baffles the Middle Easterners even more than it does us.

Illustrative of the point is a story that came to my attention when I was traveling in that part of the world. It is a story of a frog and a scorpion and it goes as follows: A peaceful frog was floating in a stream, minding his own business, enjoying the warm afternoon sun. A scorpion approached the bank of the stream. Unable to swim, the scorpion called to the frog and asked for a lift to the other side. The frog shook his head vigorously and wisely in the negative and said the equivalent of "Not on your life. You, Mr. Scorpion, have a deadly sting. If I give you a lift, you will let me have it."

The scorpion waved one of his legs in a gesture of beguiling reassurance and said: "Be sensible, my friend, I can't swim. If I were to sting you, it is true that you would die but I would drown. Obviously, it would be the height of insanity for me to sting you. Obviously, then, your fears are baseless."

The frog was persuaded by this logic and, for a small fee, agreed to carry the scorpion across the stream. Halfway out, the scorpion suddenly stung the frog and both promptly began to go under. With his last breath, the frog gasped: "Why on earth did you do that? Now, we are both going to die. Your behavior just doesn't make sense."

And with his last breath, the scorpion replied: "How right you are, my friend, that we both are going to die. But how wrong you are when you say my behavior doesn't make sense. You forget that this is the Middle East."

The story may exaggerate somewhat the peculiarities of the situation that confronts us in the Middle East. I wonder, sometimes, how much. Nations in that region, it seems to me, like the frog, on occasion display an almost inexplicable tendency to court their own destruction. And sometimes like the scorpion they seem even eager to invite it, especially if it promises to bring down others in the process.

I ask you to bear that in mind as I proceed to consider the problems of the Middle East as they appear to us. These problems may seem entirely different when seen through the eyes of the Middle Easterner. What appears logical to us may, perhaps, not have any meaning for people in Egypt or Israel or Syria.

I do not say that to disparage these people. They have reasons for approaching the problems of the Middle East from a different point of view than ours. It is not for us to judge them or to moralize upon their behavior. We look at the region from a comfortable position several thousand miles away.

We have not bled in its wars, holy and unholy.

We have not known, for centuries, the status of outcasts nor have we experienced life in the ghettos of Europe as have, for example, many people in Israel.

We have not, for a long time, suffered the indignities of colonialism with which most of the Arabs are all too familiar.

We have not known the crushing burden of an incredibly deep poverty and a stifling superstition.

Nor have we known the physical debilitation of relentless and widespread disease that is the commonplace in the Middle East.

If it is wrong to moralize on the situation in the Middle East, however, it is equally wrong to deny that we have a concern, a deep concern in what transpires there. We do have interests in that region, important interests which our Government cannot ignore with impunity. Because we do have such interests, we have every right to consider the Middle Eastern situation and to seek to determine intelligently what is the best course for us to pursue with regard to that situation. As we get clearly in mind what our interests are, we shall have a little better understanding of why we are concerned with Middle Eastern affairs, why indeed we are discussing the subject today.

At the top of the list is our interest in peace in the Middle East. All of us ought to know by this time that a serious conflict in any significant portion of the globe is likely to spread throughout the world. We could not insulate ourselves from World War II. How much less likely are we going to be able to do so from world war III, if it should break out?

All it takes now to set in motion the poised military strength of the major powers is a miscalculation somewhere. The missiles, the strategic bombing commands, the massed armies and naval forces are in position. Once unleashed, even in error, the tragedy would begin and would proceed relentlessly to its terrible climax of worldwide destruction. We would not be spared the consequences, in Alabama or anywhere else in the country.

The fuse of this conflict could be lighted in the Middle East. That is so, in the first place, because the political ambitions of the Soviet Union and the economic interests of the Western World meet in the region. The Russians, under both the czars and the Communists, have exerted expansionist pressure on the Middle East, from time to time, and they have had their eyes fixed even beyond on the Mediterranean and Africa. Across their path lie vital interests of the Western World, particularly of Western Europe, and particularly in petroleum.

The Middle East, as it has been said, is afloat on a sea of oil. This sea contains the greatest proven reserves of petroleum in the world. For many years to come, at least until we have made far greater progress in the development of nuclear energy than at present, Middle Eastern oil will be essential to the survival of Western Europe in economic decency and in freedom.

The danger of conflict in the Middle East does not lie solely in a potential clash between the political interests of Russia and the economic interests of the West.

Additional pressures of explosive force are to be found within the region itself. Between Israel, the Jewish homeland, on the one hand and the Arab States on the other, there is an implacable hostility that con-

UNIVERSITY OF MICHIGAN LIBRARIES

stantly threatens to erupt into violence. There are rivalries among the Arab States themselves which may one day set them into conflict. Finally, throughout the area, there is a latent fear and hatred of foreigners, particularly westerners, which is a heritage of the period of colonial domination. The colonialism is all but gone but the fear and the hatred remain. They are fed today, sometimes to fever heat, by the fuels of ultranationalism and general economic and social discontent in the Arab world.

If a conflict should arise in the Middle East from any of these local causes, it would immediately tend to bring into play the interests of Russia and the West, since both camps are deeply involved in the region.

Our own interest in this highly charged and dangerous situation, as I said before, is predominantly in peace, for anything short of peace threatens the holocaust of world war III and that, in turn, threatens all of us.

To be sure, we have other more specific and limited interests in the region. American oil companies have sizable operations and valuable concessions in Saudi Arabia and other countries. We have a highly important interest in the continued and efficient operation of the Suez Canal through which much of our seaborne commerce passes. We have an interest in the air routes that traverse the Middle East and in airbases which we lease in the region.

We have cultural interests developed over the years by missionaries and educators. We have a religious concern because our population is largely Christian and Jewish and the holy places of both are found in the predominantly Moslem Middle East. We have an interest—a human interest if you will—in the survival of Israel as a Jewish homeland. We have a sympathetic interest in the progress of the Arab States, a concern growing largely out of our own revolutionary rejection of colonialism.

All of these interests, however important they may be in themselves, are subordinate to our overriding interest in the maintenance of a just peace in the Middle East. Indeed these interests can only be safeguarded and advanced if that kind of peace prevails in the region.

If we have this picture clearly in mind—that is—that our predominant interest is the preservation of a just peace, we may proceed to a consideration of the problems of the Middle East in that context. In short, we may ask ourselves, what is it that does or might seriously jeopardize the peace of the Middle East?

The first possibility that occurs is a direct Russian aggression. Russia has a common border with the Middle East. It has, at times, threatened Iran and Turkey. Such an aggression, if it were attempted, however, would come into direct conflict with the interests of the Western nations. We are partners with Turkey in NATO and the United Kingdom is a member of the Baghdad pact along with Iran and other neighboring states. A deliberate Soviet aggression against Turkey or Iran would almost certainly produce a general war. Indeed, the so-called Eisenhower doctrine, about which you heard a great deal a year ago, makes it clear that a Russian aggression or a Communist aggression against any Middle Eastern state is likely to be met with counterforce.

Let me examine that possibility a bit further. On the basis of information available to me in Washington, there is no evidence that the Russians have planned or are planning a direct military invasion of the Middle East. The Russians are fickle, to be sure, and it is entirely possible that they may change their minds and gamble on war in the Middle East. As of now, however, there is nothing to indicate that such a shift is likely.

As for a Communist aggression beginning within the region—and as I noted the Eisenhower doctrine is also directed at preventing that type of breakdown of peace—the principal Soviet intimate among the Middle Eastern nations is Egypt. But Egypt—now the dominant partner with Syria in the United Arab Republic—is not a Communist country. It has even banned the Communist Party. In these circumstances it could hardly launch a Communist aggression.

Where, then, is the aggression likely to originate—the aggression against which the Eisenhower doctrine is directed? The answer, I believe, as of now, is nowhere. Whatever its good intentions—and, along with most of the Senate, I voted for the measure at the urging of the President—for all its well-meaning intentions, the Eisenhower doctrine, it seems to me, is an illusory policy aimed at a shadowy objective.

Does that mean that there is no danger of war in the Middle East? Not at all. The dangers are very real and continuing. The observation I have just given you means simply that I do not believe that the Eisenhower doctrine gets at the dangers, at least at the dangers that exist today. Yet our policy must deal with these dangers, if as I said earlier, the overriding interests of the United States in the Middle East is the preservation of a just peace in that region.

The real dangers to peace, as I see them, arise from within the area itself. Foremost among them, as it long has been, is the Arab-Israeli dispute. I shall not discuss the merits or demerits on each side of this dispute. Proponents of the one or the other side have gone all the way back to Biblical times in cataloging argumente and counterarguments for their particular position. I have studied the matter sufficiently, however, to be satisfied that a peaceful settlement of the dispute is not impossible provided:

1. The Israelis are not intent upon pursuing a course of territorial expansion at the expense of the Arab States.

2. The Arabs are not intent upon the destruction of Israel.

3. Each side recognizes that there is more to gain from peaceful tolerance of one another, if not actual cooperation, than there is from destructive conflict.

For the present, an uneasy truce exists along the Israeli borders. It is maintained largely by the presence on the Egyptian-Israeli frontier of the United Nations Emergency Force. This body of men, drawn from the smaller nations, is making a major contribution to peace.

May I say, that the Senate has recognized the value of its work. During the last session of Congress, I introduced a resolution expressing the hope that the emergency force could be made permanent so that it would be available for critical situations in the future. The resolution passed the Senate without a single objection.

While the emergency force has been instrumental in keeping a truce in the Arab-Israeli dispute, it is important to bear in mind that a truce is not the same as peace. One of the weaknesses of our policy on the Middle East, it seems to me, lies precisely in this realm. The administration has been content to cling to a truce, however uneasy it may be, rather than to push ahead and try to convert the truce into a genuine peace. The truce in the Arab-Israeli dispute is costly to us since we pay the bulk of the expense of maintaining the emergency force and of maintaining several hundred thousand Arabs in refugee camps.

This latter expenditure involves tens of millions of dollars a year and it has gone on year after year ever since the Palestinian war in 1948. I do not believe we should begrudge these expenditures if they help to prevent a major conflict. The point is, however, that a truce is not likely to last forever. Unless action is taken to convert the Arab-Israeli truce into a genuine peace the conflict may break out again despite the expenditure of hundreds of millions of dollars on our part.

The Arab-Israeli dispute remains the primary danger of conflict in the Middle East and it is one of the shortcomings of the Eisenhower doctrine that it does little, if anything, to deal with it.

As I mentioned earlier, another danger of conflict within the region grows out of the antiforeignism, the ultranationalism of some of the newly independent states. This has been stimulated by leaders with delusions of grandeur. The delusions express themselves in spoken dreams of recreating ancient empires, empires which stretch even as far as from North Africa to the Pacific; in short, wherever Arabs have gone in centuries past.

Now there is much to be said in favor of Arab unity. The small middle eastern states could gain a great deal from a voluntary integration of their peoples and economies for peaceful purposes. There is nothing to be said for an Arab unity based upon the sword and the cry of "holy war."

Presently, there are trends toward unity in the Middle East. They can be seen in the recent Egyptian-Syrian-Yeman linkage and in the tieup between Iraq and Jordan. What is not clear, as yet, particularly in the case of the Egyptian-led coalition, is whether the unification is for peaceful or warlike purposes. If it is for the purpose of expansion, then we will soon be confronted with a situation of the gravest kind in the Middle East. It will be a situation created by states which cannot be labeled Communist. Again, the Eisenhower doctrine does not come to grips with this possibility.

There is no doubt that these Arab leaders who make their appeal on the basis of the sword and holy wars have a considerable following among the Arab peoples throughout the Middle East. I believe that one of the principal reasons for their success in this respect lies in the terrible poverty and the economic backwardness that is the lot of the Arab people generally.

Some of these rulers have been able to divert the discontent which these conditions produce into military circuses and political adventures. People in the Middle East, however, no less than people elsewhere, will not be fooled forever by these tactics. Sooner or later they will demand responsible government. They will demand that their governments direct their attention to very real social and economic problems rather than to expansionist adventures in hatred.

It behooves us in determining our policies to do what we can to encourage that demand. So far, however, our policies have not done that. When they do, perhaps, we will begin to come closer to that just peace in the Middle East which is in our own best, our overriding interest.

It seems to me that specifically these are the basic problems that must be solved in the Middle East, and to which the energies and resources of United States policy must be directed.

First, there is the problem of the Palestinian refugees. It is not enough simply to continue to support these unfortunate human beings in the squalor of the refugee camps. So long as they remain sequestered in this fashion they will be an element of instability in the Arab countries in which they are located.

They will continue to be, moreover, prone to political exploitation for aggressive adventures by unscrupulous leaders.

It should not be impossible to launch a concerted attack on this problem of the refugees; one which would see some of them returned to Israel, and the balance justly compensated and permanently resettled in productive activity throughout the Arab world.

The second problem which must be solved is that of the boundaries between Israel and neighboring states. At present, there exists a demarcation for the purpose of the truce. The Arab States desire to go back to the 1947 U. N. plan of partition of Palestine, a plan which, if implemented, would represent a drastic reduction in the present size of Israel. On the other hand, the Israelis take the position that, by starting the war in 1947, the Arabs created an entirely new situation and that there can be no going back to a plan which was predicated on a peaceful partition of Palestine.

Here, again, it seems to me that if peace is the desire of all concerned some rectification of the frontiers in the interest of settlement is possible. Certainly, the U. N. might be of great assistance in this connection.

Finally, I should like to mention the need for action to develop the water resources of the Middle East. Rivers are literally the lifeline of the peoples of that region. Properly developed and managed the great rivers such as the Tigris, the Euphrates, the Nile, and the Jordan, and many lesser streams can make the desert bloom while at the same time delivering enormous power for the expansion of the economies of the middle eastern countries.

Furthermore, since some of these rivers cross national boundaries, their development will require joint action. I can think of no single factor which would do more to turn the Middle Eastern countries from hatreds and rivalries than a cooperative and constructive effort to improve their common livelihood in this fashion.

In dealing with all of the problems I have been discussing, it seems to me that the essential factor is the leadership of the United States. This leadership can be exerted through diplomacy and just commonsense reasoning with Israelis and Arabs. It should not be impossible for both sides to come to see that their present obstructionism is destructive of their true interests, that the way to a promising future for all in the Middle East is through genuine settlement.

If I may sum up my observations, I should like to make clear that I believe that there is a grave danger in becoming complacent about the Middle East simply because guns do not happen to be going off at the moment. Our policies, at great expense, so far, have helped to keep them muzzled. These policies have acted to keep the lid on the pot, so to speak, but the steam is still building up inside.

Unless our policies are adjusted and adjusted rapidly to meet the inner pressures of the Middle East—the various facets of the Arab-Israeli dispute, the need for social and economic progress, the imperialist tendencies in some of the countries of the area—we may not be able to hold the lid much longer.

Scientists and Humanists Join To Strengthen Democracy

EXTENSION OF REMARKS
OF
HON. J. W. FULBRIGHT
OF ARKANSAS
IN THE SENATE OF THE UNITED STATES
Monday, August 4, 1958

Mr. FULBRIGHT. Mr. President, in mid-July at the University of Massachusetts the Humanities Center for Liberal Education held its third annual seminar, examining the problem of how America's scientists and humanists can join together in their mutual responsibility for strengthening democracy in the scientific age.

More than 100 scientists, liberal arts educators, representatives of industry, labor, government, and the mass communications media gathered for the seminar. They discussed means of mobilizing America's vast cultural and intellectual resources as the most effective instrumentalities for preserving the freedoms of our citizens and our leadership in the free world.

Of particular significance to the Nation is the statement adopted by the seminar at the close of its discussions. This statement recommends lines of action, as permanent United States policy, to achieve a simultaneous advance on all fronts of American education.

Mr. President, I ask unanimous consent that the statement be printed in the Appendix of the RECORD.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

STATEMENT ADOPTED BY THE THIRD ANNUAL AMERICAN HUMANITIES SEMINAR, UNIVERSITY OF MASSACHUSETTS, AMHERST, MASS., JULY 16, 1958

The United States is confronted with a systematic, total Soviet effort—economic, political, diplomatic, and psychological, with military force in the background—to exploit the weaknesses, confusions, and temptations of a transitional period in world affairs.

America must place her chief reliance in foreign policy on something more than military power and conventional diplomacy. We must mobilize our vast cultural and intellectual resources as the most effective instrumentalities for preserving the freedoms of our citizens and our leadership in a free world.

The enduring leadership which the United States must provide should be rooted in intellectual excellence: This is achieved by the continuing creativity of a highly esteemed and substantially supported intellectual power at work in an atmosphere of freedom.

The political leaders of the resurgent and newly emerging nations are intellectual leaders in their homelands. They respect the quality of America's arts and sciences, and their respect is heightened by the fact that this quality is grounded in free individuals.

It is the consensus of this seminar that the arts, sciences, and education—the sources of our cultural and democratic and spiritual values—are not adequately supported in America.

To make possible a simultaneous advance on all fronts of American education and the union of these fronts for integrated effect, we, the conferees of the American Humanities Seminar, recommend these lines of action as permanent United States policy:

1. Expand cultural, educational, scientific, and technological interchange among nations, for the purpose of mutually enriching nonpolitical relations in the pattern of the International Geophysical Year and the World Health Organization.

2. Devote a significantly larger share of the Nation's resources to the arts, scientific research, and education to meet our obvious need. This is necessary because United States expenditures in these areas are disproportionate to the Nation's income and to the expenditures of other, competitive nations.

3. Renew the emphasis on educational opportunity and enable each individual, as a significant unit in the Nation's human resources, to achieve the peak of his capabilities. This would mean provision for the fast learner and the gifted, as well as for the slow learner.

4. Educate the public mind to awareness of the common ground and shared concerns of scientists and humanists, as they demonstrate through joint action their mutual responsibility for meeting the problems of democracy in the scientific age.

5. Reduce the lags between the specialized knowledge of the experts and the knowledge of the community, to achieve closer cooperation between scientists and humanists, and to bring about greater understanding among the general public.

Portrait of a Man of Good Will, Jimmie James

EXTENSION OF REMARKS
OF
HON. RICHARD L. NEUBERGER
OF OREGON
IN THE SENATE OF THE UNITED STATES
Monday, August 4, 1958

Mr. NEUBERGER. Mr. President, when I receive a long letter from Portland with a number in one corner and a simple but effective crayon sketch in the other corner, I know I have again heard from my good friend and constituent, Jimmie James, who resides in my home city of Portland, Oreg. His letters never request anything for himself, but they are always filled with concern and sympathy for American Indians, whom Jimmie James champions with commendable loyalty and devotion.

David Sheer, legislative chairman of the Anselm Forum, of Gary, Ind., has written an appreciative and informative sketch of Jimmie James under the appropriate title "Concern for Justice," and his organization has just made it available to the public.

I ask unanimous consent, Mr. President, that selected excerpts from this eloquent sketch about Jimmie James, of Portland, Oreg., be printed in the Appendix of the RECORD.

There being no objection, the sketch was ordered to be printed in the RECORD, as follows:

CONCERN FOR JUSTICE
(By David Sheer, legislative chairman, Anselm Forum, Inc.)

Somehow, when I think of Jimmie James, I think always of a big hulk of a man in the middle sixties bent over a typewriter, pounding out letters in defense of Indian causes. The more than five thousand letters he has mailed out, appealing for justice and humanity in the Government's dealings with that luckless people, has given meaning and substance to his life.

* * * * *

In the latter part of 1954, the Associated Press in Washington, D. C., picked up Gary Anselm Forum's protest against injustices to the American Indian. Letters soon started coming from all parts of the country. The first one received by Anselm Forum's public relations executive, Reuben E. Olson, bore the number 3059. It described the writer as "Indian Press Agent and Painter of the Columbia River." On the large envelope was a sketch in color of bison racing across the plain. This envelope was not laid aside but placed on the wall of the study.

This was the first of several hundred letters Anselm Forum has received from Jmmie James.

UNIVERSITY OF MICHIGAN LIBRARIES

With the letter, he sent an article written by RICHARD L. NEUBERGER, What's a Treaty With the Indians Worth? Congress had authorized an immense dam, a $348 million project which would destroy the Indian fishing stations at Celilo Falls. Salmon fishing at Celilo Falls was probably the oldest Indian religious and cultural heritage in the Northwest. Work on the dam was about done, but negotiations with the Yakimas were not yet completed.

NEUBERGER knew nothing could prevent the completion of the dam. The competitive position of much of the Northwest's economy depends on cheap electric power. The Yakimas would sign just as the others had signed. But not to give serious consideration to the Indians' rights, to proceed with the dam before the Yakimas had either given their consent or exhausted legal remedies, was to ignore their elemental rights. It was to turn the discussion in that direction that NEUBERGER penned the fighting phrase "A pledge addressed to warriors in feathered bonnets is as binding as one made to an ermine-cloaked ruler on a throne."

Jimmie James reasoned that the Yakimas had given up an area of 16,920 square miles, and retained as a reservation an area of 1,875 square miles. For the land they had surrendered, they asked the right to live in their traditional manner, to worship their Creator in their own way, and to fish in their accustomed places on the Columbia River and its tributaries.

* * * * *

Jimmie James argued in countless letters that the respect you show for the holy places of others is the respect you invite for your own. But the petroglyphs—carvings chipped into the solid rock facing the river—and pictographs—painted in natural durable pigments—and the seven commandments—carved into the solid rock in back of the rapids—have all gone to oblivion. The Indian burial island, Melameloose, where the Celilo Indians have placed their dead for countless centuries, is no more.

* * * * *

Here and there, from his letters, we gleaned bits of information about the man himself. We learned that he is part Danish, part Welch, but more than one-eighth Cherokee. That more than one-eighth Cherokee was the passion that guided much of Jimmie's conduct. For instance, in reply to one of our queries he wrote, "I do not smoke or drink, neither do I swear." Significantly, he added, "You know Indians had no cuss words until the white man came. I just guess they had no occasion to swear at anyone." Again he expressed conscious identity with his great grandmother in describing his belief. "I follow the golden rule," he wrote, "believing in God and that Christ lived * * * yet my heart is with the Indians. Their God is yours and mine."

The Indians' god was a god of conservation. He loved all life. "Kill nothing except to live," was one of his commandments. Another was, "If you kill 1, let 2 go by." Commandments such as these were for survival. The Great Spirit taught him that he must preserve life to live. There are no recorded accounts of the Indians completely exterminating any of God's creatures. The Indian fought when his land was invaded—but what people worth their salt would not?

Even as a young man, Jimmie James gave much thought to the survival problems of America's first citizens. They probably came to this continent toward the end of the fourth glacial period. What they could make with their few flint tools and fire was poor protection from the rigors of a hostile environment. And, as only a young man would, he asked himself whether he could survive as they must have had to do. Could he go to an isolated part of the desert and start from scratch? This, he did. For weeks he survived as a gatherer of wild fruits and berries; he dug roots and picked seeds. He dug a hole in a small ridge and used it for warmth and shelter. He found sharp edged rocks which he used to fashion a primitive bow and arrow. He killed wild game for food, both birds and animals. He stretched, dried, and tanned skins as the Indians did. At the end of 6 months, he lived in his own hut, dressed in clothes of his own making.

In rural Kansas, where Jimmie James was born, in a sod house with a dirt floor about a mile out of Woodston, a man was expected to be a sort of jack-of-all-trades. He was expected to know all that was necessary to be done around the farm and home. Neighbors were almost considered kinfolk. The spirit of helpfulness which prevailed in time of sickness and misfortune is what gave warmth to the long Kansas winters. In large cities, such as Chicago or New York, where life is more complicated, and people are more callous, such attitudes could hardly be expected to thrive.

* * * * *

Jimmie studied painting with John Knoff, Otto Schneider, and Eugene Devole. He also attended the School of the Art Institute in Chicago. He continued his studies in New York and worked with such men as Charley Russell and Howard Christy.

In between times, while the steel mills in Gary were being built, he helped set some bed plates for an engine room which weighed over 40 tons apiece.

When Jimmie James first came to the Northwest and visited Tum Tum (Celilo Falls), he knew that this was the place for him. He knew there was no more beautiful sight on earth. He fell in love with the Columbia River—that arrogant cat of a river—never sure where she was going but destined to get there. It was a roller-coaster—twisting, turning, dropping, churning. Its headwaters, a small lake of cold blue water by the same name, is located in a mountain valley between two ranges in Canada. It flows straight north for more than 200 miles, then with a sharp bend, turns to run south. After the big westward bend, it makes its way to the Pacific Ocean. He loved the bounder strewn nothingness that is Grand Coulee. He loved the sparse areas and the heavily wooded areas. He visited Kettle Falls when the Indians were still fishing there. There were salmon runs in the early spring and fall, and Columbia smelts compared favorably with mountain trout. The Columbia River was the principal coastal stream for the steelhead trout.

Jimmie painted what he saw and felt, combining reality and imagination. His style suited him and he expressed himself well. His paintings are pretty well scattered over the entire country. He made no special effort to keep track of them. When completed, they were on their own. Each had been a child with its own special problems, but he was never entirely satisfied with any of them.

His charcoal pictures, especially the historical ones, were drawn with material secured near the location of the scene. He dug up the charcoal where ancient Indian camps were once located. These camps, high above the Columbia River, dated back to the time when Mount Adams, Mount Hood, The Sisters, and what is now Crater Lake, were active volcanoes. The charcoal used for "The Ancient Fisherman," which Jimmie James presented to Anselm Forum, was more than 3,000 years old.

Jimmie tried to acquire as much knowledge as he could about the river and her moods, about the people whose fragile cultures grew up near the river's banks. He went about, canoeing down most of the rivers whose waters empty into the Columbia. He learned to respect all living things. It was the kind of respect that comes with the understanding that each living thing must live according to its own nature. Just as he wanted life, they also wanted life. It was this understanding that made him Tommy Thompson's welcome guest on festive occasions. This was the reason Wilson Charley welcomed him as a companion on long treks to the more isolated parts of the Yakima Reservation. He has eaten fish, eels, roots, and berries at the homes of Wilson Charley and Tommy Thompson numerous times. Indian fry bread he described as being "just about out of this world."

He is one of the few dedicated men who could understand and accept the Indians as they were. He saw nothing exotic about a hut too small to properly house an entire family. There were many, many days when there was little more than dried fish and Indian bread to eat. These Indians were bound together by the ties of language, custom, tradition, and a feeling of kinship. They felt their way was the right way because it had always been their way of life, and it suited them.

Jimmie also had a vision of the meaning of race hate. His father had taken him to Tennessee during his boyhood, and he had seen a Negro burned at the stake. The frenzied mob and the screaming victim made a lasting impression upon him.

Jimmie was honorably discharged from the Army after the close of World War I. He also served with the Portland Board of Embarkation during World War II.

He works mostly in the basement of his home. There, he has a large room where he keeps his Indian collection and a room where he does research with Indian herbs. Another room houses his library and the studio where he does his black and white historical sketches. His oil paintings are done in an upstairs studio.

Jimmie believed his efforts have helped to promote a better understanding and knowledge of Indian life. He believes there is now a greater degree of mutual good will and even affection between the two races. The strength of character of the Indian people will enable them to survive, to retain their character and identity, and to continue to contribute to this Nation's welfare.

American Policy in the Mideast

EXTENSION OF REMARKS

OF

HON. HUBERT H. HUMPHREY

OF MINNESOTA

IN THE SENATE OF THE UNITED STATES

Monday, August 4, 1958

Mr. HUMPHREY. Mr. President, Mr. Graham Hovey, of the editorial staff of the Minneapolis Tribune, is an experienced foreign correspondent and commentator. He has traveled extensively in Europe, Asia, and Africa. Presently he is visiting the United Nations and reporting on the activity of the U. N. Security Council.

In the Sunday, July 27, issue of the Minneapolis Tribune, Mr. Hovey has written an article entitled "Our Mideast Need: New Policies, New Concepts." It is a candid, frank, and constructive appraisal of United States policy and actions as they pertain to the Middle East.

He also reports on some of the comments of delegates at the U. N. about United States policy. It is good to hear

what others say and think. All too often we have been listening to a few voices in Washington that continue to repeat old slogans and apply old policies to new problems.

I ask unanimous consent that Mr. Hovey's article be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

OUR MIDEAST NEED: NEW POLICIES, NEW CONCEPTS

(By Graham Hovey)

UNITED NATIONS, N. Y.—Some of America's constant supporters in the United Nations and the cold war are insisting that Washington rethink and redefine its policies and objectives in the Middle East.

These diplomats warn that if this country clings to impractical policies and outdated diplomatic concepts, other and greater blows will follow Iraq's coup, which provoked our military move into Lebanon.

By impractical policies they mean the Baghdad Pact and those pursued under the Eisenhower doctrine.

By outdated concepts they mean, for example, the notion that our side must never recognize publicly that Russia is a power factor in the Middle East or can have any legitimate interests in that area.

There was lively discussion of this latter point here after news dispatches from Washington purported to give the real reason why any summit meeting with Russia on the Middle East could take place only in the security council.

These dispatches explained that the Middle East is already on the council agenda. Any summit meeting on this subject outside the United Nations, they said, would constitute recognition by the West of Russia's "presence" in the Middle East.

Even some members of the United States delegation to the United Nations conceded privately that this kind of reasoning was unrealistic. Other pro-Western diplomats used stronger language to describe it. In effect, they said this:

Russia is in the Middle East and everyone knows it and no one will any longer be impressed by Western diplomatic maneuvers aimed at denying or ignoring the fact.

Russia would be in the Middle East for reasons of geography and power even if its Government were not Communist and expansionist; even though its economic stake in the area, unlike that of the West, may be relatively unimportant.

Russia is in the Middle East with military and economic aid programs and, of course, with a political program.

The West must find ways to parry and counter some aspects of these programs but it cannot wish the programs out of existence.

"In fact," said one Western diplomat, "the question is not whether Russia is in the Middle East but whether the West can find ways to remain in the Middle East."

Among the specific questions which many of America's friends wish the Eisenhower administration would face squarely in the present circumstances are these:

Have the Baghdad Pact and the Eisenhower doctrine proved to be effective instruments for parrying and countering Soviet influence in the Middle East?

In light of the recent events in Iraq and Jordan, will the United States continue its previous emphasis on military aid and military alliances in this area?

Many observers with experience in the Middle East believe that there would have been no major civil strife in Lebanon if President Chamoun had not embraced the Eisenhower doctrine; that Nuri Said would be alive and in power in Iraq had he not taken that Arab country into the Baghdad Pact.

Some go further and contend that it was the Baghdad Pact—and the pressures it represented for nations to stand up and be counted in the cold war—that gave Russia its best excuse and opportunity for penetration of the Middle East.

This is speculation, but by persons with some qualifications to speculate. It leads inevitably to another major question which many diplomats believe the West should confront at this time:

Can the West settle for a neutral Arab Middle East striving for political and economic unity?

There are experienced Middle East observers who believe this would afford the West its best chance—perhaps its last chance—of retaining influence in the area and of insuring the flow of the oil on which Britain and Europe so heavily depend.

Would Russia respect any formal agreement to remove the Middle East from the cold war arena? It would be unrealistic in the extreme to expect Moscow to cease all political activity in so promising an area.

The point that many of our U. N. supporters make, however, is that our present policy is not working; that it may, by its military emphasis, its pressures on small nations to join formally the western camp, be making Russia's job easier in the Middle East.

If the Russians encroached on any agreement that the Middle East should be neutral at least the Arab resentment now directed at the West might refocus on them.

There was little joy at the United Nations over the news that Secretary Dulles would fly to Europe to shore up the Baghdad Pact. Some of our best friends believe his objective instead should be to liquidate it—as quietly and gracefully as possible.

The National Space Program

EXTENSION OF REMARKS
OF
HON. JOHN W. McCORMACK
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Monday, August 4, 1958

Mr. McCORMACK. Mr. Speaker, under leave to extend my remarks, I offer for inclusion in the RECORD, an editorial appearing in the August 4, 1958, edition of Aviation Week. This magazine has done a consistently outstanding job in reporting developments in astronautics as well as the more traditional field of aviation. Therefore, the praise which the editor, Mr. Robert Hotz, extends to the Select Committee on Astronautics and Space Exploration is accepted as a special tribute by the members and staff of the committee. The editorial is as follows:

MIDSUMMER SURVEY

(By Robert Hotz)

The aviation industry and its related technologies are steaming through the midsummer months in one of the strangest atmospheres since the first years after the end of World War II.

The Mideast crisis simmers dangerously close to a shooting war in strange contrast to a domestic calm and complacency that is hard to explain.

Although United States science and industry are on the verge of some of their most exciting explorations of space, the general public appears bored with the entire subject.

The industrial structure on which the Pentagon depends to develop and produce superior new weapon systems is creaking and groaning under severe financial stress but even the top civilian leaders in the Defense Department, most of them former business executives, are strangely indifferent to this problem or its implication for future defense strength.

BURNING ISSUES

In contrast the Congress has recorded a remarkable record during the session now drawing to a close on Capitol Hill in handling the burning issues of space technology, missile and advanced aircraft development and the sticky problems of air traffic control and air safety regulation. We cannot recall another session of Congress that has taken so much positive action on these perennial problems.

Perhaps the most important achievement in this field was the creation of the National Aeronautics and Space Agency using the technicians and laboratories of the National Advisory Committee for Aeronautics as a nucleus. In the relatively short time of 4 months the House and Senate, with a fine bipartisan spirit, tackled the National Space Agency proposals submitted by President Eisenhower and have forged an instrument capable of executing a sustained national program in this vital area. We have been particularly impressed by the manner in which the special House committee, headed by Majority Leader JOHN MCCORMACK, of Massachusetts, with the aid of a good professional staff, guided this program through what might have been a legislative morass and fought vigorously for the most effective compromise with a rather odd Senate approach to the problem. Sufficient starting funds have been made available for the new Agency in the current fiscal year. If President Eisenhower will now make the key appointments of the Director and the required new council members, the NASA can blast off toward a sustained, scientifically sound exploration of outer space.

VITALLY NEEDED AGENCY

The other outstanding aviation project before Congress is the creation of an independent Federal Aviation Agency with full authority to tackle the myriad problems of air traffic control and safety that have been so widely dispersed in a bureaucratic maze. This action, sparked by Senator MIKE MONRONEY in the upper House and skillfully steered by Elwood "Pete" Quesada on the executive side of the Government, is now facing its final hurdle in the House. We hope that Representative OREN HARRIS, key man in the House for this bill, will provide some extraordinary bustle to match the performance of Senator MONRONEY and Mr. Quesada in assuring the creation of this vitally needed agency in the current session of Congress.

In defense, Congress has also compiled a better than average record with a Defense Department reorganization bill that at least takes a positive step toward untangling the Pentagon knot of indecision. As usual Congress also was more sensitive than the executive branch in providing adequate funds for development of key weapons in advanced missiles, aircraft, and submarine programs. It has also begun to ring the bill on the vast bureaucratic expansion of the Military Air Transport Service into costly duplication of commercial airline services while neglecting the genuine problems of adequate military air logistics.

Congress also became more aware of the tremendously complex relationship between the military services and the industrial complex that develops and produces new weapons. It should study this problem more

UNIVERSITY OF MICHIGAN LIBRARIES

thoroughly in the future. This area needs a complete overhaul of both its legislative and administrative aspects to develop a modern streamlined military-industry relationship that protects the taxpaying public agianst excessive profits but at the same time permits industry to move with the speed its technical capabilities make possible.

Congress Should Refuse To Legislate Fair Trade

EXTENSION OF REMARKS
OF
HON. BRUCE ALGER
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Monday, August 4, 1958

Mr. ALGER. Mr. Speaker, under leave to extend by remarks in the RECORD, I include the following editorial from Barron's national business and financial weekly. The fair-trade bill, just reported by the Commerce and Finance Subcommittee of the Interstate committee, would not be fair to anyone—not to the consumer, nor the retailer for whom it is intended to protect. It actually could become the umbrella protecting big retailers. They could cut prices with their own products while the small retailer could not do so with trademarked items. Congress and the consumers should beware of this dangerous bill, which would destroy the competitive forces underlying our private enterprise system.

It is my hope that Members of Congress will inform themselves and discuss this matter with constituents before it is too lake to undo the damage.

BILL OF GOODS—CONGRESS SHOULD REFUSE TO LEGISLATE FAIR TRADE

Sweltering Washington these days is witnessing a spectacle more predictable than springtime cherry blossoms—the midsummer scramble by hot, weary legislators to wind up their work and head for the hustings. Despite the parlous state of the world, leaders on both sides of the aisle are talking wistfully of going home in less than 2 weeks. Before that day of emancipation, however, they must dispose somehow of an impressive stack of unfinished business. In view of this crush, it is distressing that much of their time and attention is being taken up by proposals that merit no consideration whatever. One sorry example is the surprise effort to breathe new life into the tattered corpse of fair trade.

Measures to legalize this type of price-fixing nationally, in a form more hostile to free enterprise than ever, have been introduced by Senator HUBERT HUMPHREY, Democrat, Minnesota, and Representative OREN HARRIS, Democrat, Arkansas. In prompt response, a swarm of small-business advocates—trade association men speaking for druggists, jewelers, and appliance dealers—has converged on Capitol Hill to raise a supporting clamor. Less in evidence, as usual, are the representatives of the consumer, whose pocketbook is under attack. At any time and place, the record makes clear, fair trade, by keeping prices high, hobbles competition and restricts markets. For these very reasons, as even some of its erstwhile champions concede, it is virtually impossible to enforce. It adds up, in short, to a costly hoax. Few proposals could be more out of place during an economic slump, which calls not for less zeal and initiative in winning the consumer's favor, but for more.

Fair trade, a misbegotten child of the great depression, was born when several States enacted laws permitting manufacturers to establish minimum retail prices for their products. This novel approach to merchandising, exempted from the Federal antitrust laws by the Miller-Tydings Act of 1937, came to govern sales of most trade-marked United States drugs, cosmetics, housewares, sporting goods, and small appliances. When the postwar shortages were over, manufacturers and price-cutting retailers became embroiled in endless litigation. In 1951, the Supreme Court ended the confusion by deciding that minimum prices bound only stores that had signed contracts with their suppliers. Storming to the rescue the next year, the lawmakers passed the McGuire Act, extending the sway of fair trade over all retailers, including nonsigners, in any State which had adopted a price-maintenance law.

Congress, however, did not have the last word. Merchants, complaining bitterly that the fast-spreading discount houses were flourishing at their expense, began to slash prices in retaliation. When the manufacturers sued, many State acts were held to be unconstitutional. Last fall, General Electric, a staunch champion of price maintenance, carried a memorable battle against the $50-million-a-year Masters store chain to the Supreme Court, which ruled in favor of the discounter. In February, GE, Sunbeam, and many a smaller manufacturer freed their retailers from the restrictive contracts. Their action was hailed widely as the death blow to price-fixing.

Its champions, however, are a stubborn lot. Two months ago, Congressman HARRIS took time out from his three-ring investigation of the independent Federal agencies to toss his new bill into the hopper. Senator WILLIAM PROXMIRE, Democrat, Wisconsin, and Senator HUMPHREY, himself an ex-druggist, did as much in the Upper House. These enthusiasts propose to outdo anything attemped in the past. Far from leaving each State a free choice, as heretofore, both bills flatly would declare fair trade to be national policy, enforceable in Federal courts. Furthermore, they would abolish the need for any contract with distributors, letting the manufacturer simply serve notice of his minimum prices. Proponents argue that such legislation would tighten channels of distribution for the manufacturer, protect the small merchant and serve the real interests of the consumer. Above all, they contend, it would rescue retailing from the law of the jungle.

The flaws in this glib argument are readily apparent. Experience has proven that price fixing (when it works) overshoots its avowed target and kills all competition. For that reason, it has drawn the fire of the Justice Department and the Federal Trade Commission. As former Attorney General Brownell observed, "Price in some cases is the only area where the little retailer can compete against the big department stores." Price maintenance, then, is designed to hamstring the aggressive and imaginative merchant. The fair traders, in the scornful words of one of New Orleans' famed price-cutting Schwegmanns, "want to get up late, make money on low volume and not work too hard."

That fair trade keeps prices, at a comfortable, high-margin level is demonstrated anew whenever it is abandoned. Thus the decision by G. E. and Sunbeam to give it up touched off a rousing battle in appliances, which slashed prices as much as 40 percent, and incidentally broadened the market for manufacturer and retailer alike. Similarly, when Louisiana's price law collapsed, a Baton Rouge druggist, Charles F. Fort, marked down everything in his store from 10 to 50 percent. Customers appeared in such numbers that his eight clerks could not serve them. Today Mr. Fort has 6 drugstores, 52 clerks, and a $2 million-a-year business. Nor has he built up this volume, as some critics suggest, by reducing his profit to nothing. "We don't believe in giving our merchandise away," says this nonconformist, "but we do keep our costs low so we can give the people a fair price."

Such success stories offer a happy contrast to the frustrations encountered by many a giant firm which has clung to price maintenance. They also point up a final reason why Congress should refuse to clutter up the statute books with the proposed legislation. For no matter what the law may say, fair trade is essentially unenforceable. In all its woeful history, manufacturers, finding the price umbrella increasingly costly to maintain, have sold furtively to discounters. Retailers have struck back by marking down their own price tags. Consumers, too, somehow have managed to ferret out the best bargains available. Fair trade, in short, is no less vulnerable than any other attempt to rig prices. Sooner or later, a dynamic free economy will finds ways to topple any such jerry-built edifice.

Hon. Thomas J. O'Brien

EXTENSION OF REMARKS
OF
HON. HALE BOGGS
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Monday, August 4, 1958

Mr. BOGGS. Mr. Speaker, I am pleased to see further tributes to our distinguished friend and colleague, TOM O'BRIEN of Illinois. I include three editorials:

[From the Chicago Tribune of August 4, 1958]

WILL WE LOVE THEM IN NOVEMBER?

We have given a good deal of attention both in our news and editorial columns recently to Representative SIDNEY YATES, a Democrat from Chicago's North Side, for his exertions in seeking to get Chicago a break on lake diversion and in starting things going on a new Chicago Federal building and courthouse. We had an editorial complimenting YATES for getting an appropriation for the planning and site for the buildings.

Representative THOMAS J. O'BRIEN, a West Side Democrat, has also been most active in trying to get Chicago an increased flow of lake water for navigation and sanitary purposes. His contributions have been duly noted in our news stories.

These are Democrats, but at the moment we are fond of them. They are trying to get things done for Chicago and for the people they represent. We compliment them again on their exertions and wish we could find equal zeal in some of our Republican Congressmen so we could spread the flattery around.

Our solicitous feeling for these Democrats exists despite our awareness that there are many bones to pick with Democrats in general, and despite our having differed from time to time with these particular ones. If they make mistakes, we shall not spare them. The question is, as the old ditty has it, "Will you love me in December as you did in May?" And that, we are sorry to say, is something about which we cannot be entirely sure.

[From the Chicago Sun-Times]

ALMOST UNANIMOUS

In the entire Illinois delegation to Congress—2 Senators and 25 Representatives—

only 1, Representative SID SIMPSON, is not supporting the lake diversion bill.

The near unanimity is to a considerable extent due to the untiring efforts of Representative THOMAS J. O'BRIEN, Democrat, of Chicago, to win downstate converts to the cause of diversion.

Not so many years ago, Senators and Representatives from downstate were inclined to oppose any proposal to divert more Lake Michigan water into the Illinois Waterway, which consists of the Chicago River, part of the Des Plaines and all of the Illinois River. Finally, O'BRIEN's persistence overcame the resistance of all but SIMPSON.

SIMPSON, a Republican, is from Carrollton in Greene County, about 35 miles north of St. Louis. The Illinois River runs almost half its course through his west central Illinois 20th district, and SIMPSON's argument against diversion is that "we want less water, not more."

But the Illinois River also runs through portions of the 18th Congressional District of Representative H. MICHEL, Republican, of Peoria; the 17th, Representative LESLIE C. ARENDS, Republican, of Melvin, and the 15th District of Representative NOAH M. MASON, Republican, of Oglesby, the most recent convert to diversion. The remainder of the Illinois Waterway runs through several Chicago districts and one suburban district, the 14th, all of whose Representatives now favor increased lake diversion.

The argument might be made that from a geographical standpoint SIMPSON's district has more at stake in the diversion fight than any other one district. But SIMPSON represents only about 280,000 people, while the remaining members of the Illinois delegation represent 9,160,000.

If SIMPSON were to study the diversion issue carefully, he too might change his mind. For the effect of increased diversion would be beneficial to his district as well as to others. The proposed extra diversion, 1,000 cubic feet per second as against the present 1,500 figure, is not enough to add seriously to present flood problems. Moreover, the advantages—a greater intake of oxygen to sustain more fish life and kill off undesirable plant life—would far outweigh any disadvantages that increased diversion might have, including the flood danger that doesn't exist.

But even without SIMPSON, the Illinois front for extra diversion ought to be united enough to persuade the Senate to pass the bill.

[From the Garfieldian and Austin News]

NICE GOING, REPRESENTATIVE O'BRIEN

Congratulations are due Representative THOMAS J. O'BRIEN, who is serving his 11th term as congressman from the West Side's Sixth District. For his untiring efforts in leading the fight for passage of legislation authorizing the important Cal-Sag Channel, Congress has ordered that a lock and dam to be built on the Calumet River be named in his honor.

Congressman O'BRIEN is not one to make the headlines very often. He is not an orator and very seldom enters into the debate in the House of Representatives. Nor does he dash off opinions and hand them to reporters on every controversial issue.

Most everyone knows that Congressman O'BRIEN is a faithful Democrat who has stuck to his party's principles ever since he first started his political career in the State legislature back in 1906. He has been known as a loyal, sincere, kindly man who has been true to his friends and has made very few, if any, enemies.

In Washington, where he is a member of the important House Ways and Means Committee, he is universally liked and respected by members of both parties. He is often called upon by members of the opposite party who need cooperation in a local problem and he has never been known to let one of them down.

The action to name a lock and dam in O'BRIEN's honor—adopted unanimously in both the House and Senate—comes as proof of the high esteem in which the West Side representatives held by his fellow lawmakers of both parties. We are sure that Mr. O'BRIEN has received many honors in his 52 years of service but none can match a tribute paid by the Members of the most important legislative body in the world.

We are sure the entire West Side joins us in extending congratulations to Representative O'BRIEN.

The Constitutional Freedom To Travel

EXTENSION OF REMARKS
OF
HON. HUBERT H. HUMPHREY
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES
Monday, August 4, 1958

Mr. HUMPHREY. Mr. President, in the Sunday, July 27, issue of the Minneapolis Sunday Tribune, there appeared an editorial entitled "The Constitutional Freedom to Travel."

This editorial comments upon proposals before the Congress to govern State Department policies relating to passports.

The editor has made an analysis of the two principal bills relating to the subject of passports. I am very pleased that he has seen fit to comment favorably upon the bill I introduced some time ago—S. 4137.

I ask unanimous consent that the editorial be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

THE CONSTITUTIONAL FREEDOM TO TRAVEL

Congress now has before it two proposals for legislation to govern State Department policy in the issuing or withholding of passports. One, in the House of Representatives, is sponsored by the administration. The other, in the Senate, is sponsored by Minnesota's Senator HUMPHREY, among others.

Of the two, the Senate bill is infinitely to be preferred.

The House bill puts undue emphasis on matters concerning what it calls the proper conduct of our foreign policy. It reflects an almost frightened idea of what damage might be done to our national security by letting noisy dissenters or possible conspirators travel abroad.

Its stress is on the control of Americans' travel abroad, not on their constitutional freedom to travel.

The emphasis of the Senate bill, on the other hand, is on that freedom. Under it, the only restrictions which the Government could put on citizens' travel abroad would be: (a) in case of war, when the President could control entry into and exit from the United States; (b) in case of hostilities other than war in which United States forces might participate, when entry of citizens into the combat areas could be controlled; and (c) in the case of persons under indictment, information, or sentence for the commission of a felony, who may be denied passports.

The bill significantly omits any provision for the limitation of passports during times of so-called national emergencies, the authors pointing out that as far as the issuance of passports is concerned, the United States has been in a national emergency since 1940.

The authors of the Senate bill, in an explanatory memorandum accompanying their proposal, also aim a telling blow at the present practice of the State Department to proscribe large areas of the world as out-of-bounds to traveling Americans.

Under the bill, if the President and the State Department decided that temporarily the United States could not give its usual protection to American travelers in a certain area, passport applicants, the public and Congress would be notified of the hazard, but the President shall not forbid travel in these areas.

This "travel at your own risk" section makes sense, but it is likely to be especially distasteful to Secretary Dulles and others who seem to look upon citizens' travel more as an instrument of Government policy than as the constitutional freedom which the courts have found it to be. But Americans who believe that freedom to travel and other freedoms are inherent rights and not matters of official expedience will throw their support to the Senate passport bill.

Hon. John A. Burns

EXTENSION OF REMARKS
OF
HON. WAYNE N. ASPINALL
OF COLORADO
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 10, 1958

Mr. ASPINALL. Mr. Speaker, most assuredly I wish to join with my colleagues in voicing our appreciation for the fine services which the Delegate from Hawaii, the Honorable JOHN A. BURNS, has rendered to the people of the Territory of Hawaii particularly, and to the Nation generally during the 85th Congress. And, may I say, that to those of us who were privileged to know him personally before he made his presence here among us, his successes and achievements during the last 2 years have come as no surprise. With his knowledge of the area and people that he is honored to represent, his dedication to purpose, his humility of spirit, and his ceaseless activity in furthering the principles and objectives in which he believes, success was bound to be his reward. Not discounting in the least the records of his illustrious predecessors, I do not hestitate to say that the accomplishments of the present Delegate in securing favorable action on needed legislation for the Territory and his boost toward the goal of full statehood for that lovely land and its hospitable, intelligent, and loyal people has been second to none.

JOHN A. BURNS is a man of strong character. He practices openly the faith in which he believes so sincerely and which permits for him no compromise with evil, disloyalty, or doubledealing. His reputation is above reproach. His word, not lightly given, but when given, is his bond, and, to my knowledge, remains unquestioned. With these attributes he is possessed of far more than the average abil-

UNIVERSITY OF MICHIGAN LIBRARIES

ity for the work to which he is now dedicated. He has learned well the intricacies of his new responsibility. As a newcomer, he has not hesitated to ask for advice and counsel, and he has done this, regardless of partisan or political division. The Members on both sides of the aisle have been only too glad to counsel and advise with him in the interests of the people of Hawaii. He is held in the highest of regard and affection by all Members of both Houses.

From the very beginning of his membership in this body he recognized the broad aspect of legislative responsibility. In my opinion, such approach is most outstanding and especially so when such wisdom is found in one just starting his services in this body. Never forgetting for a moment his first and primary responsibility to the area he represents, he has been able to recognize the whole picture—the whole project—rather than just the provincial approach. He started with a good understanding of the experiences of those who had preceded him. Having once made up his mind about what he though was necessary, he has never faltered or wavered. Consequently, the attainment of that ambition, which never has been absent from his conscious moments and, which, as I understand, is the goal of a great majority of the people who sent him to us, is closer to realization today than it ever has been heretofore. Success is just ahead. Statehood for Hawaii—providing its citizens still desire such status—will soon be a reality just as it is for Alaska today. In my opinion, no one understands better the procedure necessary to gain the prize and no one has been willing to give more, even to the point of jeopardizing his own personal welfare, in such struggle than the present Delegate from Hawaii, the Honorable JOHN A. BURNS.

Brussels Fair Flop—Another Blow to American Prestige?

EXTENSION OF REMARKS
OF
HON. J. HARRY McGREGOR
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Monday, August 4, 1958

Mr. McGREGOR. Mr. Speaker, under leave to extend my remarks in the RECORD, I am pleased to include the following editorial by Dick Williams, entertainment editor of the Los Angeles Mirror News.

Without regard to who was at fault in letting this situation get out of hand, I am wondering if it has not meant another damaging blow to American prestige overseas. I am also wondering if it could not have been avoided by a little timely cooperation between our official representatives at the fair and this private company of wildwest performers.

Mr. Speaker, I have not had an opportunity to visit the Brussels Fair. My friends who have, tell me that on the whole it is a wonderful display of our way of life. Relatively little things like this, however, catch the public eye overseas, are blown out of all proportion by enemy propaganda agents, and eventually tend to overshadow all of our successful efforts.

Mr. Williams is to be congratulated for calling our attention to this situation, and I sincerely hope that steps will be taken to insure against the recurrence of such events.

BRUSSELS RODEO—EIGHT-HUNDRED-AND-FIFTY-FIVE-THOUSAND-DOLLAR FLOP BURNS "ANGELS"

(By Dick Williams)

A Hollywood promoter's dream of grandiose American wild west show and rodeo at the Brussels World's Fair has left local and other investors holding the bag for $455,000. The rodeo venture collapsed 3 weeks after it opened.

Even worse than the flop of the show, which closed July 12 owing an additional estimated $400,000 to Belgian creditors, was the dent to United States prestige overseas.

Gene Autry, whose Denver-based Cremer Rodeo Co. supplied 200 head of livestock for the show, decried the way the United States Government had let the situation deteriorate once it was obvious that the show was in deep trouble. He flew over to investigate the situation 10 days ago.

A troupe of 200 cowboys and cowgirls and a band of Sioux Indians were stranded in Brussels without funds by the show's flop.

They were finally flown home at Government expense after the Moscow Circus, also playing the Brussels Fair, offered to put on a benefit performance to raise money for the destitute performers, many of whom had received no wages for weeks.

AUTRY FLIES 72 COWBOYS HOME

Autry told me he paid the plane fares for 72 of the cowboys back to Denver.

"When they landed in New York they had had only a box lunch since leaving Brussels 20 hours before," he reported.

Autry instructed his New York representatives to take all of the cowboys and their wives to dinner before putting them on a plane for Denver.

"We spend billions for overseas aid but the Government let this thing go too far before it moved in," he observed bitterly.

Henry Fine, Hollywood publicist who handled the show and just arrived home, told me the experience was "so unbelievable I'm still sitting around shaking my head. I think the whole fiasco is bound to lead to a congressional investigation. If it doesn't, I've lost my respect for Congress."

Fine said he had received only 1 week's salary for 16 weeks work since he was hired by G. Robert Fleming, 111 Marquez Place, Pacific Palisades, the originator and producer-manager of the wild west show and rodeo.

Fleming, now believed to be in New York, has no past experience with show business ventures as far as anyone knows.

Autry said he was under the impression from the start that Fleming was in some way associated with the State Department, and had tacit backing of the Government in putting on the show.

Fleming took off for New York once the show flopped in Brussels, amid angry recriminations from the Brussels press. He told Fine he would seek further backing from ANTA, the national theatrical organization.

Caught in the worst debacle for Los Angeles show business investors since the demise of the ill-fated revue My L. A. in 1951 is a group of local backers headed by FM-radio station owner Harry Maizlish. He is in for a reported $250,000. Maizlish had his attorneys in Brussels last week investigating the situation.

Other local investors include Blanche Hill, 9419 Sunset Boulevard, Beverly Hills, and Morris Bernstein, a dentist, of 263 26th Street, Santa Monica. Additional investors were from Texas, San Francisco, and New York.

BAD LUCK, BAD MANAGEMENT

Autry and Fine agreed that a combination of bad management and bad luck killed the show, which started off with the kind of reception accorded the Russian Moiseyev Dancers here in the States.

It rained almost steadily during the early weeks of the fair, Autry said. As a cushion against this emergency, Fleming had originally purchased a new style, $60,000 air-cushion-type tent made by United States Rubber.

The tent suffered a quick series of disastrous blowouts at the start of the run and became unusable. Thereafter, rodeo show patrons were forced to sit out in the rain to see the show.

Autry, who was originally tendered an offer to star in the show with Gail Davis, of Annie Oakley fame, and turned it down, cited amazing expenditures.

One included a freight bill of $70,000 reportedly paid by Fleming to transport temporary circus-style seats from Los Angeles to Brussels, although they could have been obtained there.

Europeans have long had a penchant for American-style Wild West shows and it is highly ironic that at the start it was figured the rodeo had the biggest potential of any show playing the fair. It was spotted just outside the regular fairgrounds and was regarded as a World's Fair attraction.

"The show got a fantastic reaction when we opened," Fine told me. "The people screamed over it. They came by the busload from all over Europe—Germany, Holland, France—to see it. It was such a big hit that anyone connected with the show or even wearing a western-style sombrero had open sesame to everything."

REPORTED IN BANKRUPTCY

The situation now is a mad tangle. No one has any accounting books on the show. Tickets were distributed all over Europe to agencies with apparently no record kept of whom they went to or how many were given, Autry told me.

A flurry of lawsuits seems inevitable, but whether anyone will collect a franc, let alone a dollar, is problematical. The company reportedly was placed in bankruptcy in Brussels last week.

The harassed United States Embassy, struggling to combat the ill will built up by the fiasco, is now attempting to find money to pay off Belgian creditors, including 30 local musicians who received no pay.

Casey Tibbs, star of the show, and Verne Elliot, associated with Autry's rodeo company and in charge of the stock, are still in Brussels.

Loose Handling of Public Money in the Planning and Construction of the Air Academy

EXTENSION OF REMARKS
OF
HON. JAMIE L. WHITTEN
OF MISSISSIPPI
IN THE HOUSE OF REPRESENTATIVES
Monday, August 4, 1958

Mr. WHITTEN. Mr. Speaker, in connection with my remarks, I am including in the RECORD several articles from

the Denver Post, Denver, Colo., edition of Sunday, July 27, 1958 and one from the Rocky Mountain News of July 25. I think these articles merit the attention of the membership for many reasons. They confirm the complete lack of consideration that the promoters and builders of this Academy have had for costs or future cost of operations, clearly demonstrates that little, if any, attention was given to the basic purpose of such Academy.

It is to be noted that this Academy is compared with Pike's Peak as an attraction. I think that comparison is appropriate, for Pike's Peak rises far above the surrounding countryside and is a highlight in the topography of the region. This Academy, on the other hand, too, represents a peak—in lack of planning, waste of public money—and is a landmark to those officers in the Pentagon and in the air service who have built a shrine to their loose handling of public money.

It is to be noted, too, that the basic purpose is not even mentioned in this almost full-page story; but the story itself leads to the belief that this could well be a political contribution to the State by the Federal Government. Any reading of the article will clearly show the terrific cost of maintenance which this Government will face in the future.

I call attention of the membership to the fact that a police squad of 91 is required to patrol this sprawling shrine to Air Force handling of finances. I think it appropriate, too, that on the same page of this same paper, there is an article about Steve Canyon and other comic strip characters being on the grounds of the Academy. This seems to me entirely appropriate, though a reading of the strip leads to the thought that this, too, is high-priced Air Force propaganda.

I would repeat again that the late Mr. Talbott bypassed all regular means of handling this public construction, and, according to my belief, handpicked the architect-engineer, and brought into his own office the handling of the plans for this Academy, where it is hard to find any real handling was ever done. It seems that almost any individual, from the Secretary of Defense all the way down to the working level, could get approval for any changes which would increase cost and use funds appropriated by the Congress for other purposes to meet such desires.

Truly, the hearings which our Subcommittee on Military Construction recently held, plus the publicity incident to it, including the article I insert in the RECORD today, should arouse the curiosity of the public; and perhaps Colorado will make even more money from American people than this article seems to think it will.

The serious side, Mr. Speaker, is that these fine young Americans, right out of high school, trained at this Academy for the Air Force, in 12 or 15 years will be setting the monetary policies and making the financial demands for spending in the name of defense of this country. At that time, apparently, they will be passing judgment on probably a third of the total income of the Government. Certainly their financial training in the rarified atmosphere of this shrine to public waste is hardly conducive to training them to protect the economy of this country. This is highly dangerous, particularly since, as the Secretary of Defense, Mr. McElroy, testified before our committee, the present outlook is that the loser between the United States and Russia will be that country whose economy cracks up first.

Mr. Speaker, this example, plus many others which I know about from having served on the Appropriations Committee for national defense, as well as on the Subcommittee on Military Construction, leads me to the firm belief that we seem determined to strike the first blows at our own economy, making it that much easier for Russia.

INVESTIGATION ASKED OF ACADEMY COSTS

WASHINGTON, July 26.—A congressional investigation into the costs of the nearly completed Air Force Academy at Colorado Springs was urged Saturday by Representative JAMIE WHITTEN, Democrat, of Mississippi.

A member of the House Appropriations Committee, WHITTEN said the total figure will reach approximately $300 million as compared with preliminary estimates of $126 million.

The expenditures were approved, WHITTEN said, by the late Harold E. Talbott as Secretary of the Air Force without having been considered through usual procedures for such projects.

The Mississippi Congressman said land for the Academy originally was to have cost about $1 million and was to have been purchased by the State of Colorado and given to the Government. In the end it cost about $5.5 million, with the Federal Government putting up all but about $1 million of the total, he said.

Observing that much of the data concerning the Academy cost came out during hearings on the military construction bill, WHITTEN said:

"I think anyone who reads over the testimony we received will agree that we should investigate the situation further."

He said he will urge that either his appropriations subcommittee or some other congressional group, such as the House Government Operations Committee, investigate.

[From the Denver (Colo.) Post of July 27, 1958]

ACADEMY INFLUENCE FELT IN VARIED AREAS

(By John Morehead)

Late next month, 1,158 Air Force Academy cadets will move into their nearly completed permanent quarters just north of Colorado Springs.

This will be a significant occasion for the United States, and especially for Colorado.

For the Nation, the Academy attests to the new maturity of its youngest arm of defense. At last the Air Force has a nest in which to develop the men who will be charged with global defense responsibilities and perhaps the conquest of space.

For the State, the Academy will have meaning that is much more immediate and material.

Even in the 3 years the Academy occupied temporary quarters at Denver's Lowry Air Force Base, operating on a limited scale, it enhanced Colorado's prestige, boosted its economy, and made it the center of many new activities.

In its beautiful and costly permanent site, the Academy will continue to do these things on a far greater scale.

ONE HUNDRED MILLION DOLLARS SPENT

For example, the Federal Government already has spent more than $100 million to build a physical plant which promises to rival, in importance to publicity about the State, towering Pikes Peak which is clearly visible from the 17,800-acre Academy grounds.

While there is disagreement as to what the Academy's ultimate cost will be, Congress so far has appropriated $133.5 million. Only the Colorado-Big Thompson reclamation project, bringing water from the western side of the Rockies to the thirsty eastern plains, has cost the Government more in the State.

The greatest part of this money has gone to erect a complex of supermodern buildings that might best be described as startling. The Academy proper is a quadrangle of several steel, concrete, and glass structures atop a mesa where the cadets will live and learn. A part of this quadrangle is visible from the main Denver-Colorado Springs Highway (U. S. 85–87), which forms the eastern boundary of the Academy grounds.

But most of the Academy reservation cannot be seen from the road. The campus is 7 miles long and more than 5 miles wide, cut up by valleys and hills and butted up against the rugged Rampart Range.

Tucked into this terrain are the facilities needed to support the Academy—powerplants, warehouses, administrative buildings, pumping plant, sewage plant, barracks. There will be 550 homes in one area and 650 in another to house the Academy staff and their families, plus schools, stores, and all the other things necessary in communities of such size.

In all, there will be some 40 miles of roads linking the various areas, most of which are open to visitors.

This adds up to a fine tourist attraction. Last year, even while the buildings were rising, an estimated 80,000 persons came to see and enjoy. This figure is expected to increase to 250,000 this year.

"Ultimately," says Thayer Tutt, vice president of the Broadmoor Hotel and one of the leaders in the campaign to get the Academy for Colorado, "there should be a million visitors a year."

Former Gov. Dan Thornton, president of the Denver Convention and Visitors Bureau, says "The Academy will be like the Capitol in Washington and the Empire State Building in New York. People who visit the West will want to see the Academy."

Next June 3, the Academy will graduate its first class of 208 cadets with pomp and ceremony to rival the traditional graduation services at West Point and Annapolis. The crowd coming to this event is expected to set off a summer-long centennial-year parade of visitors.

And tourists mean dollars for Colorado's economy.

Aside from the money that visitors may spend in the State, the Academy is the economic equivalent of a new industry. Its business will be the care, maintenance, and education of 2,520 cadets, the projected capacity enrollment expected to be reached in 1963.

To get this job done, 2,200 officers and airmen will be assigned to the Academy. Their dependents will number an estimated 5,200. An additional 2,750 civilian employees, living off the site with the families, also will be needed. These persons will draw an aggregate monthly payroll of more than $1,150,000. Most of this money will be poured into the economy of the Colorado Springs-Denver areas.

FOOD BILL HIGH

The cost of feeding the cadets alone amounts to a substantial bill. Based on current costs, it would take about $100,000 a month to purchase the 75 tons of food which a full complement of cadets would stow away.

Academy officials say most of their food is being bought through Denver firms. Pur-

UNIVERSITY OF MICHIGAN LIBRARIES

chases will continue to be made in Denver and in Colorado Springs after the move.

No less important to Colorado will be the Academy's influence on the State's schools, in intercollegiate sports, and the area's social life.

The Academy's curriculum is roughly similar to that offered by a 4-year engineering school, with strong emphasis on the humanities and liberal arts. Maj. Gen. James B. Briggs, Superintendent, says the Academy "should provide the broad educational background required by senior air officers of a nation which has assumed leadership of the non-Communist world."

Dean James E. Perdue, of the University of Denver's college of arts and sciences, expresses the thinking of many educators when he says: "The educational philosophy finally adopted by the Air Force will have a tremendous impact on the rest of us."

It is expected that many of the region's outstanding teachers will be invited to address the cadets. By the same token experts from the Academy faculty—drawn from throughout the United States—will be available to this area's colleges as guest lecturers and consultants.

In athletics, the Academy has fielded teams in 17 sports, many of them, like la crosse, new to the West. The result is improved quality of competition and increased national recognition for this region.

Big-time football is only a season away. The Air Academy Falcons will play Army in the East next year. This year the Falcons play Colorado, Utah and UCLA along with teams of lesser renown. In a few years the Academy will be playing a full schedule against the top college teams of the country as well as Army and Navy.

The leisurely social life that used to characterize military posts may have gone the way of cavalry horses, but Academy officers and their ladies will find a warm reception in the various strata of Colorado society.

Not least among those who will be welcomed are the cadets. Hand-picked from among the Nation's brightest, sturdiest youths, the cadets are a reservoir of eligible bachelors for this region's young women.

POLICE SQUADRON OF 91 PATROLS ACADEMY SITE

COLORADO SPRINGS, July 26.—They look like cadets, these 91 policemen who patrol the beautiful new Air Force Academy site.

But they really are cops, maining law enforcement patrols, manning the north and south entrance gates to the 17,500-acre site, and supply maps, brochures and answers for thousands of tourists from all part of the Nation.

Hundreds of tourists have to be set straight about the young airmen.

The next question most frequently asked is: "Just where is the chapel that has been causing all the fuss?"

The new force of air police headed by Capt. Roger P. Fox, provost marshal and squadron commander, and Lt. Laurent Bougie, operations officer, was set up here July 1, working in four flights on a round-the-clock basis. The headquarters building has a spic-and-span newness from front office to padlocked clink.

Nearly 3,000 vehicles tour the area every weekend, an average of about 10,000 persons.

Visitors may stop at the entrance gates for maps and brochures.

While the academic area is temporarily blocked off from traffic because of construction, visitors may drive their own cars over many of the roads from 6 a. m. to 7 p. m. daily.

From lookouts in this sprawling mountian section of 7,200-foot altitude, they can get breathtaking views of the academic complex, housing and service areas.

Before the airmen took over at the Academy site, a civilian security force known as General Services Administration was in operation for 3 years.

The GSA crew did everything from jeeping groceries in to residents marooned by deep snows, to guarding construction payrolls.

By the time the cadets are moved here from Lowry Air Force Base in Denver in August, the air police squadron will number 112.

STEVE CANYON STRIP IN STATE MONDAY—SHOWS LOCAL SCENES

Air Force Lt. Col. Steve Canyon and his vivacious cousin Poteet arrive in Colorado Monday to do their bit in helping the Air Force Academy move from Lowry Air Force Base to its permanent site near Colorado Springs.

The two new arrivals will be recognized by Denver Post readers as the main characters of the Milton Caniff comic strip Steve Canyon.

The comic appears in 606 other newspapers throughout the world, but those acquainted with Denver will see in the panel backgrounds many familiar Denver area sights.

While Poteet becomes involved romantically with an Air Force enlisted man, Steve goes about his work helping the Academy personnel in their move.

Among the many local personalities brought into the strip is Maj. Gen. J. E. Briggs, commander of the Academy.

He is pictured on this page in a panel taken from one of the future Steve Canyon sequences.

Buildings, street and highway signs, the new Academy buildings and familiar details of Denver life can be recognized in the comic.

Six months ago a Denver Post reporter-photographer team toured the city obtaining photographs of such scenes and details for Caniff, who is a stickler for detail.

[From the Rocky Mountain News, Denver, Colo., of July 26, 1958]

AIR FORCE ACADEMY FINANCING PROBE URGED

(By Gene Wortsman)

WASHINGTON, July 25.—A Mississippi Congressman Friday urged a deeper probe into financing of the Air Force Academy at Colorado Springs.

Representative JAMIE L. WHITTEN (Democrat, of Mississippi) said, "There are lots of things that arouse your curiosity."

A member of the House Appropriations Subcommittee which questioned witnesses about the Academy, WHITTEN said that the handling of contracts is questionable.

He said that after contracts were let values were increased by millions of dollars.

EASIEST THING

It "would be the easiest thing in the world" for the Government official handling contracts to award the original bid to a favorite who knew that the price would be upped later, WHITTEN said.

"I am saying that could have happened," he remarked in the hearing to John N. Ferry, special Air Force assistant for installations. "Could it not?"

"It is a remote and unthinkable possibility," Ferry replied.

"Why is it unthinkable?"

"Because of the character of the people who are running this job. * * *"

"Mr. Talbott resigned, did he not?" (Harold Talbott was Air Force secretary when Congress was told the Academy would cost $125 million.)

"Mr. Talbott resigned," Ferry agreed.

"Wasn't he using his position to influence business for his own folks?" WHITTEN asked.

"No, sir; I cannot agree."

MORE QUESTIONS

"Well," WHITTEN said, "you came here with him, and it is natural that you (would not agree). I am asking you again if that was not the basis on which he tendered his resignation, and that it was accepted—on these charges?"

"I could not comment on that, sir."

"Were the charges made?"

"The charges were made."

"Did he offer his resignation?"

"He did."

"Did the President accept it?"

"The President did, sir."

Later in the hearing WHITTEN said:

"I do not know whether I can get by with it, but I am going to try and get another investigation. I do not know how far I can get with that." WHITTEN reiterated his probe plea Friday.

Mail Rates Should Be Based on Delivery Cost

EXTENSION OF REMARKS

OF

HON. EUGENE J. McCARTHY

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Monday, August 4, 1958

Mr. McCARTHY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include an editorial from the Bloomington Sun, Bloomington, Minn., entitled "Mail Rates Should be Based on Delivery Cost," which points out the real need for a reexamination of the whole mail-rate structure:

COST

(By Pete Donaghue)

Although the postage rate hikes which will go into effect August 1 are certainly needed, there are many small-business men who wish that the whole mail-rate structure could be evaluated for fairness.

Unfortunately, in setting the new rates, Congress appears to have been more influenced by powerful special interests than by a realistic appraisal of the immediate economic problem. Everyone will feel the new postage hike, but the poor small-business man—as usual—is getting hit for more than his share.

It wasn't too long ago that a lower rate was charged for mail to be delivered locally, and letters which were to be sent out of town and required more handling, paid more postage.

Under the new rate structure, 4 cents is being charged for all first-class mail, whether for local delivery or transportation across the country. Using the postal department's own figures, however, the cost of distribution of first-class mail is less than 2 cents when that mail is handled only by the local post office.

Since the bulk of the mail of a small-business man goes to the local post office and to local customers, an across-the-board increase for all first-class mail is a further penalty on him. Conversely, a blanket increase is an aid to a large company, which otherwise would have to pay more because it costs more to deliver its mail all over the Nation.

Another area where a real investigation is needed to clear up inequities is in the second-class privileges allowed newspapers and magazines. Even though this newspaper would suffer a bit in higher second-class rates we'd gladly pay more to see an honest approach to the whole problem.

Second-class rates are scheduled to be raised in three installments, beginning next

January 1. Even with this raise, however, second-class publications will not come near paying the cost of their distribution.

We believe that all classes of mail—including second-class—should pay exactly what they cost to be delivered. Mailings which go to farflung corners of the country should pay more than those which are delivered in the next block.

An article in the Postal Supervisors says that the postal department loses $4 million a year on delivery of The Reader's Digest, and also mentions that the average copy of this publication is mailed for 1 cent.

A total of $8 million is lost annually by the Post Office in the handling of the Saturday Evening Post and the Ladies Home Journal. Biggest single loss of the post office however is Life, which costs the tax payer of this country $9 million a year to be delivered.

If all classes of mail were made to pay their own way, there would be a lot less grumbling at the coming postal increases, particularly on the part of the hard-hit small-business man.

Shopping Around

EXTENSION OF REMARKS
OF
HON. BRUCE ALGER
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Monday, August 4, 1958

Mr. ALGER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following interesting editorial on the fair trade bill. This article is now even more significant since the Commerce and Finance Subcommittee of the Interstate Committee, of both of which I am a member, has reported the fair trade bill to the full committee. I am opposed to this bill, strictly on the basis of the merit of arguments offered for and against. This editorial sheds further light on the inequities and harm that would be done under a Federal fair trade law.

SHOPPING AROUND

As every housewife knows, the American economy is built on shopping around. By shopping around, the housewife knows she has a better chance of getting the thing she wants at reduced cost or perhaps a better article than the one she had in mind for the same price she wanted to pay. Shopping around is the result of the American system of competitive free enterprise, and most people will agree that it's a very beneficial result.

Some don't, though, and among them are some Congressmen who want again to hobble the public with the so-called fair-trade laws which in recent years have fallen not only into disrepute but into illegality. Fourteen State courts have declared unconstitutional various State fair-trade laws based on an act of Congress which permitted States to pass laws that fixed prices.

Representatives OREN HARRIS, of Arkansas, has introduced a bill the House Commerce Committee is expected to report out favorably and the House to pass. The bill cuts through the evasions of former permissive acts of Congress. This one would make mandatory a national fair-trade law which would end retail trade competition altogether.

Mr. HARRIS, to say the least, is to be congratulated on his forthrightness. He makes no bones about State laws, agreements and so forth. The bill comes right out to permit a manufacturer to fix stipulated or minimum resale prices simply by serving notice to the distributors. Even the fiction of a contract is abandoned, and the same resale price would be set in all States, Territories, and the District of Columbia simultaneously. Violators could be hauled into Federal court for damages.

Perhaps some manufacturers will like such a bill, and maybe some retailers will, too. But the manufacturer who sets his prices either nationwide or by areas, reduces the flexibility of his price structure. And the retailer would be bound by the prices set and denied the possibility of moving his goods faster by reducing prices. In fact, the only way a retailer could legally lower the price, once it was set by the manufacturer, would be to go out of business or hold a damaged goods sale. It seems to us that both manufacturers and retailers should hesitate about a bill that might well curtail their sales.

There isn't much hesitation on the part of the Government, however; the Commerce, Agriculture, and the Justice Departments are against the Harris measure as written. The Justice Department says it would drastically change the basic concepts of our competitive economy. "The bill would suppress competition at the manufacturing level and at all levels of distribution. Obviously, competition would be eliminated at the retail level, since this is the apparent purpose of the bill."

And what would be the result of the elimination of competition at the retail level?

Senator HUBERT HUMPHREY, of Minnesota, in a speech in the Senate recently, put the case for fair trade quite succinctly. He said fair trade benefits the retailer and the wholesaler, by placing them on an equal footing with all other retailers and wholesalers of branded or trade marked products, whether they happen to be large or small. Also, the margins of profit for both are fixed.

As for the effects on the consumer, Senator HUMPHREY had this to say: "Fair trade eliminates the need for shopping around."

And what would happen if there were no more shopping around?

The Justice Department has an answer to that in a survey made in 1954, and we think the housewife who shops around now would like to know what happens when she can't.

The survey shows that drug and appliance prices in fair trade areas were 28 percent higher than drug and appliances prices in places where there wasn't any fair trade.

Federal Scholarships

EXTENSION OF REMARKS
OF
HON. JOHN V. BEAMER
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 15, 1958

Mr. BEAMER. Mr. Speaker, the need for a careful and cool-headed study of proposed legislation is emphasized in the Indiana report on scholarships. This story is summarized in the editorial from the Marion (Ind.) Chronicle of July 31, 1958, which, under unanimous consent, I include in the Appendix of the RECORD:

NEED EXAGGERATED

It is easy to say this or that isn't true but you make a strong case only by backing up the opinion with solid facts. Such is the case in Indiana on the proposal for Federal scholarships to aid college students. And the need is exaggerated, as so often is the case when the Federal Government decides to take over functions which strictly are State affairs.

Proponents of Federal scholarships have been citing estimates that as many as 100,000 able high-school graduates do not go to college for financial reasons. On this basis, Indiana could be expected to have about 2,300 competent school seniors who will be denied a college education for lack of money.

A committee of 14 men, headed by Clarence Manion, former dean of the Notre Dame Law School, was appointed by State school officials to investigate the situation. Letters were sent 707 high-school principals to find out how many students with interest, ability, and aptitude in science and mathematics to perform college work successfully would be unable to attend college because of a lack of funds. The answer was approximately 2,000—very close to the estimated figure of 2,300.

It was then that the true story came to light. These 2,000 students were invited to take a 4½-hour test in science, mathematics, English, and social studies with the view to obtaining a scholarship. Only 703 took the examination. The other 65 percent apparently was not interested.

The results of the 703 examinations disclosed only 179 students as having the definite ability to pursue successfully a college course. (This doesn't speak very high for their training in high school on an overall basis.) The students with ability were asked, by letter, if they could pay their own way to college. Twenty-three did not respond and 14 said they had the financial resources necessary for college for at least a year. Twenty-five others had interests other than in mathematics and science.

The standard-need formula then was applied to the remaining 117 qualified students. Of these, 64 were eliminated by the formula, leaving 53 students qualifying for financial aid. And of this final group, 37 already had scholarships ranging from $25 to $750 but did need extra help.

The investigating committee now is devising a plan to aid these students from private sources and the Indiana Chamber of Commerce has undertaken the job of making sure that the assistance becomes available.

So the facts and figures are plain. Officials in Washington who want to force through the Federal-scholarship program obviously are exaggerating the need, at least as far as Indiana is concerned.

The Community Facilities Act of 1958

SPEECH
OF
HON. JOHN H. DENT
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Friday, August 1, 1958

Mr. DENT. Mr. Speaker, in supporting this legislation, the community facilities bill, I do so because of the great need for congressional action at this time.

Too many Members are ready and willing to vote for so-called foreign aid with the Economic Development Fund to spend American dollars for community facilities in underdeveloped countries. To do less in our country is shortsighted and in a sense, against the best interest

UNIVERSITY OF MICHIGAN LIBRARIES

of our country, its communities, and its peoples.

Let us see what S. 3497 will do for the people. This bill as reported by the committee, would rewrite title II of the housing amendments of 1955, which authorized Federal loans for public facilities. The bill would make the following major changes in this loan program:

First. The fund for community facilities and public works loans would be increased to $2 billion, of which $400 million would constitute a revolving fund.

Second. The formula for computing the maximum interest rate to the borrower would be revised to produce a maxium rate, under present conditions, of 2⅝ percent.

Third. The maximum loan term would be raised from 40 years to 50 years.

Fourth. The existing program has been limited in practice to communities of 50,000 population or less; the bill extends the program to all municipalities and other political subdivisions of States without regard to population.

Fifth. Eligibility would be extended specifically to a wide range of facilities and projects. Priority would be given to projects which the administration determines could not be undertaken without the bill's assistance.

Sixth. Private nonprofit hospitals would be made eligible for loans under the bill.

Seventh. The amount of the authorization which could be used in any one State would be limited to 10 percent.

Eighth. The prevailing-wage and overtime requirements of the Davis-Bacon Act would apply to projects financed under the bill.

In addition, the bill would increase the authorization for Federal planning advances under section 702 of the Housing Act of 1954 from $48 million to $98 million.

The primary and urgent purpose of this community-facilities and public-works bill is to provide a much-needed stimulus to our lagging economy, to increase the flow of the purchasing power into the hands of the consumer, and to reduce the alarming ranks of the unemployed. It will provide a valuable tool in the fight against the current economic slump. Basically, the bill would provide a substantial sum of money for long-term loans on liberal terms to municipalities and other political subdivisions of States for the construction of many types of worthy community facilities and public works. I am convinced that the program will furnish a vitally needed economic stimulus and, at the same time, will enable communities to build essential and desirable public facilities which would not otherwise go forward.

The bill is a product of careful study and deliberation by the committee. It was one of the major pieces of legislation considered during an extended series of hearings on legislation to relieve unemployment. During the hearings, which began on April 14 and continued through May 22, the committee received testimony from witnesses of the highest caliber and competence, men of proved achievement and ability in their fields. The list of witnesses included former President Harry S. Truman, distinguished governors from 10 of our great States, distinguished mayors, top labor and business leaders, the leaders of the 3 major farm organizations, top administration officials, and Members of Congress. The cooperation of these witnesses was of invaluable assistance to the committee and their contribution has helped to improve both the content and quality of the bill.

In framing the bill your committee considered S. 3497, passed by the Senate on April 16, 1958; H. R. 11474 and H. R. 11272; and the reported bill incorporates features from all three bills.

The whole problem of aid to communities is not new. In 1955 Congress passed a community-facilities bill which set up a revolving fund of $100 million restricted to loans for smaller communities. Smaller communities have been defined as communities under 10,000 population, although the act actually contemplated communities of 50,000. Most of this money has been used for sewerage and water facilities.

This bill goes much further, not alone in its extension to all communities but also in its realistic increase in both the amount of money and the longer terms for the duration of the loan at lower interest rates.

Personally I can see no logic in a situation which refuses to lend money to our communities while at the same time, giving money, without hope of return, to foreign communities.

The vote to defeat the rule on this bill is of course a vote against the bill.

Any Congressman voting for foreign redevelopment and against local home community redevelopment loans should take another look at the situation and consider voting for loans to our communities for the construction, repair, and improvement of public streets, sidewalks, highways, parkways, bridges, parking lots, airports, and other public transportation facilities; public parks and other public recreational facilities; public hospitals, rehabilitation and health centers and public nursing homes and public convalescent homes; public refuse and garbage-disposal facilities, water, sewage and sanitary facilities, and other public-utility facilities; civil-defense facilities, public police and fire protection facilities; public wholesale farm produce markets; public libraries and offices and other public buildings—other than schools—and public land, water, and timber conservation facilities.

Loans to nonprofit hospitals to finance specific projects for hospital construction, repair, or improvement are also made eligible under the bill.

To insure that assistance under the bill will be channeled primarily into projects that will create employment, there is included in the committee substitute a requirement that in extending such assistance the Administrator shall grant priority to projects which he determines could not be undertaken without such assistance. Applications of communities which demonstrate that the project involved could not be undertaken without Federal assistance would be processed ahead of applications where such a showing is not made.

To assure a roughly equitable distribution of the loan funds, borrowing in any one State could not exceed 10 percent of the funds provided—including repayments into the revolving fund.

There are many features of the act that will be covered in other speeches and the report of the committee on this bill is an outstanding book of information concerning public expenditures under previous acts, and contemplated spending under this act. In the light of the severe opposition, and to my mind unsound arguments advanced by the opposition, I believe it is time to make a comparison of public expenditures under the present local facilities bill and the expenditures under the foreign aid facilities bill.

Under the present law there is a revolving fund of $100 million available for the smaller communities. Under the foreign aid bill there is at the present time, $8,278,000,000 with $595 million earmarked for facilities in foreign countries. Added to this, there is another $912 million unexpended out of this grand total, allocated for spending in development and redevelopment of these foreign communities.

As a matter of information I believe the following list of programs and the amounts allocated to each program is of utmost importance to local officials, particularly those who have begged this Congress to back legislation covering their communities for, if not more, at least one-half as much as we are giving to the foreign countries. I would like to have this schedule become part of the RECORD and I want to thank Congressman OTTO E. PASSMAN, of Louisiana, for making it available to me.

Although defeat of the rule appears to be the order of the day, I cannot help but feel that failure to pass this legislation would be a severe blow to our economy and especially to the many local governments that have been looking forward to this aid.

Program by name and amount (House bill)

	Total available for expenditure
1. Military assistance:	
Unexpended, June 30, 1958	$3,359,502,000
New funds, fiscal year 1959	1,515,000,000
Total	4,874,502,000
2. Defense support:	
Unexpended, June 30, 1958	910,688,000
New funds, fiscal year 1959	700,000,000
Total	1,610,688,000
3. Development Loan Fund:	
Unexpended, June 30, 1958	295,118,000
New funds, fiscal year 1959	300,000,000
Total	595,118,000
4. Development assistance:	
Unexpended, June 30, 1958	168,211,000
New funds, fiscal year 1959	
Total	168,211,000
5. Special assistance:	
Unexpended, June 30, 1958	126,288,000
New funds, fiscal year 1959	185,000,000
Total	311,288,000
6. President's Asian fund:	
Unexpended, June 30, 1958	88,677,000
New funds, fiscal year 1959	
Total	88,677,000

Program by name and amount (House bill)— Continued

	Total available for expenditure
7. President's contingency fund (new program):	
New funds, fiscal year 1959	$100,000,000
Total	100,000,000
8. Technical cooperation, bilateral:	
Unexpended, June 30, 1958	165,899,000
New funds, fiscal year 1959	150,000,000
Total	315,899,000
9. Technical cooperation, U. N.:	
Unexpended, June 30, 1958	9,500,000
New funds, fiscal year 1959	20,000,000
Total	29,500,000
10. Technical cooperation, Organization of American States:	
Unexpended, June 30, 1958	998,000
New funds, fiscal year 1959	1,500,000
Total	2,498,000
11. Joint control:	
Unexpended, June 30, 1958	6,770,000
New funds, fiscal year 1959	
Total	6,770,000
12. Atoms for peace:	
Unexpended, June 30, 1958	6,100,000
New funds, fiscal year 1959	5,500,000
Total	11,600,000
13. North Atlantic Treaty Organization:	
Unexpended, June 30, 1958	1,000,000
New funds, fiscal year 1959	
Total	1,000,000
14. Intergovernmental Committee for European Migration:	
Unexpended, June 30, 1958	5,500,000
New funds, fiscal year 1959	12,500,000
Total	18,000,000
15. U. N. Refugee Fund:	
Unexpended, June 30, 1958	
New funds, fiscal year 1959	1,200,000
Total	1,200,000
16. Escapee program:	
Unexpended, June 30, 1958	1,800,000
New funds, fiscal year 1959	8,600,000
Total	10,400,000
17. U. N. Children's Fund:	
Unexpended, June 30, 1958	6,775,000
New funds, fiscal year 1959	11,000,000
Total	17,775,000
18. U. N. Relief and Works Agency:	
Unexpended, June 30, 1958	6,428,000
New funds, fiscal year 1959	25,000,000
Total	31,428,000
19. Ocean freight:	
Unexpended, June 30, 1958	100,000
New funds, fiscal year 1959	2,100,000
Total	2,200,000
20. Control Act:	
Unexpended, June 30, 1958	160,000
New funds, fiscal year 1959	1,000,000
Total	1,160,000
21. Administrative expenses, ICA:	
Unexpended, June 30, 1958	5,511,000
New funds, fiscal year 1959	33,000,000
	38,511,000
22. Administrative expenses, State:	
Unexpended, June 30, 1958	3,105,000
New funds, fiscal year 1959	6,692,500
Total	9,797,500
23. Hungarian refugee:	
Unexpended, June 30, 1958	6,500,000
New funds, fiscal year 1959	
Total	6,500,000
24. Egyptian refugee:	
Unexpended, June 30, 1958	200,000
New funds, fiscal year 1959	
Total	200,000

Total	746,000
Grand total	8,278,084,500

H. R. 13621, a Bill To Correct Inequities of the Postal Field Service Compensation Act of 1955

EXTENSION OF REMARKS
OF

HON. GEORGE P. MILLER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, August 4, 1958

Mr. MILLER of California. Mr. Speaker, on Thursday, July 31, I introduced the bill, H. R. 13621, to correct the inequities of the Postal Field Service Compensation Act of 1955. The purpose of the bill is generally indicated in its title.

Experience has shown that the act is discriminatory in many of its features, and behind the times so far as its pay features compare with general industrial practices. The suggested amendments will improve the act in those instances that have developed during the time the act has been in effect. A sectional analysis follows:

Subsection 1 provides that when an appeal is sustained the position on which the appeal is based shall be posted for bid in accordance with postal regulations.

Subsection 1 (a) would simply provide the right of organizations and the officers of organizations to file appeals in behalf of the members of their organizations.

Subsection 2 advances all nonsupervisory positions by one level.

Subsection 3 would provide that employees assigned to duties and responsibilities of a higher salary level shall be paid for such duties for the time employed. At the present time the employee is required to perform service at the higher level for 30 days in each calendar year before becoming eligible for the increased compensation.

Subsection 4 would require the Postmaster General to file annual reports on the operations of the act.

Subsection 5 would correct a situation wherein an employee who had held a given position for a number of years was converted under the act to a step and level lower than the step in the same level of the employee who was first promoted to the position on the day following enactment of the act.

Subsection 6 would remove the artificial restraint on the advancement of substitutes assigned to road duty in the Postal Transportation Service.

Subsection 7 would correct a situation which prohibits clerks and lettercarriers from promotion to higher salary levels unless they are in the top step of their level, while other employees in lower levels may be promoted to higher levels without regard to the step they occupy in their current salary level.

Subsection 8 would merely provide that the normal schedule of regular employees would be encompassed within 9 consecutive hours rather than 10. At the present time many employees are required to take 2-hour lunch periods making for an extremely long work day.

Subsection 9 would grant employees premium compensatory time (at the rate of time and one-half) for work performed on Saturdays and Sundays and would make it mandatory that employees be paid rather than be given compensatory time for Saturday and Sunday service during the month of December.

Subsection 10 would provide double compensatory time for services performed on holidays and the payment of double time for service performed on Christmas Day.

Subsection 11 would increase the night work differential from the present 10 percent of salary to 20 percent in common with the practice in enlightened private industry.

Subsection 12 would provide compensatory time for Saturday and Sunday service for employees in third-class offices and require that the hours of duty of employees in third-class offices be on the same basis as the hours of duties of employees in first- and second-class offices.

Subsection 13 would provide that whenever a substitute employee is required to be available for duty he shall be employed not less than 3 consecutive hours. At the present time when an employee is officially called for duty he must be employed for not less than 2 consecutive hours, but in many instances postmasters instead of ordering a substitute to report for duty merely tell him to remain within calling distance in the event his services are needed. In this manner the employee is as effectively tied down as though he had been ordered to report, but is not paid for the period of time involved.

Subsection 14 would not change the present substitute ratio but would merely provide that all substitutes, temporary as well as classified, be included in determining the number of substitutes to which an office might be entitled.

Subsection 15 is applicable only to employees on road duty in the Postal Transportation Service. If a run is less than 8 hours, the time less than 8 hours is characterized as deficiency time, and the total of all deficiency time must be made up before the employee can be paid over-

time for additional service. These requirements force employees to make additional runs without compensation.

Section 2 of the act prescribes the effective dates. The bill, with the exception of subsection 5 of subsection 1, would not be effective until the beginning of the first pay period following enactment. Subsection 5 of section 1 has a retroactive application.

Letter From Mr. Alsop to Mr. Wilson

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, August 4, 1958

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following column in the form of a letter written by Mr. Joseph Alsop to former Secretary of Defense Charles Wilson which appeared in the Washington Post on August 4, 1958:

LETTER TO "ENGINE CHARLIE"

(By Joseph Alsop)

DEAR MR. WILSON: Maybe there are more important things to write about, but your recent remarks about Jim Gavin positively demand this letter of thanks.

General Gavin has been doubly impertinent. Rather than lie to the Congress about the results of your defense policies, he has preferred resigning from the service that he loved and gave his life to. And now he has dared to publish a book, suggesting that your defense policies have led this country into mortal danger. This kind of impertinence of course deserves the rebuke you so characteristically meted out:

"I know Gavin," you are reported as saying. "And he is just another overly inflated Army officer with an exaggerated regard of his ability. He's just trying to sell his book."

What was so wonderful was your simultaneous denial that Gavin could really know you, since you had only seen him on rare occasions. You know Gavin, in other words, as you knew about the defense of the United States—by interpreting the messages of your own peculiar mental telepathy in the powerful light of your own prejudices. Or one might say, you know Gavin as you knew about the danger to this country from the rapid growth of Soviet power—by ignoring all the unpleasant facts reported by the intelligence services, and faithfully following your own natural instincts (with some help from the budgetary policies of your friend, George Humphrey).

There are certain facts about Jim Gavin, to be sure, that lesser men than you still have a tendency not to ignore. There is the simple fact of the man himself—the brilliant intellectual who is also a great fighting man, the adored leader of the best division in the United States Army, the combat general with the cool courage that goes with knowledge, the shining soldier with the human style that all men envied and the best men tried to imitate.

One does not forget, either, the parachute landing that Gavin made in Sicily, and the long cruel battle at Salerno, and the drop at dawn into the inferno at Nijmegen and desperate attack that turned the balance in the desperate Battle of the Bulge. All these further facts still arouse strong emotions and call up vivid images—but only in smaller minds than yours. And, of course, you are right that the two Distinguished Service Crosses, and the Silver Star, and the Purple Heart, all won in the fire of battle, are mere military fripperies that probably had a lot to do with overly inflating Jim Gavin.

No doubt smaller minds are afflicted with these distorting emotions and are impressed by these foolish images, simply because they do not understand as well as you do what makes our country great. If you had left Westinghouse Electric to go into uniform, for instance, you might not have got the job with Delco-Remy in 1919. And if you had not got the job with Delco-Remy, you might not have got the job with General Motors later on. And if that job had been missed, heaven forbid, we might not have had you as Secretary of Defense.

Even before that great moment when you took over the Pentagon, you always insisted on the right priorities. One remembers, for example, your reply to Bob Lovett when he asked for a loan of one of your junior executives during a very bad moment in the Korean war. The man Lovett wanted did not mind the heavy cut in salary. He only asked Lovett for your assurance that his absence on the Nation's service would not hinder his later promotion in the peculiar hierarchy over which you then presided. With a thrill of admiration, Lovett still recalls your stern and patriotic answer: "Of course, it will be held against him, if he leaves General Motors the way you want him to."

At the Pentagon, too, how firmly and wisely you always insisted upon the right priorities. It was a dangerous moment when you took over, no doubt about it. Action was demanded on a whole series of ugly reports announcing the early loss to the Soviets of the existing American military lead. There were a lot of people who wanted to press the panic button in your immortal phrase, and make the effort to maintain the American lead.

But you went right on assuring everyone, in your coolheaded way, that the Russians weren't 10 feet high. So the Soviets are now well on their way to gaining almost unchallengeable superiority in nuclear striking power. For this, we have you to thank.

But this letter is meant to offer thanks of a more personal kind. It is intended to thank you for the final revelation of the true grandeur of your viewpoint; and it is especially intended to thank you for showing us all what gratitude is owing, what respect is due, from the comfortable people who have been saved to those men who have uncomfortably risked their lives to save them. Thank you, and goodby.

JOSEPH ALSOP.

Washington Report

EXTENSION OF REMARKS
OF
HON. BRUCE ALGER
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Monday, August 4, 1958

Mr. ALGER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following newsletter of August 2, 1958:

WASHINGTON REPORT

(By Congressman BRUCE ALGER, fifth district, Texas)

AUGUST 2, 1958.

The adjournment rush is on. Committees passing out final bills, Rules Committee assigning priority, floor action of debates and votes. Often all these are simultaneous. Frequently normal, more orderly, procedures are discarded in haste. These closing days are the most dangerous of each Congress as action is taken in haste, some allegedly intentional and political, to pass out the controversial legislation more easily. This was an unusually eventful week.

H. R. 10 (Jenkins-Keogh bill), a bill to encourage the establishment of voluntary pension plans by self-employed individuals, passed under suspension of the rules which permits only 40 minutes' debate, no amendments, and a two-thirds vote of those present. The purpose: a limited set aside of income to be taxed later when spent during retirement. The reason: to equalize tax treatment between self-employed and employees, the latter so benefiting now; the major criticism: the Federal tax revenue loss will be $360 million in the first year (and less later) at a time when the Government is deficit financing. Generally an excellent bill, as I see it.

The Presidential pension bill passed handily after amendment. The bill provided (1) $25,000 per year Presidential pension, (2) $10,000 pension for the widow, (3) clerical and administrative help (somewhere between $104,000 to $130,000 yearly), (4) suitable office space, (5) the franking privilege (4,000 pieces a month). By a vote of 127 to 76 the last three provisions were deleted (Alger for deletion). Many felt that Presidents were financially secure, others suspected financial help would be used politically by ex-Presidents. Most agreed, including myself, that the final bill was a good one.

The social-security amendments bill included a 70-percent increase in benefit payments, an increase in public assistance, maternal and child care, and welfare provisions and an increase in tax rates. The base pay for taxing was increased from $4,200 to $4,800, and effective January 1959 the rate upped one-fourth percent for employer and employee and three-eighths percent for self-employed, these to be progressively increased to 9 percent by 1969 (employer plus employee) and 6¾ percent for self-employed. The bill passed handily, 375 to 2, after 4 hours of debate. Since I opposed the bill after study and the debate, let's see what opposition grounds are to this bill: (1) The Advisory Committee set up 2 years ago to study and suggest changes to social security won't report until later this year, (2) even after tax increase the payments will be more than taxes. It is not pay as we go, but it stil actuarially unsound; (3) the $22 billion fund has all been spent, only Federal I O U's remain; (4) the deficit of payment to the 12 million present retirees is $65 billion. What will it be for the additional 75 million now paying in anticipating future benefit payments? (5) Payment is compulsory; yet you may never get it back; example: those oldsters who can't live on social security and seek to earn more, lose their social security. These and others. Now what do you think?

This stopgap legislation is a typical election-year gesture to voters. It happens each election year. Sidestepped or postponed is the answer to the question: Can our people afford the tax increases necessary to pay for social security? For many, social-security taxes will exceed income taxes. Instead, we transfer the debt and decision to our children. Unless it collapses in the meantime, a future generation may vote the program out. It is a political measure, after all. Then where will the elder citizens be who were forced to take this Government program instead of a private insurance program wherein their money would be returned. Or will we be forced to socialize our Government to bail out earlier failures to recognize social-security weaknesses. Should Congressmen be afraid to speak out and oppose the politically popular measures? Of course not. If we want a social-security program why don't we face up to the costs and make it pay as we go?

Why don't insurance and businessmen tell the people the facts of life and make the program actuarially sound? We're all of us for providing for our futures.

The Community Facilities Act, a $2 billion bill to loan Federal money to local communities for sidewalks, parking lots, recreational facilities, and almost every conceivable kind of project was defeated, 187 to 173, generally along party lines, a few Democrats joining most Republicans to defeat it. Since no local subdivision of this Nation is so in debt as the Federal Government, it is hard to understand the thinking of the proponents of this bill. This may slow down the $5 billion list of spending bills still awaiting action. Otherwise, 2 more debt-limit increases, instead of 1, may be required.

The fair-trade bill in our committee, allegedly to help retailers through manufacturers setting the prices for trademarked items, I have branded as unfair to consumers and self-defeating to the retailers. I predict, if this bill ever becomes understood, there will be a mighty roar by the shopping public that will drown out, perhaps even retire Congressmen supporting the bill.

A Big Step in the Right Direction

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, August 4, 1958

Mr. FLOOD. Mr. Speaker, under leave to exend my remarks in the RECORD, I include the following editorial from the Wilkes-Barre Record of Saturday, August 2, 1958, commenting on the recent dedication of the Northeastern Pennsylvania Regional Bank & Trust Co.:

NORTHEASTERN BANK MARKS ITS COMING

Branch banking is no new experience for our region, but it was climaxed yesterday in unique form when the new Northeastern Pennsylvania Regional Bank & Trust Co., largest in its field, was dedicated. Size was not the sole criterion of uniqueness. Dedication ceremonies were held simultaneously in Wilkes-Barre, Hazleton, and Scranton. This is without a precedent in the banking field.

And as is well known by now, the new bank combines the operations of the Wilkes-Barre Deposit & Savings Bank, First National Bank & Trust Co., of Scranton, and the Markle Banking & Trust Co., of Hazleton.

As defined by President Frank E. Hemelright, formation of the new bank is based on a spirit of community interdependence and progress. This goal certainly has its proper place in a regional setup.

Luzerne county stockholders, patrons, and other friends of the newly formed institution will note with satisfaction that the Wilkes-Barre bank will be represented by Justin Bergman, president, and Attorney Robert Doran, both of Wilkes-Barre, on the new board, and that Alvan Markle, Jr., and Dr. Edgar L. Dessen, of Hazleton, will represent the Markle bank interest.

In a forward-looking statement, Mr. Hemelright makes note of a solid history of community service and public interest by the three predecessors of the new bank and points confidently to its slogan, "A Big Step in the Right Direction," as a symbol of area progress.

We join in wishing the new institution continued success and the expanded measure of usefulness to which it aspires.

Nursing Homes Called Shocking, Criminal

EXTENSION OF REMARKS
OF
HON. J. FLOYD BREEDING
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES
Monday, August 4, 1958

Mr. BREEDING. Mr Speaker, under leave to extend my remarks, I would like to call attention to the fact that recently we have had considerable testimony in the Banking and Currency Committee in behalf of the nursing homes for the entire United States. Since the provision is carried in the housing bill which is expected to come to the floor of the House in the near future, and in order to substantiate the position of the nursing homes in the United States; I would like to submit this article concerning the nursing homes in Washington, D. C.; making clear the deplorable conditions of the nursing homes in the District of Columbia. This article makes clear the need for adequate and better care for our aged citizens:

NURSING HOMES CALLED SHOCKING, CRIMINAL—DISTRICT OF COLUMBIA MEDICAL SOCIETY REPORT SAYS FEW EVEN MEET MINIMUM STANDARDS

(By Charles G. Brooks)

Most of Washington's private nursing homes are a disgrace to the city, a District Medical Society report released last night charged.

The special report by the Committee on Public Health was accompanied by comments ranging from "the situation is terrible and criminal," to "some of the holes I have been in should be burned to the ground."

The tone of the report was backed by Dr. Daniel L. Finucane, District Health Director, who said yesterday that very few of the private nursing homes here meet Washington's minimum standards.

A HORRIBLE SITUATION

Gerard M. Shea, Director of Public Welfare, agreed, saying "it is a horrible situation" with many persons barely getting room and board in run-down homes.

Dr. Finucane said the problem seems to be one of economics. The average person, he pointed out, can't pay the $300 to $400 per month generally required by the better homes. The Welfare Department, for example, allows only $110 per month for nursing home care for its wards.

Dr. Clifton R. Gruver, chairman of the Medical Society's executive committee, while recognizing the sad state of most of the private nursing homes, declared that a crackdown which would close many of the homes would be unwise at this time. The need for nursing home beds is too great, he added.

The report was presented to the executive committee last week. The committee appointed three subcommittees to work with the Health Department and Nursing Home Association toward improving the situation.

SUBSIDIZATION PROPOSED

The committee agreed there is no immediate solution. It noted, however, a number of opportunities for improvement in medical care and in sanitation. The group agreed on the need for a long-range program and on the need to explore the possibility of subsidizing nursing homes.

The unusual report from the usually conservative medical society is the result of a survey of physicians earlier this summer. Responses came from 129 doctors who said they had sent patients to nursing homes during the past 2 years. Another 102 doctors had not used the homes recently, and several gave their reasons for not doing so.

Many of the reporting physicians use only the few topflight nursing homes in the District so that statistics in the report show a higher general rating for homes than the Committee on Public Health expected.

However, more than 60 doctors returned special critical comments with their forms. These comments severely condemned the majority of nursing homes.

APPALLING CONDITIONS

Dr. Gruver declared: "Remarks by many indicate conditions which would appear appalling. We must elevate the standards of care as befits this Nation's Capital * * * to a level which allows us to view with pride rather than shame the facilities available for the care of these patients."

The doctors who responded to the survey noted a total of 81 nursing homes in the District, nearby Maryland and Virginia, including nonprofit or voluntary institutions and tax-supported homes. The committee, however, dealt only with the proprietary or private homes.

A medical society spokesman pointed out that the doctors who made special comments—most of them derogatory—were the ones "with the most experience with nursing homes."

TWO FORCED TO CLOSE

Another recalled that the 2 most satisfactory of 9 homes he had used were forced out of business by inspectors enforcing fire regulations.

Three others, the doctor noted, were run by women with "personalities shockingly unfit for the care of patients."

One was a registered nurse, another a practical nurse, and the third "probably making false claims to training."

Mrs. Josephine Prescott, head of Public Health Nursing for the Health Department, declared the situation is "shocking." She added that the department is trying to devise ways and means of correcting it.

LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any executive department, bureau, board, or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section relating to estimates shall apply to reports or documents not exceeding 50 pages (U. S. Code, title 44, sec. 140, p. 1938).

Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on House Administration of the House of Representatives or the Committee on Rules and Administration of the Senate, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U. S. Code, title 44, sec. 133, p. 1937).

CHANGE OF RESIDENCE

Senators, Representatives, and Delegates who have changed their residences will please give information thereof to the Government Printing Office, that their addresses may be correctly given in the RECORD.

Daily Digest

HIGHLIGHTS

Senate heard memorial addresses in tribute to the late Senators Neely and Scott, and passed 92 bills on calendar call.

House passed 67 miscellaneous bills and received veto message on independent offices appropriation bill.

Bills Reported: Reports were made as follows:

S. 2597, private (S. Rept. 2093);

H. R. 13, to revise chapter XI of the Bankruptcy Act, with amendments (S. Rept. 2094);

H. R. 8943, to amend titles 10, 14, and 32 of the U. S. Code, to codify recent military law and to improve the code, with amendments (S. Rept. 2095);

H. R. 9989, S. Res. 353, H. J. Res. 609, 619, 636, H. Con. Res. 321, H. J. Res. 595, 620, 628, 634, S. 2494, 3739, 3768, 3818, 2057, 3221, 3509, 3547, 3640, 3743, 3826, 3004, 3308, 3696, 3801, 3921, H. R. 1293, 1691, 2319, 2759, private (S. Repts. 2096–2125);

H. R. 3368, authorizing district courts to allow additional peremptory challenges in civil cases to multiple plaintiffs as well as multiple defendants (S. Rept. 2126);

H. R. 6353 and 6667, private (S. Repts. 2127–2128);

H. R. 6788, authorizing abbreviated records in reviewing administrative agency proceedings (S. Rept. 2129);

H. R. 7282, private (S. Rept. 2130);

H. R. 7306, to provide that notice of an action relative to real property pending before a U. S. district court must be recorded in certain instances (S. Rept. 2131);

H. R. 13378, facilitating naturalization of adopted children and spouses of certain U. S. citizens performing religious duties abroad (S. Rept. 2132);

H. R. 13451, to amend the Immigration and Nationality Act with regard to the status of certain aliens (S. Rept. 2133);

H. R. 4804, for relief of Newington School District, New Hampshire, with amendment (S. Rept. 2134);

H. R. 7260, to authorize confinement in jail-type institutions, followed by a period of probation, with amendment (S. Rept. 2135);

H. R. 7330, 7725, 3140, private (S. Repts. 2136–2138);

H. R. 3820, settlement of claims of military and civilian personnel of the U. S. Coast Guard, with amendments (S. Rept. 2139);

H. R. 7826 and S. 4054, private (S. Repts. 2140, 2141);

H. R. 13374, providing for the retention of the deferment or exemption upon change of membership in a Reserve component (S. Rept. 2142);

H. R. 5237, authorizing the Secretary of the Navy to furnish supplies and services to foreign vessels and aircraft (S. Rept. 2143);

S. 4196, to amend the Intercoastal Shipping Act to authorize incorporation of contract terms by reference in short-form documents (S. Rept. 2144);

H. R. 9833, to amend the Merchant Marine Act with regard to citizenship of corporations (S. Rept. 2145);

S. 3445, private (S. Rept. 2146);

H. R. 4635, providing for settlement and entry of public lands in Alaska containing coal, oil, or gas, with amendments (S. Rept. 2147);

H. R. 11123, providing extension of certain functions of the Secretary of the Interior to areas other than the U. S., its Territories and possessions, with amendment (S. Rept. 2148);

H. R. 9543, to amend the Hawaiian Organic Act relative to transfer of title of ceded land by the President (S. Rept. 2149);

H. R. 7149, providing for the periodic transfer to the Hawaiian home development fund of certain excess funds in the Hawaiian Home Administration account (S. Rept. 2150);

H. R. 9461, to permit the granting of patents in fee simple to certain occupiers of public lands in Hawaii (S. Rept. 2151);

H. R. 9500, relative to sales and exchanges of public lands in Hawaii to persons who suffered real property losses in the tidal wave of 1957 (S. Rept. 2152);

H. R. 8482, authorizing Commissioner of Public Lands of Hawaii to exchange certain public lands for highway purposes (S. Rept. 2153);

Appendix

Texans Know the Value of the National Guard

EXTENSION OF REMARKS
OF
HON. LYNDON B. JOHNSON
OF TEXAS
IN THE SENATE OF THE UNITED STATES
Tuesday, August 5, 1958

Mr. JOHNSON of Texas. Mr. President, the people of Texas are disturbed by the proposed reduction in National Guard units. The people of Texas believe we should strengthen our defenses, not weaken them. The people of Texas know how nobly our National Guard men have served in the past, in time of war and in cases of civil disaster.

A typical expression of the feeling of Texans about the contemplated weakening of the National Guard is contained in a resolution passed recently by the commissioners' court of Bexar County.

I ask unanimous consent that the text of the resolution be printed in the Appendix of the RECORD.

There being no objection, the resolution was ordered to be printed in the RECORD, as follows:

Resolution

Whereas a reduction of National Guard units is contemplated, although Congress has voted an appropriation to retain the units at the present level; and

Whereas this reduction of National Guard units would not only deprive Bexar County and San Antonio of these much-needed units, and of the trained and organized forces and equipment that stand alone as being instantly available in event of civil disaster or national emergency; and

Whereas this reduction or curtailment would reduce our strength, not only in the community but over the Nation; and

Whereas at this critical period, it does not seem to the best interest of our national security to reduce our National Guard units; and be it

Resolved, That commissioners' court go on record as opposing the reduction of the present strength of National Guard units; and be it further

Resolved, That a copy of this resolution be spread upon the minutes of this meeting and that official copies of the same be sent to Gov. Price Daniel, Congressman Paul J. Kilday, Senator Lyndon B. Johnson, and Senator Ralph Yarborough.

Witness the signatures of the members of the Commissioners' Court of Bexar County, and the seal of said court on this the 30th day of July A. D. 1958.

CHARLES W. ANDERSON,
County Judge.
ALBERT A. PENA, Jr.,
Commissioner, Precinct 1.
SAM C. BENNETT,
Commissioner, Precinct 2.
SAM JORRIE,
Commissioner, Precinct 3.
A. J. PLOCH,
Commissioner, Precinct 4.

Negotiations Between UAW and Automobile Industry

EXTENSION OF REMARKS
OF
HON. PAUL H. DOUGLAS
OF ILLINOIS
IN THE SENATE OF THE UNITED STATES
Tuesday, August 5, 1958

Mr. DOUGLAS. Mr. President, while other national and international events have taken the headlines, it is nevertheless important for the country to recall that in one of our most important and influential industries, the auto industry, there is an unresolved conflict between the principal employers and the representatives of the employees.

At the recent executive committee meeting of the industrial union department of the American Federation of Labor-Congress of Industrial Organizations at Denver, Colo., July 24–25, the committee adopted a statement on the negotiations between the UAW and the Big Three companies of the auto industry. Since this statement summarizes the results of the negotiations to date, naturally from the point of view of the UAW and its associated unions in the industrial union department, and since there was little publicity given to the statement, I believe the information in it should be brought to the attention of Members of Congress and those who read the CONGRESSIONAL RECORD. The basic and concluding appeal of the statement that the representatives of management engage in real collective bargaining and seek to work out new contracts which will settle the pending dispute and provide a basis for the future working relationships of the companies and the workers, will be supported by all thoughtful citizens.

For the information of Members of Congress, therefore, I ask unanimous consent ta have printed in the Appendix of the RECORD the statement just referred to.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

STATEMENT ON UAW NEGOTIATIONS BY THE INDUSTRIAL UNION DEPARTMENT EXECUTIVE COMMITTEE AT ITS MEETING, DENVER, COLO., JULY 24–25, 1958

For the past 2 months, the United Automobile Workers has been working without contracts in the plants of the Big Three of the auto industry. Throughout these weeks, the union has continuously sought to resolve its differences with the industry through the give and take of collective bargaining.

While the union has offered to extend present agreements pending the negotiation of new contracts, the companies have spurned this offer. They have instead issued take-it-or-leave-it ultimatums and have callously brushed aside the welfare of their employees.

Taking advantage of current economic problems besetting the American people, the Big Three of the auto industry have sought to impose upon the members of the union a continuation of previous contracts for the next 2 years. The companies have failed to move even in the slightest degree from their initial proposals, although the union has shown every willingness to engage in true collective bargaining.

The demands of the United Auto Workers have been just and fair. The union program has been noninflationary and consistent with the best interest of the Nation as well as UAW members. It has offered to bargain within the framework of price cuts, only to have this proposal brusquely rejected by auto-industry management.

As contracts neared their expiration dates, the UAW reduced its demands and offered to settle with the companies on the basis of contract improvements designed to meet pressing human needs.

These included long overdue improvements in supplementary unemployment benefits which can be made with little or no additional cost to the companies; a cost-of-living escalator in pensions to prevent the erosion by inflation of the small benefits paid retired workers, and severance and transfer payments to workers losing employment because of plant relocations. The union also is seeking improvement in the productivity factor governing wage adjustments since output per auto worker man-hour is rising steadily.

Instead of bargaining on the basis of the facts, the companies canceled the contracts. Management has also placed severe limitations upon established grievance procedures, although these have insured long industrial peace while protecting the rights of both the workers and management.

Despite the current recession, the auto industry has proved one of the most profitable in the Nation. Past profits have been fantastic and the future holds out an even more golden promise for the industry. The industry can well afford to meet the union's demands.

UAW President Walter Reuther has pointed out that while his union is not seeking any advantage over management, it is not willing to permit management to use the recession in order to gain advantage over the workers and deny them their equity. The UAW has called upon its members to resist management provocation and to hold firm.

The union membership has responded with a great demonstration of faith and solidarity that merits the commendation of all labor. Members are voluntarily paying dues in an overwhelming majority, assuring the continuity of their union. They are supporting their union with a discipline that has already given management proof that it cannot weaken or destroy the United Automobile Workers Union.

The industrial union department, AFL–CIO, representing 7 million organized industrial workers, pledges its full solidarity and support to the United Auto Workers in its struggle for economic and social justice. It pledges the full support of industrial labor across the country. It offers to place at the

disposal of the UAW, if required, its resources and staff personnel.

The industrial union department calls upon the AFL–CIO and all of American labor to provide full support to the efforts of the UAW to negotiate sound and satisfactory collective bargaining agreements with the Big Three of the auto industry. Such a demonstration of solidarity by labor can effectively meet the challenge of the united front of big business behind the actions of the Big Three in the auto industry.

The industrial union department calls upon the Big Three auto management to get down to cases and engage in real collective bargaining with the representatives of its workers so that new contracts will be negotiated without further delay. Such action will be in the best interests of the Nation, the automobile workers, and the industry itself.

Retrench, Tax, or Drift

EXTENSION OF REMARKS
OF
HON. WALLACE F. BENNETT
OF UTAH
IN THE SENATE OF THE UNITED STATES
Tuesday, August 5, 1958

Mr. BENNETT. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Retrench, Tax, or Drift," published today in the Washington Daily News, and commenting on the speech made yesterday on the floor of the Senate by our distinguished colleague, the Senator from Connecticut [Mr. BUSH].

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

RETRENCH, TAX, OR DRIFT

Senator PRESCOTT BUSH of Connecticut owns one of the few voices being raised in Congress against the spending deficit spree which has been prevalent in this session.

In a notable speech in the Senate, he put the question again: "How can we pay the bills?"

It is the biggest question before the country—whether you look at it from the standpoint of the taxpayers, national defense, the future of our children, or the general welfare.

The Government had a deficit of $2.8 billion last year. The deficit for this year already is estimated at $12 billion. Senator BUSH, with good reason, forecast annual $20 billion deficits unless the trend is radically reversed.

This could lead to only one result, frightening inflation.

Either the Government cuts back less necessary spending, or raises taxes, or both. The only other choice is to drift—drift into an era of terrifying inflation, and go the way of France, Germany before Hitler, and China.

"The poor and the families of moderate income, whose savings are in bank accounts or life insurance policies," said Senator BUSH, "are helpless as the cost of living gets higher and higher. Inflation offers opportunities for the speculator, the get-rich-quick artist; it spells disaster for the average American."

It spells disaster for the whole country. It can make our defenses impotent.

"Let us," said Senator BUSH, "have the courage to recapture control of our fiscal affairs."

And he well might have added: "Or else."

Navy Honors Tucker Sno-Cat Corp.

EXTENSION OF REMARKS
OF
HON. RICHARD L. NEUBERGER
OF OREGON
IN THE SENATE OF THE UNITED STATES
Tuesday, August 5, 1958

Mr. NEUBERGER. Mr. President, on July 3, the Tucker Sno-Cat Corp. of Medford, Oreg., received the Navy's certificate of merit. This high honor has come to this Oregon industry as a direct result of the important part which a Sno-Cat played in connection with the Navy's recent expedition to the Antarctic. The award ceremony was duly reported in the Medford Mail Tribune of July 3, 1958. I ask unanimous consent, Mr. President, that this informative report be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

TUCKER CORP. PRESENTED NAVY'S CERTIFICATE OF MERIT

Tucker Sno-Cat Corp., Medford, was awarded a Navy certificate of merit in a formal ceremony Wednesday afternoon at the Medford Hotel.

E. M. Tucker, president of the company, accepted the certificate from Capt. S. P. Zola, district public works officer for the 13th Naval District, Seattle, who represented Rear Adm. E. J. Peltier, Chief of the Navy's civil engineers.

The certificate of merit, the 12th issued since its establishment, is one of the highest honors the Navy can bestow.

OPERATION DEEP FREEZE

It was awarded for the Sno-Cat company's participation in supplying its over-the-snow vehicles for Operation Deep Freeze, the Navy's expedition to the Antarctic in connection with the International Geophysical Year.

In making the presentation, Captain Zola told of the Navy's Seabees units and explained that the Tucker Sno-Cat is used and maintained by them. He added that no doubt the Seabees have found the Tucker Sno-Cat an intriguing piece of equipment and have possibly put it to some uses that Tucker did not dream about.

He welcomed the Tucker Sno-Cat Corp. to the midst of the "can do" organizations and that the corporation should feel justifiably proud of its accomplishments.

QUALITY PERFORMANCE

He said that the quality and performance of the Tucker Sno-Cat has been well established as it has been given a severe test in the Antarctic crossing over 2,100 miles of rugged terrain.

He concluded that "like the Seabees, you responded to a challenge of a difficult task. You were asked to meet an unexpected deadline and you met it. The Navy needed your cooperation and assistance and you gave it unselfishly and without hesitation. The spirit you have shown deserves recognition."

The citation states, "for outstanding service to the Department of the Navy in the expeditious manufacture and production of the Tucker Sno-Cat vehicle furnished for Operation Deep Freeze III, the Navy's expedition to the Antarctic in support of the International Geophysical Year. Personnel of the Tucker Corp. evidenced a commendable 'can do' spirit by exerting the greatest effort to meet ship movements of the expedition when the delivery deadline was moved up from the original date.

"This outstanding cooperation was extended by all of the personnel of the firm who participated in the prosecution of this contract, and reflected the highest integrity of purpose and professional ability. In recognition and appreciation of these valuable services, this citation is approved this 21st day of April 1958." It was signed by Thomas S. Gates, Jr., Secretary of the Navy.

Four of the big vehicles made by Tucker Sno-Cat Corp., were the only ones to make the trek all the way across the Antarctic continent, the first time this has been done by motorized ground transport, with Sir Vivian Fuchs of Great Britain.

A. C. Pierce introduced the persons at the speaker's table prior to the formal presentation. They included Don McNeil and Ron Gandee, chamber of commerce; Joseph Moore, vice president, First National Bank of Portland and manager of the Medford branch; Robert Duff, city manager; Robert Duncan, State representative; John J. Looser, member of directors, Sno-Cat Corp.; Mrs. Pierce; and Mrs. E. M. Tucker.

Duncan represented Senator Richard L. Neuberger and Gov. Robert D. Holmes.

TELEGRAMS READ

Senator NEUBERGER, in a telegram, said that "the Tucker Sno-Cat Corp. in building a vehicle that successfully traverses vast Antarctic snows has made a distinct contribution to the national welfare, while adding substantially to the industrial development of Oregon and Medford in particular. Deserving of special commendation is Mr. E. M. Tucker, Sr., whose inventive genius is, fortunately, matched by his faith and courage."

Governor Holmes, in writing of the contribution made by the Tucker Sno-Cat Corp. to the Antarctic explorations, said: "I am very proud that it was an Oregon plant that made this contribution. I am likewise proud that Oregon produced the kind of leadership in this instance that illustrates exactly what we need and want to achieve in our program for diversified industry and a stable economy in our State.

"If at any time the department of development can be of assistance to you in any way, I hope you will invite its cooperation. And I also hope that the Sno-Cat will be displayed at the Oregon centennial next year, where, I am sure, it will attract intelligent interest and certainly open to you an expanding market feasible for you to serve."

Approximately 50 people, including members of the Tucker family, public officials, and employees of the Sno-Cat Corp., attended the dinner and presentation ceremonies.

Farm Research Bill

EXTENSION OF REMARKS
OF
HON. HOMER E. CAPEHART
OF INDIANA
IN THE SENATE OF THE UNITED STATES
Tuesday, August 5, 1958

Mr. CAPEHART. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial which appeared in the Journal and Courier of Lafayette, Ind., on Friday, August

1, 1958, about the farm research bill which was recently passed in the Senate.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

WORTH TRYING

The Senate, by the smashing vote of 81 to 0, passed a farm research bill which Indiana's Republican Senator HOMER E. CAPEHART introduced 2 years ago with several other Senators.

The measure has been one of Senator CAPEHART's major projects. It authorizes a vast Government research program to discover and develop new uses in industry for everyday products of the American farm. CAPEHART greeted its passage with the assertion that it offers the only real and permanent solution of the farm problem.

The Hoosier Senator long has contended that we should be encouraging farm production instead of controlling it, as now. The farm research bill, he contends, is one of the most important passed by the Senate in recent history.

Also, he has expressed the belief that an adequate research program, patterned after industry, will eventually double the demand for products of the American farm, dispose once and for all of costly surpluses, relieve the great financial burden imposed by subsidy programs and assure farmers a fair price for the full production of every acre of tillable soil.

Research has done great things for industry. It may do the same thing for agriculture. Since farm programs tried to date have not worked, it is worth trying.

Most farm research to date has been concerned with increasing production. This has worked so well that it has created a new problem—surpluses. Now research is proposed which would increase consumption. If the latter succeeds any way near as well, great strides will have been made in giving the farmer the economic status he needs and deserves.

St. Lawrence Seaway To Rival Panama Canal

EXTENSION OF REMARKS
OF
HON. EDWARD J. THYE
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES
Tuesday, August 5, 1958

Mr. THYE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a very interesting article which was published in the Minneapolis Star of July 31, 1958, entitled "Seaway To Rival Panama Canal."

There being no objection, the article was ordered to be printed in the RECORD, as follows:

SEAWAY TO RIVAL PANAMA CANAL

(By Edward T. Chase)

No single works project in our time can match the long-range significance of the St. Lawrence seaway in its impact upon the North American Continent.

The effects of this $1½ billion engineering marvel, whose hydroelectric powerplant operation was recently opened with great fanfare after 4 years of construction, will rival the repercussions of the Panama canal and the Suez—not as soon as the seaport press agents claim, to be sure, but by the 1970's and 1980's.

A recital of what the seaway does hardly reveals its meanings for all of us and our children and grandchildren, nor hints at the curious political turmoil surrounding its shamefully delayed birth.

The new 27-foot-deep seaway, upon completion in 1962 (its opening is for April 1959), will permit 80 percent of the world's ocean-going merchant marine to move 2,342 miles inland from sea level at Montreal to 600.5 feet above sea level at Duluth in Lake Superior, the farthest such penetration by ocean vessels of any continent.

Secondarily, in mastering the St. Lawrence, it will simultaneously create a hydroelectric plant outranked only by Grand Coulee, being capable of producing 1,880,000 kilowatts.

Such statistics are received unblinkingly in this age of material wonders. A more homely statisic may begin to help us understand why geographers, economists, political scientists, and industrialist are excited, however. That is that one horsepower will move a ton on 2 wheels, 40 tons on water.

In short, the energy-friction ratio explains why, despite scientific progress, waterways provide the cheapest transportation and why cultures have been determined by waterways ever since man's earliest civilizations developed—in river regions and around the navigable highways of the Mediterranean.

The seaway means, then, the further integration through low-cost transport of the industrial heart of America with the entire Atlantic community, in effect the industrial core of free western civilization.

The opening of the 4,300 mile fourth coast (to outrank in commerce both the Pacific and the gulf), thus means an immense industrial stimulation throughout a sector of the globe that is already unrivaled for both its industrial and agricultural productivity, the hinterland of the Great Lakes, already contributing 45 percent of our national product.

The eventual impact of this expansion in turn will involve vast population increase and regrouping, including the birth of entirely new cities.

Not the least of the seaway's effects, furthermore, will be a cultural reorientation as this population is made acutely aware, by trade, not only of the rest of the world, but the rest of America, as the seaway intermeshes with our other great transport systems.

Traditionally isolationist mid-America will confront the rest of the world as never before, almost as New York, Philadelphia and Boston do, bringing home the truth that one cannot sell abroad without purchasing the goods of your customers abroad, a genuine two-way street. And there is every reason to believe that this will accelerate the demise of American economic isolationism as well as political isolationism.

We can even hope that the cross-fertilization of ideas traditionally occurring with trade will result in other, subtler cultural understandings and stimulations.

Our Middle East Aims

EXTENSION OF REMARKS
OF
HON. J. W. FULBRIGHT
OF ARKANSAS
IN THE SENATE OF THE UNITED STATES
Tuesday, August 5, 1958

Mr. FULBRIGHT. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an interesting and provocative article entitled "The Way To Achieve Our Middle East Aims," written by C. L. Sulzberger, and published in the New York Times of July 30, 1958.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

FOREIGN AFFAIRS—THE WAY TO ACHIEVE OUR MIDDLE EAST AIMS

(By C. L. Sulzberger)

WASHINGTON, July 29.—Hesitantly and reluctantly the world is approaching a critical negotiation. Its ultimate objective would seem to be isolating the Middle East from war by neutralizing that area.

Nevertheless, this remains a tense time, and the basic causes for tenseness have not yet been alleviated. It would therefore seem wise for both our own and the Soviet Governments to suspend exchanges of recrimination and to concentrate on the essential problem.

"Menaces always do harm to negotiation," wrote that expert diplomatist, François de Callières, in the 17th century, "since they often push a party to extremes that would not have been resorted to but for provocation."

Three changes must be reckoned with in stabilizing the Levant: the rise of Arab nationalism, the weakening of the western position, and the coincidental strengthening of Soviet influence. But history does not require that change bring chaos.

To avoid such chaos the region must be sealed off from great power clashes. Neither bloc at present can hold the area and each wishes to deny it to the other. Likewise, a curb on local aggression, both direct and indirect, must be created. And finally, Western Europe's access to Arab oil must be protected.

In approaching these objectives we should take special pains to maintain our alliance obligations, above all to Britain, France, and NATO. But that does not mean we are obliged to endorse each national aspiration of every ally.

FACING THE FACTS

Two salient facts must be faced. The first is that henceforth Russia's right to a voice in middle eastern affairs has to be acknowledged. The second is that we cannot escape certain special obligations to nations impinging on the Arab world. For example, as that region is neutralized, Turkey, Iran, and Israel become eligible for additional security guaranties from us.

Within this framework it does not seem impossible to reconcile our views with Moscow's objective of guaranteeing the Middle East from external interference and freezing arms shipments to the area. We must first define the territory affected. Then we must insist on excepting from this embargo countries with particular responsibilities such as Turkey.

A difficult puzzle is insuring the Levant against indirect aggression, today a greater danger than that of direct attack. One text to work from was once drafted by Molotov.

In 1939, when Moscow, London, and Paris sought unsuccessfully to negotiate an alliance against Germany, the Soviet foreign minister proposed that the three nations agree to help each other in the event of Nazi aggression—"direct or indirect"—against any European state. In a special annex Molotov suggested this obligation should apply in case of "internal coup d'etat or a political change favorable to the aggressor."

THWARTING SUBVERSION

It is not beyond possibility for the U. N. to devise similar machinery to thwart subversion by Nasser or other expansionists. If we can come to an essential agreement on neutralizing the Middle East, surely some mechanism can be invented to protect that area from its own internal combustion.

The question of oil is vital to Britain and the Continent, which depend for their existence upon access to this Arab commodity. Might we not be well advised to let London and Paris take the lead in negotiating settlement of this issue? We would lose little by retiring from that prominent position we have attained in middle eastern matters. About all this has gained us is the role once held by the aggressors of Suez as the favorite Arab whipping boy.

We should, of course, assist our friends in strengthening their position as they begin to bargain. We must help them to store larger petroleum reserves and to develop their nuclear power programs such as Euratom, thus making them less subject to potential blackmail pressures.

But beyond this we need not go. All of us must recognize the existence as a major force today of the revolutionary nationalism symbolized by Nasser. Our aim should be to avoid pressing this into Russia's arms; to prevent the U. S. S. R. from attaining dominance in the Middle East; and to protect the legitimate access of our allies to its petroleum.

This should provide foundation for a logical policy. And such a policy would be consonant with our long-term interests.

Cultural Exchange With Communist Czechoslovakia

EXTENSION OF REMARKS
OF
HON. PAUL H. DOUGLAS
OF ILLINOIS
IN THE SENATE OF THE UNITED STATES
Tuesday, August 5, 1958

Mr. DOUGLAS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a significant memorandum furnished to the Department of State earlier this year by the Czechoslovak National Council of America. This memorandum relates to the cultural exchange with Communist Czechoslovakia as practiced today, and points out the manner in which the rulers of that country take advantage of these exchange activities to further their propaganda and to deny a parity or reciprocity of opportunity to the free world. In the face of the rather superficial assumptions that these exchanges are necessarily beneficial to the cause of peace and international understanding, it may be well for Members of Congress and others to give consideration to the tough realities which this memorandum outlines.

There being no objection, the memorandum was ordered to be printed in the RECORD, as follows:

MEMORANDUM TO THE DEPARTMENT OF STATE CONCERNING CULTURAL EXCHANGE WITH COMMUNIST CZECHOSLOVAKIA AS PRACTICED TODAY

As representatives of Americans of Czechoslovak descent, we strongly protest against United States acceptance of cultural exchange and coexistence with Communist Czechoslovakia under existing conditions, that is, on Communist terms. We specifically object to the following:

I. TUZEX

Tuzex is a plot hatched by the Communist regime to extort American dollars. It is a government agency which sells all kinds of Czechoslovak goods from foodstuffs to automobiles to anyone living in Czechoslovakia for American dollars sent from the United States as a gift by American friends. It is no longer possible for Americans to send gift parcels with American goods to Czechoslovak relatives, as the Communist regime has slapped down a prohibitive tax on all things American. Since January 1, 1958, Americans are to send dollars only. Business agencies advertising Tuzex extensively in American newspapers and through the mail recommend "the excellent new way of sending gifts with the full approval of the United States Government. Tuzex is just like Sears, Roebuck and Macy's of New York," we are told.

Obviously, Tuzex is a defeat to us for several reasons:

First of all, by making it impossible for us to send American gift packages, the Prague regime has deprived us of an excellent propaganda channel, for every American package spoke of our way of life. The Communist regime is actually encouraging its citizens to ask American relatives for Tuzex dollars and discouraging American gift parcels. We know that Czechoslovak recipients were summoned to appear before a people's court for having received packages from American relatives. Furthermore, a careful check is now being made of people with American ties.

Secondly, Tuzex is detrimental to American business. Instead of buying American products, we have to spend our dollars on Communist goods. Our dollars are then used by the Communist regime to build up Czechoslovak industry. It is a recognized fact that Czechoslovak industry acts as a spearhead to Soviet economic penetration the world over. Moreover, we shall find that, as Czechoslovak industry expands, the Communist regime will be able to undercut our prices on world markets.

Without any doubt, the Communists are dictating the terms.

II. AMERICAN VISITORS

Americans are invited to Czechoslovakia to spend dollars. It is said that about 3,000 visited Czechoslovakia last year and from all indications, the number will be even higher this year. The United States Government permits practically anyone to travel to Czechoslovakia, but Americans in vain ask the Czechoslovak authorities to permit their old parents to visit them in America, although they offer to pay all expenses for their Czechoslovak guests.

The Czechoslovak border remains hermetically sealed to Czechoslovakia, except to the reliables who are sent abroad by the regime for a definite purpose.

And while the Communist regime is enticing Americans to visit Czechoslovakia, it is, at the same time, taking severe measures to prevent Czechoslovakia citizens from meeting or fraternizing with American visitors. Spy trials of alleged traitors are intended to strike terror among the population, as has been borne out by the testimony of Mr. Joseph R. Jacyno, the expelled member of the American Embassy in Prague. Hotel employees are carefully screened; many were discharged this spring and replaced by a more trustworthy staff. Everywhere people having American relatives are subjected once again to a government checkup.

III. FILMS

Agents of the Czechoslovak regime are making arrangements in the United States for the showing of Czechoslovak films. For instance, in Greater Chicago, three moving picture theatres, the World Playhouse, California, and Villas, are showing films from Prague. We know that a Chicago representative brought five Czechoslovak films.

The films we have seen to date are Communist propaganda. Písnička za groš (Song for a Penny) and Anděl z hor (Angel from the Mountains) are a glowing account of life under communism. (We are sorry to say that some of the onlookers fell for the subtle Communist propaganda). Even the story of Smetana's life has a red thread running through it: only the little people appreciated the great composer; it is always the little people who suffer and bring sacrifices etc.

In Czechoslovakia, if American news reports are correct, the Communist government, after months of negotiations, selected three American films. We ask, however, what can eager western-minded Czechoslovaks actually learn about America from the films finally approved by the Prague regime, such as Desire under the Elms? (This O'Neill play was given in Prague 30 years ago). So far, not one film showing life in the United States in a favorable light has been shown in Czechoslovakia.

IV. NEWSPAPERS AND PUBLICATIONS

Czech and Slovak Communist newspapers and other publications sympathetic to the Communist regime in Czechoslovakia are published in this country. These are the only ones to reach the citizens of Czechoslovakia to speak for the American people. No other American publications, except scientific, of course, are permitted. American tourists tell us that while their baggage was given only a perfunctory once-over, all printed matter, including children's books, whatever they happened to take along for the trip, was confiscated at customs under some pretext or other. Czechoslovaks are waiting in vain for the much desired American magazines and books.

Communist books from Czechoslovakia are sold in American bookshops (in Chicago, for instance, in Artia, Nova Doba, Slovak Bookstore) and mailed out to people living in the United States. For a one-dollar order, a recipient receives several other Czechoslovak publications free of charge. This would indicate that there is quite a supply of Communist material on stock in Chicago.

American tourists also report that the Voice of America and Radio Free Europe are jammed.

Thus the Communist masters have complete veto power over news information and all forms of cultural exchange. The free world should not allow the Communists to get away with the hoax of exchange when, in reality, they are enforcing a black-out.

This Communist duplicity—the whip at home and the smile abroad—is most objectionable and dangerous. Abroad, the Communist regime has launched a worldwide campaign to win western confidence, but at home is carrying on a new wave of persecution, of which there can be no doubt. On June 18, at its plenary meeting the Communist Party is to devise ways and means of attaining the five-point program which calls for: (1) Complete ruthless collectivization of farmers—the Kulaks must be destroyed; (2) in the cities, impoverishment and terrorization of former middle class, the Government employees, army men, among the undesirables and unreliables being citizens with close family ties in the United States; (3) higher norms of factory workers; (4) a perfected system of factory informers—this network of accomplices to tie in with the secret police; (5) an ideological and cultural Marx-Lenin straitjacket.

In view of the new wave of persecution in Czechoslovakia, it is unthinkable that the United States Government enter into friendly relations with the Communist oppressors headed by President Novotny, called Heydrich by the people. Nor is it the time for so-called cultural exchange, especially since it is not an exchange but a Communist plot to entrench communism. If we accept Communist terms, we shall separate ourselves from the Communist victims, and the people

behind the Iron Curtain will lose faith in us. Naturally, they cannot help but feel abandoned if we carry on a program of so-called coexistence and exchange with their oppressors at the very time that persecution is sweeping across their unhappy land.

Therefore, the Czechoslavak National Council of America urges a policy of strength and deep conviction and respectfully submits the following recommendations for your consideration:

PARITY IN ALL THINGS

I. Americans should be able to send free gifts packages to friends if limited to the personal use of a family. As the United States Government permits its citizens to spend in Czecvhoslovakia or to send any amount of dollars to Czechoslovakia, the Prague regime should at least permit its citizens to receive small gift packages of American goods.

PARITY IN VISITORS

II. As practically all Americans wishing to visit Czechoslovakia are given an American passport and thousands of them have gone there last year and this year, Czechoslovak relatives should be allowed by their regime to visit American families as guests. Under present conditions, only those Czechoslovaks, handpicked by the Prague regime for special reasons, come to the United States.

PARITY AGAIN

III. For every Czechoslovak film shown here, we ask that an American film appear on the screen in Czechoslovakia, a film showing life in the United States at it really is.

We suggest that a closer check be kept on films brought here by private individuals, intended for public showing, and that the censors board include on its staff an adviser with a thorough knowledge of the wiles of communism. Communist propaganda is far too subtle, and it is not enough to know a foreign language. The Czechoslovak National Council of America offers its services gratis in Chicago, New York, Detroit, Cleveland, Washington, D. C., Cedar Rapids, etc.

PARITY IN NEWS INFORMATION

IV. Inasmuch as this country permits Communist and proregime newspapers to be published in Czech and Slovak and to be sent to Czechoslovakia as representing American public opinion, and inasmuch as this country also permits newspapers, magazines and books from behind the Iron Curtain to be delivered and sold here through various agencies and bookstores, we ask for the same privilege.

The Czechoslovak National Council of America, with the help of other organizations of Americans of Czechoslovak descent would launch a magazine drive and send to Czechoslovakia thousands of issues of magazines—other than political, about everyday life in America. The Czechoslovak public is eager for the magazines, and we would supply them gratis.

When giving these terms, we are not asking for anything we Americans are not willing to permit or to give ourselves; in fact, the United States and its citizens are already doing so.

If the Communist regime refuses to accept reciprocity, we should stop calling the Communist hoax an exchange and give it the proper name: a Communist blackout with American assistance.

On the subject of the proposed summit meeting, the Czechoslovak National Council of America pays tribute to the foresight and firm stand taken by the Secretary of State, the Honorable John Foster Dulles, when he insists that any discussion with the Soviet Union must include on its agenda the fate of the captive peoples. May the United States continue to be a beacon of justice and hope to the Czechoslovaks and the other once-free nations of central and eastern Europe.

Very respectfully yours,

CZECHOSLOVAK NATIONAL COUNCIL OF AMERICA,
JAMES HOVORKA, *President.*

CHICAGO, *June 9, 1958.*

A Spire Above a Fort

EXTENSION OF REMARKS
OF
HON. LISTER HILL
OF ALABAMA
IN THE SENATE OF THE UNITED STATES
Tuesday, August 5, 1958

Mr. HILL. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the article written by the Chaplain of the Senate, Dr. Frederick Brown Harris, entitled "A Spire Above a Fort," published in the Washington Sunday Star of August 3, 1958, in the column entitled "Spires of the Spirit."

There being no objection, the article was ordered to be printed in the RECORD, as follows:

SPIRES OF THE SPIRIT

(By Dr. Frederick Brown Harris, Chaplain of the U. S. Senate)

A SPIRE ABOVE A FORT

It is a summer Sunday afternoon at Fort Myer, so near the national seat of government. The United States Army is honoring its chaplains. For those who have eyes to see the deep significance of the occasion, spires of religion leap to the bending sky. To stirring martial music a famous regiment of marching men, armed to defend the liberties of a free people, are saluting dedicated servants of God and of man who, in heroic yesterdays and in the grim today, are witnesses to the reality and supremacy of spiritual verities—to the faith that has made and preserved us a Nation.

Planned and personally led by Secretary of the Army Wilbur M. Brucker, the celebration was deliberately set up to emphasize to the Nation and to the world the vital role of the chaplains of the Armed Forces in peace and in war. High military officers stand to receive the salute while throngs representing many churches approvingly applaud. This midsummer pageant in the year of our Lord 1958 is linked to the very beginnings of the Nation's life as the colonists' rebellion against tyrannical rule gathered strength. It was then that the Father of his Country called for ministers of the various churches, bringing the resources of restraining and sustaining divine grace to stand by the side of the men who, in the struggle, were to know the temptations and suffering of the camp and battlefield. Those who gladly answered came out of the differing traditions of the various denominations.

From then until now, devout men have been consecrated to the sacred task, not of furthering the peculiar tenets of their brand of sectarianism or to dispute about the tweedle-dee and tweedle-dum of theological distinctions but rather of interpreting to men under the stress and strain of a soldier's lot the God about whom all the creeds utter their faltering and partial words. Chaplains go forth, not to sell their particular telescopes, but to show groping souls the eternal stars. Their ruling passion is beautifully suggested by the familiar words of Bible, which has ever been the chaplain's handbook, "How beautiful upon the mountains are the feet of Him that bringeth good tidings, that publisheth peace, that bringeth good tidings of good, that sayeth 'The Lord reigneth.'"

From the Second Continental Congress to the 85th Congress, now in session, in the noble procession of chaplains is glimpsed the warning words of Washington, "Let us not indulge the supposition that morality can be maintained without religion. These are the pillars of human happiness—the finest props of the duties of men and citizens." Every President since has echoed the first President's sentiments, down to the present occupant of the White House who, as a leader of militant hosts, has known at firsthand the essential value of the chaplain's sacred task. Declares President Eisenhower, "The basic doctrine to which we must always cling is that our form of government is founded on religion. It has no sense without a deeply felt religious faith."

A true chaplain meets young men where they are, with understanding and sympathy, conscious of the weaknesses which beset all. It is his not just to fortify the strong, but to be the medium of redemption from deeds and attitudes that tarnish and stain, pointing to the glory of forgiveness and cleansing grace. Every chaplain worthy of his vocation finds himself continually asking, as his task unfolds, "Who is sufficient for these things?" It is the men now serving in that capacity, and others whose memory as servants of the Most High is held in sacred remembrance, symbolized by the four chaplains, Jewish, Protestant, and Catholic, who, giving their life-belts to others, went down with their ship, that led the outstanding churchman, now Secretary of the Army, to plan the 83d birthday of the Chaplains Corps as a red-letter observance.

Preceding the reception, attended by a glittering array of generals and chaplains and their families, when all were greeted personally by the Secretary and representatives of the General Staff, the deep meaning of the celebration was fittingly phrased by Secretary Brucker. Among other things he said, "It is an honor and an inspiration here today to pay tribute to this splendid group of men who are so completely dedicated to the basic principles upon which our country was founded. The Army and the Nation will forever be in debt to the able and devoted clergymen of all faiths who serve, or have served, as chaplains. Throughout all the years since the Second Continental Congress, and in every war, the ministry of the Army chaplain has been a spiritual mainstay of our soldiers. The chaplain has helped them to find inner peace amid the turmoil; he has fortified their faith in Almighty God and their belief in the ultimate triumph of a righteous caues; he has shared every hardship of those entrusted to his care. Some 284 Army chaplains have given their lives in the service of God and country. Today our Army chaplains, about 1,100 strong, have many momentous responsibilities and operate on a worldwide scale."

The able and devoted chief of chaplains, Maj. Gen. Patrick J. Ryan, in his greeting from a chaplain to chaplains, declared: "To us, the Army chaplains of today, has been passed a noble spiritual heritage. As defenders of our land, our soldiers must be fortified with moral and spiritual qualities. Where moral apathy exists we must dissolve it with positive virtue. We must project courage and confidence which come through knowledge of God and adherence to His law."

Never, perhaps, has an Army chaplain written his name on the very heart of a nation, as did Studdard Kennedy in a black hour of England's history. His verses, written in the inferno of conflict, live on for-

ever. To his men in the crowded trenches he said, "I see what you see—this eternal struggle in the dark. I see the foul disorder and the filth of mind and soul in which men wallow like swine, stamp on their brothers till they drown in puddles of corruption. Yet have I looked into my mother's eyes and have seen the light of love, pure love and true—and I know I must fight on this side or that. And so, I bet my life on beauty, truth and love—not abstract, but incarnate truth. Beauty made flesh and realized in love. I bet my life on Christ, who turns the soul of darkness into light."

And now, shall we take something from the literary heritage left by this inspiring chaplain as a greeting to the United States Army Chaplain Corps on their 83d birthday? Here it is, Studdard Kennedy speaking to all chaplains and to all soldiers, said: "I see all history pass by, and through it all still shines that face, the Christ face, like a star which pierces drifting clouds, and tells the truth. They pass, but it remains and shines untouched, a pledge of that great hour which surely comes at last, when the tempest sobs to silence, silver silence, and the moon rides stately in an open starry sky and there is peace."

And that is a spire above all camps and forts of any nation whose God is the Lord.

Protection of American Public From Violators of Securities Laws

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Tuesday, August 5, 1958

Mr. WILEY. Mr. President, over a period of several years I have pointed out the need for strict enforcement of the Nation's securities laws.

I have stressed that if the American private-enterprise system is to get an increasing amount of sound equity capital invested by 8½ million stockholders, the good name of investments must be protected from the handful of manipulators and chiselers who sell "moose pasture" stock, which is worthless.

Hardly a week goes by in which we do not read some new information from the Securities and Exchange Commission, from the office of the attorney general of the State of New York, or from other attorneys general elsewhere, announcing a new crackdown, a new court injunction, a new indictment against some company which has been mulcting the public in a boiler-shop operation.

Fortunately, the public is becoming increasingly sophisticated against the high-pressure type of glib promises of fantastic profits from quick investments.

The New York Stock Exchange, the American Stock Exchange, and other exchanges, along with better-business bureaus, have carried on a very helpful information and education campaign to alert investors.

There is always, however, some new gimmick which the chiselers think up. For example, because of the lack of a blue-sky law in Alaska, fear has been expressed that that new State might become the home of boiler-shop operators.

Moreover, when some new metal appears on the market—some new wonder item which appears to have a profitable future—the crooks are quick to set up phony companies with mythical assets and unlikely prospects, in order to sell their certificates to the unwary.

In the past, there had been a certain number of chiselers operating from cross the border in Canada, fleecing the American public out of very considerable sums. Fortunately, such Canadian-based operations have been on the decline. They do not represent, and have never represented, the overwhelming bulk of sound security operations in Canada, any more than the small minority of chiselers represents the bulk of securities investments in the United States.

Nevertheless, one bad apple can tend to spoil the barrel. That is why, in my capacity as a member of the Senate Foreign Relations Committee, I have been in close touch with the SEC, with Canadian authorities, as well as State authorities in past years, in order to help assure continued close cooperation on both sides of the border.

Naturally, Canadian authorities are anxious to protect the good name of Canadian investments, just as we are anxious to protect the good name of the American securities industry.

I send to the desk the text of an article which appeared in the July 13 New York Times describing how the SEC list of companies on the Canadian restricted list helps to alert the unwary investor.

Of course, that list must be kept up to date. One of the problems of the list, or any other similar list, is that the crooks are faster in inventing new companies than it is possible to crack down on the new companies. Nevertheless, as fast as evidence is duly compiled and recorded, phony companies should be listed in order to alert the investor.

I ask unanimous consent that the text of the article be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the New York Times of July 13, 1958]

SEC BLACKLIST HELPS INVESTORS—NAMING OF POSSIBLY DUBIOUS CANADIAN COMPANIES IS TERMED MONEYSAVER

As blacklists go, the Securities and Exchange Commission's Canadian restricted list probably acts as one of the world's best money and headache savers for investors. It carries the names of 167 relatively obscure companies, including 4 added 2 weeks ago and one added last week.

First in line is the Aero Mining Corp. and the last is Woodgreen Copper Mines, Ltd. In between are such hopefully titled companies as Golden Hope Mines, Ltd., and such down-to-earth ones as A. L. Johnson Grubstake.

No one at the SEC knows the market value of the securities on the list. But each name has been placed there because the Government agency has reason to believe that the shares are being sold, or have recently been sold in this country, without meeting registration requirements. If a stock is not registered, the SEC has no way to make sure investors are getting the basic facts on which to base an investment decision and protect themselves from fraud or overpriced or watered stocks, according to Paul Windels, New York regional administrator of the SEC.

STARTED IN 1951

The SEC started the list in 1951, when large amounts of speculative Canadian stocks were being sold in this country. Each year the commission files many court actions seeking to bar brokers in this country or residents from selling securities on the restricted list. Last week, for example, it obtained injunctions against two such brokers.

But the commission points out "Canadian companies are beyond the reach of the process of Federal courts." Hence the list was begun to alert investors against possible risks involved in the purchase of such securities and also to alert broker-dealer concerns of possible illegal distributions.

The theory—and the hope—is that an investor reached by mail or telephone by a persuasive salesman for Canadian mining or oil shares will contact his broker or banker before buying. If the broker or banker finds the name on the blacklist, he knows the issue is suspect. But, the SEC warns that just because a Canadian stock is not on the list, there still is no proof that SEC registration requirements have been met.

The SEC has to depend on tips from brokers, Canadian authorities, or persons reached by questionable stock salesmen for information about possible fraudulent shares being sold in this country. It welcomes inquiries.

LIST REVISED

By this spring the list had grown to a record of 230 companies. So, instead of sending out more supplements, the SEC revised the list and winnowed it down in April to 162 names. The SEC said it had eliminated Canadian companies "concerning whose stock the Commission has no evidence of a public offering or sale in the United States during the past 5 years." Of course, if a listed company registers, its name will be removed from the list, but few care to do that.

The list tends to be effective because much of the selling relies on broker-dealer outlets in this country. The SEC holds a threat over these in the form of possible injunctions and suspensions from the National Association of Securities Dealers, or revocation of broker-dealer registrations.

The SEC believes that the 1955–56 peak of "boilerroom operators"—high-pressure salesmen of stocks with little or no value—has passed. But, while many of the big operators have been eliminated, the SEC said in its last annual report published at the year's start, salesmen for some of the worst "boilerrooms" had begun small operations of their own—a cancerous diffusion.

While it continues to wage war against these small operators, the SEC also is concerned about the activities of some formerly large operators who have fled this country and Canada for Latin America, especially Cuba. With this in mind, Wall Street will not be surprised if the SEC soon widens its restricted list to include other foreign securities.

The People Speak

EXTENSION OF REMARKS
OF
HON. HERMAN E. TALMADGE
OF GEORGIA
IN THE SENATE OF THE UNITED STATES
Tuesday, August 5, 1958

Mr. TALMADGE. Mr. President, I ask unanimous consent to have printed

in the Appendix of the RECORD the column by David Lawrence entitled "The People Speak," from the August 8, 1958, issue of U. S. News & World Report.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THE PEOPLE SPEAK

(By David Lawrence)

It was no mob incited by agitators that went to the polls last week in Arkansas.

It was no small group of zealots determined to defy the supreme law of the land that voted overwhelmingly to assure Governor Faubus a third term—unprecedented in more than half a century.

It was the electorate of Arkansas, expressing in a calm and deliberate manner its belief that the wording of the Constitution of the United States must be accepted, rather than any fortuitous ruling by the Supreme Court deviating from the Constitution.

The electorate of Arkansas reiterated by its vote a belief that the 14th amendment should be enforced not by bayonets but by a law of Congress. Such a law has never been passed even though the amendment specifically says:

"The Congress shall have power to enforce, by appropriate legislation, the provisions of this article."

What is the provision that has been deemed pertinent by the Supreme Court? The 14th amendment says that "no State shall * * * deny to any person within its jurisdiction the equal protection of the laws."

For decades past "equal protection" has been construed by the Supreme Court to mean that equal facilities for education may properly be provided by the States through separate schools.

Ever since the founding of the Republic, education has been considered solely within the right of the States to administer. Nowhere in the Constitution is the word "education" mentioned, and certainly the debates in Congress when the 14th amendment was adopted do not reveal a scintilla of evidence to prove that the amendment was intended to give Congress the power to take away from the States the right to control their own educational systems.

There is nothing in the Constitution, therefore, which prohibits the States from assigning pupils to public schools on whatever basis the State feels will give the best education to the children of its citizens.

From the very beginning of our history—confirmed indeed by a specific decision of the Massachusetts Supreme Court in 1850—the right of a State to set up separate schools for different races has been upheld. In 1896 the United States Supreme Court formally recognized the custom when it said that "separate but equal facilities" do not violate the 14th amendment.

The people of Arkansas have as deep a respect for the Constitution as the people of any other State of the Union. There would not have been cast for Governor Faubus last week the largest percentage of votes ever polled by any candidate in a Democratic primary election in Arkansas—70 percent of the total vote—if the people had not wished to assert their right to interpret the plain words of the Constitution as they are written.

The people of Arkansas have refused to uphold the usurped right of the nine Justices in Washington to say that modern psychology or emotionalism is more important than the letter of the Constitution itself. The people of Arkansas reserve the right to control their own emotionalism, especially inside the schools.

The people of Arkansas have been abused on the radio and on television and in the northern press as "lawless." They have been told that their action—in controlling their own educational system—is a blot on America's record before the world, especially in Soviet Russia.

But the free election last week, is, on the contrary, a dramatic example of freedom of choice. Nowhere in the Soviet empire could there be such a vote recorded in opposition to the policies of the central government.

Arkansas has not merely upheld its Governor. It has gone beyond any question of personalities. It has upheld a great principle—the doctrine of States rights which Thomas Jefferson gave us.

The 10th amendment to the Constitution declares: "The powers not delegated to the United States by the Constitution, nor prohibited by it to the States, are reserved to the States respectively, or to the people."

The problem of mixing the races in public schools cannot be solved overnight. It is one that is rooted in the customs and habits of the people.

This writer was enrolled for 12 years in integrated public schools in the North and never has had any personal objection to integration. The people of every State, however, are entitled to their right of self-government. If it was intended by the Constitution that there be uniformity of law throughout the States, then logically the Supreme Court long ago should have declared invalid all those laws which vary from State to State in different fields of human relations.

The people of Arkansas have spoken. They have said that the Constitution itself is the only "supreme law of the land." By their virtual unanimity, they have advised the Supreme Court to halt its usurpations and to follow the Constitution itself.

Welfare of Migrant Agricultural Workers

EXTENSION OF REMARKS

OF

HON. PAUL H. DOUGLAS

OF ILLINOIS

IN THE SENATE OF THE UNITED STATES

Tuesday, August 5, 1958

Mr. DOUGLAS. Mr. President, in the years that I have served as a Member of the Senate I have been concerned about the relative neglect of the working, living, and travel conditions of the migrant workers who are an important part of the process of cultivating and harvesting many of our crops.

A number of tragic accidents involving the unsafe transportation of these workers led Congress to give some power to the Interstate Commerce Commission to establish minimum safety requirements, which I hope will greatly diminish these hazards.

Some improvements have been reported in the terms under which Mexican nationals are imported into this country under international agreement with Mexico, although representatives of agricultural workers who are citizens still complain that work opportunities are not made available to nationals of our own country in some areas before Mexican workers are imported.

The need to improve the conditions under which these relatively helpless groups work and the conditions under which their families live, however, is very great. It recently came to my attention that the legislature in New York passed a number of measures looking in this direction. For the information of Members of Congress and of legislatures in other States, therefore, I ask unanimous consent that copies of these recent bills, together with the supporting statements describing them and a letter from the acting industrial commissioner of the States of New York, be printed in the Appendix of the RECORD.

I hope that this type of positive action to relieve the distressing conditions of migrant workers and their families will be studied with a view to parallel action by the legislatures of other States and by Congress.

There being no objection, the bills, statement, and letter were ordered to be printed in the RECORD, as follows:

STATE OF NEW YORK,
DEPARTMENT OF LABOR,
Albany, May 13, 1958.

Hon. PAUL H. DOUGLAS,
United States Senator,
The Senate, Washington, D. C.

DEAR SENATOR DOUGLAS: As requested in your letter of May 5, 1958, I am very pleased to send you copies of the four migratory labor bills which were recently signed and enacted into law by Governor Harriman.

You might be interested to learn that three of these bills were initially prepared by this department as a result of our own surveys and investigations, and as an outcome of the deliberations of the interdepartmental committee on food and farm labor processing, which is an advisory committee appointed by Governor Harriman, consisting of representatives of the various heads of the state departments concerned with this problem, experts in the field of agriculture and farmers.

In addition to the bills I am enclosing supporting statements which were prepared for the introducers at the time that the bills were submitted to the legislature.

As a sidelight you may be interested to learn that the bills prepared by this department and subsequently introduced by Democratic members of the State legislature, were all defeated by the Republican majority. The Republicans, however, realizing that the need for this legislation was so imperative, reintroduced the bills under their own sponsorship. Nevertheless, we had the satisfaction of knowing that the reintroduced bills were word for word, comma for comma, period for period, identical with ours.

The Republican bills passed the legislature and were subsequently signed by the Governor. I am also enclosing a copy of the Governor's memorandum which was issued at the time of the signing.

These three measures are:

1. The licensing of farm labor camp commissaries, by Mr. Van Lare. Senate 3192, Print No. 4248, chapter 895, now chapter 895, of the laws of 1958.

2. Payroll records of crew leaders, by Mr. Watson. Senate 3193, Print No. 3498, chapter 254.

3. Revocation of grower's registration, by Mr. Watson. Senate 3194, Print No. 4060, chapter 896.

In addition, the department of health sponsored a bill, which subsequently became law (Senate 3025, Print No. 4187, by Mr. Speno, chapter 894), which requires the operator of a camp to obtain a permit or license from the department of health indicating compliance with the State sanitary code prior to the admission or housing of any migratory laborers. This bill, which in a different form, was already part of the law, was necessary in view of several county court decisions which held that a farm labor camp

operator needed only to make application for a permit in order to operate a farm labor camp. As very often happened, by the time the application was denied, the farmer had already completed the season. Under the new law he will not be able to operate the camp at all prior to the issuance of a permit by the Department of Health.

I hope that the above has been of some assistance to you. Should you have any further questions please do not hesitate to call upon me or any member of this department.

Very truly yours,

CHARLES W. HALLORAN,
Acting Industrial Commissioner.

Senate 3192

An act to amend the labor law, in relation to farm labor camp commissaries

The people of the State of New York, represented in senate and assembly, do enact as follows:

SECTION 1. The labor law is hereby amended by adding thereto the following new sections, to be sections 212 (d) and 212 (e), to follow section 212 (c), to read as follows:

"§ 212 (d). Farm labor camp commissaries; issuance of permit; renewal, refusal, suspension, and revocation of permit; rules and regulations. 1. No person shall operate a farm labor camp commissary, or cause or allow the operation of a farm labor camp commissary, without a permit from the industrial commissioner to do so, and unless such permit is in full force and effect. Application for such permit shall be made on a form prescribed by the commissioner.

"2. A permit to operate a farm labor camp commissary must be conspicuously posted in the commissary. The permit may not be transferred or assigned and shall run to and include the 31st day of December of the year for which it is granted, unless sooner revoked by the commissioner. The permit may be renewed each year upon the filing of an application for renewal on a form prescribed by the commissioner.

"3. A permit holder shall post, and keep posted, in a conspicuous place in the commissary, the current prices of all goods sold or leased, and the prices charged shall not exceed the prices listed on the poster.

"4. The commissioner may refuse, revoke, or suspend a permit when he finds that:

"(a) the applicant or permit holder has violated any of the provisions of this chapter of the penal law, or has been convicted of any crime or offense, except traffic violations, or is not a person of good character or responsibility; or

"(b) the applicant or permit holder has made any misrepresentation or false statements in his application for a permit.

"5. The commissioner shall not refuse, revoke, or suspend a permit unless the applicant or permit holder, upon due notice, has been given an opportunity to be heard; provided, however, that pending the determination of such hearing, the commissioner may temporarily suspend a registration if, in his opinion, its suspension for such period is necessary to effectuate the purposes of the section.

"6. The commissioner may promulgate rules and regulations necessary to carry out the provisions of this section.

"SEC. 212 (e). Definitions. As used in section 212 (d):

"1. 'Persons' includes any individual, firm, partnership, association, or corporation.

"2. 'Farm labor camp commissary' means a place where goods are offered for sale or lease and which is operated in or in connection with a farm labor camp, including meals sold to workers. 'Farm labor camp commissary' includes a building, shed, or structure, or any part thereof, occupied as a farm labor camp commissary.

"3. 'Farm labor camp' means a property consisting of a tract of land and all tents, vehicles, buildings, or other structure pertaining thereto, any part of which may be occupied by persons employed as laborers in farm activities who are provided with sleeping facilities, in whole or in part, by the owner, lessee, or operator thereof, with or without stipulated agreement as to the duration of their stay, whether or not they are supplied with meals but who are supplied with such services or facilities as are necessary for their use of such property. The term 'farm activities' shall include the following activities in connection with vegetables and fruits and the plants, bushes, or trees producing the vegetables or fruits: fitting, planting, cultivating, harvesting, vining, sorting, grading, packing, storing, canning, freezing, dehydrating, bottling, and preserving or treating by any method.

"4. 'Goods' includes all goods, wares, merchandise, food, or any article or thing."

SEC. 2. This act shall take effect immediately.

DEPARTMENT OF LABOR BILL 34—SUPPORTING STATEMENT ON AN ACT TO AMEND THE LABOR LAW IN RELATION TO FARM LABOR CAMP COMMISSARIES

This bill is an outgrowth of recent complaints that migrant-farm workers are charged excessively high prices in stores located on the site of farm-labor camps. These complaints were investigated not only by the labor department but by the interdepartment committee on farm food processing workers.

Frequently, migrants are housed in camps which are several miles away from the nearest shopping area. Without any means of transportation of their own, they are compelled to buy their groceries and supplies at the camp store. Some camp store operators have taken advantage of this situation, and complaints have been made that migrant workers have been charged as much as $1 for a small can of sardines and a pack of cigarettes.

The attached bill is designed to control such abuses. It would require that any person operating a store or commissary in a farm-labor camp must obtain a permit from the industrial commissioner. The prices of all items sold would have to be posted and they could not be substantially higher than the prices prevailing in the locality in which the store is located. Permits would not be issued to persons of bad character or with criminal records.

This bill is another step forward in the protection of migrant workers. The 1954 law, requiring the registration of crew leaders, protects migrants against misrepresentation of wages and working conditions; the attached bill would protect migrants against excessive charges for food and other items. In many respects, the wording of the attached bill follows that of the 1954 enactment.

Senate 3193

An act to amend the labor law, in relation to requiring farm labor contractors or crew leaders to keep payroll records and give wage statements to farmworkers

The people of the State of New York, represented in senate and assembly, do enact as follows:

SECTION 1. Subdivision 7 of section 212 (b) of the labor law, as added by chapter 448 of the laws of 1954 and renumbered by chapter 786 of the laws of 1957, is hereby renumbered to be subdivision 8.

SEC. 2. Section 212 (b) of such law is hereby amended by adding thereto a new subdivision, to be subdivision 7, to read as follows:

"7. (a) Each farm labor contractor or crew leader shall keep payroll records for each worker of wage rates, wages earned, number of hours worked, and all legal withholdings from wages on a farm and in the manner prescribed by the industrial commissioner. Such payroll records shall be readily available and open to inspection by the industrial commissioner or any duly authorized representative at any reasonable time.

"(b) Each farm labor contractor or crew leader shall give to each worker with every payment of wages a written statement showing the worker's wage rate, wages earned, number of hours worked, and all legal withholdings from wages on a form and in the

SEC. 3. This act shall take effect immediately.

DEPARTMENT OF LABOR BILL 2—SUPPORTING STATEMENT ON AN ACT TO AMEND THE LABOR LAW, IN RELATION TO REQUIRING FARM LABOR CONTRACTORS OR CREW LEADERS TO KEEP PAYROLL RECORDS AND GIVE WAGE STATEMENTS TO FARMWORKERS

This bill is designed to implement present provisions for the protection of migrant workers against abuses relating to payment of wages.

Although section 212 (b) of the labor law provides that the industrial commissioner may require crew leaders to file a statement of the wages he intends to pay farmworkers before a certificate of registration is issued to the crew leader, experience has shown that such wage statements are of very limited value. In many cases the crew leader does not know at the time that he recruits the workers what the wages will be. Workers may be recruited between January and April and not be brought into this State until June. In other cases the wages may be fixed by the grower and not by the crew leader. The present law does not require crew leaders to keep records of actual wages paid, with the result that enforcement of the wage-payment provisions of the labor law is extremely difficult, if not impossible.

This bill would require crew leaders to keep payroll records and to give workers a wage statement showing the wages earned and the deductions made from wages. It would afford greater protection to workers and permit better enforcement of the wage-payment provisions in the labor law. The forms for payroll records and wage statements would be prescribed by the industrial commissioner.

Similar provisions are now contained in the agreement between employers and Puerto Rican agricultural workers.

The attached bill is 1 of 5 proposals submitted by the labor department to improve working standards of migrant workers.

Senate 3194

An act to amend the labor law, in relation to the registration of persons bringing into this State 10 or more migrant farm workers

The people of the State of New York, represented in senate and assembly, do enact as follows:

SECTION 1. Section 212 (a) of the labor law, as last amended by chapter 448 of the laws of 1954, is hereby amended to read as follows:

"§ 212 (a). Registration—migrant labor. 1. Each person who employs, recruits, transports and brings into the State or is responsible for bringing into the States 10 or more out-of-State migrant farm or food processing workers who are residents of the United States, shall, in each instance prior to the importation of such workers, register with the industrial commissioner, and submit such facts on wages, housing, working conditions, and such other information, as the commissioner may prescribe. Copies of this information or summaries thereof shall be made available by the commissioner to each such registrant who shall (1) give a copy to each worker, preferably at the time of recruitment and in any event lot later than

the time of arrival in the State and (2) post and keep posted conspicuously at least one copy at all times in any camp in which such workers are housed. Upon registration with the commissioner as provided above, he shall submit to each registrant pertinent information concerning workmen's compensation insurance and farmers' liability insurance with medical payments, including the rates for such protection.

"2. The provisions of section 212 (b) relating to a certificate of registration and to the renewal, refusal, suspension and revocation of registration shall apply to registration under this section with the same force and effect as though expressly made applicable to registration under this section."

SEC. 2. This act shall take effect immediately.

DEPARTMENT OF LABOR BILL 44—SUPPORTING STATEMENT ON AN ACT TO AMEND THE LABOR LAW, IN RELATION TO THE REGISTRATION OF PERSONS BRINGING INTO THIS STATE 10 OR MORE MIGRANT FARMWORKERS

This bill is designed to achieve greater responsibility on the part of growers who utilize migrant farmworkers. It would extend to growers utilizing 10 or more migrant farmworkers the sanctions now applying to farm-labor contractors or crew leaders.

Regulation of employers of migrant labor was first enacted in 1946 when section 212 (a) was added to the labor law. This enactment required the registration of all persons bringing into this State, or responsible for bringing into this State 10 or more migrant farmworkers. It applied to crew leaders and growers. The law, however, merely required registration and the submission of information on wages, housing and working conditions; it failed to provide for revocation of registration or for any penalty for misrepresentation of working conditions or violations of law.

Recognizing the inadequacies of the 1946 enactment, the legislature, in 1954 added section 212 (b) to the labor law. This section, which only deals with crew leaders, provides certain penalties for misrepresentations, or, if they, in any way violated any provisions of the labor law or penal law. A crew leader violating the law may have his registration revoked and he would not be permitted to continue his operations in this State. This enactment, however, did not have a similar revocation provision for growers. As the law now stands, a crew leader's registration may be revoked for misrepresentation of working conditions, but if a grower misrepresents working conditions or violates the law, there is no similar provision for revoking his registration.

The attached bill will correct this deficiency. It will permit the industrial commissioner to revoke the registration of a grower for misrepresentation of working conditions, and make the grower subject to the same penalties and sanctions of a crew leader.

This bill is 1 of 5 proposals submitted by the Labor Department to improve working standards of migrant labor.

Senate 3025

An act to amend the public health law, in relation to permits to operate farm labor camps

The people of the State of New York, represented in senate and assembly, do enact as follows:

SECTION 1. Paragraph (m) of subdivision 4 of section 225 of the public health law, as amended by chapter 175 of the laws of 1956, is hereby amended to read as follows:

"(m) require that application be made for a permit to operate a farm or food processing labor camp as defined in the sanitary code; authorize appropriate officers or agencies to issue such a permit when the applicant is in compliance with the established regulations; prescribe standards for living quarters at farm and food processing labor camps, including provisions for sanitary conditions; light, air, and safety; protection from fire hazards; maintenance; and such other matters as may be appropriate for security of life or health, provided, however, that the provisions of the sanitary code established pursuant to the provisions hereof shall apply to all farm and food processing labor camps intended to house migrant workers and which are occupied by 5 or more persons. In the preparation of such regulations, the public health council may request and shall receive technical assistance from the board of standards and appeals of the State department of labor and the State building code commission. Such regulation shall be enforced in the same manner as are other provisions of the sanitary code;

SEC. 2. This act shall take effect immediately.

GOVERNOR'S MEMORANDUM ON PAYROLL RECORDS OF FARM CREW LEADERS

(Memorandum filed with Senate bill 3193, Print No. 3498, entitled: "An act to amend the labor law, in relation to requiring farm labor contractors or crew leaders to keep payroll records and give wage statements to farmworkers")

MARCH 19, 1958.

Approved.

This bill will require farm labor contractors or crew leaders to keep payroll records and to give each worker a statement showing his earned wages and the deductions made. The bill will implement the present provisions of the law for the protection of migrant workers against abuses involving wage payments.

When I requested this legislation in a special message to the legislature earlier this year I pointed out that in my first annual message, the legislature was advised of the need for setting higher standards for the employment and living conditions of migrant workers who helped to harvest New York's crops. In 1956, the interdepartmental committee on farm and food processing labor was reorganized to enable it to coordinate more effectively departmental programs having to do with the problems of migrant labor. I also appointed an advisory council on seasonal farm and food processing labor to work with that committee.

This bill is a result of the inspections and investigations of conditions in migrant labor camps conducted under the auspices of these two committees. It will afford to thousands of migrant laborers greater protection against wage payment abuses. It will permit better enforcement by the industrial commissioner of the wage payment provisions of the labor law.

The bill is approved.

AVERELL HARRIMAN.

Retired—But Busier Than Ever

EXTENSION OF REMARKS

OF

HON. RICHARD L. NEUBERGER

OF OREGON

IN THE SENATE OF THE UNITED STATES

Tuesday, August 5, 1958

Mr. NEUBERGER. Mr. President, I think the sociologists who pursue the science of geriatrics as a special field of study would be well advised to observe closely the tempo maintained by the officials of the National Association of Retired Civil Employees. If these officials have slowed down with the years, I pity those who must have tried vainly to keep pace with them when they were at the height of their careers in Government. They are a fine group of American citizens.

Frankly, Mr. President, these people are a great inspiration to me. I have watched them demonstrate in their meetings with the Senate Post Office and Civil Service Committee, of which I am a member, the incalculable value of the judgment, perspective and maturity which are the fruits of their years of experience. They helped to guide me in working for the recent increase in annuities provided for former Federal employees.

I am reminded of a small group of San Francisco executives, who on reaching the retirement age, but not relishing imposed inactivity, set themselves up as management consultants and were busier than they had ever been prior to retirement.

These thoughts occurred to me, Mr. President, when I read in the Washington Evening Star of July 15, 1958, William Basham's stimulating story of Frank J. Wilson and John Madigan, president and secretary, respectively, of the National Association of Retired Civil Employees, one of the truly useful organizations in our National Capitol.

So that my colleagues may enjoy the inspiration of this article, I ask unanimous consent that it be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

CIGAR CHOMPER, 71, BATTLES FOR RETIRED CIVIL EMPLOYEES

(By William Basham)

Seventy-one-year-old Frank J. Wilson ground down on a fresh cigar and with both hands firmly planted on the oversized desk, snapped out: "This business is run by retirees—for retirees."

The straight-talking president of the National Association of Retired Civil Employees added, "We don't run up to Capitol Hill asking for charity. We originate, sponsor, and promote legislation to meet the needs of civil-service retirees—the original intent of the Civil Service Retirement Act."

Telephone calls, letters, and visitors pour in all day long at the office at 1625 Connecticut Avenue NW. The staff is made up of 51 members, all over 60, and all very busy.

SEVENTY-TWO AVERAGE AGE

"The average age on the 3 floors of our headquarters is 72. That includes George Fonken, who's past 84. George has the responsibility of getting out the mail to member prospects—a project in itself," Mr. Wilson said.

"There's no time for dawdling," asserted Mr. Wilson, whose carriage still attests to his former days as head of the United States Secret Service.

"This group got its start right after the Civil Service Act was passed in 1920. Fourteen retirees chipped in a dollar apiece. Today we have a 93,000 membership, 23 State federations and 680 chapters functioning in every State, Hawaii, the Canal Zone,

the Philippine Republic—and Alaska," he said proudly.

Just then, the group's tall, silver-haired secretary, John Madigan, 68, walked in carrying an impressive amount of correspondence. He summed up the group's activities, saying, "A good description of our duties might be compared to that of a watchdog."

ALWAYS A BATTLE

Mr. Madigan's explanation is as good as any for the organization that has sicked its vast numbers on members of Congress who drag their heels on legislation affecting the welfare of the Federal retiree. "It's battle, battle, battle," said Mr. Wilson, "but it's gotten us increased annuities, tax exemptions, payments for widows of retires and a group hospitalization plan."

Reaching to a pocket crammed with more cigars, Mr. Wilson said:

"When a worker quits his desk after 30 years or so, he finds that it's an extremely sudden change. Many sit home for awhile, putter in the garden, watch TV, or read. But some of these can't take an abrupt break in their established routine and have mental breakdowns.

"One of our big aims is to get the potential retiree alerted several years before he quits his job. Recently, we've helped in urging Government agencies to set up preretirement counseling services in their personnel offices. It's a modest beginning, but we think it's catching on."

As if they didn't have enough to do, the association puts out a monthly 32-page magazine covering up-to-date developments on benefits, information on local units and giving "pats on the back" to sympathetic legislators.

H. R. 13610: A Bill To Assist in Health, Physical Education, and Recreation Instruction of the Nation's Schoolchildren

EXTENSION OF REMARKS
OF
HON. TORBERT H. MACDONALD
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 5, 1958

Mr. MACDONALD. Mr. Speaker, I have introduced a bill which has a direct relationship to the future strength and security of our Nation. H. R. 13610 proposes to assist the States and Territories in extending and improving their programs of fitness through health and physical education, and through recreation instruction of the Nation's schoolchildren. In my opinion, this program of extension and improvement in these important areas is essential to our Nation's security.

This bill would provide a total of $15 million a year in Federal funds for a 5-year period beginning in 1960. Each State would receive a minimum of $50,000 a year, with additional funds allotted in proportion with a State's number of school-age children. Under the bill, each state would outline a program by which Federal funds would be used to extend and improve school health and safety education, physical education, and recreation instruction with special attention to fitness.

I am sure every Member of this Congress agrees with me when I say that American schools must produce physically fit persons to meet the challenge of present world crises. The reports of the large numbers of our young men between the ages of 18 and 25 who have been rejected by the Armed Forces on physical grounds are alarming. When we consider that in the six and a half year period from July 1, 1950, to the beginning of 1957, over 15 percent of the 4.7 million draft registrants were rejected because of physical defects, we cannot fail to acknowledge the urgency of the need for this program. Statistics from one study show, for example, that one out of three of our youths in their late teens and early twenties have been found unfit for military duty because of physical defects. This dramatic evidence of our neglect has in fact, been supported by every study ever made of the health of American school children.

It was shocking for Americans to learn the results of tests from a study by Dr. Hans Kraus, associate professor of physical medicine and rehabilitation at New York University, and Miss Bonnie Prudden, director of the Institute for Physical Fitness at White Plains, N. Y., which showed that out of 4,264 United States children tested for muscular fitness, 57.9 percent failed to meet minimum standards as compared with the much smaller percentage of 8.7 of the 2,879 European children who were given the same tests.

Additional evidence of the need for emphasizing the importance of physical fitness is outlined by the reports of the President's Conferences on the Fitness of American Youth.

I have followed with deep interest the reports and recommendations of these conferences. Because of my concern over the fact that present programs of physical fitness are not reaching all of the Nation's youth and because of my feeling that there should be more cooperation and financial assistance to these programs, I have introduced this bill which would provide Federal financial assistance to the States for their extension and improvement of school health and safety education, physical education, and recreation instruction with special attention to fitness in local schools.

The recommendations of the President's conference, with its representatives from youth-serving organizations throughout the Nation, support the fact that the Federal Government has a responsibility toward assisting the States in the promotion and extension of their programs of physical fitness. The conference gave formal recognition to the fact that physical and health education and recreation are essential to a balanced program of education for every boy and girl. Such programs of physical fitness are necessary for the development of healthy bodies and minds. Our all-out effort toward scientific and technical production requires that our citizens function at a high level of health and personal efficiency.

Scientific and productive manpower, present and potential, should be utilized to its fullest, unhampered by illness, accidents, or preventable or correctable health defects. Parallel to a national program aimed toward discovering and educating talented and gifted youth, it seems to me that there should be a program of health service and health instruction to encourage these youths, and others, to develop and maintain maximum physical and mental health. Certainly all youngsters should be "fit to learn." No youngster should be denied full achievement of his potentials because of preventable conditions of poor health.

We all know that public and professional interest in recreation is expanding rapidly. Everyone agrees that schools need to exert leadership now to meet recreation responsibilities, to avoid forfeiting their rights to other agencies, and to minimize wasteful duplication of personnel and facilities. Also youth unrest and youth delinquency need to be met squarely with school programs of physical education, intramural sports, athletics, and recreation.

The physical and intellectual efficiency of the Nation's youth must be improved through programs to develop the sound functioning of body processes, to correct remediable defects, and to assist our youth in the attainment of the endurance, strength, agility, and coordination and other qualities upon which the strength of a healthy Nation must depend.

As Americans we are proud of our high standard of living and our modern school facilities, yet, 91 percent of the Nation's elementary schools have no gymnasiums. We boast of our exceptional health record which less than 50 percent of our high schools provide programs of physical education. Furthermore, other reports indicate that 40 percent of the young men entering our Armed Forces in World War II could not swim 50 feet and that less than 5 percent of American youths have had the opportunity to enjoy camping and outdoor living.

These deficiencies must be remedied. I believe that the program outlined in my bill represents an important step toward the establishment and development of an effective program to insure the maximum degree of health, physical well-being, and fitness of our schoolchildren and to provide the Nation with a larger reservoir of persons whose strength, vitality, and stamina are essential resources to the Nation's security. Therefore, it is my hope that my colleagues will agree with me and assist in having this meritorious legislation enacted into law at the earliest possible moment.

Financial Stability for Local Service Airlines

EXTENSION OF REMARKS
OF

HON. WARREN G. MAGNUSON

OF WASHINGTON

IN THE SENATE OF THE UNITED STATES

Monday, August 4, 1958

Mr. MAGNUSON. Mr. President, fiscal solvency and future financial stability which will insure increasingly effective local service airline flights were advanced a step nearer realization at the quarterly regional meeting of the Association of Local and Territorial Airlines, hosted by Frontier Airlines, Inc., and held at Denver, Colo., July 24 and 25.

The Honorable Louis J. Hector, distinguished newest member of the Civil Aeronautics Board, delivered the remarks which mirrored this area of financial stability and increased public service when he championed bold imaginative thinking in matters of route adjustment and modification of operating restrictions.

Mr. Hector spoke on behalf of modification of old subsidy concepts to deal with the fabulous growth of local service and necessary introduction of new equipment by the local service airlines. He described the necessity for more definitive subsidy standards and the possibility of constructing a subsidy mail rate policy based on overall operating efficiency. This major address, which specifically seconded the CAB policy address on local airline service, delivered by the Honorable James R. Durfee, distinguished Chairman of the Civil Aeronautics Board, at the ALTA meeting in Las Vegas, Nev., April 10–11, 1958, should prove of genuine interest to my colleagues and to their constituents in every State presently receiving local airline service, and I ask unanimous consent that it be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

ADDRESS BY THE HONORABLE LOUIS J. HECTOR, MEMBER, CIVIL AERONAUTICS BOARD, AT THE QUARTERLY REGIONAL MEETING OF THE ASSOCIATION OF LOCAL AND TERRITORIAL AIRLINES, DENVER, COLO., JULY 25, 1958

I do not need to tell you how very pleasant it is to meet once again with representatives of the local service and territorial airlines. Since I have been on the Board, I have had the opportunity to meet a number of you personally and to see firsthand the energy, the enthusiasm, and the experience which you bring to the many problems which you and the Board together face today.

We spend a lot of our time in Washington these days on local service problems. I am sure you all appreciate the great complexity and importance of the Seven States case in which a tentative vote was recently announced by the Board. The tremendous scope of the new routes there under consideration; the use-it-or-lose-it principle implemented by specific standards outlined in the press release of the Board; the reconsideration of whole route systems that occurs in such a major area case—all these are matters of vital interest to the industry. You are all also certainly aware of the sweeping changes in restrictions requested by many of the parties in other area cases; the critical issues for the entire industry involved in the rate of return case; and the many broad questions concerning local service and territorial carriers involved in other cases presently before the Board. I know all these matters are of great interest to you just as they are of profound interest to the Board. But, of course, it is just these very things which are important and timely and vital—both to you and to us—which are being vigorously litigated before the Board right now and hence are the hardest to talk about. Under the principles of procedural due process which insure to every party the right to a full hearing on his specific case, we can discuss such matters only in very general terms. It is in this spirit that I would like to review briefly with you today a few of the general proposals recently made by the industry.

It seems to me that the bulk of the industry proposals can be divided into three general types. First, there are the proposals for reequipment. This subject has been talked about for years now, and I think we are all gratified that at last through the guaranteed loan programs things are beginning to happen. Of course, until recently even a guaranteed loan program wouldn't have done much good because the planes weren't there to be bought. The Board, as a matter of fact, may have been somewhat negligent in not using its developmental powers in this field. I think it might have been proper for the Board somehow to have underwritten the earlier development of an appropriate aircraft suitable to the needs of the local service carriers. But be that as it may, you now have the planes—some new planes and some old planes at new low prices—which seem proper for the job, and you have the financial machinery for buying them.

A second matter often discussed is route adjustment and the modification of restrictions. This includes a host of different proposals. These are all the proposals, for instance, for greater freedom in route realinement and changes of service pattern within a carrier's certificated system. I have heard it proposed even that such each local service carrier seems to have a general geographical area in which it is primarily responsible for air service, the Board should permit each carrier to serve the towns and cities in its area by any routings it seems fit, provided only that it gives adequate service to all points which produce a minimum of required traffic. This is certainly a revolutionary concept but not without a precedent—as a matter of fact it is somewhat akin to the Los Angeles Airways helicopter certificate which permits the carrier to serve any point in an area of 50-mile radius. The proponents of this idea point out that no one—neither the Board nor the carriers—can really predict in advance what the routings should be within a local service trade area, and that only trial and error can show which towns will produce passengers and which routes are the most efficient. I think you can see what complications such an idea poses in terms of subsidy standards and conventional route authorizations, but this may be the kind of bold, imaginative thinking which is needed to solve our problems.

Other proposals in the general category of route adjustment and modification of restrictions include a wide variety of skip-stop proposals and interroute, intersegment service proposals.

The real heart of the matter however, is the desire of the local service carriers for nonstop authorization between major traffic points. Let's face it, when a local service official talks route adjustment what he really means is nonstop between his major terminals. He may talk about other things too, but in the end he gets down to the real proposal which is the nonstop authority. Now what justification is offered for this? I'm sorry to say that I usually hear only one—that it will reduce the carrier's subsidy.

The usual speech or article on this subject outlines the financial plight of the local service industry, then speaks of the general desire to reduce subsidy, and finally ends with the statement, "The only way to achieve this is to give the local service carriers nonstop authority." Of course, this is not a bad argument. We all want to reduce subsidy and we know that this might help—but it is an argument that can't stop there, for the opposing argument is also a strong one. It runs like this: The Board gave out the first local service certificates in 1944, 1945, and 1946 specifically for the purpose of providing service from small towns and cities of our country into the larger cities. The whole argument for permanent certification before Congress, the whole tenor of the legislative history confirms this purpose. The Board and Congress have been and still are clearly willing to pay all the subsidity necessary to insure the continuation of this local service. So there is no real need to add another type of service.

I certainly wouldn't presume to tell you how to argue your case, but I would suggest that the best way to obtain authority to do something is to show, not that you need the revenue to be derived from the authority, but that you can so exercise the authority as to give better service to the public than anyone else.

I could not, of course, speculate whether or not and, if so, when and to what extent the local service carriers will obtain nonstop rights between major terminals. This would involve major readjustments within the industry, and will be greatly influenced by traffic developments, the operating economics of the new planes, and many other factors. But I do think we should always remember one thing. Whatever else happens, local service must be performed in ever-growing volume for the foreseeable future. Even if the local service industry should some day obtain these long-hoped-for nonstop rights, they will only be the frosting on the cake. The cake itself is still local service, and that cake must somehow be made sweet enough, palatable and nutritious enough, for you to thrive and prosper even without the nonstop icing. We must make local service itself a good, profitable, paying, thriving business. In this effort you will have massive governmental support. I think it can be achieved. Then if you get other broader authorizations, you will have two good, profitable businesses—a situation that any healthy private enterprise should certainly strive for.

Speaking of private enterprise, you may wonder why I haven't come to the announced topic of my speech, Private Enterprise and Public Subsidy. Frankly, the reason is that we are not as far ahead with certain subsidy studies as we had hoped. These studies are part of a general reappraisal of our subsidy standards and our machinery for subsidy determination. The many proposals in this field are the third type of proposal so often made by the industry in the past months.

Your own program has dealt very extensively with subsidy standards. You have advanced the suggestion that temporary mail pay should be set so as to anticipate probable increased costs rather than merely reflect the costs of a past period. You have urged that temporary rates be set so as to include interest, that the standards for mileage disallowances be more clearly established, and that mail rates should be based on overall efficiency rather than item-by-item examination. All of these requests, it seems to me, arise out of one basic problem, and that is the problem of operating under fixed rates in a period of rapid change,

development, and growth. The statement has been made, and it has much substance, that a final mail rate of the old type is almost meaningless today because almost as soon as it is established the basic data has changed. On the other hand, the present system of temporary mail rates leads to constant reexamination and renegotiation, and still often leaves the carrier in a position where it does not have the cash to meet its interest payments, not to speak of the constantly increased working capital required by a growing enterprise.

The Board has recently been studying not only all the details of the present subsidy standards and machinery to see if they can be improved, but have simultaneously asked the staff to embark on certain basic studies to determine whether some major modifications of our old subsidy concepts might not be the real answer to these problems. When I accepted your invitation I had hoped that certain of these staff studies would be completed and available for discussion, but unfortunately this kind of rethinking of basic policy takes a lot more time and involves many more problems, both legal and policy, than one ever anticipates. I can assure you only that the work is going forward under high priority.

Let me give you some of the general thinking which underlies this reappraisal of subsidy standards. Our chairman, James R. Durfee, expressed it very well in his speech to you at Las Vegas last April: "Our present system does not provide the necessary incentive to remain on final rates. It provides no real incentive to minimize expenses under a temporary rate, and no definite, dollars-and-cents standards by which carriers can judge their own performance. * * * Our basic objective will be to provide definite subsidy standards, within which the carriers will have to live—within which carriers will have the freedom—and the profit-and-loss incentive—to conduct their operations as good management judgment dictates."

I heartily concur in the chairman's remarks, particularly his comment concerning a "profit and loss incentive." We must always respect the daring and enterprise of those who organized the local service industry and the high degree of personal pride which guides its management today. We must realize, however, that we can little longer rely solely on these intangibles to insure the continuing growth of this industry. Your industry, like all other growing industries, must attract additional capital. You must someday soon show profits in order to attract equity capital and, thereby, break the cycle of constantly mounting debt.

I have always had a particular personal interest in these problems because I for a number of years ran a small business just about the size of the average local service carrier. I have always been amazed at the multitude of uncertainties which face local service management. You must operate your current system and chart your future course while often never fully knowing what your so-called temporary mail rate is. You are constantly negotiating final rates which in reality seldom stay final. You are nearly always involved in route extension cases. All of this takes place while you never really know what mileage may be disallowed and what expenses may be looked upon as not proper under honest, economical, and efficient management. I am convinced that your continued progress requires a new scheme which will enable you to plan operations with greater knowledge of what you can expect in the way of public support.

In many ways the subsidized air carrier system is a unique experiment in cooperation between private enterprise and the Government. It is totally unlike a public transportation system which is run by a governmental body for the public with the deficits automatically charged to Government expense. The subsidized air carrier industry bears little relation to other types of public utility, such as a light company or telephone company, which is guaranteed a virtual monopoly of an indispensable service, and which is only controlled by limitations on profits. The closest analogy to the airline subsidy I have been able to find is the maritime operating subsidy whereby the expenses of our American-flag ships are equalized so as to give them a fair opportunity against lower-cost foreign competition. But in this case the subsidy is based on a clearly definable standard—the difference between American costs and foreign costs—which can be ascertained with some precision in advance.

The airline subsidy is based on the principle that when a carrier performs needed services authorized by the Government in an honest, economical, and efficient manner and still does not show a reasonable profit, the Government will subsidize the difference. In carrying this out we have up to now become involved in an interminable round of discussions about what in minute detail is honest, economical, and efficient management.

One of the recent suggestions made by the local service carriers is that they be judged on their overall efficiency rather than by a point-by-point examination. To my mind, this suggestion may strike pretty close to the heart of the problem. The Circuit Court for the District of Columbia has recently reminded us in the American Overseas case that Congress did not put the responsibility for development of an air transportation system wholly upon Government agencies. In this statute the Congress sought to utilize the abilities and the capacities of the private air carriers. * * * Many different operations—different in policy, in mode, and in result—may all be honest, economical, and efficient. It is not enough for the Board to say that an operation it designs and favors meets those tests and it will approve that course and none other.

I know that you devoutly hope for improvements which will enable the local service industry in the foreseeable future to become self-supporting. I know that you share with many of us in government the feeling that after an appropriate period of development the users of local service should find it possible to pay the full cost of your operations. I feel too that you agree that in the long run the disciplines of private competition offer a better hope of cost-cutting and managerial efficiency than all the detailed policies wise regulators can ever hope to fashion. It seems to me that in the long run all we can hope to do is to devise broad general policies and within them permit local service management sufficient leeway to work out their own destinies. In short, our efforts must be directed to setting the climate in which you work—not substituting our ideas and energy for yours.

If general subsidy standards can be devised so that you and we will know in advance what amount of subsidy you may expect for any given type of operation, and if such subsidy standards can be so formulated that they contain for you a genuine profit incentive and at the same time give us a greater measure of control over the total subsidy bill, we shall have made a step of the most profound importance for all of us. Not the least of the benefits would be the enormous saving of time in mail rate proceedings—both our time and your time. We could well use the manpower and energy in the consideration of broader policy problems, and you could well use the time and energy in your real job—which is running your own airline in the most efficient and economical manner possible.

This is a major undertaking, however, and we will need the assisttnce of all of the local service and territorial carriers and their representatives. Members of our staff will probably be in touch with you for informal, individual discussions, and I hope you will give them the full measure of your constructive thoughts and experience.

In this job of subsidy standards, we in the Board have grave responsibilities, both to the public who require air service, and to the public treasury on which we draw for subsidy payments. You have both of these responsibilities in equal measure, and in addition you have the responsibility of making your own company a progressive and profitable business enterprise. It is my conviction that these aims are in no way incompatible, and I know that we can rely on you for the fullest measure of cooperation and assistance.

Oregon Participation in Benefits of Rural Library Services Act

EXTENSION OF REMARKS
OF
HON. RICHARD L. NEUBERGER
OF OREGON
IN THE SENATE OF THE UNITED STATES

Monday, August 4, 1958

Mr. NEUBERGER. Mr. President, my native state of Oregon has one of the finest and most enlightened State libraries in the Nation. This library has now begun to make available, through Oregon's vast countryside, the additional book distribution and other operations authorized by the Rural Library Services Act, in support of which many of us in the Senate and the House were extremely active. Oregon also maintains an excellent system of county libraries, which contribute to our high literacy rate.

Miss Eleanor Stephens, who soon will retire as State librarian of Oregon, has contributed greatly to the standing and quality of our State's library facilities. Miss Stephens recently gave a most informative talk describing the services being provided by the rural library funds made available to our State. This talk was delivered to the annual Oregon Library Association conference, an outstanding group.

I think it is particularly heartening to read Miss Stephens' vivid description of the enthusiastic reception accorded the State's three new bookmobiles, as they roll through the wide-open spaces of Oregon, bringing information, enlightenment, and education in their shelves and files. She also pays tribute to public-spirited citizens like Herman Oliver, of John Day, who has donated his own funds to build a new library in that community, and to furnish a bookmobile for Grant County.

It is especially pertinent that I, as one of the Senators from Oregon, should ask unanimous consent to include Eleanor Stephens' splendid address in the Appendix of the CONGRESSIONAL RECORD, because we are well aware that the distinguished Congresswoman from the Third Oregon District, Mrs. EDITH S. GREEN, was one of the leaders in helping to bring about enactment of the Rural Library Services Act in 1956.

I ask that the thoughtful report by Oregon State Librarian Eleanor Stephens be printed in the Appendix of the RECORD.

There being no objection, the report was ordered to be printed in the RECORD, as follows:

NEW ORBITS FOR OREGON LIBRARIES

(By Miss Eleanor Stephens)

WHAT IS THE OREGON PLAN FOR LIBRARY DEVELOPMENT UNDER THE RURAL LIBRARY SERVICES PROGRAM? WHAT IS THE PHILOSOPHY BEHIND THE PLAN? HOW HAVE THE PROJECTS BEEN SET UP?

With this my swan song as State librarian at an Oregon Library Association meeting, I would like to make it something worthy of remembrance. Although exposition of this kind does not lend itself to dramatization, the implications of the program carry us out on a wave of the future which cannot be belittled, no matter how poor the narration. In such a mood I might start with Milton; for who else has such grandeur for the space age? "He looked and saw wide territory spread before him towns and rural works between."

I found in browsing through Milton's Paradise Lost and then in his Aeropagitica: "A good book is the precious lifeblood of a master spirit, embalmed and treasured up on purpose to a life beyond life." And again: "Methinks I see in my mind a noble and puissant nation rousing herself like a strong man after sleep, and shaking her invincible locks, methinks I see her as an eagle mewing her mighty youth, and kindling her undazzled eyes at the full midday beam."

These mighty words may seem a far cry from the midget beginnings of the projects in process in Oregon but, as I reminded you in my Christmas library letter, "All the flowers of tomorrow are in the seeds of yesterday." We in Oregon do have an unusually wide territory "before us spread," the towns are relatively few everywhere, except in the Willamette Valley, where 85 percent of Oregon's population is located. But, knowing how truly a good book is the precious lifeblood of a master spirit, those of us who have been the architects of the Oregon plan determined that the experiment to be made possible, even with budgets cut 50 percent, should in some way help Oregon to rouse itself to its full library strength. We wanted a plan with sufficient geographical spread to make everyone in the State aware of it, yet we recognized that if we dribbled it out in amounts that were too small we would fail to demonstrate what could be done properly, and we knew we must enlist local cooperation if the projects were to be really self-supporting after the brief pump priming period had ended. We had to start where we had leadership to depend on.

Since this is a space year, in attempting to make graphic the Oregon plan, later in my explanation I shall use an analogy which relates our library program in Oregon to the universe and its encircling worlds. To clarify these relationships in our proposed library system may I first remind you of some dictionary definitions:

Universe: Defined as the totality of existing things, including the earth, the heavenly bodies, and all else throughout space.

Galaxy: Typified by the milky way or any galactic system, including those outside of the milky way.

Moon: May refer specifically to a body which revolves around the earth, or may be any planetary satellite.

Sputnik: Need I define this now most used word in the English language—a new thing created to spin about the earth in its own new orbit—of which less than half a dozen have been created to date, but imagination projects new dimensions in living from their devising and use.

Because the Multnomah County Library now operates in Oregon the only library system which in any way approximate standards of population, size, and support as set up in the American Library Association publication on public library service, and because the loans made to it by the Oregon State Library are less than one-tenth of 1 percent, in this delineation the Multnomah County Library is considered as outside of our operation, a milky way of its own. But we might approach the library cosmos, or library complex of public library service in Oregon, under our newly envisioned program, with a cosmology that differs somewhat from present concepts.

The Oregon library concept which served well a pioneer society was one in which there radiated out from the Oregon State Library, a well established book collection which has been loaned generously, not only to supplement existing library collections but also to serve the isolated patron. Ours has been an agency which had as its slogan "your State library is as near as your mailbox." This sun of the State library is not now capable of illuminating adequately the universe of Oregon, with its population of 1,700,000. But if we can conceive of some galaxies, with their own stars, or area library centers, being established in various portions of our universe Oregon, each of which has its own moons, or community library centers, and its sputniks (bookmobiles), the State library can conceivably supplement such library service quite effectively.

In the limited time allowed it is not possible to review all of the steps in public cooperation which led to making the Oregon plan a reality. It can easily be documented for you if you return home and reread my special bulletins of August and September 1956, as well as the one for September 1957 which reported the program implementation as approved by the board of trustees of the Oregon State Library on the 25th of that month. The bipartisan support which include the Republican governor and President in 1956 and later a Democratic governor and legislature in Oregon, as well as a Democratic delegation in Congress, all deserve their share of credit for making the dream come true.

Although the Rural Library Services Act was signed by President Eisenhower in June 1956 and Oregon's matching funds were voted in May 1957, none of the Oregon money was available under the Oregon law until Federal funds were on hand. The State library staff and the State purchasing agent rolled into action immediately, when the first Federal allotment of $40,000 was received on May 16, 1957 since this money had to be spent by June 30, a brief 6 weeks. By June 18, 1957 bids had been made on 3 bookmobiles costing approximately $7,000 each and books and plastic jackets for them totalling $10,333 were ordered. A plan for allocating these books was devised by July 1, 1957.

Since not only the professional journals have been full of facts and figures, but our local press has carried news about the Library Services Act as sponsored by Congresswoman EDITH GREEN of Oregon, I shall not review it in detail. You will doubtless remember that the enabling act would have given $7,500,000 of Federal funds annually to State agencies for 5 years from July 1, 1956 through June 30, 1961, two-fifths of which time is already past, the budget for one-fifth more has to be in to Washington, D. C. this month, with only the two-fifths for the period from July 1, 1959 through June 30, 1961 remaining to be allocated. All this, although we have been in actual operation for only 1 year as of this month, while the grants-in-aid program swing into action only 9 months ago.

When you realize that Oregon in its first 2 years did not receive a total of $217,060 as it might have hoped for, if the full $7,500,000 had eventuated in the Federal budget, but had to cut its program to rather less than half of that amount, it is somewhat miraculous that our 11 projects have moved forward with the momentum which they have had. May I pause here to give praise not only to Eloise Ebert, Cora Miller, Mabel Baker, and Rose Davidson, of the State library staff, as well as to all of our subject specialists who worked selecting books for the bookmobiles but also to our splendid project leaders, many of whom you'll meet on the panel here today, and to trustees, county courts, and Jaycees who have all put shoulders to the wheels within wheels to make the projects click.

A year and a half ago when I prepared an article for the Oregon Library News titled "Bootstrap Lifting," the Oregon State Library lacked funds for adequate extension division staff and services, and had no budget for grants-in-aid to libraries in the State. The dynamic efforts of the board of trustees of the State library in 1957 brought into being funds from the Oregon State Legislature with which to match Federal funds for rural library services to communities of less than 10,000 population. In the spring of 1956 your State librarian had spent 6 weeks at Rutgers University under the tutelage of Keyes Metcalf and Lowell Martin, evolving a system of libraries for Oregon which incorporated ideas prepared by her and Eloise Ebert under Dr. Robert Leigh at the University of Washington in 1951, which in turn were revamped by the library development committee of the Oregon Library Association in 1953. If, as I had written in an article published in the Library Journal 10 years earlier, on January 1, 1943, it is true that "Patterns precede garments, and a map is an essential when evaluating an itinerary that takes you where you want to go," certainly mulling over plans in the last 14 years must have done something toward perfecting the pattern for 1957, evolved at Rutgers, which with the exception of the point relative to equalization funds, lays out the road which the Oregon projects are now traveling.

In a State which preaches self-realization, where we have many small isolated communities properly proud of local initiative, in which they have shown community spirit in recognizing library needs, even though they have little fiscal potential, it was natural for the board of trustees of the Oregon State Library and the Oregon Library Association to agree that "the pattern of development for libraries in Oregon must be diverse if it is to be tailored to suit the needs of people in both the more populous and the less populous areas." And so, in the May 1956 proposal which I prepared under the title of a "System of Libraries for Oregon" after an introductory statement:

"Any attempt to adapt library standards for Oregon should endeavor to arrive at some pattern which would define minimum services and facilities for all Oregonians and to provide—

"1. Easy access to adequate and varied collections of books and other materials, housed attractively and efficiently.

"2. The services of personnel skilled in selecting, guiding and stimulating the use of such materials.

"Owing to the multiplicity of books published and the difficulties attendant upon assembling stock, organizing and distributing it efficiently and economically, it is axiomatic in 1956 that books are best serviced by a system of libraries."

I analyzed functions for various levels of service, defining in such a system the place of the State library, as it now exists, the possibility of State-supported regional centers, or as an easier early expedient more frequent use of extension librarians from the State library (called in this document, field

consultant) and what might be expected of locally supported library systems. I mentioned that the local library headquarters might be set up under different jurisdictions, as provided under Oregon library law: The locally supported headquarters might be set up under—

1. A regional library constituted of participating counties or parts of counties—as promulgated in one 1955 Oregon legislation;

2. A county, sufficiently large in population with a tax base large enough to support an adequate separate county library;

3. A federation of existing public libraries which might experiment by sharing in cooperative book buying and cataloging and/or payment for the services of a specialist on some phase of children's adult work.

Stemming out from such suns as these galaxy headquarters, there were to be for each a system of area library services, which might be termed the moons or sputniks of the galaxies.

The State library sun of library service, now attempting to light our Oregon library universe in many areas and serving distant points all too weakly, would still have a big job cut out for it in supplementing with its rays of books and advice the activities of the suns, or headquarters libraries, at the center of the various galaxies. With the light waves conserved from no longer attempting to stretch its functions out too far, functions which no other library can perform so well in the State, the entire system would be greatly strengthened.

The Oregon State Library should continue to serve not only as an archival and legislative reference headquarters but also as a library center for materials and resources in a better library extension program. However, the emphasis of its book service to the general population might profitably be shifted from direct over-the-desk and mail-order service to individuals and to too small libraries, to working with a system of regional or county library centered services. In this newly envisioned setup the State library might operate in a variety of ways:

It would give leadership in planning, promoting and helping improve library service for the general population, schools, colleges and State institutions and would further develop its consultative services toward this end. The State library would not set up a union catalog for the libraries of the State as has been done in some States, but it would continue participation in the Pacific Northwest Bibliographic Center as a means of facilitating interlibrary loans among libraries in the State. Its collection of more than a half million volumes would be used primarily to supplement the existing resources of library systems throughout Oregon.

In an effort to give not only a richer but a more economical library service the distribution of books from the State library might be accomplished by two different methods operating in conjunction. Existing services would be continued from the Salem center; but, in order to give a more equalized service in more distant areas, there might be a subcenter or subcenters in other places.

* * * * *

The first allotment of $40,000 merely purchased materiel, or encumbered funds for such purchases, with which a statewide educational program to establish a favorable climate in which good libraries might develop. The new extension staff at the State library was not completed until the fall of 1957, but that wasn't too bad, since the second allotment of Federal funds did not arrive until August 1957, when the wheels for the second-year program began to grind slowly. You have all received library extension notes, one issue prepared by Mrs. Mabel Baker to quicken interests of small libraries in western Oregon, and the other by Miss Cora Miller for eastern Oregon. Both of these extension librarians were feeling their way and meeting local leaders in areas which did not already have county library services or bookmobiles or which had not joined with some nearby area to secure their share of Federal funds and were attempting to discern the climate of opinion as to new directions for these areas.

By September 1957 the trustees of the State library had evaluated proposals for projects which were made firm for the numbers I to VII as first conceived. However, since neither Umatilla nor Jackson County submitted official proposals approved by their county courts, Benton-Linn was substituted as VIII and Malheur as IX.

Hours, rather than minutes, should be spent to delineate properly the operations involved in making effective use of all funds, for which the librarian of the State library, as administrator, is charged with responsibility. I can assure you that difficulties were met not only due to the terms of Public Law 597 and its regulations, but also to the State's directive relative to the 10 percent for expenditure of the State's matching moneys, the merging of the funds in a common pool, and the insistence of both jurisdictions on a type of performance budgeting. Despite innumerable problems relating to delays in securing bookmobiles and personnel, all 11 projects are clicking, as indicated in the leaflet on New Orbits for Oregon Libraries.

We scarcely know what activity has created the greatest stir but suspect it is the 3 beautiful State-purchased bookmobiles, 1 of which served as an exhibit bookmobile in 10 western Oregon counties before moving on as a demonstrator in Clatsop, where it will remain until June 1959; the other 2 being allocated respectively for western and eastern Oregon. One of these is the project newly devised as a regional demonstration in Benton and Linn Counties, and the other in Malheur a too small and not adequately supported eastern Oregon county, is intended to show how service might be improved there by use of a bookmobile. Through the generosity of this county and its librarian Marjorie Pomeroy, the Malheur County bookmobile is also functioning on occasion as an exhibit bookmobile, having made a trip to Union County, as well as making a similar promise to Baker County, which plans to put on a county library campaign ere long.

Out of the total of $197,910 from State and Federal appropriations received in 1957 and 1958, $97,189 goes into direct grants-in-aid after purchasing bookmobiles, books, and consultant services. Although bookmobiles already were available in Clackamas, Deschutes, and Tillamook Counties, rural library services funds for personnel, books, and operational expenses, are providing greatly improved service to these areas, which have devised patterns of cooperation that merited award by the State library trustees.

If you will study the horizontal sheet enumerating projects I through IX you will discover a lien halfway across the page which serves to segregate the grants-in-aid from the projects under special supervision of the State library staff.

Owing to the manner in which matching for Federal funds is set up, it was fortunate that the Oregon State library carries forward, through its direct mail and advisory work services, some 80 percent of which reach out into communities having less than 10,000 population. This provided a backlog of expenditures under project I which made it easier to supervise from the State library directly such activities as that with library trustees and with junior chambers of commerce with whom Mrs. Baker has worked under project II, and Cora Miller's wide range of activities for eastern Oregon libraries under project III.

In project IV, because Herman Oliver and his wife provided money, not only for the new library building in John Day but also for the bookmobile in Grant County, this project was enriched with over 2,000 books from rural library services funds, to say nothing of the numerous hours of close cooperation made possible by Cora Miller having chosen to date John Day as the center of her field work. Bookmobile enthusiasts thrilled when a letter came to the State library from Mrs. Louise McKown stating that when 100 books were issued from the new library, 200 were issued in the same period from the bookmobile * * * and this in a county of less than 10,000 population. This county no doubt shows the most dramatic gains because in less than a year this county has been made the recipient of a beautiful building in which to house its reference and reading room and administrative quarters, a Parnassus, with which to serve rural people, made possible by county tax funds that lifted support from 34 cents in 1956–57 to over $1 per capita in 1957–58, more than tripling support.

Project V most nearly approximates the ideal of regionalization which is a goal of the Oregon plan. A new wing has been added to the Deschutes County Library for headquarters in Bend and a new bookmobile provided, under the supervision of their dynamic professionally trained librarian, Eleanor Brown. Cooperation has been established with two nearby counties (Crook and Jefferson) that also have demonstrated their striving for library betterment in making possible new housing, in this our first real grants-in-aid project. The Oregon Library News carried in its issue of February 1958 the story of the inception of this program. Were it not for the difficulty of securing adequately trained professional assistance, despite the great distances and the sparsity of population in the region this project would take a back seat to none. It would seem true, as Miss Brown said in her report, that central Oregon regional is on the way up—and fast.

Financed less effectively, because Linn County does not provide any of its own tax money to help with the large burden being channeled for a joint regional service in both Benton and Linn Counties, none the less because the Corvallis Public Library trustees and staff had the vision splendid of what cooperation might bring, if the counties joined forces, and because the Albany Public Library Board and its librarian said they would be willing to supply books as interlibrary loans for the bookmobile project, owing to greater density of population, project VIII no doubt approximates more nearly the library situation which might pertain in the Willamette Valley if it began to inaugurate rural library services via bookmobile. Mrs. Alice Davidson has prepared for the State library a splendid report on the vicissitudes of initiating such services, but when you hear that the first 2 months' runs (limited as they are) netted a circulation to rural people, previously without direct book access, of 2,752 in Linn County and 3,052 in Benton, you will understand our enthusiasm. The first month showed gains of 10 percent, the second 21 percent in use of books.

Projects VI and VII have in common, but with different approaches, their attempts to set up cooperative cataloging projects. Each as added professionally trained personnel for this program, but Miss Sally Lou Tipton, librarian for Clackamas County (VII) with its 1 unified county system for some 100,000 people with 10 branch libraries

naturally has approached its problems differently than Mrs. Mary Rutherford, library administrator for Tillamook and Clatsop Counties, in what we have chosen at the State library to call the north coastal region, which jointly total 48,720 people. In our idealized scheme we would hope that Lincoln County to the south of Tillamook might apply in 1959–60 for entry into this regionalized service. Already Mrs. Baker has worked with all the Jaycee groups in this area and a short inservice training program is to be offered Lincoln County librarians while State library extension workers sound out local residents regarding picking up local support.

Another phase of project VI includes the bookmobile on loan to Clatsop County, and the plan to provide a regional coordinator of work with children for the two counties in the north coastal area. A book could be written upon the vicissitudes of library development in Clatsop County, but the magnificent support of library trustees in both Clatsop and Tillamook Counties and the indomitable courage of Mrs. Farnsworth Wright at Astoria make it appear that, despite difficulties, this library service is to be lifted to standards.

Further considerations in discussing the project problems might well include the legal aspects of the problem, which I assigned to Miss Eloise Ebert after she returned from the University of Illinois last year. Although the contracts or agreements, as the attorney general desires us to call the arrangements between jurisdictions, have involved innumerable hours of time and patience we seem to have passed this juncture. Miss Ebert's yeoman service in the preparation of guiding principles for approving requests for grants made for demonstrations and/or projects as well as rules and regulations for project agreements should be extolled. Mrs. Baker's patience in scouting out exhibit bookmobile routes and setting up schedules for the same deserves special mention, and the dogged devotion of Rose Davidson to the arduous task of 47 days, rain or shine, on the exhibit bookmobile, are herculean labors which we hope not to have to repeat in the same fashion soon again.

It would appear as if in 1958–59 we are beginning to approach the situation envisioned 2 years ago by Governor Smith when he telegraphed the Congress on May day in 1956:

"The Oregon State Library Board and the Oregon Library Association advise me that the funds provided will stimulate the improvement of local service. Within the 5-year period specified in this bill (H. R. 2840) adequate demonstrations could be provided." By dint of great effort we at the State library have kept the faith. As the yellow leaflet New Orbits implies "Local jurisdictions might well begin to investigate what they can do since local funds must finance enlarged programs ultimately." It is not my part to discuss future planning, but I can assure you that this same leaflet gives some advice for the future. There were not too many requests in the past so no properly authenticated requests have been denied. But many large countries are now bestirring themselves, in Lane County, for example, the League of Women Voters has come out with a recommendation to set up rural library service so the next awards may be not too easy to gain. But we need not be discouraged for I truly believe with Thoreau that "if one advances confidently in the direction of his dreams and endeavors to live the life which he has imagined, he will meet with success unexpected in common hours. He will put some things behind and will pass an invisible boundary."

Concern Over Defense

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, August 4, 1958

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following column by Mr. Hanson W. Baldwin which appeared in the New York Times on Sunday, July 27, 1958:

CONCERN OVER DEFENSE—WEAKNESSES IN LANDINGS IN LEBANON AND SENATE UNIT'S ALARM ARE CITED

(By Hanson W. Baldwin)

The Senate Appropriations Committee expressed concern about the United States defense position last week in unmistakable terms.

It not only criticized the optimism of the administration but it also provided some $1,200,000,000 more than President Eisenhower had requested for the armed services for the next 12 months. Some criticisms were overdrawn and some of the added funds may have been voted on the "it's better to be safe than sorry" principle.

Nevertheless the committee views were based solidly on an uneasy sense of weaknesses, some of which were evident during the recent landings of our Armed Forces in Lebanon.

Secretary of Defense Neil H. McElroy cited "the speed of our forces' reaction to situations of tension" as justification for his view that our air transport capabilities are adequate.

LITTLE SUPPORTING EVIDENCE

But the Lebanese experience offers little evidence to support Mr. McElroy's optimism, in the opinion of other military observers.

Our forces made unopposed landings in Lebanon at the invitation of the Lebanese Government. One battalion of Marines was fortunately near by—the others farther away. None of them had helicopters; the initial landings had to be made in amphibious craft. Only 1 Army airborne battalion of about 1,600 to 1,800 men was flown—in the initial increment—from Germany to Adana, Turkey, and thence after a deliberate delay, to Beirut. A good airfield was available for the transports in Beirut. In addition to this airborne element—some 800 marines were flown as individual replacements—not as a combat unit—from this country to Beirut.

The numbers of men and the amount of equipment transported to Beirut in the initial increment were far too small and the time required was far too long, some observers believe. If the United States had faced fairly determined opposition the small units sent might have been defeated in detail.

Airborne operations must depend for success, in part, upon shock effect, mass, and speed.

Yet today, the air transport available is not sufficient to move any sizable numbers of airborne troops and still carry out the other emergency airlift tasks required. This was demonstrated by our experience in Lebanon.

The relatively slow and small air-shuttle operation from Germany to Beirut was hampered, in part, because some of our air transports had to be diverted to start a fuel airlift from Saudi Arabia to Jordan. Others were required by the Strategic Air Command, others by the Tactical Air Command. The Navy used some. Others had to be held in reserve for possible use in case an emergency developed elsewhere in the world. There was not too much left over for the Army.

In addition to its concern about our airlift weaknesses, the Senate committee apparently felt that the United States Army needed more modern equipment quickly.

United States weapons now ready for production or in advanced stages of development, may well be equal or superior in quality to Soviet weapons—but the Army budget has not included sufficient funds to expedite production and to get these new weapons into hands of troops.

BASIC PROBLEM BROADER

These and other weaknesses motivated the actions taken by the Senate committee last week.

But the basic problem is a broader one.

William C. Foster, who was cochairman of the Gaither Committee, which studied our defense posture, and who has held other important defense jobs, stresses this problem in the current number of the General Electric Defense Quarterly, published tomorrow.

He points out that Russia has been closing the gap technologically and has been matching our total overall defense effort, even though its gross national product represents only about 40 per cent of our gross national product.

About 10 percent of our total goes into defense, as compared to Russia's 25 percent. If we put just 10 percent more of our effort into defense production—"still leaving 80 percent for consumer goods, services, and all our present high standards of living, the Russians, to match us, would have to take away from their people one-third of the already sparse good things of life they have," Mr. Foster declared.

This is the kernel of our long-term defense problem which neither the executive nor the legislative branches of the Government have resolutely faced.

The Nation Would Be Better Served by an Early Adjournment of Congress

EXTENSION OF REMARKS
OF
HON. JOHN E. HENDERSON
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 30, 1958

Mr. HENDERSON. Mr. Speaker, the dog days of Congress occur about this time of year when the Nation would be better served by an early adjournment. All sorts of legislative schemes appear and occasionally are passed when they should have been killed. A prime example, in my estimation, is the bill to provide pensions, free mailing privileges, suitable office space, and stenographic assistance for former Presidents.

With so many important measures which could be considered, I am not sure that I can agree that the session needs to be prolonged to attend to a matter of such low priority. Were we to concede that a pension for ex-Presidents would be desirable—and I do not concede it—there would seem to be no justification for the other emoluments of past office.

No similar treatment has ever before been accorded a class of American citizens. No need has been demonstrated for this legislation. Neither of the living ex-Presidents are what one might call penniless and they can and have adjusted their letter writing and other literary pursuits to their own temperament and disposition. When the day comes, if it does, that we have a President or a President's widow in financial distress the Congress will act quickly, and the people will certainly support such action. Meanwhile, if Congress is to remain in session, there are bills in pigeonholes which could be brought out on the floor which would affect thousands of people in need rather than two who are not in need and who have not asked for this legislation.

The Equity of H. R. 10

SPEECH
OF
HON. WILLIAM C. CRAMER
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 29, 1958

Mr. CRAMER. Mr. Speaker, passage in the House of H. R. 10 was a tribute to the determination and hard work of two distinguished gentlemen. In indicating my support of this measure I wish to acknowledge the great accomplishment of Mr. JENKINS of Ohio and Mr. KEOGH of New York. Over a period of many years they determinedly fought the battle that has been won, at least, in the House. Their success is to be commended and nearly 7 million of professional men and women and other self-employed people will benefit from their foresightedness and determination. I congratulate them on splendid work and am happy to cosponsor this bill, I having introduced H. R. 11187.

A great number of the residents of the First District of Florida have expressed their interest in H. R. 10 and I was glad to represent their interests in introducing a companion bill, H. R. 11187 and in voting for this bill that would provide an equitable form of tax relief for those who wish to volutarily provide for the later years of their life. It is only proper that they do so. It is only proper that they be afforded the same benefits as the employee—in some cases their own employees—who, with the contributions of a company, are only taxed on money paid into retirement-benefit programs when they are received upon retirement.

The professional men and women of the first district have been nearly unanimous in support of such legislation. In fact, they have urged that I support this measure which simply encourages the establishment of voluntary pension plans by the self-employed. It fully provides for those affected a greater equality of tax treatment as related to the employee who will draw social security benefits and the employer or professional man who, of his own choosing, would protect his future and that of his family.

Tax deferment, up to $2,500 or 10 percent of the income of the individual electing to use the provisions of H. R. 10, can only inure to the benefit of the Government over a period of years and whatever loss of tax revenue there is at this time will become an advantage in the future. I must say that I sincerely hope a further form of tax relief may be presented to even more of the taxpayers of the Nation in the near future. The immediate tax loss that must be met with enactment of this measure, which I view as being overcome shortly through other taxes resulting from this plan, can certainly be overcome with stringent housekeeping on the part of the agencies of Government and cutting of waste throughout all departments particularly in our programs of mutual assistance planned throughout the world. This loss is insignificant in comparison to the benefits provided. Resultant investment of capital held in trust funds that would be provided in the execution of the provisions of this bill would be to the public good and a source of advantage to the Government through purchase of Government bond issues and through additional taxable investment incomes. We must further realize that this program will definitely encourage the growth of savings throughout the country and thus have a most significant anti-inflation effect.

There has been a long delay in the remedial legislation that we have provided by action of the House. I trust the Senate will act favorably thereon. I have been glad to support and cosponsor this legislation that brings about an equalization in tax benefits and which provides greater security for those who voluntarily elect to avail themselves of the provisions of this bill. I, again, congratulate the authors of H. R. 10, am delighted to join them as a cosponsor of this bill, and I express my full endorsement of this legislation.

Frank D. Gorsline

EXTENSION OF REMARKS
OF
HON. RAY J. MADDEN
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Monday, August 4, 1958

Mr. MADDEN. Mr. Speaker, the Calumet region of Indiana suffered a great loss this year in the passing of Frank D. Gorsline. He was one of Hammond, Ind.'s, outstanding civic leaders and bankers. He was a citizen of Chicago, Ill., and well known throughout the Chicago and adjacent Indiana area.

I wish to submit with this statement a letter from J. Roscoe Miller, president of Northwestern University to Mrs. Frank D. Gorsline, 880 Lake Shore Drive, Chicago, Ill. I also wish to include with my remarks a letter from Jens Nyholm, Northwestern University librarian, informing Mrs. Gorsline of a permanent memorial in the form of a bookplate in the Northwestern University Library in memory of one of its outstanding alumni.

NORTHWESTERN UNIVERSITY,
OFFICE OF THE PRESIDENT,
Evanston, Ill., January 22, 1958.

Mrs. FRANK D. GORSLINE,
Chicago, Ill.

DEAR MRS. GORSLINE: I was very sorry to learn of the death of your husband, Mr. Frank D. Gorsline, who graduated from our Evanston School of Commerce in 1923. The officers of the university join me in sending to you their condolences.

As a memorial to Mr. Gorsline, we will place in Deering Library on the Evanston campus a book marked with a special bookplate bearing his name. It is our hope that it will give you satisfaction to know that his name is perpetuated in this way in the university from which he graduated.

Sincerely yours,

J. ROSCOE MILLER.

NORTHWESTERN UNIVERSITY,
THE UNIVERSITY LIBRARY,
Evanston, Ill., July 14, 1958.

Mrs. FRANK D. GORSLINE,
Chicago, Ill.

DEAR MRS. GORSLINE: In memory of your husband, the Northwestern University Library has placed a bookplate with the inscription "In loyal memory of Frank D. Gorsline, class of 1923" in its copy of Madison Avenue, U. S. A., a book about the extraordinary business of advertising and the people who run it, by Martin Mayer.

This volume will stand on our library shelves during Northwestern's second century as a tangible evidence of Mr. Gorsline's presence here at the university.

Faithfully yours,

JENS NYHOLM,
University Librarian.

Resolution Adopted by Oregon State Conference on Social Welfare

EXTENSION OF REMARKS
OF
HON. EDITH GREEN
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Monday, August 4, 1958

Mrs. GREEN of Oregon. Mr. Speaker, in a period of extreme international strain and tension, it is all too easy to bypass very important areas of public concern. One of these areas is the field of public assistance and the responsibility the Federal Government has in helping the States carry out adequate programs.

For this reason, I would like to call to the attention of my colleagues the resolution adopted by the Oregan State Conference on Social Welfare:

RESOLUTION ADOPTED BY OREGON STATE CONFERENCE ON SOCIAL WELFARE

Whereas the explosive postwar growth in population in the United States has greatly intensified the need for public services; and

Whereas the United States Constitution states that it is the function of the Federal Government to promote the general welfare, and Federal participation through grants to the States is essential to encourage States and localities to initiate and expand public services and to enable poorer States to achieve minimum standards in performance of public services; and

Whereas the concept of Federal grants-in-aid is under attack under the guise of States rights and the need for balancing the Federal budget; and

Whereas cuts in Federal aid to such vital programs as public assistance, child welfare, vocational education and rehabilitation and slum clearance would seriously affect the welfare of many of our citizens: Be it therefore,

Resolved, That the Oregon State Conference on Social Welfare affirm its belief in the concept that it is the function of modern democratic government to promote and protect the welfare of its citizens, and that continuing Federal participation is vital to the adequate provision of such public welfare services; and be it further

Resolved, That a copy of this resolution be sent to President Eisenhower and to all Members of the Oregon congressional delegation.

Economic Recession Hurts All Americans

EXTENSION OF REMARKS
OF
HON. GEORGE S. McGOVERN
OF SOUTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 30, 1958

Mr. McGOVERN. Mr. Speaker, it is generally believed that the current recession has been confined largely to a few industrial sections of the country. Actually, as demonstrated in a recent finding by Elmo Roper & Associates, the recession has been felt most sharply in rural and smalltown areas of the Nation.

Under the impact of declining farm income, hundreds of thousands of farmers have given up farming to seek employment in nearby towns and cities. This type of employment opportunity has been very seriously curtailed by the recession.

Because of this situation the Roper study revealed that the Midwest and the South have both been hit hard by declining employment opportunities stemming from the recession. This fact indicates that Americans living in rural and smalltown areas have as great a stake in the proposed area development legislation as do urban residents. It is my hope that this forward looking, constructive legislation will be passed in the current session of the Congress.

Believing that it will be of interest to my colleagues, I include at this point a release by Elmo Roper & Associates dated July 19, 1958:

EVERY THIRD FAMILY HIT BY RECESSION

(By Elmo Roper & Associates)

One-third of the Nation has felt the impact of the current recession. This means that close to 60 million people have been affected in some degree—either by loss of employment or loss in income—by the economic malaise that has crept across the Nation in the past year. A nationwide cross section was asked this question: I'd like to know a little about how the recession has affected you personally. Which of these statements applies to you?

	Percent
I or someone in my immediate family is out of work	10
While no one in my family is out of work, our family income is less than it was a year ago	22
Our family income is the same as it was a year ago	52
Our family income is higher than it was a year ago	14
Express no opinion	2

What job statistics do not show is the millions of people who while still at their jobs, have suffered cuts in pay or in overtime. The official figures do not record how many salesmen are facing unaccustomed sales resistance, to the extent that their families face unaccustomed budget restrictions. Nor do they reveal the number of factory workers who have dropped from a 5-day week plus overtime, to a 4- or 3-day week. Yet such people represent a group more than twice as large as those actually unemployed.

High though those figures are, they still leave the majority of the public untouched by the 1957–58 downturn. They also reveal a substantial segment who are actually better off than they were a year ago. This last group is, of course, a mixture of people on their first jobs, people who benefit from automatic pay increases, as well as those working in businesses or industries that are actually doing better this year than last.

Inevitably, the economic blight is spread unevenly over the economic scale. Among people whose normal standard of living is above average, the better off and the worse off balance each other out. But among those already on the economic margin, half the families have suffered a setback in their standard of living:

[In percent]

	High or upper, middle income	Middle income	Low income
Out of work	3	7	21
Income lower	18	21	26
Income same	56	57	43
Income higher	20	14	8
Express no opinion	3	1	2

In addition, the old belief that Negroes are last hired, first fired gains substantial backing from today's results. Only 9 percent of white families have an unemployed member at the present time, but 24 percent of Negro families report this sad statistic.

RURAL RECESSION WORST

Although cities like Detroit have been hard hit, in general people in large cities have weathered this year's rugged economic climate better than people in small towns and country areas. While in cities of 100,000 or more, 28 percent either have a family member out of work or reduced family income, the corresponding figure for people from towns of 2,500 or less and those living in rural areas is 37 percent.

Since farm income is up somewhat, the rural recession appears to reflect a loss of job opportunities off, rather than on, the farms. With agriculture demanding less and less manpower, country and small town people have been turning more and more to forms of industrial employment within commuting range of their homes. Apparently this kind of employment had dropped sharply.

Regionally, Midwesterners and Southerners are most affected. The lowest out-of-work figure is reported for families in the Northeast. The far West, whose unemployment figures are as high as those of any other part of the country, also shows the greatest number of people better off.

[In percent]

	East	Mid-west	South	Far West
Out of work	6	11	12	12
Income lower	23	23	22	18
Income same	58	50	51	46
Income higher	12	14	11	21
Express no opinion	1	2	4	3

What do these figures mean? They make it clear that the blight of unemployment spreads quickly beyond those who actually lose their jobs. A dip that has not earned the name depression has nonetheless reduced the economic well-being of a full third of the Nation's families.

New England Council Calls for Better United States Economic Cooperation With Canada

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 24, 1958

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include an interesting release on a statement by Raymond H. Trott, board chairman of the New England Council in Boston:

NEC HEAD CALLS FOR BETTER UNITED STATES ECONOMIC COOPERATION WITH CANADA

ST. JOHN, NEW BRUNSWICK, August 3.—A prominent New England business leader said tonight that the United States could improve relations with Canada by employing more foresight in formulating some economic policies.

"The reasons for any actions are more easily understood before they are taken than afterward," Raymond H. Trott, board chairman of the Rhode Island Hospital Trust Co., Providence, told the welcoming session of a joint regional economic conference sponsored by the Atlantic Provinces Economic Council and the New England Council.

Trott, who also is board chairman of the NEC, reminded the delegates to the 3-day meeting about the economic "stresses and strains" discussed during President Eisenhower's recent visit to Canada before such actions would have eliminated or lessened many misunderstandings.

"It is said that some of our attitudes have been too arbitrary and taken without regard for the feelings of our friends and neighbors," Trott also told the delegates to the Admiral Beatty Hotel gathering, "and if this is true we should and can make amends without receding from the course of action that we feel necessary for our own economy."

The group, which included some 50 New England businessmen, hailed Trott's declaration that "we need to understand each other even better than we do now" and his forecast that "the economic future for both the United States and Canada is a very bright one and offers a great deal to both countries."

New Brunswick Premier Hon. Hugh John Flemming, one of three maritime provinces premiers attending, welcomed the American visitors to the conference which was called to discuss mutual economic problems of the Atlantic provinces and New England. It is the second such meeting between the two regional economic development organizations, the NEC having played host to APEC delegates in 1956 at Bar Harbor, Maine.

Noting that the United States exports about $4 million worth of goods to Canada and imports an estimated $3 billion from her, Trott said the trade between the two nations is "greater than between any other two countries in the world and an obvious reason why we need each other economically." He laid the cause of friction to the failure to understand each other's problems.

On the other hand, the areas represented by the participating groups have "much in common socially and economically," the Rhode Island bank executive stressed, and

he predicted "even more intensive effort in the future" to develop resources and eliminate sources of irritation.

APEC President Dr. Frank MacKinnon and Trott presided at the reception. Included in the New England delegation were NEC Executive Vice President Gardner A. Caverly and Richard L. Bowditch, chairman of the NEC Canadian-New England relations committee and board chairman of C. H. Sprague & Sons Co., Boston.

Weekly Broadcast of Hon. Emanuel Celler, of New York, WINS Radio Station, New York, August 3, 1958

EXTENSION OF REMARKS
OF
HON. EMANUEL CELLER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 24, 1958

Mr. CELLER. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include the transcript of my weekly broadcast over WINS, New York, August 3, 1958:

PENSIONS FOR PRESIDENTS

I believe that ex-Presidents should get a lifetime pension, plus free office space, free mail, and a staff of workers. A plan embodying these provisions has won congressional approval. A former President would get $25,000 a year and during her life, his widow $10,000 per annum after his demise. As passed by the Senate, the former Presidents would get an office, a staff, and free mailing privileges. The House struck out these extra provisions. This was unfortunate. The bill now goes to conference, where the differences must be ironed out. I hope the Senate version of the bill will prevail.

The only former living Presidents that we have are former Presidents Herbert Hoover and Harry S. Truman. President Eisenhower would be eligible when his second term ends January 1961.

The Republicans are objecting to the free mailing privileges and office staff features of the plan. They argue that a former President could thus aid a political party or a political candidate, or if the ex-President decided to run for office again, he would have a great advantage. I see no merit in these objections. Suppose an ex-President wanted to run for Senate or for Congress. Why should we try to stop him? Ex-President John Quincy Adams made a good Congressman and Ex-President Andrew Johnson made a good Senator. These ex-Presidents are public figures, called upon to make many public appearances. They handle vast amounts of correspondence. Harry Truman says it takes three clerks to handle his mail alone.

A number of former Presidents, after their terms of office expired, lived in penury and want. President Grant became bankrupt and died of throat cancer at Mount McGregor in New York, in dire financial straits. Thomas Jefferson was near bankruptcy at the close of his career. Both Madison and Monroe fared none too well in their declining years.

There are now two widows of former Presidents who would be eligible for this pension—Mrs. Woodrow Wilson and Mrs. Franklin Delano Roosevelt.

As matters stand today, a former President is one of the very few Federal officials, civilian or military, who gets no retirement pay. Even the Vice President gets a pension, but not the President. That makes no sense.

SUMMIT CONFERENCE AND THE MIDEAST

It is difficult to see how President Eisenhower can avoid—to the credit of himself and the United States—a summit conference. Apparently, most of our allies want this conference, the neutral world wants it and most of the Afro-Asian nations want it. If the President did not wish it and does not wish it, it would have been far better for him months ago to have negated the idea firmly and absolutely. He was always indecisive and woolly in his answers to the many nasty letters Khrushchev wrote. It looks now as if he will be euchered into a conference he does not want, a conference that may be a personal triumph, unfortunately, for Khrushchev, whose stock will skyrocket in Europe and in Asia, while Eisenhower's stature has been greatly reduced in the eyes of the neutral world. I say this reluctantly. He should have been advised to veto a summit conference months ago in no uncertain language, but once he said he would climb to the summit, he could not decline and descend.

If and when a conference is held, we must get somebody to match the cunning and caustic wit of Khrushchev. Make no mistake about it, despicable as he is, he has a dynamic personality and is given to homely proverbs and barbed quotations from Russian folklore. Neither Dulles, with his legalistic, negative attitude, nor the President, with his casual, indecisive manner, would be a match for Khrushchev. I say this is all kindliness to the President. There is only one man that I know of on the the American scene that could meet Khrushchev and worst him, smother him with satire, deluge him with witticisms and interlard his oratory with abrasive anecdotes—that man is Adlai Stevenson—who, in addition to all these qualifications, has an overpowering intellectuality and a mastery of history and diplomacy. Khrushchev would find more than his equal in Adlai. Why do not the President and Dulles call upon him, nay more, why do not the President and Dulles call upon former Presidents Herbert Hoover and Harry S. Truman, and former Secretary of State, Dean Acheson? These are parlous times. All wisdom doesn't reside in this administration. Perhaps these former heads of state could lend considerable help and comfort to Dulles and Eisenhower in their present embarrassment.

A good deal of our trouble is our lack of a definite policy. Ours is an ad hoc approach, changing from day to day. We always seem to be doing things reluctantly—as though dragged to do them—as when Prime Minister Macmillan forced our hand to consent to the Summit meeting. Why do we always seem so negative and so unconcerned about the appearance we may create in the eyes of the world? We should insist and keep on insisting, in answer to all the diatribes of Khrushchev, that we want peace, but that he, Khrushchev, hampers peace. Frankly, some of the letters that Khrushchev wrote were so foul and so vindicative and so full of abuse that, diplomatic practice should have prevailed and the letters should have been returned unanswered to the Russian Ambassador. Heretofore, in previous administrations, when any nation practically insulted our head of State, the nation that sent such a letter got short shrift. That has not been the case these days with the present administration and that is unfortunate.

As to the Middle East, our policy should be clearcut and unmistakable. It should call for the following:

1. Settlement of the Arab refugee problem.

2. A Middle East arms embargo.

3. Withdrawal by Russia of its Security Council veto of the United Nations water resources plan for the Middle East.

4. Guarantee of the integrity of the borders of and sovereignty of Israel and the Arab States.

5. Prevention of not only armed aggression from without, but prevention of indirect aggression by infiltration and propaganda.

6. Free access of the West to eastern oil reserves.

7. Recognition of Arab nationalism, but insistence that it be for peace and not for aggression, and divorced from Soviet influence.

We hear little these days of the Eisenhower doctrine. Its tones are painfully silent. It came in with a bang and went out with a whimper. Where was the great flurry and flourish that ushered it in? It has not been a signal success and cost us over $300 million. That money has gone down the drain. Do you remember the Richards' mission? Former Congressman Richards was sent to the Middle East with a bundle of $300 million, which he distributed among the Arab countries. What did we get for this $300 million? The guns it purchased, apparently have been turned against us. Strange too, that little Israel, that did not participate in this booty, is the only country in the area upon which we can safely count.

Incidentally, Israeli intelligence gave advance notice to both London and Washington of the coup d'etat in Iraq that marked the Mideast flareup. But Macmillan and Dulles ignored the warning. Next time they had better listen to little Israel.

CONEY ISLAND

Coney Island has indeed had a checkered career—it has gone in turn from wilderness to boomtown; from a hangout for criminals to a watering place for the rich; from a playground for the well-to-do middle class to a gaudy seaside resort for the masses, where once the nickel ruled supreme. And now it has a new face—a more respectable face. It is no longer a seaside amusement resort with a boardwalk frontage as so many of us remember it. Its glittering past for recreation, amusement, and bathing, is no more. It has really and truly become an integral part of Brooklyn and is fast becoming a residential section—the site of splendid buildings to house middle-class families.

Ceremonies were recently held for the erection of the Luna Park houses on the site of the former Luna Park. At these groundbreaking ceremonies, Commissioner Robert Moses, as chairman of the mayor's slum-clearance committee, spoke of the emergence of Coney Island into a dignified, permanent year-round community and as a center for orderly, seasonal large-scale public recreation from a shabby, catchpenny, honky-tonk Coney Island, to which many nostalgic fables cling.

Coney Island has been synonymous with crowds and play—for it was here that millions of Americans came for relaxation and fun—to bathe in the ocean and enjoy the outdoor amusements. Many of these amusements and rides were first introduced at Coney Island and, later copied throughout the world. It was here the first roller coaster was built in 1884. Here too many of our entertainers first appeared in Coney's cabarets and vaudeville theaters, and went on to become outstanding stars of the stage, screen, radio, and television or achieved eminence in the world of music. At Carey Walsh's Cabaret, a young man named Jimmy Durante played the piano, while another, whose huge brown eyes became his trademark, was a singing waiter—yes, that was Eddie Cantor. At Perry's there was a 5-man combination with Vincent Lopez at the piano. And those who dropped into Stauch's for a glass

of their famous beer might have heard a slight, dark-haired young man sing. He later gave up his singing for songwriting and found fame and fortune under the now world-famous name of Irving Berlin. Long before he became a popular movie star, Cary Grant worked for a while as a walking advertisement for Steeplechase and could be seen making his way through the throngs on stilts.

And then there were some who became infamous. One young man earned his pay as a bouncer for one of the speakeasies. His name? Al Capone.

Famous and infamous, fashionable and unfashionable, good and bad, rich and poor, sober and gaudy—all have been a part of Coney Island's history, where fun, laughter and noise were the order of the day and night and always there were the throngs. One has but to say "Coney Island," and immediately there is evoked a picture of a mass of humanity, cramped together on beach and boardwalk, being constantly subjected to a cacophony of sounds. These sounds came first from the barkers and later from the public address systems, luring the customers into the hundreds and hundreds of sideshows, spectacles, animal acts, games and rides, which added their respective noises to the general confusion of sound.

Through the years, Coney Island is said to have attracted over 2 billion visitors to its playground and I imagine that there must have been moments when one would have thought that all 2 billion were there at the same time. In addition to all the sights and sounds, there were hundreds of cabarets, restaurants, ice cream parlors and food and drinking stands selling everything man would concoct for human consumption—and above all, the hot dog, to which Coney Island lays claim and which has become an American institution, famous the world over—so famous, in fact, that President Franklin Delano Roosevelt served hots dogs at a picnic for visiting royalty. Today, they are being served to the visitors who come to the United States Pavilion at the Brussels Fair.

There were many "firsts" at Coney Island and by the early 1900's, this playground had become a national and international phenomenon. It still attracts many people and will continue to do so for many years to come. No one would seriously consider cutting out the "fun" area entirely, but the face and character of Coney Island have changed and will continue to change. And the many legends will cling to its gaudy past.

Cheering News in the Valley

EXTENSION OF REMARKS
OF
HON. ROBERT E. JONES, JR.
OF ALABAMA
IN THE HOUSE OF REPRESENTATIVES
Monday, August 4, 1958

Mr. JONES of Alabama. Mr. Speaker, under leave to extend my remarks I wish to include an editorial which appeared recently in the Decatur Daily, Decatur, Ala.:

CHEERING NEWS IN THE VALLEY

News to cheer about in the Tennessee Valley is the concerted approval of the three members of the TVA Board of Directors of the Senate bill proposing self-financing without crippling amendments which would take away the freedom of action so essential to TVA in providing additional power facilities.

Sometime ago in this column we mentioned the fact that the Board of Directors would earn much more confidence from home folks if they went to Washington, made their position known, and slugged it out with the enemies of public power.

Yesterday, Chairman Herbert D. Vogel and Board members Arnold Jones and Dr. Frank Welch, all Eisenhower appointees, endorsed the Senate bill and urged its passage. It was the first time the Board members had publicly opposed the Budget Bureau and given their approval to a specific TVA financing bill.

Their action will mean a great deal in this fight. Certainly it will solidify the forces in the valley. This sort of front has not been offered for several years. With Chairman Vogel, Mr. Jones and Dr. Welch taking this sort of position, we are certain that the millions of people in the valley will change their thinking and rally to the leadership of the three men to whom the destinies of TVA have been entrusted for the years ahead.

Extend Title VII, Public Health Act

EXTENSION OF REMARKS
OF
HON. HENRY ALDOUS DIXON
OF UTAH
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 15, 1958

Mr. DIXON. Mr. Speaker, the right to good health has always been commonly accepted as a fundamental right by every citizen of this Nation. Fortunately, we have 85 medical teaching centers which have consistently, through extensive research and educational programs, enabled our people to enjoy the greatest health status of any people on this globe.

It is interesting to note that less than 60 years ago, most American medical schools could be called second or third rate when compared with those in Germany, England, and other nations. It was not unusual to have a proprietary institution or diploma mill operating for profit without such necessities as laboratories, equipment, hospital affiliations, or competent instructors. Today's medical schools, however, are more than just educational institutions. They have become complex centers of medical science and are the basic institutions involved in the search for new knowledge in the prevention, diagnosis, and treatment of human illness. Truly our 85 medical schools are the foundation of our entire health and medical structure.

The swarm of new activities has given rise to many new problems in our medical schools, chiefly those of finance. Medical school deans and university presidents are unanimous in designating finances as the No. 1 headache of the past decade. And in spite of the voluntary contributions by the people of this Nation through State appropriations and private gifts, plus the support the Frederal Government has provided in recent years, the increasing demands on the part of our healthy constituents for even more extensive health services forecast an even greater financial burden on these schools in the future.

From the standpoint of national prosperity and security, this Nation has no greater asset than the high standard of health so prevalent among its people. This is why the American people have supported medical education through their donations and support of State and Federal legislation. They fully realize that the smallest discovery in a research laboratory can eliminate polio, or perhaps prevent a plague, or control a dangerous disease such as diabetes. In other words, our people realize that medical research has not only made it possible for them to live 20 years longer than their forefathers, but that additional discoveries have made these 20 active and productive years. Knowing that the people of America support us, I urge early passage of H. R. 12876.

National Defense in Proper Perspective

EXTENSION OF REMARKS
OF
HON. LeROY H. ANDERSON
OF MONTANA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 2, 1958

Mr. ANDERSON of Montana. Mr. Speaker, the following penetrating letter by Joseph Alsop, in his column in the Washington Post, places many of the actions of former Secretary of Defense Wilson in their proper perspective. Mr. Alsop might well have noted that Mr. Wilson tried to stop the Army Jupiter missile program. I and a few of my fellow Congressmen strongly opposed that cutback here on the floor of the House. Now, a year and a half later, we know that if Mr. Wilson had had his way, there would be no Explorers orbiting around the earth, America would be years behind the Soviet Union in space and rocket development, and our prestige would be way, way down. Looking back, with all the facts before us, it is evident that when the President thanked Mr. Wilson as he left the office of Secretary of Defense, the most accurate words he could have used would have been, "Thanks for nothing."

Mr. Alsop's column follows:

MATTER OF FACT

(By Joseph Alsop)

LETTER TO "ENGINE CHARLIE"

DEAR MR. WILSON: Maybe there are more important things to write about, but your recent remarks about Jim Gavin positively demand this letter of thanks.

General Gavin has been doubly impertinent. Rather than lie to the Congress about the results of your defense policies, he has preferred resigning from the service that he loved and gave his life to. And now he has dared to publish a book, suggesting that your defense policies have led this country into mortal danger. This kind of impertinence, of course, deserves the rebuke you so characteristically meted out:

"I know Gavin," you are reported as saying. "And he is just another overly inflated Army officer with an exaggerated regard of his ability. He's just trying to sell his book."

What was so wonderful was your simultaneous denial that Gavin could really know you, since you had only seen him on rare occasions. You know Gavin, in other words, as you knew about the defense of the United States—by interpreting the messages of your

own peculiar mental telepathy in the powerful light of your own prejudices. Or one might say, you know Gavin as you knew about the danger to this country from the rapid growth of Soviet power—by ignoring all the unpleasant facts reported by the intelligence services, and faithfully following your own natural instincts (with some help from the budgetary policies of your friend, George Humphrey).

There are certain facts about Jim Gavin, to be sure, that lesser men than you still have a tendency not to ignore. There is the simple fact of the man himself—the brilliant intellectual who is also a great fighting man, the adored leader of the best division in the United States Army, the combat general with the cool courage that goes with knowledge, the shining soldier with the human style that all men envied and the best men tried to imitate.

One does not forget, either, the parachute landing that Gavin made in Sicily, and the long cruel battle at Salerno, and the drop at dawn into the inferno at Nijmegen and desperate attack that turned the balance in the desperate Battle of the Bulge. All these further facts still arouse strong emotions and call up vivid images—but only in smaller minds than yours. And, of course, you are right that the two Distinguished Service Crosses, and the Silver Star, and the Purple Heart, all won in the fire of battle, are mere military fripperies that probably had a lot to do with overly inflating Jim Gavin.

No doubt smaller minds are afflicted with these distorting emotions and are impressed by these foolish images, simply because they do not understand as well as you do what makes our country great. If you had left Westinghouse Electric to go into uniform, for instance, you might not have got the job with Delco-Remy in 1919. And if you had not got the job with Delco-Remy, you might not have got the job with General Motors, later on. And if that job had been missed, heaven forbid, we might not have had you as Secretary of Defense.

Even before that great moment when you took over the Pentagon, you always insisted on the right priorities. One remembers, for example, your reply to Bob Lovett when he asked for a loan of one of your junior executives during a very bad moment in the Korean war. The man Lovett wanted did not mind the heavy cut in salary. He only asked Lovett for your assurance that his absence on the Nation's service would not hinder his later promotion in the peculiar hierarchy over which you then presided. With a thrill of admiration, Lovett still recalls your stern and patriotic answer: "Of course, it will be held against him, if he leaves GM the way you want him to."

At the Pentagon, too, how firmly and wisely you always insisted upon the right priorities. It was a dangerous moment when you took over, no doubt about it. Action was demanded on a whole series of ugly reports announcing the early loss to the Soviets of the existing American military lead. There were a lot of people who wanted to "press the panic button" in your immortal phrase, and make the effort to maintain the American lead.

But you went right on assuring everyone, in your cool-headed way, that "the Russians weren't 10 feet high." So the Soviets are now well on their way to gaining almost unchallengeable superiority in nuclear striking power. For this, we have you to thank.

But this letter is meant to offer thanks of a more personal kind. It is intended to thank you for the final revelation of the true grandeur of your viewpoint; and it is especially intended to thank you for showing us all what gratitude is owing, what respect is due, from the comfortable people who have been saved to those men who have uncomfortably risked their lives to save them. Thank you, and goodby.

JOSEPH ALSOP.

Entry in Lebanon Not Justified on Moral or Legal Grounds

EXTENSION OF REMARKS
OF
HON. EDITH GREEN
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Monday, August 4, 1958

Mrs. GREEN of Oregon. Mr. Speaker, the letters which I have received from Oregon on the latest crisis in the Middle East are overwhelmingly in opposition to the sending of troops to Lebanon. One of the most piercing editorials has been written by the former Republican Governor of the State, the Honorable Charles Sprague. Mr. Sprague was at one time an alternate delegate to the United Nations. Throughout his lifetime he has been a student of national and international affairs. For many years, he has been one of the most highly respected leaders in Oregon. I would call to the attention of my colleagues Sprague's editorial which says in effect that the United States entry in Lebanon was not justified on moral or legal grounds:

[From the Oregon Statesman of July 20, 1958]

IT SEEMS TO ME

(By Charles A. Sprague)

UNITED STATES ENTRY IN LEBANON NOT JUSTIFIED ON MORAL OR LEGAL GROUNDS

Let us have done with moralizing over United States intervention in Lebanon. We have not dispatched marines there just to shore up the present Lebanese Government. It is our move on the chessboard of power politics. Our concern is not chiefly for the Lebanese people to protect them from trespassing Syrians and Egyptians; but for our national interests which focus on the containment of the Soviet Union and of communism, and on prevention of Russian control of the great reservoir of petroleum in the Middle East.

We are not fretting particularly over whether the miserable fellaheen of Egypt and the impoverished villagers of Iraq and Syria and the nomads of Saudi Arabia fall under the sway of Russia—their lot could hardly be worse than it is and has been for centuries. We are fearful lest the Middle East, strategically and economically important, fall under Soviet domination. At least let us be honest about that.

The Oregonian, which declares that the United States is on firm moral ground in dispatching troops to Lebanon, tinctures its morals with oil when it says of the countries of the Middle East that these territories and resources cannot be permitted to fall under the arbitrary control of any bloc unfriendly to the West. And one of its stable of Washington correspondents, William S. White, makes the same dual defense:

"Washington has now put it plainly that we will not permit the Middle East to fall into the wide sink of communism. Made clear, too, is that we will not allow Western Europe to be shut off from the Middle East oil which she must have."

The New York Herald Tribune was more frank than the Oregonian when it headed its supporting editorial: "The West's Lifeblood Is Threatened."

We are told, too, that it was time for the United States to take a stand, otherwise we would continue to be pushed around. This makes intervention a matter of prestige, which again is part of the game of power politics.

If our policy is to save peoples from communism we had a much better case in Hungary in 1956 when its people tried desperately to free themselves from the Russian yoke and made an appeal to United Nations for aid against the Russian aggressors.

Or in Poland when there was a similar uprising. Then the United States joined other nations of the West to renounce any intention to intervene, although our ties to the Poles and Hungarians were much closer than to the Lebanese.

Justification even from the standpoint of national interest, of intervention in Lebanon requires the equation of pan-Arabism with Nasserism and it with communism. This calls for assumptions, such as that the rebellion in Lebanon and the coup in Iraq were plotted in Moscow or by agents of Moscow. For that there is no proof. It ignores the fact of Arab aspirations toward independence and national unity, which have lifted President Nasser to a world figure. It ignores, too, the pressures of the Arabs for expulsion of European protectorates from Syria clear around the Mediterranean to Morocco and Algeria.

If we now intervene in the Middle East because Nasser gives us offense, because he is a gimcrack dictator who will be just a pawn of the Soviet Union, then we were dead wrong in 1956 when we turned against Israel and Britain and France and forced through United Nations their evacuation of the Suez.

The Israeli had more provocation than the Lebanese because their borders had persistently been violated by the Egyptians; and Britain and France had more at stake in the Suez Canal and the Middle East than the United States.

On moral grounds (wisely, I believe) we moved to halt their aggression in Egypt. Now, for a similar reason, we intervene in Lebanon. True, we moved in troops at the request of the President of Lebanon, but our move did not square with our commitments under the Eisenhower doctrine which called for support on request when a nation was subject to or threatened by armed aggression from any country controlled by international communism, which was not the case in Lebanon—no Soviet or Communist soldiers were anywhere near.

Nor did the United States rely on United Nations. We had besought the dispatch of an observation team by U. N. It reported that it found no evidence of substantial infiltration to support the rebel forces. It was only after the coup in Iraq that we rushed in our Marines and paratroopers—and then besought United Nations to take over the policing.

Washington simply got panicky after it got the news from Baghdad. Instead of waiting for some clearing of the atmosphere it reversed its policy and shipped in Marines and Britain followed with troops to Jordan. Now an Ambassador from Iraq named by the new Government declares that Iraq will honor its commitments, will continue to deliver oil to the West, still considers itself a member of the Baghdad Pact.

Meantime, we have conceded to Russia for the first time in the cold war the moral initiative. Now Ambassador Soboleff moves in U. N. for the withdrawal of foreign troops from Lebanon and Jordan. And President Khrushchev even more dramatically seizes the initiative with an invitation to an immediate summit meeting, dressing it in the attractive colors of averting the war which seems to threaten.

To sum up: Our intervention in Lebanon is not justified on moral or legal grounds. It is the consequence of our fixation in trying to polarize international politics between the Soviet Union (communism) and the West (the free world). It overlooks the surge of peoples lately emancipated from colonial status for independence and for material progress and for ethnic and national prestige. It overlooks, too, the turbulence of new and immature governments and the easy resort to revolt and assassination as a result of internal stresses. The intervention is essentially an attempt to counter, in advance, a power penetration of the Middle East by the Soviet Union. It must be assessed then solely in terms of power politics.

Mr. Speaker, I would also like to call to the attention of my colleagues the very challenging and forthright letter to the editor which expresses the views of 7 outstanding civic and church leaders of Portland.

These men all hold positions of great responsibility. People in my congressional district—yes, in my State—look to them for leadership in time of crisis.

The questions which they raise must soon be answered by the State Department.

And while they write as individuals, from the mail which I have received in my congressional office, I would say that Rabbi Nodel and the other ministers are also expressing the views of many, many others.

PORTLAND, OREG., *July 23, 1958.*

EDITOR, THE OREGONIAN,
Portland, Oreg.

SIR: In a recent editorial, the Oregonian justified the sending of United States Armed Forces into Lebanon "on firm moral ground." We should like to insert a modest question mark after this phrase. It is easy for nations to confuse their own self-interest with the cause of world peace, or even the will of God. Newspapers, we think, ought to be on constant guard against this temptation.

There are, however, some very real moral issues involved. We believe that the United Nations, imperfect and slow-moving as it is, still remains our best hope for reconciling differences among nations peacefully and constructively. If this is true, we have a moral obligation to support it and make it more effective. When we bypass it for the sake of expedience, we weaken it. Furthermore, forgetting altruism altogether for the moment, we weaken our own position in world opinion and encourage the suspicion that the "moral" that most concerns us in this instance is spelled "m-o-r-e o-i-l."

Other moral considerations suggest themselves. One of the principal obligations of citizenship is the duty of scrutinizing the conduct of government to support it when it is right and oppose it when wrong. To attach morality too quickly to this act of armed intervention may relieve us of the necessity of thinking the issue through, but the searching questions still remain. How long are the troops to remain there? Will we send forces to Turkey, Jordan and Iran upon request? Will we leave Lebanon this fall if President Chamoun's successor, assuming Chamoun is sincere in saying he will not run for reelection, requests it? The overall cause of free institutions is not served by an uncritical endorsement of our present position in the Middle East simply because it is an accomplished fact.

There may be compelling reasons for our intervention related to world peace and security. If so, the government has an obligation—a moral one, we think—to state what they are, beyond the strategic necessity of guarding petroleum supplies which it declares flatly we do not need for peaceful purposes.

Is our object to stop the spread of Nasser's influence? If so, it was a mistake to stop the British, French and Israeli march on the Suez in November 1956. Do we seek to encourage Israel's commendable effort to bring democracy to the Middle East? This hardly seems to comport with our continuous efforts to cultivate the favor of Ibn Saud, one of the world's most autocratic rulers, including the extravagant ovation we gave him during his recent visit to this country.

We urge an honest and realistic appraisal of this and all other applications of our foreign policy. We deplore a facile readiness to rationalize questionable diplomacy after the fact. Most of all, we decry the careless use of an honorable term to serve as an expedient of the moment. The concept of morality has operated as a vast power good in men's lives for thousands of years. We dare not compromise it by misuse. We shall need it intact in the days and years ahead as we seek to build ever stronger the brotherhood of man and the commonwealth of God.

Sincerely yours,

The Educational Program of the United States Air Force Academy

EXTENSION OF REMARKS
OF
HON. ALFRED D. SIEMINSKI
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Monday, August 4, 1958

Mr. SIEMINSKI. Mr. Speaker, recently when she looked out of the tower of the Empire State Building and gazed at New York, the Queen of England exclaimed that it was "Beautiful, beautiful."

A railing around the tower kept gravity from pulling the Queen groundward.

When you look out of a window at the new United States Air Force Academy near Colorado Springs, you are bound to sense that it is beautiful, beautiful.

It is said that man has been in touch with eternity for 2,000 years. When you stand on the grounds of the United States Air Force Academy, it seems easy for man to take off, sweep the skies, travel the solar systems, and put all things under his feet.

From Colorado Springs it seems indeed that the "Heavens are not too high," to borrow a Convair motto.

From Colorado Springs it is possible to sense that soon, perhaps, even rockets will be devised to burst in air writing messages across the sky that will direct the movement of people and good, especially, if other means of communication need implementation.

The above are some of the hopes for the cadets to realize whose good fortune it will be to take the airmanship program at the United States Air Force Academy.

Under leave to extend my remarks, I ask that the contents of a recent brochure on the United States Air Force Academy be here spread on the RECORD. I trust that it will be read with interest and profit.

The brochure contains a foreword by Air Force Academy Superintendent Maj. Gen. James E. Briggs, United States Air Force. In his schooldays, General Briggs was head boy and senior captain of cadets at the New York Military Academy, Cornwall-on-Hudson, N. Y. Later he graduated top man in scholarship and rank at the United States Military Academy, West Point, N. Y. General Briggs played varsity lacrosse at Cornwall and at West Point. He played hard and he fought hard. He knows scholarship and he knows men.

After the foreword by General Briggs, the brochure outlines a program of education for future Air Force officers that includes curriculum, instructional methods, faculty, library, selection of cadets, airmanship, athletics, extracurricular activities and the challenge of an Air Force career on the threshold of a space age.

Significant it is that two young men stand out in air and space scholarship at this time in the United States. Both graduated from the New York Military Academy within a few years of each other. General Briggs graduated in the mid-twenties and Byron G. McNabb, Mr. Missile of Cape Canaveral, Fla., as the New York Times, today, affectionately calls him, graduated in 1928. Mr. MacNabb, chief of Convair operations, Cape Canaveral, Fla., "pappied" the Atlas missile that accelerated toward 15,000 miles an hour last Saturday and hit "right in the pickle barrel" 2,000 to 2,500 miles downrange in the south Atlantic. Eventually, he and his 900 colleagues hope to fly their "bird" the full ICBM distance of 6,325 statute miles.

The question, of course, is, will Mr. MacNabb and his followers make obsolete the United States Air Force Academy? The United States Air Force Academy brochure that General Briggs pappied should answer the question. It follows:

UNITED STATES AIR FORCE ACADEMY—A PROGRAM OF EDUCATION FOR FUTURE AIR FORCE OFFICERS

FOREWORD

Since the autumn of 1954, when competition for appointment to the first class of cadets at the Air Force Academy began, thousands of young men have expressed interest in this new institution. These young men have asked many questions about the Academy: What subjects are included in the academic curriculum? Is credit given for previous college work? Do all cadets follow an identical course of studies? Is the faculty well qualified? How good are the laboratory facilities? Is there an opportunity for graduate education after completion of the Academy course?

The purpose of this booklet is to answer some of the most frequently asked ques-

tions about the educational program of the Air Force Academy.

The men who have been responsible for planing, organizing, and operating the Air Force Academy have shared one conviction: that the United States must provide the best possible institution for the education and training of future Air Force leaders. While recognizing the importance of military tradition, the founders of the Academy have subscribed unanimously to the proposition that there is no place for rigidity, dogmatism, or inflexibility in the education of Air Force officers. You will find that philosophy reflected in the following pages.

JAMES E. BRIGGS,
Major General, United States Air Force, Superintendent.

INTRODUCTION

For the first time in our history, the United States is confronted by an enemy whose avowed goal is the destruction of our way of life. Every home and factory in this country is a potential target for the weapons of that enemy.

For the first time in our history, the freedom of each citizen of this Nation is challenged.

Today we are training military leaders not alone for the defense of the United States but for national survival, and for survival of the civilization of which America is a part.

This is the air age—an era in which oceans and mountains and deserts have lost almost all meaning as defensive barriers. No points on the face of the globe are separated by more than a few hours. No longer is it necessary to invade a country to destroy it. One aircraft with one thermonuclear device can unleash a greater destructive force than that of all explosives set off by man prior to the development of nuclear weapons.

Today, the most effective defenses against enemy attack are our wide network of warning devices and fighter aircraft, and the ability of our long-range bombers to strike instantly and with devastating force any foreign power which might launch an assault upon the United States. The security—the survival—of all that we hold dear lies to a very large degree in the hands of our airmen.

Where will the leaders of our Air Force come from? From the farms, the villages, the great cities of every State in the Union; from the rich and the poor; from families whose roots go back to colonial days, and from families who crossed the oceans to America less than a generation ago.

What will our Air Force leaders be like? They must be not mere technicians but broadly educated men whose characters are formed by the military virtues of duty, honor, and devotion to country and whose minds are adaptable to the rapid pace of scientific and political change which is a mark of our time. They must be the best that a free democratic society has to offer. Training, educating and motivating such officers for lifetime careers in the Air Force is the business of the United States Air Force Academy.

Future air leaders will continue to come also from the Reserve Officer Training Corps and from other sources. Experience has shown, however, that the number from these sources who elect to remain in the Air Force as career officers is not sufficient to meet all Air Force needs. It is the Academy's task to insure a nucleus of career leaders.

DEVELOPMENT OF THE AIR FORCE ACADEMY

What does an Air Force officer need to know in an age of supersonic jets, long-range guided missiles and nuclear weapons; in an era when man stands at the threshold of space; in a period of rapid social change and of great political decisions? This is the question which members of the Air Force Academy Planning Board asked when that body was established in 1948 to lay plans for the new United States Air Force Academy. Opinions were solicited from a large group of eminent civilian educators, from senior officers of the three services, and from the faculties of the Military and Naval Academies.

It was agreed that the Air Force Academy should not be an institution devoted to training junior officers, but rather should provide the broad educational background required by senior air officers of a nation which had assumed leadership of the non-Communist world. Clearly, Academy planners and advisers could not define with precision the problems which air leaders will face 20 years hence. It was equally obvious that traditional concepts of officer education could not be followed blindly. The academic curriculum which emerged after many months of study and consultation combined civilian and military educational thought, and was based upon a foundation of past experience, existing problems, and estimates of the future.

The curriculum drawn up by the Academy Planning Board and its consultants aimed at producing officers with a sound background in the physical sciences and a knowledge of aeronautical engineering. The planners recognized, however, that men are still the basic ingredient of any military force and hence that a competent officer must be skilled in human relations. Planning Board members agreed that the responsibilities of military leaders had been broadened many fold in the preceding decade and that problems of national security would be paramount in the years ahead. The role of air power was destined to be decisive in the future of the world and hence Air Force leaders must be aware of the major problems, both domestic and international, of the Nation they serve. The breadth of intellectual horizon required of future air leaders called for academic training in the humanities, social sciences, physical sciences, and engineering.

Between 1948, when the first curriculum plans evolved and 1954 when President Eisenhower signed a bill authorizing establishment of the Air Force Academy, educational plans were subjected to review and refinement. This process has continued as plans have been translated into an operating program at the Air Force Academy's temporary location, Lowry Air Force Base, Denver, Colo. The Academy will move to its permanent location 8 miles north of Colorado Springs in 1958.

The Academy, which opened its doors to the first class of cadets on July 11, 1955, is neither an engineering nor a liberal arts college, but combines certain elements of both. It may be accurately described as a school of general education for professional Air Force officers—a school which endeavors to give each cadet "the knowledge and qualities of leadership required of an officer in the United States Air Force, and a basis for continued development throughout a lifetime of service to his country, leading to readiness for responsibilities as a future air commander."[1]

A cadet who completes the 4-year course at the Academy will graduate with a bachelor of science degree, the aeronautical rating of navigator, and a commission as second lieutenant in the Regular Air Force.

THE ACADEMIC CURRICULUM

The curriculum of the Air Force Academy is, in many ways, unique among undergraduate institutions of the United States. While individual courses are, in many instances, similar to their counterparts offered by civilian colleges, the combination of courses required for graduation is not paralleled in any other collegiate institution. The Air Force Academy does not offer a major field of study, but rather seeks to give its graduates the broadest possible educational experience in preparation for a career which embraces the leadership of men, close association with the people of other countries, the development and operation of vastly complex machines, the management of an organization which counts its men by the hundreds of thousands and its capital investment in the billions, an active participation in the formulation of national policy, and the planning—if necessary, the execution of military strategy and tactics.

The program of academic studies is outlined in chart II. Within each major area of learning—the humanities, the social sciences, and the physical sciences—courses have been arranged to form a continuous learning process and at the same time to relate to the other major areas to the greatest extent possible. All courses have been planned with close interdepartmental and interdivisional cooperation. Coordination of course planning has made it possible to reduce the time devoted to the introductory phases of many courses.

Advanced, accelerated, and special courses

The majority of cadets will follow the curriculum outlined in chart II. About one-third of the cadets admitted to the Air Force Academy have had 1 or more years of college work before their selection as cadets, however. Opportunity has been provided for these cadets, and for unusually talented cadets who have not previously attended college, to take advanced and special courses. Two methods of curriculum enrichment are used. First, cadets who have satisfactorily completed college courses similar to those included in the Academy curriculum, or who show superior aptitude in a subject, may elect to substitute advanced or accelerated courses for some courses in the regular curriculum work. Thus, those cadets who have satisfactorily completed a course comparable to fourth class[2] mathematics, or who show great aptitude in mathematics, are encouraged to take an accelerated mathematics course in which the material of the regular course is reviewed rapidly, followed by an introduction to statistics and probability, and vector algebra. While cadets in the regular fourth class mathematics course complete 10 semester hours work, those in the accelerated course earn from 12 to 14 semester hours credit. Similarly, cadets who can demonstrate satisfactory knowledge of the history of western civilization may study, in lieu of that course, the history of Russia or history of the Middle East.

The second method of providing for superior students is the special course program. Cadets admitted to this program are allowed to carry one course per semester in addition to regular and advanced or accelerated courses. These cadets are encouraged to develop their special course plans in either the scientific area or the social science-humanities area. Admission to the special course program is based on the cadet's high school and previous college work, and the quality of his academic work at the Air Force Academy. The content of a cadet's special course program depends upon his individual academic background and his desires; hence it is not possible to outline a standard special course. A cadet granted permission to follow a special course in the social science-humanities area might enrich his educational plan by studying courses in anthropology, sociology, or social psychology, philosophy, political theory, fine arts, creative writing, and great issues. The sum total of the regular and special courses in the social science-humanities area might

[1] From the official statement of the mission of the Air Force Academy.

[2] Classes at the Air Force Academy are designated: Fourth class (freshman), third class (sophomore), second class (junior), and first class (senior).

in some cases, approach a major in humanities or social sciences.

The objective of the special course program in scientific and engineering studies is to provide additional instruction which will enable a cadet to complete all or most of the usual requirements for a bachelor's degree in engineering. The engineering special course program of qualified cadets will include most of the following courses: properties of engineering materials, physical chemistry, advanced mathematics, advanced engineering drawing, modern physics, nuclear engineering, aircraft structures, servomechanisms, heat transfer, stability and control, and flight testing.

The regular, advanced, and accelerated courses offered by each academic department are described briefly in the following sections. Under the special course program, the faculty will, within limits of competence and laboratory facilities, teach any course for which there is a demonstrated need.

Description of courses

The Air Force Academy faculty is organized in 16 departments which are grouped into 4 academic divisions as shown in chart I, with the entire academic program under the supervision of the dean of faculty.

The Division of Humanities includes the Departments of English, Law and Logic, and Foreign Languages. Collectively, these department present a total of 31½ semester hours of instruction, of which 16 semester hours are in the field of English.

The Department of English is concerned with teaching cadets to write, read, speak, and listen effectively and to understand and enjoy literature as a study contributing to the development of mature character. These two threads—instruction in communications skills and a study of literature—run through the entire 3-year equence of instruction.

The fourth class English course is devoted largely to instruction in communications skills. Each cadet writes some 20 short themes and 3 longer research papers. As a background for his writing, the cadet reads a number of expository essays which serve also as a means of improving reading speed and comprehension. The best of cadet writing in this course is published in a small magazine, Chandelles. Instruction in speech includes an introduction to semantics, public speaking, and the planning and conduct of conferences.

The study of literature in the fourth class year introduces the cadet to the literary forms with which he will be concerned during his next two English courses. In this block of instruction, a short novel, two dramas, several short stories, and a sampling of poetic forms are read and analyzed.

Third class English is largely a study of some masterworks of western literature from the time of Homer to the 18th century. The cadets read all, or at least substantial parts of selected works rather than fragments from the works of a large number of great literary figures. The authors studied include Homer, Aeschylus, Sophocles, Euripides, Chaucer, Shakespeare, Milton, Moliere, and the English Renaissance poets. There is a continued but greatly reduced emphasis on communications skills.

Second class English is a continuation of the third class course. In this course, attention is centered on important European and American literary works from the middle of the 18th century to the present. Wherever possible, courses in English literature and history have been coordinated so that a cadet studies concurrently the history and literature of a country and period.

The Department of English offers an accelerated program to cadets who have completed a freshman English course at another institution or who show exceptional ability in English composition and speech. These cadets are excused from fourth class English and in their fourth class year take a special course which is much the same as the third class literature program with additional writing and speech exercises. As third classmen, this group takes the second class English program, and as second classmen they may take a special course in contemporary literature, literary criticism, and creative writing.

Instruction given by the Department of Law and Logic includes a one semester course in logic during the fourth class year and a one semester course in law during the first class year. The logic course embraces a study of propaganda and fallacies, semantics, syllogistic reasoning, and the scientific method. The cadet is taught to see logic not as propaganda or a game, but rather as a discipline with techniques and principles which can help him to organize and direct his own thinking and to test propositions which he, as an officer, will have to evaluate.

The course in law is both a survey of the theory of law and a study of law as a social institution. It is a course of fundamental cultural value, presenting basic principles of property, civil and criminal law, and the application of these principles to actual cases. This course is to some extent a pioneering effort. The need for a nonspecialized course in law at the undergraduate level is now being recognized in American undergraduate institutions.

Foreign languages are to be taught in the first class year. The objective of foreign language instruction is to give cadets a competence in the spoken form of one foreign language and an increased appreciation of the culture of foreign nations. Classes will meet 5 days a week throughout the first class year. Initially French and Spanish will be taught; other languages will be added as cadet enrollment increases.

The Division of Social Sciences includes the Departments of History, Political Science, Economics, Military History, and Geography, and Psychology, instruction in the social science area, which totals 33½ semester hours, is aimed at developing in cadets a deeper understanding of human society.

Regular courses offered by the Department of History are history of world civilization in the third class year and United States history for second classmen. The first 64 lessons of world civilization are devoted to western civilization and the last 36 to oriental civilizations. In both of these areas there is much emphasis on the cultural elements of civilization, including science, philosophy, and the fine arts. Primary and secondary source materials are used extensively to supplement the text. In United States history emphasis is placed on the period since 1763; a major objective of the course is to acquaint cadets with the role and responsibilities of United States leadership in the 20th century. The study of political, social, economic, military, and diplomatic trends and movements which have influenced our society is based to a large extent on a collateral reading program. Cadets who are qualified in the history of western civilization or in United States history may elect to substitute for those courses history of the Middle East, and history of Russia; United States diplomatic history, and Latin American history.

The Department of Economics teaches principles of economics and comparative economic systems in the second class year. These courses introduce cadets to some of the fundamental concepts of economic organization in a modern interdepartment society. Among the topics discussed are national wealth, national income, monetary and fiscal policies, and economic problems of capitalism and other economic systems. Throughout the course, techniques of modern income and monetary analysis are used to help cadets develop an appreciation of economic factors and how they affect national security. The final economics course, economics of national security, is taught in the first class year. It deals with national economic objectives, mobilization programs, economic stabilization, systems analysis, and economic warfare. In all economic courses, the case study approach is used extensively. Advanced courses in Contemporary Economic Thought, International Economics, and History of Economic Thought are available for qualified cadets.

The Department of Political Science at the Air Force Academy, as in many other schools, embraces two fields of instruction: government and international relations. American National Government is taught in the second class year, paralleling the United States history course. This course is concerned equally with the institutions of government and with giving the cadet an understanding of the body of fundamental ideas on which our system of government is built. Advanced courses in American Political Thought or American Political Parties are open to cadets who qualify for exemption from the course in American National Government. In the first class year, cadets study Contemporary Foreign Governments. This course treats both the structure and operation of major foreign governments and problems of political behavior. Some problems considered in the government courses are: the dilemmas of democracy, the problem of concentration of power versus decentralization, relations between government and the economic order, and conflicts between ideologies. The final political science course, International Relations, is taught during the second semester of the first class year so that cadets may bring to the course a background in geography, history, government, and economics. In this course, cadets study the nature of international relations, the bases of national power, and the formulation and implementation of foreign policy in the United States and other great powers. A behavioral rather than an historical or descriptive approach is used, with emphasis on analysis of the complex forces which influence world politics.

The Department of Military History and Geography teaches a 1-semester course in physical and cultural geography in the fourth class year and a 1-semester course in military history in the first class year. The geography course is aimed at developing in cadets an ability to evaluate the influence of geography on national security and the employment of air power. Qualified cadets may substitute political geography for the basic course. The general objectives of the military history course are to develop a broad, balanced understanding of the scope and complexity of war through a study of military history, military affairs, and military problems, and to provide a basis for continuing professional study in these subjects. Emphasis is placed on the period from World War I to the present. About one-third of the course is devoted to a study of air warfare; the remainder covers ground and naval warfare, military theory and organization, strategy and tactics, civil-military relations, and military leaders. This course is closely coordinated with instruction given in the military training phase of the airmanship program by the Division of Military Training.

One of the principal objectives of the Department of Psychology is to help cadets build a solid foundation for the understanding of the human problems of military training, leadership, and morale in the Air Force. The third class course in psychology is divided between principles of psychology in the first semester, and psychology in the Air Force which is taught the second semester. The second semester draws on actual Air Force case studies in the areas of personnel adjustment, engineering psychology, leadership, and morale. This study of applied psychology is coordinated with

leadership training presented in the airmanship program. A number of advanced courses such as social psychology, personnel psychology, and psychology through literature are offered for cadets with a background in psychology.

The Division of Basic Sciences includes the departments of mathematics, chemistry, physics, and graphics. Many of the subjects taught by these departments are a part of any program of general education. No one, regardless of profession, can well understand the modern world without some knowledge of mathematics, chemistry, and physics. Instruction in these areas and in engineering drawing, totaling 35 semester hours, also provides indispensable background for engineering courses offered by the Division of Applied Sciences.

The Department of Mathematics teaches courses in the fourth and third class years. Fourth class mathematics includes college algebra and plane trigonometry in the first semester. Wherever possible, applications in all mathematics courses are drawn from navigation problems and other uses characteristic of Air Force operations. The second semester is devoted to spherical trigonometry, a subject used in navigation training, and to plane and solid analytics. Calculus lessons cover the differentiation and integration of polynomials. Third class mathematics deals with differentiation and integration of more complicated functions and their application to area, volume, centroids, moments, series, and other physical applications. The last 20 lessons are devoted to an introduction to differential equations. Accelerated courses are offered for qualified cadets in both the fourth and third class years. In the accelerated courses, the material of the regular courses is covered at a rapid pace, followed by probability and statistics, and vector algebra in the fourth class year and differential equations in the third class year.

The fourth-class chemistry course does not differ materially from a freshman general chemistry course taught at a civilian institution, except that application to Air Force problems is stressed where appropriate. The Department of Chemistry conducts advanced courses for cadets who have special preparation or unusually high aptitude. The advanced courses are in qualitative and quantitative analysis. In both chemistry and physics, combination lecture-laboratory rooms are used.

The Department of Physics offers a 9 semester-hour course in the third class year. The course is divided in six subcourses: mechanics, heat, light, sound, electricity and magnetism, and modern physics. Classroom periods are of 75 minutes duration and are augmented by laboratory periods which are interspersed throughout the course to provide an opportunity for the cadets to verify the physical laws studied. Fundamental physical principles are related to practical Air Force problems. The course provides a firm scientific foundation for future work under the Division of Applied Sciences.

The Department of Graphics teaches two courses, charts and maps, and engineering drawing as a fourth class program. Instruction in charts and maps is designed to support the flying training phase of the airmanship program. The objective of the course in engineering drawing is to develop spatial visualization, an understanding of drafting methods, and skill in reading engineering drawings rather than to train finished draftsmen. The department offers advanced engineering drawing for cadets who have an adequate knowledge of the material covered in the regular course.

The Division of Applied Sciences includes the Departments of Mechanics, Electrical Engineering, Thermodynamics, and Aerodynamics. Instruction presented by these departments total 29 semester hours. All of the subjects in this area are peculiarly adapted to Air Force use. They provide a general background for all officers and a foundation for graduate study for those who will later specialize in engineering.

The Department of Mechanics presents its course during the second class year. Approximately 30 lessons are spent on statics, followed by 30 lessons on dynamics, then 40 lessons on strength of materials and strength of materials laboratory. Instruction is oriented toward an understanding of mechanical and structural principles as they apply to aircraft and missiles. The accompanying laboratory course deals with techniques used to test engineering materials and to verify the theories of mechanics of materials. In addition, an advanced course in properties of engineering materials as applied to modern aircraft is offered to selected students with high academic averages. This course runs approximately 30 hours.

Electrical engineering, taught by the Department of Electrical Engineering in the second class year, covers the fundamental laws governing electricity and electronics and presents a brief survey of nuclear physics. All instruction in electricity and magnetism required for the aerial navigation program is given in this course. Classroom periods are of 75 minutes' duration and are supported by some 20 laboratory periods.

The course in aerodynamics is taught in the first class year. The first two parts of the course in aerodynamics are designed to give the cadet a thorough understanding of the fundamentals of fluid flow and incompressible aerodynamics. The third portion will present an introduction to transonic and supersonic flow, followed by a discussion of the effects of compressibility on aircraft performance, stability, and control. The laboratory program is coordinated with classroom work throughout the year to give the cadet a physical appreciation of the material presented in the classroom. Aerodynamics laboratory equipment will include a transonic-supersonic wind tunnel with a 1 foot square test section and a mach number range of .5 to 4.5, a subsonic wind tunnel with a 2½-by-3½-foot test section, a smoke tunnel, and liquid-flow apparatus.

Thermodynamics, taught in the first class year, deals with the transformation of heat into useful power, with particular reference to the various types of engines and thermodynamic systems used by the Air Force. Applications studied include gas turbines, reciprocating engines, turbojets, ramjets, rockets, air-conditioning, refrigeration, and steam powerplants. The thermodynamics laboratory will be equipped with all types of aircraft powerplants, including rocket engines, and will have test cells for engines up to 3,000 pounds thrust. Laboratory equipment will also include the principal types of refrigeration equipment and equipment for testing fuels, and lubricants. Two small steam powerplants will be used to acquaint cadets with the probable methods of converting nuclear energy into mechanical energy.

The Department of Thermodynamics will also teach design appreciation in the first class year. This course consists of presentations by military and civilian research and development specialists, lectures, and group problems. Its objective is to give the cadet an understanding of the successive stages in the development of a weapon system and its components, and an appreciation of the compromises that must be made among conflicting engineering requirements and between engineering possibilities and operational requirements.

Summer travel

Although not an integral part of the Air Force Academy academic curriculum, summer travel must be considered an important element of each cadet's educational experience. During the summer following the cadet's fourth, third, and second class years, he will visit Air Force, Army, and Navy installations throughout the country. Cadets are given opportunities to visit places of historical and cultural interest near each installation.

During the summer following their third class year, cadets are allowed to use their leave to travel abroad, accompanied by officers of the staff and faculty. Arrangements were made for the first group of cadets to visit United States military installations in England, France, Germany, and Spain during the summer of 1957. Their itinerary was arranged to allow free time in London, Paris, and Madrid—time which could be used to enhance their knowledge of the political, economic, social, and cultural life of the nations with which they will be closely associated as Air Force officers.

The group received briefings on military problems at our own bases and at the various headquarters of the NATO military commands. These were supplemented by political and economic briefings delivered by personnel of United States Embassies abroad.

THE AIR FORCE ACADEMY LIBRARY

When the library opened its doors on August 15, 1955, the collection numbered less than 500 volumes. On October 31, 1958, there were more than 26,000 volumes in the book collection and some 600 periodicals on the shelves. Ultimately, the library at its permanent site in Colorado Springs will house a general book collection of 200,000 volumes and an aeronautical research collection of 50,000 volumes.

Making books accessible to users is the guiding principle of the library. An open stack system is used, giving readers direct access to the book collections. This system transforms the book collections, containing the thought and achievements of the best scholars and scientists through the ages, into active instructional tools for both the faculty and the cadets.

The Academy Library possesses one of the best newspaper collections in the western part of the United States. The library subscribes to 70 daily newspapers which include the leading journals from every part of the United States, and outstanding foreign newspapers such as the London Times and Manchester Guardian. Its collection includes a complete file of the New York Times since 1913 on microfilm. The library is also a depository for Government documents.

The Academy Library holds a membership in the Bibliographical Center for Research. Through this service, the library is able to arrange loans of books and periodicals from library resources throughout the United States and Canada.

INSTRUCTIONAL METHODS

One of the objectives of the Air Force Academy is to develop in its cadets the highest form of discipline—that self-discipline which enables a man to see his responsibilities and to carry them out without compulsion. This is especially important in modern aerial warfare which may require single aircraft to operate independently, vast distances from home base, and out of contact with higher authority. Such discipline is not the product of stereotyped minds which have been trained to accept without question. One of the fundamental tenets of Air Force Academy educational philosophy is that cadets shall be encouraged to question constructively everything that they read and hear. This philosophy cannot exist in a rigid, formalized atmosphere. Visitors to the Academy are often surprised at the relaxed classroom atmosphere and by the give-and-take which goes on among the cadets and between cadets and instructors.

Cadets attend classes in sections of approximately 12 men. This small group teaching situation allows instructors to know their

students and to devote attention to the learning problems of each cadet. Teaching techniques vary with subject matter, but in all cases are calculated to derive maximum benefit from small sections. In the humanities-social science area, the discussion and seminar methods are used extensively. Interdepartmental seminars are especially productive in the social science field. These methods are supplemented by lectures to an entire class. Many of the lectures are delivered by guest speakers who are distinguished in their fields. Recitation, instructor demonstration, and student performance are frequently used techniques in the scientific area.

Although cadets are tested more frequently than is customary in civilian institutions, there is no standard testing pattern. In the basic science courses, a quiz or graded blackboard work is given at more than half the daily attendances. Testing is less frequent in the humanities-social science area where cadets may be given a short objective quiz or an essay test about once each week. Preparation of lessons is considered a military duty; each cadet is expected to have studied his lesson prior to class. Homework assignments are based on approximately 2 hours of outside preparation for each hour of classroom attendance. Generally, classroom periods are of 55 minutes' duration, although 75-minute periods are used in some of the scientific and engineering subjects. Laboratory periods are 110 minutes in length.

Audio-visual aids are used extensively where appropriate. Each academic department has available slide, moving picture, and opaque projectors. Audio-visual services, an activity under the jurisdiction of the dean of faculty, maintains a large library of films, transparencies, and recordings, and is equipped to produce other types of instructional aids.

Each department conducts extra instruction periods after regular classroom hours for cadets who need additional instruction on a particular lesson. Cadets are encouraged to consult with their instructors outside the classroom as frequently as they wish. Extra instruction and individual conferences are conducted on an informal basis, usually in the instructor's office.

THE FACULTY

Faculty members have been selected from among Regular and Reserve Air Force officers on active duty. Selection is based on academic preparation, teaching experience, or potential, and performance as an officer. Approximately one-third of the faculty are graduates of the United States Military or Naval Academies. The universities at which the instructional staff have done graduate work include Harvard, Yale, Princeton, California Institute of Technology, Massachusetts Institute of Technology, Georgetown University, and the Universities of Pennsylvania, Denver, Chicago, California, Missouri, North Carolina, Colorado, and Texas. The faculty averages 5 years' college-level teaching experience at civilian institutions or at the United States Military and Naval Academies.

Almost without exception, members of the Academy faculty have lived and traveled abroad. Often, their duties prior to joining the faculty have been directly related to the subjects which they teach. In the scientific area, for example, many instructors have served with the Air Research and Development Command, the Atomic Energy Commission, or the Air Materiel Command. About half of the faculty are pilots or navigators who have served with operational units.

In addition to their primary function of academic instruction, all members of the Air Force Academy faculty are responsible for participating in the development of the cadet's character and leadership ability, and for motivating each cadet to devote his life to the service of his country.

By law, the Air Force Academy is authorized 21 permanent professors. Other faculty members usually serve at the Academy for a period of 4 years, though a few may remain for longer periods. Some instructors will return to the Academy for a second tour of instructional duty after having served an intervening tour in another type of Air Force activity.

THE AIRMANSHIP PROGRAM

The principal purpose of this brochure is to acquaint the reader with the academic plan of the Air Force Academy—with what is taught, how classes are conducted, and who does the teaching. An equally important part of the entire Academy plan of education and training is the airmanship program program which is under supervision of the Commandant of Cadets.

The airmanship program includes military, flying, and physical training which total 38½ semester hours over the cadet's 4 years at the Academy (chart III). Seventeen and one-half semester hours of airmanship training are given during the academic years (mid-September to early June); the remaining hours are taught in the summer months. During the summer, each cadet of the three upper classes is also granted leave.

The military training phase of the airmanship program includes those subjects which the cadet will need to know as a second lieutenant: squadron administration, airbase functions, Air Force organization, weapons, functions of the major commands, leadership, instructor training, and drill. The cadet is also given a broad understanding of the organization and capabilities of other elements of the national defense structure including the problems of joint military operations. His classroom instruction is supplemented by summer field trips to Air Force, Army, and Navy installations.

Flying training is concentrated in the 3 upper class years. The program includes classroom work in navigation, and practical experience in aerial navigation aboard the Academy's flying classrooms, Convair T-29 navigation training aircraft. Each cadet also receives introductory pilot training during the summer following his fourth class year. An increase in the amount of pilot training is presently under study.

Physical training extends throughout the cadet's 4 years at the Academy and includes both physical conditioning and instruction in team and individual sports. Emphasis is on contact sports, such as boxing, judo, and football. An extensive intramural program is part of the physical training curriculum. Upper classmen serve as team coaches and as instructors. These duties are considered important elements of the cadet's training in leadership.

Cadet life outside the academic classroom is supervised by the commandant of cadets and his staff. The regimen under which cadets live is actually a 4-year laboratory exercise in command and leadership. First and second classmen are responsible for the day-to-day administration of the wing of cadets and for the operation of the system under which the two upper classes assist in the military training and discipline of new cadets.

At the Air Force Academy, each cadet develops a rigid adherence to truth which is essential to his performance as a career officer in the United States Air Force. The honor code, which pervades every action of the Air Force cadet, is built around a basic and uncompromising premise: complete integrity.

During the initial phase of cadet training in his first summer at the Air Force Academy, the new cadet is given a course of instruction in ethics. In this series of lectures and discussions, the honor code is explained in detail, enabling him to understand fully the importance and benefits of his honor code. He learns that a cadet's word is never questioned; he is exposed to an atmosphere of complete trust among his fellow cadets and the officers of the Air Force Academy.

The honor code is administered by the cadets through a council of elected representatives who are responsible for maintaining the highest standards of honor in the cadet wing. Membership in this council is the highest office to which a cadet may be elected.

EXTRACURRICULAR ACTIVITIES

The cadet's heavy workload is balanced by an extensive and well-rounded program of extracurricular activities. Social activities are centered at Arnold Hall, where excellent facilities have been provided for dances, informal entertainment of guests, and for club meetings.

Extracurricular activities may be divided into three general categories: those of an educational nature, those which are primarily recreational, and the program of intercollegiate athletics.

Educational activities

Extracurricular activities of an educational nature are generally supervised by members of the faculty. These activities include publication of the cadet yearbook; the cadet magazine, Talon; and Contrails, a booklet which contains a variety of information on cadet life and lore, Academy customs, and facts about the military services. The Cadet Forensic Association participates in intercollegiate debates and oratorical contests throughout the Rocky Mountain area. The Cadet Forum sponsors a series of informal Sunday afternoon meetings at which public affairs are discussed by guests who are authorities on various aspects of national and international policy. The Forum is also planning an annual intercollegiate conference on international affairs which will convene for the first time in 1958. Weekend and holiday trips to local areas of geographical interest are conducted by the Geography Club.

Recreational and hobby clubs

The cadets have organized radio, model engineering, photography, judo, skeet, and chess clubs. For cadets who are interested in music, there are three cadet choirs which sing at weekly religious services. A cadet dance band plays for informal social activities. Some of the best skiing in the country is found within 2 hours' drive of the Academy. The ski club provides equipment and lessons for its members and sponsors regular Sunday and holiday trips to adjacent ski areas.

One of the most fascinating and unusual of Academy recrational activities is the cadet soaring club. The Air Force Academy, standing at the foot of the rampart range, is in what is considered to be one of the world's best areas for soaring. The club has both two-place training gliders and high performance sailplanes. It is possible for a cadet to progress through a carefully supervise program to the highest soaring ratings granted by the Civil Aeronautics Administration and the Soaring Society of America. The members not only fly, but also build some of their own sailplanes.

Intercollegiate athletics

Blue-and-silver clad teams of the Air Force Academy, known as the falcons, are rapidly carving a name for the Academy in the world of intercollegiate athletics. The Academy fields intercollegiate teams in football, soccer, cross country, basketball, wrestling, gymnastics, swimming, fencing, skiing, baseball, track, golf, tennis, rifle, and pistol. Lacrosse and hockey will be added to this array when the Academy moves to its permanent site in 1958.

During the first 2 years, Academy teams competed successfully with collegiate insti-

tutions in the Rocky Mountain area. In 1958, the Academy will schedule strong intersectional opposition in all varsity sports.

Intercollegiate athletics are open to any cadet who maintains a cumulative average of 70 percent or higher in every subject. Those cadets who are not members of intercollegiate athletic squads participate in the Academy's extensive intramural athletic program.

SELECTION OF CADETS

The procedures for gaining admission to the Air Force Academy are described in detail in the Air Force Academy catalog. The majority of candidates are nominated by Congressmen to compete in state competitions. There are other competitions among nominees of the President and Vice President; competitions for residents of the District of Columbia, the Territories, and the Panama Canal Zone; competitions within the Regular and Reserve components of the Armed Forces; and a competition open to sons of deceased veterans. Selection within each competition is based upon the candidate's performance on college entrance examination board tests, airmanship and physical aptitude tests, and upon an evaluation of the candidate's high school record. Candidates are judged not only on their mental achievement and ability but also upon activities which indicate leadership potential.

The Air Force Academy is interested in young men who are outstanding both intellectually and physically, who have a wide range of interests, and who have demonstrated a capacity for leadership. The educational and training program and the demands of cadet life are exacting. Few men, no matter how talented they may be, will complete the Air Force Academy program unless they sincerely desire to serve their country as officers of the United States Air Force.

Although there are no specific minimums of secondary school courses or credits required of candidates, the Air Force Academy entrance examinations measure academic achievement that is expected of a secondary school graduate. The academic preparation which offers the best promise of success as a candidate and as a cadet includes the following minimum courses:

Elementary algebra: 1 year.
Intermediate algebra: 1 year.
Plane geometry: 1 year.
Solid geometry: ½ year.
Trigonometry: ½ year.
Physics: 1 year.
Chemistry: 1 year.
English: 4 years.
World history: 1 year.
United States history: 1 year.

Cadets also find that additional social studies (government and economics, for instance) and a short course in typing are helpful.

The Air Force cadet's standing in his class depends on a measure of leadership ability as well as academic achievement. The best demonstration of leadership potential that a candidate can show is active participation in extracurricular activities, both athletic and nonathletic. Candidates who have had a successful record in the Boy Scouts, in the Civil Air Patrol, and in student government have had experiences that contribute to success as a cadet.

The academic workload of a cadet and the programs of military training, flying training, and physical training demand a high degree of physical fitness. Prospective candidates are advised to attend to physical development as well as mental development. "A sound mind in a sound body" is old advice, but every successful Air Force cadet knows its value.

AN AIR FORCE CAREER

When a cadet graduates from the Air Force Academy with his bachelor of science degree, aeronautical rating as navigator, and commission as second lieutenant, his education and training, far from being completed, have just begun. Immediately after graduation leave, the majority of graduates will go to pilot training. A smaller number will be given advanced training in navigation skills. All will then be assigned to operational units as air crew members in fighter, bomber, or transport aircraft. Generally, a part of the Academy graduate's first 5 years will be spent overseas in Europe, the Far East, North Africa, the Caribbean area, or at one of our northern defense bases.

After about 5 years' service, the young officer will attend the first of the Air University courses for officers, the equadron officers' course. Some 5 years later, he will probably be assigned for 10 months to the Air Command and Staff School. A few carefully selected officers who are destined for the highest levels of command and staff positions will ultimately attend the Air War College, the Industrial College of the Armed Forces or the National War College. These last two schools are joint institutions for officers of the Air Force, Army, and Navy, and personnel from the Department of State and other governmental agencies.

In his years between service schools, the typical officer will rotate between air crew duties, staff positions, and command duty with various Air Force commands, such as the Strategic Air Command, Tactical Air Command, Air Defense Command, Air Training Command, Air Research and Development Command, or Air Materiel Command. The officer's staff duties may be in personnel management, intelligence, operations, communications and electronics, training and education, research and development, meteorology, supply, or financial management. These are a few of the approximately 30 broad career fields open to Air Force officers. There are, of course, specialties within many of these fields.

A substantial number of Academy graduates will be sent to civilian universities or to the Air Force Institute of Technology for postgraduate work leading to a master's—and in some cases to a doctor's—degree. A few of the areas in which Air Force officers do graduate work are aeronautical, chemical, and electrical engineering, guided missiles, nuclear physics, mathematics, personnel management, business administration, journalism, economics, languages, international relations, and education. The range of professional specialization within the Air Force is extremely wide. So diversified are Air Force activities that virtually every profession found in the civilian world may also be found within the Air Force.

In addition to its extensive program of graduate education in civilian universities and its own Air University school system, the Air Force operates many specialized schools in such fields as maintenance, engineering, armament, photography, nuclear weapons, and intelligence. The principal peacetime function of the Air Force is training to maintain a high level of combat readiness, for any full-scale war of the future probably would not permit a long period of mobilization and training.

Some of the Academy graduate's assignments will be in the United States and others overseas. In 30 years of service, an officer may anticipate spending 8 or 9 years abroad. Generally, he will be able to take his family with him as he travels to foreign countries. This opportunity to live and travel abroad is one of the greatest attractions of an Air Force career.

As an officer advances in rank, his responsibilities increase proportionately. The commander of a combat wing (normally a colonel) has under his supervision many millions of dollars' worth of weapons and equipment and several hundred officers and airmen. The commander of a numbered Air Force, such as the 6th Air Force which is part of Strategic Air Command, occupies a position of responsibility comparable to that of the president of a very large corporation. Such a commander is accountable for the lives of several thousand people and the wise employment of weapons of tremendous destructive capacity. Officers who hold key staff positions in the Air Force participate actively in the formulation of military and national policy. Theirs are among the most complex and engrossing jobs of our times.

Whatever may be the direction of the Academy graduate's career in the Air Force, he will stand always at the forefront of the air age. The breadth of vision which he acquired at the Air Force Academy will stand him in good stead through years of rapid change and unprecedented problems, and he will find deep satisfaction in a career of service to his country and his fellow men.

Roger Babson Reports on Gold

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 29, 1958

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include an interesting report on gold by the noted financier Roger Babson, which appeared in the Rancho Santa Fe Times on July 10, 1958:

ROGER BABSON SAYS

BABSON PARK, MASS., July 9.—As I have already expressed myself in these columns, I do not expect any shooting war to be started by Russia, and probably no chemical war. I do expect an intensified economic war and believe we are now in such an economic war, started by Russia some months ago. One of the weapons Russia will use is gold.

RUSSIA'S GOLD SUPPLY

Although over 50 percent of the free world's annual production of gold comes from South Africa, Russia is now reported to be producing $500 million worth a year; to have on hand $8 billion dollars worth to use as a weapon against us. This gold could be a real factor in breaking commodity prices and prolonging our business depression.

Probably Russia has in mind establishing a gold ruble which would have a constant value in foreign trade all over the world. This could make a great impression on both our allies and the backward nations. It should be an important weapon for Russia in the economic war in which we are now engaged. It seems, however, that as the next step in making a Russian ruble universal for trade, Russia must agree to the British insistence on mutual freedom of travel and communications and cease radio-jamming anything related to business or finance.

VALUE OF THE DOLLAR

Previous to 1934 the American dollar was based on gold at a price of $20.67 per ounce. Under the Roosevelt administration, the price increased and the dollar diluted. It is said that Mr. Macmillan and President Eisenhower discussed the problem at their recent conference. They agreed that it should also be discussed with friendly nations; but this might cause them to become frightened and lead them to withdraw gold from the United States, which American investors do not want done.

Interfering with the price of gold would certainly cause more inflation. Many people think inflation is a bullish argument in the stock market; but it may not be so. If foreign nations withdraw very much gold, the bearish factors could offset the bullish.

THE TRUE STATISTICS

Since 1950, Europe has increased its gold holdings to $8 billion, some from mining and purchasing in the open market and some by withdrawals from other countries. This especially applies to West Germany, the Netherlands, and Belgium. The latter country has also benefited from its large uranium holdings in Africa. During the last few months, our gold supply has been reduced $1¼ billion. At this rate we would lose over $3½ billion worth during 1958.

A statistical analysis of this loss shows that it has been due to a change in our foreign-trade situation. Up until recently, our exports exceeded our imports, and our stock of gold increased. Now this tide has turned and our imports of raw materials and manufactured goods exceed our exports.

WHAT ABOUT GOLD SHARES

Naturally, there has been an increase in the price of gold shares which are traded largely on the London Stock Exchange and in Toronto. There are two reasons for this increase: (1) When business is in a recession, as at present, the cost of mining gold decreases. Since the price of gold after it is mined does not decline, this increases the profits of good gold mines. These profits have not been very satisfactory during the past few years and the prices of gold shares have been abnormally low. (2) The current talk about devaluation of the dollar has also been a factor, but this is a very speculative factor.

It seems to me, however, that aside from the above two reasons, readers are justified in holding a few good gold stocks—not for profits, but for security. While I see reasons why many stocks should decline in the next year, I see no reason why many good gold stocks should sell lower than they did a year ago.

It is illegal for American investors to store any raw gold in safe-deposit boxes in the United States or its possessions. I am, however, seeking a Government ruling as to whether or not investors may store such gold in other nations. When I receive a copy of said ruling, I will freely send it to any reader on request.

H. R. 12704

EXTENSION OF REMARKS
OF
HON. EDITH GREEN
OF OREGON
IN THE HOUSE OF REPRESENTATIVES

Monday, August 4, 1958

Mrs. GREEN of Oregon. Mr. Speaker, on the Consent Calendar today was H. R. 12704, a bill which would change the distribution of the funds derived from Federal forests. Two years ago during the 84th Congress, a similar bill was introduced and put on the Censent Calendar. At that time I opposed the bill for the same reasons I opposed H. R. 12704 today.

The money received by the counties may seem nominal, and yet when one thinks about it in terms of the help they give to education it is a good deal of money. My own State of Oregon receives a good share of the funds spent on education from this source, and I know that my State is not alone in this.

Cecil Posey, executive secretary of the Oregon Education Association, had this to say in a letter:

I have just received word from Forrest E. Cooper, counsel for the public lands committee of the Association of Oregon Counties, that H. R. 12704 has cleared the Agricultural Committee in the House and will appear on the Consent Calendar on July 21, 1958.

As you are aware, funds from the United States forest lands that now go to the counties are used for roads and schools. This proposal would allow these funds to be used for other purposes. We are very much opposed to opening up the use of these funds for purposes other than those for which they are now used.

Forrest E. Cooper, representing the Oregon Association of Counties, was promised by the clerk of the House Agriculture Committee that if this measure was called up for a hearing, he could oppose it in committee. He was not given that opportunity.

Albert Skaggs, research director of the Oregon Education Association, states:

There is a great deal of concern here with the attempt * * * to allow the counties to use the Federal forest land revenues for general governmental purposes (H. R. 12704). At the present time, one-fourth of the money goes to the schools, and three-fourths for public roads. The total amount of money that Oregon received for 1957–58 is $9,450,662.

Enclosed is a listing of the amount of money the schools in Oregon have received from the Federal forest land revenues that have been returned to the State.

Your help in stopping H. R. 12704 will be much appreciated.

This list of counties which I have inserted, below, shows that 29 out of 36 counties in Oregon have received benefits:

Federal forest land revenues for schools, 1957–58

Baker	$29,817.39
Benton	7,613.59
Coos	11,590.36
Crook	32,255.73
Curry	87,108.64
Deschutes	110,068.25
Douglas	350,689.32
Grant	92,099.59
Harney	38,228.47
Hood River	51,309.09
Jackson	56,547.52
Jefferson	19,343.31
Josephine	47,212.80
Klamath	133,833.60
Lake	107,916.14
Lane	531,558.75
Lincoln	84,000.82
Linn	178,225.45
Malheur	186.83
Marion	69,624.86
Morrow	4,169.33
Multnomah	16,837.23
Tillamook	45,987.51
Umatilla	12,656.90
Union	25,681.30
Wallowa	18,917.50
Wasco	51,163.47
Wheeler	10,646.57
Yamhill	12,432.52
Total 1957–58	2,362,665.52
Total 1956–57	2,355,704.14
Total 1955–56	1,526,204.52

Leaders of my State are not alone in opposing this legislation. Let me quote a few of the comments received.

Mrs. Bernie Jacobsen, president of the Washington Congress of Parents and Teachers:

The Washington Congress of Parents and Teachers reaffirms its unanimous action in convention of May 1958 favoring legislation requiring countries to allocate at least 50 percent of Federal forest and grazing funds to the public schools. We strongly recommend amendment to H. R. 12704 that would protect school revenue.

Mr. Joe A. Chandler, executive secretary, Washington Education Association:

I have checked with the officers of the Washington Congress of Parents and Teachers, the Washington State School Directors, and Washington County Superintendents Association. They agree with us that our Washington State statutes should be changed to provide for compulsory division of forestry funds equally between the counties and the schools before we can support Federal legislation liberalizing the distribution of forestry moneys to the county general funds.

Forrest Rozzell, executive secretary, Arkansas Education Association:

H. R. 12704 will cost the schools of Arkansas $539,000 annually; we are unalterably opposed. Wiring our delegation to this effect.

F. E. Bass, executive secretary-treasurer, Tennessee Education Association:

In 1956–57 Tennessee received $86,066 from this fund. Of this amount, the schools received $62,978.20. While this is not a lot of money, it means considerable to some of our counties. There are 12 counties which receive funds as a result of this act.

Dix Price, executive secretary, Arizona Education Association:

Horan bill amending Forest Lands Act could deprive Arizona schools of $104,000 annually. Amount not substantial but vital to many small schools in forest counties. Have wired Arizona delegation urging opposition to bill.

Phares E. Reeder, executive secretary, West Virginia Education Association:

Recent West Virginia law allocates 80 percent of forest land money to the county school board. The balance goes to the State road commission.

Passage of H. R. 1270 * * * would divert school and road money to the county government, which has the barest of administrative responsibilities in our State.

Last year California received $4 million and Idaho received $1½ million.

Some may argue that under this bill the States will still receive these funds. This is true, but how can we be sure that any of that money would be used for education? Enough money is never allocated for schools. Speeches, editorials, articles, and so forth, have pointed this fact out to us often, and in the Congress, this year we have considered a great deal of legislation dealing with Federal aid to education in one form or another. Yet, the purpose of H. R. 12704 is to decrease that money which is already earmarked for education. If this source of revenue is lost to the State educational systems—how will they make up this deficit?

Because I recognize the importance of this money to Oregon schools and those of the rest of the Nation, I feel compelled to voice my objection to this bill.

Hans J. Morgenthau on Lebanon

EXTENSION OF REMARKS

OF

HON. HENRY S. REUSS

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Friday, August 1, 1958

Mr. REUSS. Mr. Speaker, Hans J. Morgenthau has been for some years director of the center for the study of American foreign policy at the University of Chicago. His article, The Lebanese Disaster, in the current issue of the New Republic is a contribution to the hard reappraisal of our policies in the Middle East which is now being undertaken:

THE LEBANESE DISASTER

(By Hans J. Morgenthau)

It is an odd experience to think and write on a momentous event in American foreign policy after being cut off for nearly a month from all meaningful contact with foreign policy. Having lived in recent weeks in different parts of Wyoming, limited to the newspapers of the region which are local in the sense our neighborhood weeklies are and to radio and television programs selected by local stations in view of local interests, I am struck by the isolation from what is going on in the world, in which the inhabitants of this region year-in and year-out live. This is not isolationism as a policy; this is isolation as a fact of life.

Yet in a sense this is also a fascinating experience. For the first time as far as I can remember, I am all by myself in having to make up my mind about a momentous contemporary event. The wisdom of Walter Lippmann is lost to me; James Reston cannot help me with lines to read between; the inflection in Ed Murrow's voice does not beckon me to turn in the direction all good men must turn. I know nothing about the mood of the Nation nor of the climate of opinion in Washington. No research assistant provides me with historic analogies; no punch card checks my facts; nobody and nothing reassures me. The temptation to trim one's sails to the prevailing wind or else to sail against it does not need to be resisted; for there is no way of telling which way the wind blows. Nothing stands between the observer's mind and the facts, and the observer has nothing to go on except the bare facts of the situation and the resources of his mind.

Thus I find the intervention of the United States and Great Britain in the Middle East both inevitable under the circumstances and a national disaster. To speak of America alone, this intervention has been made inevitable by the policies we have pursued, and the commitments we have entered into, in the Middle East. Our policy has been to defend the status quo in the Middle East by supporting as allies those states which would accept our support, and both the commitments of the Baghdad Pact and of the Eisenhower doctrine serve to implement that policy. It is the unsoundness of that policy which makes any attempt to implement it by unilateral military action a self-defeating enterprise, fraught with terrible dangers. For, as we might have learned from Metternich's experience more than a century ago, a policy of the status quo is sound only when it seeks to defend a status quo viable in itself. The defense of western Europe is such a policy; for the vitality of the nations of western Europe provides the indigenous element necessary for the defense of the existing distribution of power, guaranteed by the support of the United States.

What exists in western Europe is totally absent in the Middle East. None of the "nations" of the Middle East to whose defense we are committed is a viable political or military entity. Far from being the creatures of their own organic growth or of a sudden surge of inner strength, they are but the artifacts of the aspirations and rivalries of foreign powers. Where in any of these "nations" are the prerequisites of nationhood? What are the historic antecedents which would entitle the present territories of Lebanon or Jordon to house a nation? Is Jordan a nation—whose king dares entrust his life only to White Russian bodyguards, who during the last year has lost two chiefs of staff by desertion to Syria, who, after expelling British power 2 years ago, must now call it back to save his life and throne? The truth is that those nations are not nations at all. They cannot exist without an outside power supporting them. In the past, Great Britain and France supported them as semicolonial dependencies, taking a last fling at colonial control. With the collapse of British and French power in the Middle East, which the Suez debacle of 1956 both consummated and made manifest, those "nations" became like ripe fruit, waiting for somebody else to pluck them. Has the United States chosen to succeed France in Lebanon and to support the resumption of Britain's traditional role in Jordan? If this is what it is trying to do—and it is impossible to say what else it could be—then the United States is up against a force before which European colonialism had had to retreat when that force stood alone, and which is now supported by the power of the Soviet Union. That force is Arab nationalism, and for it the artificial boundaries of Arab "nations" are meaningless.

This being the background of the problem that confronts the United States, it is impossible to visualize a contingency under which the marines could ever be withdrawn from Lebanon short of a radical revision of the basic assumptions and objectives of

American policy in the Middle East. For obviously what threatens the present regime of Lebanon and the existence of the state itself is not an isolated act of outside intervention which can be frustrated by a show of military force. Nor is it Communist subversion; for after all, regimes have been overthrown and kings deposed and assassinated before communism was ever heard of, and Arab nationalism uses communism, as it is used by it, but the two movements are not identical. What threatens Lebanon is its congenital inner weakness, made acute by the simultaneous collapse of western influence and power in the Middle East, the rise of Arab nationalism, and the entrance of the Soviet Union into the Middle East as a major factor. How are the marines going to supply that inner vitality without which a state must become either the client of a stronger power or be absorbed by it? To land marines in Lebanon was easy; how to create conditions in Lebanon which will allow us to get them out again is not only difficult, but appears to be an impossible task.

Yet even if it were in the interest of the United States to frustrate the designs of Arab nationalism even by force of arms, is it likely that military intervention in Lebanon will serve that purpose? The symbol and the driving force of Arab nationalism is Nasser of Egypt. How is the prestige of Nasser to be diminished and the attraction of his cause to be impaired by sending the marines to Lebanon? Will both not rise to unprecedented heights by virtue of that very action? The answers to these rhetorical questions cannot be doubted. When Great Britain, France, and Israel invaded Egypt in 1956, they struck indeed at the heart of the trouble. Whatever else may be said against the wisdom of this action and, more particularly, against the manner of its execution, that action at least aimed at the right target and in that respect appears to have been inspired by one sound political judgment which is missing in ours.

Our action, then, is politically deficient even in terms of the overall policy that has made it inevitable; for it has led us into a political blind alley, with only the United Nations or the Soviet Union, that is, the policies of other nations, to extricate us. This is a miserable position for a great Nation to be in: to embark upon a policy which leads nowhere and then to have to try to maneuver other nations into policies which will at least prevent the debacle of one's own policy from becoming too obvious by opening up the possibility of retreat.

But this is not all and it is not even the worst that must be said about our intervention in Lebanon. Through the instrument of that policy we have already inflicted upon ourselves a defeat in the struggle for the minds of men greater than any which the Soviet Union could ever have hoped to inflict upon us by its own policy. The attitude which Japan and Sweden have taken in the Security Council and whatever other news about the reaction of foreign countries I could find indicate how unpopular our action is and to what an extent it has impaired the standing of the United States among the nations of the world.

This is a miserable position for a great nation, necessarily a valid argument against our action if only that action were politically sound. Mr. Dulles is most certainly right when he insists that the United States is not engaged in a popularity contest throughout the world. A great nation has interests which it must defend at any price, and loss of popularity is by no means the highest price which it must be willing to pay. However, the benefits to be expected from such a policy must be worth the price to be paid. Yet where are the benefits to be expected from the policy upon which we have embarked? And if there should be any, are they likely to outweigh the loss which is already obvious?

That loss is alas not limited to our position in the struggle for the minds of men. More serious than any argument we have advanced thus far is the fact that our intervention in Lebanon increases the risk of a third world war. The readers of this journal do not need to be reminded of my conviction that the United States has interests which may compel it in certain circumstances to take such a risk. I would not in the fall of 1956 have washed my hands of the fate of Hungary nor would I have destroyed the last vestige of British and French influence in the Middle East in order to save Nasser. Yet the interests at stake must be of overriding importance in order to justify such a risk and the risk must be taken under circumstances most likely to minimize it.

The intervention in Lebanon fails both these tests. That intervention has no rational connection with our vital interests being—as I have tried to show—the inevitable result of a mistaken policy. Furthermore it challenges the Soviet Union under circumstances which minimize our political and military strength and maximize that of the Soviet Union—under circumstances which make it virtually impossible for the latter to refuse to take up the challenge. Given our political and military weakness in this self-chosen theater of operations we have provided the Soviet Union with an opportunity which it must be expected to exploit fully either of dealing us a defeat of the first order or of engaging us by proxy in a costly limited war which can have neither a rational political nor military aim. In the end we will be faced with three choices each disastrous in a different way: either we will have to beat an ignominious retreat or we will have to waste our human and material resources in a senseless war or we will have to transform such a war into the ultimate catacylsm of a third world war.

However, while these are the choices which our present overall policy appears to leave open to us, there is still another choice, which we should have taken long ago, and that is to scrap altogether a policy whose consistent application has had such disastrous results. What is happening in the Middle East is but a particularly disastrous consequence of an overall policy which sooner or later is bound to have similarly disastrous consequences elsewhere. What the Baghdad Pact and the Eisenhower doctrine have achieved in the Middle East, SEATO may well achieve one of these days in southeast Asia. Committed as we are through these and similar undertakings to the defense of interests which are not necessarily our own and to the maintenance of the status quo which is not necessarily viable, we are bound to be faced with contingencies in which we either must go back on our word or else risk expanding our blood and treasure in enterprises either far removed from our real interests or else incapable of successful conclusion. The echo of those grandiloquent words and the shadow of those big gestures will come back to haunt us as they haunt us today in the Middle East.

How many more lessons must we learn, if time will be given us to learn any more, in order to understand that there is a difference between a heroic posture which may be good news for tomorrow's editorial and the next elections, and a foreign policy which commits a nation—its blood, its treasure, its very existence—for an indefinite future? How long shall we allow platitudes about the independence of small nations to obscure the obvious fact that most of the new nations of Asia and Africa do not constitute viable political and military entities and therefore offer a standing invitation to stronger powers to take over? When are we going to realize that there is a golden mean between Washington's injunction against "entangling alliances" and the collector's approach to alliances—the more the better regardless of interests and power—which we have practiced in recent years and which allows Lebanon to force us through an ultimatum into most risky action? How long are we going to continue to accept as a substitute for thought that primitive and vulgar devil theory which, in imitation of Nazi and Communist thought processes, attributes every disturbance anywhere in the world to a Communist conspiracy masterminded in Moscow? How much time have we left to learn that the introduction of the cold war into the Middle East through the Baghdad Pact—playing one Arab state against the other in order to collect a few more useless and costly allies—has been a self-defeating policy, opening the door for the Soviet Union and enlarging if not opening a wound which that policy is unable to close? In other words is it not high time to look at the Middle East as it existed before the Baghdad Pact and in the light of a radically revised over-all orientation of our foreign policy?

Such a new departure of our Middle Eastern policy must start with the recognition of certain fundamental facts. The first of these facts is the inevitability of Arab nationalism, owing nothing in its existence to communism, which might have been destroyed in 1956 at its Egyptian source but against which the individual Arab states cannot be defended through Western military intervention. An Arab government, accepting or seeking Western support, signs its own death warrant as traitor to the cause of Arab nationalism.

The second fundamental fact, which we have been trying to ignore, is the Russian presence in the Middle East. While our own policies are largely responsible for that presence, we only add new errors to old if we continue to refuse to face up to the unpleasant consequences of our actions.

The third fundamental fact to be recognized is the absence of any vital interests on the part of the United States and the Soviet Union in the Middle East. The United States seeks stability both for stability's sake and in order to assure the flow of Arab oil to Western Europe. Let it be said in passing that American policy, in curious contrast to the policy of the oil companies, is in the habit of enormously exaggerating European dependence upon Arab oil and similarly underplaying Arab dependence upon European markets; for while Europe has alternative sources of supply, the Arab states have no alternative markets. Arab oil must flow west, or it will not flow at all. The Soviet Union seeks disorder for disorder's sake as a weapon in the cold war. The pursuit of these policies has brought the two super powers closer to the brink of a third world war than they have ever been before. Might they not have learned that the possible results for either side of the competition for power in the Middle East are not worth the price which disorder in the Middle East might impose upon both of them?

In view of the absence of vital interests engaged in the Middle East on either side, I have always believed—and there are men high in the councils of our Government who share this belief—that the Middle East offers a natural opportunity for a negotiated settlement between the United States and the Soviet Union. Such a settlement would require of the United States and the Soviet Union a retreat to the position they occupied before they made the Middle East a battlefield in the cold war by trying to line up the Arab states on either side. Such a settlement would then have to create a new status quo in the Middle East viable within itself

and therefore susceptible to outside support. Such support would have to be provided by the United States and the Soviet Union working together in limiting the range of Arab nationalism under Egyptian leadership to the Arab peninsula, beyond which it could expand only with outside aid. Such a settlement would be enforced by the realization on either side that a drastic disturbance of the Middle Eastern status quo would constitute an equal threat to the vital interests of both by confronting both, as does the present disturbance, with the risk of a third world war.

If this analysis is correct then it was a mistake on our part to reject out of hand the Russian offers, made repeatedly in recent years, to negotiate a settlement of the Middle Eastern issues. While these lines are being written, the papers report another Russian proposal for such a settlement. In view of the disastrous consequences of the policies the United States has pursued thus far in the Middle East, it would be the height of folly to approach such negotiations with the same untenable assumptions and objectives which are responsible for the disaster which our Middle Eastern policy faces today.

Alex (Pop) Irion Retires After 52 Years' Service as a Rural Carrier

EXTENSION OF REMARKS
OF
HON. TOM MURRAY
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
Monday, August 4, 1958

Mr. MURRAY. Mr. Speaker, one of the finest, most popular, courteous and accommodating rural mail carriers in the United States, Mr. Alex (Pop) Irion, retired on July 31, 1958, after serving on Rural Route 2 out of the Paris, Henry County, Tenn., post office for the past 52 years. He was a great credit to the postal service on account of his efficient record over a period of more than one-half of a century. He will be missed by the patrons of his route. Mr. Irion can now look forward to a well-deserved rest and vacation.

I am inserting as a part of my remarks a fine, deserving news article about his long, faithful service which appeared in last Thursday's edition of the Paris Post-Intelligencer of Paris, Tenn., an outstanding daily newspaper in the district which I have the honor and privilege of representing:

POP IRION RETIRES—UNITED STATES MAIL'S OLDEST CARRIER—HAS DELIVERED ON ROUTE 2 FOR 52 YEARS

(By Peggy Ragland)

Alex (Pop) Irion, who might well be this country's oldest rural mail carrier, retires today after 52 years of faithful service to the residents of route 2, Paris.

The Federal rural free delivery first began in this country in 1889 and it was one of the first governmental services ever given to the rural people of our Nation.

Mr. Irion, when he was just 17, first began carrying mail in 1906 over the 22 miles on route 2 as a substitute for his father, Phillip J. Irion. Since the time of the 22 miles of plain old dirt road with an average of 22 mail boxes and 22 pieces of daily mail, he has seen route 2 grow and lengthen to 46 miles with 288 rural boxes. At the last count period in May 1957, he delivered and collected 1,249 pieces of mail in 1 day. Local letters in the good old days were 1 cent and out-of-town letters were 2 cents. Some of Mr. Alex' coworkers at the post office said, tongue in cheek, that he picked today to make his last run so he wouldn't have to carry any 4-cent letters. The 3-cent stamp will become a thing of the past tomorrow.

If you are inclined to think mail service is slow now, just take this as a good example. Mr. Irion received notice on January 10, 1907, that he would officially become an appointed carrier on January 16 of the same year. The letter had been mailed from Washington January 5.

For the first 6 months of his postal career after receiving the appointment he traveled the 22 miles on horseback to get the mail through. Later he drove a horse and buggy and then a 1913 Ford with a red front and straight fenders. "Of course, the weather had to be perfect to use the car so I got the most use from it in the summer. That winter weather and roads were just too much for the old Ford." Still with the Ford, but not the 1913 model, he travels over 25 of the 46 miles on balcktopping and the rest on improved roads with gravel or hard bed.

Time was when he went to work at about 7 in the morning and returned to the post office after dark. With improved roads and transportation he now leaves for the route at 8 a. m. and drives up to the post office about 12:30 or 1 p. m.

Recalling one of the most hectic experiences he ever has had in delivering the mail, he told about the time he was trapped in quicksand.

"There had been a big rain around here and I was delivering mail around Bird's Creek. Well, sir, I drove off into the quicksand that had washed up. I was in the morse and buggy then and somehow I managed to crawl through the back end and escape. There wasn't too much mail that day so I took it out the back with me. The old horse pulled out breaking the harnesses. Couple of days later a friend, Horace Frazier, and I got the buggy out."

People have always been helping him and the rural people he delivers to are all his friends. Color makes little difference to him. He tells this tale: "One time an old colored grandmother who could neither read nor write, asked me to write a post card for her to send to a friend. Well, I always carried them with me, so I said I would. Everything went along fine and finally as I was running out of space, I told her she would have to end the letter. She added just a few more words and closed by saying, 'I'll end now but please excuse the bad writing and spelling.'"

The Post Office Department never had a more able public-relation representative than Mr. Irion. Once during the war, an elderly patron wanted to send a package to his son overseas. "I've only got a quarter," the father said, "but just send this package as far as the quarter will take it, and maybe it'll get to him." Mr. Alex won't say where the rest of the postage came from, but somehow the package reached its European destination.

All the children on the route are special friends of Mr. Irion. In fact all the girls are my sweethearts and all the boys are my fellows. Mr. Irion put it this way, "If I make friends with the children then I don't have to worry about the parents for they are my friends too." In the good old days when comic papers and books were hard to get his family had plenty of good reading material and he always saved anything he could take with him on the route so none of the children would be disappointed at the mail box.

The crackerbarrel philosopher gives this advice to young people. "If you ever want to invest in something, try kindness and courtesy. There are more rewards in this than any money investment you could make."

The friendliness Mr. Irion has for humans knows no barriers. "Part of my 288 I deliver to are colored and I show them the same service as I do my other. I never had to fix a flat or make a repair on my car. Some of my colored friends were always there to help me."

Seems like Mr. Irion has always been helping people. It goes from giving bubble gum to the children, to helping buy an organ for a new church, to helping an injured man. "One day as I was making my rounds I came across the father of Paris policeman Paul Baucum. His team had run away and he had broken a hip. I did the best I could and then drove to get help."

During his 52 years of delivering he has served four generations in one family he knows of and probably in others too. Of the Hartsfield family, he has served the grandparents and parents of Mrs. Mary Hartsfield Thompson and now her son and his family.

Of the rural subecribers, Mr. Irion says, they like to keep up with the news in the Post-Intelligencer and they just can't seem to do without it. "Sure, they may let the time run out but in a couple of weeks they are renewing it again."

People mean a lot in Mr. Irion's life. Perhaps he can best express it this way. "A thing that has been your life for 52 years, besides your family, well, it is your life. The thing I hate most about retiring is the dear friends I have to leave. After you have been with them for a while they are the best people in the world."

To say Mr. Irion likes his job and the people he works for would be putting it mildly. The people on the route are all his special friends and so are his coworkers at the post office.

The Paris postmaster, Tommy Vaughn, has this to say about Mr. Irion.

"It has been an enriching experience for me to have had almost daily contact with Mr. Alec Irion since I came to the post office. Our association, however, began much earlier because he was our carrier when I was a child and used to wait for him at our mailbox. Mr. Alex was the first official of this great Government of ours that I ever saw, and, to me his record for public service stands today as a model for others to follow.

It has been one of the highlights of my life to have finally worked with him and to have been privileged to have received his advice, which I have sought so often these last few years, both personally and in the conduct of the business of this office. I have never known a person who possessed a more selfless devotion to duty and such kindness for all mankind."

Of the many honors and awards Mr. Irion has received, he has many service awards. Just a year or so ago Mr. Irion received a letter from the postmaster after the annual inspection. The letter was in praise of the condition of the boxes on his route. Too, he received a letter of thanks from a Tennessee farm association for being the only carrier to deliver and return 100 percent of the letters sent out in an annual survey to rural box holders.

Mr. Irion has the respect and love of his fellow mail carriers over a big aren. He has served as president of the Tennessee State Letter Carriers' Association, and was a delegate to the national convention of the association in Boston.

He is a member of the board of stewards of First Methodist Church, and for many years was president of the Men's Bible Class.

Besides attending church and lodge meetings, the next most important thing in his life is bass fishing. In 1952 he strung a 9½-pound Kentucky bass, which is up to date the largest Kentucky bass ever to be taken

from Kentucky Lake. He likes to recall the time when he was fishing at the lake and felt a strong tug at his line. "It must have been the mother or father of that 9½-pounder, for when looked to see it wasn't my line he had swallowed, it was that old cypress stump that it had been hiding under."

With all those sweethearts on the route, Mr. Irion met and married the one he loved best, the former Sophie Hill, on May 21, 1911. They have 4 children—3 girls and 1 boy. Mildred Irion lives and works in Memphis. Inez Irion lives with her sister and brother-in-law, Mr. and Mrs. Lester (Kid) Neese and their only son, Alec, Jr., has a family. All three live in town.

Mr. Irion, who makes his last run today, has no definite plans about what he is going to do. He and his wife have just moved into a new home, "to be close to the children," and the yard is filled with growing flowers and "that grass kinda grows, too."

"I think the first thing I will do is go fishing. I know the father or mother of that little bass is still out there, and I want to spend some time trying to hook it.

H. R. 12808, a Bill To Extend Section 8 of the Federal Highway Act

EXTENSION OF REMARKS
OF
HON. EDWIN B. DOOLEY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, August 4, 1958

Mr. DOOLEY. Mr. Speaker, I support H. R. 12808. It is a bill which amends the Highway Act of 1958 to extend for another 2 years the estimate of cost of completing the Interstate Highway System. It extends section 8 of the Federal Highway Act to 1962 instead of 1960.

The Interstate Highway program which would eventually link every capital city in the United States by 41,000 miles of wide highways is one of the biggest construction enterprises ever undertaken in history.

In the amount of money involved, in the amount of materials to be used, in the amount of planning and engineering skills to be employed, it would dwarf into insignificance most of the great building programs of the past years—even past centuries.

Support for H. R. 12808 has come from contractors, from the American Roadbuilders Association, from the American Association of State Highway Officials, and from no less a builder and executive than Bertram D. Tallamy, the Federal Highway Administrator. These witnesses pointed out with clarity and emphasis that the economy and accomplishments of a continuing, orderly, properly financed program—already effectively demonstrated in the past—is necessary if the highway departments of the various States are to project their programs on more than a season-to-season basis.

The same is true of the contractor. The further ahead a contractor can assess his volume of work, the purchase of materials, and utilization of personnel, as well as the distribution of machinery and equipment, the more efficiently he can operate and the lower the price he can offer. The responsible highway contractor of today must of necessity be able to plan well ahead for the anticipated amount of construction work obtainable if he is to operate his enterprise in an effective and efficient manner.

It is an established fact that most of the contractors doing highway work are literally small businesses. They may not fit into the category of small business as we generally know it, but when you consider that their annual gross volume averages about $5 million or less it becomes apparent that orderly planning is indeed necessary if they are to continue as a successful segment of our economy. The bill provides that safeguard by adding 2 years to the period of planning.

Highways today are more necessary than ever in the light of our defense situation and in the light of our domestic economy, and the passage of this bill will augment a National System of Interstate and Defense Highways to be accelerated in the manner contemplated by Congress when it approved the 1956 act. The transport of our country will be immeasurably improved through the systems of highways which are being developed throughout the States and in times of emergency these roads would stand us in good stead.

Leaders in the road building industry are aware that if action as called for in H. R. 12808 were not taken by the House and the other body, they would go into 1959 without knowing how or when the 1961 apportionment can be made. If this legislation becomes law the 1961 apportionments can be made any time after the first of next January.

The program in terms of funds obligated has accelerated at about the rate expected and construction is rising right now toward the high plateau that should be sustained for several years. The constant approach to this plateau is indicated in the annual step-up in fund obligations—Federal and State funds—as follows:

Obligations for preliminary engineering, rights-of-way, and contract construction

Fiscal year:	
1957	$1,729,000,000
1958	2,223,000,000
1959 (estimate)	2,600,000,000

It is a well known fact that the interstate program was set up on a long term basis for two main reasons, first to assure that the system would be completed within a specified period of time; and second, to avoid costly peaks and valleys in demand for machinery, materials, and labor, as well as engineering services.

The American Association of State Highway Officials, through its president, Mr. C. R. McMillan, stated before the House Public Works Committee:

If the interstate program were to revert into a year by year determination as to the amount of money to be authorized, very objectionable "valleys and peaks" would be the inevitable and extremely unsatisfactory result.

The highway departments must be in the position of of being able to plan projects and their schedule for construction and of making definite time commitments to property owners, tenants, local officials and the like as to when projects will move to construction if the job is to be done properly.

Senator Carl Hayden, of Arizona

EXTENSION OF REMARKS
OF
HON. RICHARD L. NEUBERGER
OF OREGON
IN THE SENATE OF THE UNITED STATES
Monday, August 4, 1958

Mr. NEUBERGER. Mr. President, during my service here in the Senate, I have come to hold great admiration for a man who can exercise influence not because of the stentorian tones of his voice, but because of his inner wisdom, because of his knowledge of our country, and because of the quiet consideration which he gives so fairly and so impartially to the views of others.

This man is the senior Senator from Arizona [CARL HAYDEN], who was serving here before many of us were born, including myself. His service dates from Arizona's statehood. Although I am one of the Senators representing the State of Oregon, let me say that CARL HAYDEN knows a whole lot more about the resources, geography, and needs of Oregon than I do. He is a walking encyclopedia of accurate information about the United States. I continually marvel at his detailed familiarity with the innumerable projects which receive appropriations and study from his great committee.

In the Reader's Digest for August 1958, appears a merited tribute to Senator CARL HAYDEN by Oren Arnold, under the title of "America's Silent Senator." Ex-President Harry S. Truman is quoted in the article in praise of CARL HAYDEN's kindness and consideration to others, a trait which we all realize characterizes Senator HAYDEN.

I ask unanimous consent that this article from Reader's Digest about our illustrious President pro tempore of the Senate be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

AMERICA'S SILENT SENATOR
(Condensed from Western World)
(By Oren Arnold)

In an eighth-grade exam not long ago an Arizona schoolgirl, asked to name the three great branches of American Government, wrote: "The President, the Superb Court and Mr. CARL HAYDEN."

Her astonished teacher decided she wasn't far wrong in naming Arizona's distinguished 80-year-old Democratic Senator as a separate branch of the Government. For, more than any other man alive, CARL HAYDEN does indeed personify the Congress of the United States.

He has served there longer than an other person in history—47 consecutive years. As Senate president pro tempore he is third in line (after Vice President NIXON and House Speaker RAYBURN) for the Presidency of the Nation. As chairman of the Senate Appropriations Committee he wields an incalculable power that touches every pocketbook in the land. A working, walking encyclopedia of legislative information, he is one of the most respected lawmakers of this country, and every President since Woodrow Wilson has sought his counsel.

Yet he is an immensely gentle, self-effacing spirit. He seldom makes a speech or

issues a statement. As for newspaper interviews, most reporters long ago gave up trying. Harry Truman calls him, aptly enough, "America's silent Senator."

His silence is a studied thing. It began in 1912 shortly after the brandnew State of Arizona sent him to Washington as its first Representative, a tall, muscular ex-sheriff in a cowboy hat. Having preconceived notions of how Congressmen should act, he made a speech at the first opportunity. It was notable chiefly for its verbosity. At the end of it, an older Representative took young CARL by the arm and walked him down the hallway.

"Well, son," the elder remarked, "you just had to say it, didn't you? Remember, that speech will always be in the RECORD. Someday you may want to change it, but you can't. There are two ways to be a Congressman—to be a show horse or a workhorse. One way will get your name in the paper. The other will win you votes and the respect of your colleagues."

CARL chose the workhorse route. Today, while noisier colleagues are pontificating, he is most likely to be found in the Congressional Library. Studying intimate details of some proposed bill, he works up to 12 hours a day, 7 days a week, sifting out the chaff, extracting the essence. In committee he may sit, forgotten, through a 3-hour session while others wrangle. Then in perhaps 25 words he will point out precisely what must be done and why.

At the one-room school he attended in Arizona, CARL was a star pupil. He had a consuming curiosity about everything, especially faraway place. In those years it was the custom for towns and States to advertise for farmers to come and settle. Little CARL answered all the ads, got the free literature, absorbed every word. By age 10 he knew more about America than most adults.

He loved to read serious books, especially history. One hot, humid day when he was helping get in the alfalfa hay, CARL disappeared. His father found him in the shade of a haystack reading volume 3 of Ridpath's History of the World. With switch in hand the stern parent tested him to see how genuine his interest was.

"Why did Rome fall?"

"Because," the lad answered, "the people grew soft and pampered theirselfs."

It was a good answer, one that Senator HAYDEN often meditates on today.

At Stanford University CARL played center on the football team. Tall and proud in a stiff collar 4 inches high, with a middle-of-the-road hair part and a sultry lady-killer look in his eyes, he became a popular figure on campus. In 1899 he ran for the presidency of the student body against two classmates, one being Theodore Hoover, brother of Herbert. Friends told handsome CARL HAYDEN, "You'll win in a breeze."

He himself agreed, and in a burst of modesty said to Nan Downing, a fellow student whom he later married, "It would be unseemly for either of us to support me. We must vote for one of my opponents."

They did so, and CARL was defeated by two votes—the only election he has ever lost. Never since then has he underestimated an opponent.

Back home in Arizona, CARL felt the call to politics and public service. He was elected county treasurer, then from 1907 to 1912 served as county sheriff. The rough element in Maricopa County said at first that the college boy was too mild to be a law man. He managed to correct that impression. One day a notorious thug came to Phoenix, got liquored up, walked boldly into the new sheriff's office and announced that he could kill the biggest officer present. CARL, 6 feet and 220 pounds, stepped calmly from behind his desk.

"Draw," ordered the bully.

Sheriff HAYDEN drew—with a heavy open hand. He smacked the misguided badman right through the open door—then leaned out and grinned at the awed onlookers.

In 1912, when Arizona became a State, HAYDEN was elected her first Congressman at Large. In Washington, a few years later, the ex-sheriff made friends with a young clerk in the Department of Justice named Ed Hoover. They talked shop, discussed methods of identifying criminals, comparing the old Bertillon method with the new fingerprint system. When friend Ed was made FBI chief in 1924, it was CARL who helped push through a bill for $56,320 to start the Nation's far-reaching fingerprint bureau. The two men remain good friends today.

From the first, HAYDEN's technique was to avoid the limelight and get the job done, without regard to credit or publicity. Then, from the lower house, he moved to the Senate in 1926. Since that time few bills of importance—particularly in the fields of reclamation, irrigation, agriculture, mining, and Federal highway building—have escaped his touch.

Much of the colossal highway program now underway, for instance, stems from his prophetic thinking. "Our Nation lives on wheels," he says, "and good highways are almost as important as good homes."

Observers sometimes refer to the Arizonian as the Desert Fox. The story goes that Calvin Coolidge said it first when, in 1924, HAYDEN fought hard for the passage of the San Carlos Project Act, to open a new irrigation enterprise in Arizona, including a huge dam. The act passed, but it seemed certain that the economy-minded President would kill it. HAYDEN and others tried to figure out a way to prevent the expected veto. Finally, HAYDEN came up with an idea.

His Arizona colleague, Senator Henry Ashurst, made an appointment with Coolidge at the White House. "Mr. President," he said, "the great new dam in Arizona will be a thing of majestic beauty, the largest of its kind in the world, a showplace for centuries to come. We respectfully ask if we may name it in honor of you, sir. We would like to call it Coolidge Dam."

Cal signed the bill.

HAYDEN is also known as one of the friendliest, kindest men in Washington. When Harry Truman first turned up in Washington as Senator from Missouri, he was dubbed a "tool of the Pendergasts" and as such was so suspect that few Members of the Senate would even speak to him. Hypersensitive, the newcomer felt their coolness keenly. Then one morning in a Capitol hallway a tall, balding man approached him, stuck out his hand and said, "Welcome to Washington, Senator. I'm HAYDEN from Arizona, an old-timer here. Call on me for any help I can give you." It was a gesture that Truman never forgot.

In 1941, when the Senate Special Committee To Investigate the National Defense Program was set up, it was through a parliamentary maneuver suggested by Senators Hayden and Barkley that Harry Truman became chairman—a position that earned for him the national prominence which eventually led him to the White House.

HAYDEN has a marked aversion to fence-straddling. "I have found," he says, "that you have to take a stand on every issue, not only for your conscience' sake, but to avoid making a fool of yourself. If you inform yourself well and take a definite stand, both sides will respect you."

Arizona's big interests used to try to pressure him occasionally. In one case some utility companies had their employees and customers write him thousands of letters opposing a pending utility bill. HAYDEN studied the matter, wrote back a short summary of his reasons for favoring the bill, and said he would not change. In the next election his vote plurality was the largest it had ever been.

Some have criticized HAYDEN, saying that as chairman of the Senate Appropriations Committee he is guilty of profligate waste. They forget that his committee does not make the overall policy. Actually, though he handles billions, he is meticulously thrifty—the type who goes through his offices turning off lights that have been left on—and constantly concerned with finding ways to reduce national expenditures. "Give us a guarantee of world peace," he says, "and we could slice Government spending in half."

On Senator HAYDEN's 80th birthday last year a friend prepared a scroll thanking him for his decades of service. Space was left for 25 signatures. But word got around, and when the scroll reached HAYDEN it held 174,688 names, including that of Dwight D. Eisenhower. Not long before, Republican Senator FRANCIS CASE, of South Dakota, had summed up the congressional sentiment toward HAYDEN by saying, "Some years ago a man said to me that CARL HAYDEN knew more about the United States Government than any other individual. I have never been disposed to take exception to that observation."

Harry Truman put it another way, when a newly elected Senator asked his advice on how best to do his job. "That's easy," said Truman, "just watch CARL HAYDEN."

Civil Air Patrol Training

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, August 4, 1958

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Wilkes-Barre Times Leader of Friday, August 1, 1958, which comments on the military as well as civilian importance of the Civil Air Patrol:

CIVIL AIR PATROL TRAINING

These are busy days for the Civil Air Patrol. Over the weekend, Wilkes-Barre Squadron 205, of which Capt. Michael Solomon is commanding officer, will participate in Operation Pinpoint, a problem dealing with an enemy invasion of Pennsylvania.

Although it has been in existence only 3 years, Wilkes-Barre squadron, with 43 officers and 41 cadets, including 17 girls, has the distinction of being the outstanding unit in the Commonwealth. The training course of 30 months qualifies the individual for a place in civil or military aviation and has an estimated value of $25,000.

Now in its 17th year on a national level, CAP, the abbreviated form of Civil Air Patrol, is one of the few organizations which have sought to devise and put into effect programs to fit today's teen-agers for the world of tomorrow.

CAP has been making itself felt in the continuing problem facing the Nation in the shortage of scientists, engineers, and technicians. Eighty-six former CAP cadets now are in the United States Air Force Academy in Colorado. Throughout the country, some 36,000 teen-agers are enrolled in cadet ranks, preparing to cope with the challenges that are arising on every side.

The military aspects of aviation are fairly well known. In a less dramatic way, aviation provides many other benefits. The Na-

tion's well-being, growth, and prosperity are being advanced materially by air transportation while the industry, one of the country's largest, provides employment for more than 1 million men and women directly and thousands more indirectly through its purchases from small business.

America's world leadership depends largely on its progress in the air. Opportunity is knocking for youth in this field of endeavor. At the same time, there is a vital need for greater emphasis on technical education in programs, such as the Civil Air Patrol.

It is cheering to note that Wilkes-Barre is setting a stiff pace for Pennsylvania and America through Squadron 205.

An Approach to Better Inter-American Relations

EXTENSION OF REMARKS
OF
HON. DANTE B. FASCELL
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
Monday, August 4, 1958

Mr. FASCELL. Mr. Speaker, recent international events have clearly pointed out that the United States and the free world must fact, for years to come, a continuing struggle.

The principles of our life and Government are under constant challenge. Every moment of disinterest and relaxation will be capitalized upon as the time for a forward encroachment by international Communists and their followers.

The United States has just adopted the largest military budget in our peacetime history. We are all agreed we must be militarily strong to withstand any aggressive action,

Yet the most distressing gains against the free world in recent years have not been made by direct military attacks. The gains have been achieved by indirect means.

We in this country must marshal the forces and efforts of the free world to effectively combat the Communist nonmilitary and indirect methods.

It has been my belief the first place to consolidate and strengthen our mutual efforts is close to home—Latin America. A strong and effective Western Hemisphere will provide leadership and strong moral support for the rest of the free world.

Furthermore, as individual Americans we must use our enthusiasm and zeal to nurture and broaden the base of acceptance of our principles of life and government.

Our citizens have asked many times what can we do? There are many ways by which the individual can help foster and improve better international relations for his country.

In Florida we have been very conscious of this, particularly in my district.

One very good case in point is the program instituted by the Coral Gables Lions Club under the very able leadership of its immediate past president Mr. J. C. Morris—related to our own efficient House Postmaster, H. H. Morris. This people to people approach suggested and carried on is the type of effort we must multiply a thousandfold. The benefits in understanding, good will, solidarity, better international relationship, and contribution to the preservation to our way of life are valuable and incalculable.

In an article Serious Side, appearing in the Lionews of the Lions Club of Coral Gables, Fla., Joe Morris tells us what he and his club are doing—a very worthwhile effort, which I hereby commend for the consideration of all my colleagues:

(The article follows.)

SERIOUS SIDE

(By Joe Morris)

The Vice President NIXON incidents in Lima, Bogotá, and Caracas, three cities in South America, has started a lot of talk about Latin American relations by people who heretofore were limited in their concern in Latin affairs.

Now interest is aroused because of the slap in the face that hurt our national pride. But there were others who were working on the problem before these incidents happened. Some results should soon be evident with so many at work now.

Two months ago I made a tour of South America and visited 9 countries and talked to many people wherever I went, especially to people in Lima and Bogotá, because I was 3 days behind Mr. NIXON in those cities and the headlines made the topic for talk.

Returning to Miami, more than ever aware that something should be done, I asked five other businessmen in the aviation industry to meet together and try to formulate constructive ideas to pass on to our congressional representatives and aid in solving the problem.

Have you ever tried to study a complex problem the size of inter-American affairs and then consolidate your thinking into words that can mean a real solution? Well, it ain't easy.

Our group has met four times, however, and some progress is being made, we hope. But the best part is we are not alone.

The Festival of the Americas, a week or so ago brought representatives from 21 Latin countries together in Miami, Fla. Those 10 days of meeting each other—making friendships—and mixing customs was more than a miniature modulation, it was a strong surge forward.

The festival was immediately followed by a 4-day meeting of the Chamber of Commerce of the Americas where delegates and observers from 15 Latin countries, several cities in Florida and Government officials from Washington actually met in luncheon and business sessions to pose the problems existing in their country and ours, and then they offered their recommendation for a solution.

Again, this gigantic and complex problem cannot be solved in a day or two.

Some time ago, President Eisenhower put forth a plan designed to place the individual in a position where he could help his Government to better relations between countries in the Western Hemisphere.

The plan was to have each city in the United States adopt a sister city in one of the Latin countries and interbreed with her to bring forth new conceptions of both our ways of life.

The city of Coral Gables accepted the challenge and has adopted a sister city, Cartagena, Colombia.

So now the Coral Gables Lions have a new sister. Only the Coral Gables Lions had already taken such a step 2 years ago when the club adopted their sister, Santiago Club de Chile. But there is no desire to limit the size of the family. That's what we want, more good relations.

The immediate task is to arouse enthusiasm all over the United States for better inter-American relations—so it is recommended that one of the Coral Gables Lions project this year be: Start a campaign to get all the Lions Clubs in Florida to adopt a sister club in Latin America, do their best to help our Government improve inter-American affairs.

Theodore Roosevelt said: "We are the Government, you and I."

Fellow Lions—if the problems are solved they will have to be solved by all of the United States Government—U-U-U-U-U and I.

Untruths on Defense

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, August 4, 1958

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following column by Mr. Joseph Alsop which appeared in the Washington Post on Saturday, August 2, 1958:

UNTRUTHS ON DEFENSE

(By Joseph Alsop)

The time has come, once again, to take a very grave step in this space. It is time to say quite bluntly that the Eisenhower administration is guilty of gross untruth concerning the national defense of the United States.

The false claims were most succinctly put by the President himself in his last state of the Nation message.

"We have now," he told the country, "a broadly based and efficient defensive strength, including a great deterrent power. But unless we act wisely and promptly, we could lose (the) capacity to deter attack or defend ourselves." He then outlined the action he proposed to take and he concluded with this promise: "We intend to assure that our vigilance, power, and technical excellence keep abreast of any realistic threat that we face."

Either the President was consciously misleading the Nation, or he silently decided to break his promise later on, or he has been misinformed about the facts. The third alternative is not only preferable; it is also highly probable. But that does not change the hard facts about which the President has been misinformed. Nothing will change them but a vastly greater national effort to "keep abreast" of the "realistic threat we face."

The time of deadly danger will begin soon, during the period the Pentagon calls the gap—the years between 1960 through 1963 or 1964. Massive orders for hardware must be placed immediately—indeed, they should have been placed last winter—if we are going to make the feeblest pretense of keeping abreast during the years of the gap.

The prospective results of our present, fantastically inadequate effort were given in detail in the last report in this space. They may be summarized as follows:

First, we shall retain a modest margin of superiority in manned bombers throughout the years of the gap—unless the Kremlin puts its new, very long-range, supersonic jet bomber into early production, as must of course be expected. (It is not expected by the administration, but all the administration's expectations are based on the kind of reading of the grim intelligence that experience has repeatedly warned against.)

Second, the NATO estimates give the Soviets a strength in air defense that is at least two times, if not 3 or 4 times greater than our own air-defense strength; and this wide margin of superiority will be maintained throughout the years of the gap. This means, of course, that the balance of manned bomber strength must be weighed in favor of the Soviets; for our manned bombers are now increasingly vulnerable to interception by the more advanced defensive weapons.

Third, we shall be sending a few intermediate range missiles to our NATO allies in the gap years. Meanwhile, the Soviets will acquire between 1,000 and 2,000 ballistic missiles with suitable ranges to neutralize or destroy all our overseas air bases, on which the striking power of our manned bomber force heavily depends. And fourth, the United States versus U. S. S. R. score in operational intercontinental missiles in the gap years will be United States 0 ICBMs versus U. S. S. R. 100 ICBMs in 1959; United States 30 ICBMs versus U. S. S. R. 500 ICBM's in 1960; United States 70 ICBMs versus U. S. S. R. 1,000 ICMBs in 1961; United States 130 ICBMs (plus a few submarine-borne Polaris, perhaps) versus U. S. S. R. 1,500 ICMBs in 1962; and United States 130 ICBMs (plus more Polaris) versus U. S. S. R. 2,000 ICMB's in 1963.

Furthermore, only a few score more of the Navy's Polaris missiles will alter the balance in 1964. And the first solid-fueled Minuteman missile, on which the Pentagon is gambling the American future, cannot possibly be ready for operational use before the end of 1963 or early 1964. It will probably be later than this.

If this is "keeping abreast," one would like to know how the administration defines "falling behind." The effect of the present policy is indisputable. It will allow the Soviets to gain an overwhelming superiority in overall nuclear striking power. And if anyone wonders what results to expect from this kind of Soviet superiority, it is only necessary to look back a few years, to the last time this reporter took the same grave step of charging official untruth about the national defense.

This was when the egregious Louis A. Johnson was swearing he was "only cutting fat, not muscle." The Truman-Louis Johnson disarmament policy ended in the Korean war. But at least President Truman and Louis Johnson then had the excuse that the United States still possessed a virtual monopoly of nuclear striking power.

Now we are flaccidly letting the Soviets gain an overwhelming superiority in this crucial area where once we enjoyed a monopoly. We are doing this, moreover, after abandoning superiority to the Soviets in almost all other arms areas. Can any sane man suppose that this folly is not immeasurably more dangerous than the follies of Louis Johnson or can any sane man seriously suppose that the end-result will not be immeasurably more terrible? At this instant, the last chance to save ourselves is slipping through our hands.

Mr. Missile of the Cape

EXTENSION OF REMARKS

OF

HON. ALFRED D. SIEMINSKI

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Monday, August 4, 1958

Mr. SIEMINSKI. Mr. Speaker, under leave to extend my remarks in the RECORD, I should like to include two news items from today's New York Times. First, a story on Mr. Missile of the Cape, Mr. Byron G. MacNabb, and second, a note on Atlas men doing a 3-day data study. They follow:

MR. MISSILE OF THE CAPE: BYRON GORDON MACNABB

Byron Gordon MacNabb is Mr. Mac to thousands of rocket buffs on and around Cape Canaveral, Fla. But an equally apt name might be Mr. Missile. Nobody on or off the cape is a better symbol of a new order of Americans—the Missile Men.

Officially, Mr. Mac is operations manager for Convair-Astronautics at the Air Force Missile Test Center. The center's headquarters are at Patrick Air Force Base, 18 miles south of the cape. Convair has an office in the Starlite Motel between the two. But Mr. Mac is most often in his green "hard hat" and weathered field jacket, directing things at the Atlas launch area on the cape.

Convair is prime contractor on the Atlas. This is the Nation's first intercontinental ballistic missile. In its full-powered three-engined conformation, it made its first successful flight Saturday evening.

Several hours later, Mr. Mac was presiding at a celebration and chuckling over how the Atlas-B (the two-engined forerunner was the Atlas-A) had roared from its pad, accelerated toward 15,000 miles an hour, and hit "right in the pickle barrel" some 2,000 or 2,500 miles downrange in the South Atlantic. Eventually, he and his 900 colleagues hope to fly their "bird" the full ICBM distance of 6,325 statute miles.

WORKS HARD, PLAYS HARD

Mr. Mac plays as hard as he works. On a Sunday afternoon, in his home with its backyard right on the Banana River, he will do the following things in any order:

Cast for a sea trout (spotted weakfish) right off his own dock; go into the house for a drink and to explain to a caller the intricacies of a rate gyro (an instrument governing the speed of correction of a deviation in course); and stomp outside again to improve the house's drainage system with a shovel.

He is quick-moving, sharp-witted, good-natured—and, above all, dedicated to his work. For a while he stopped getting haircuts between preparations for an Atlas firing and the real thing. Once he went 6 weeks. A secretary chided him, so he gave that one [superstition] up.

Instead, he had symbolic missiles painted on his helmet. Each success meant a halo added to one of the symbols; each failure, a puff of smoke. Even after Saturday, the haloes were still outnumbered by the puffs—but the haloes were gaining.

He was born August 14, 1910, in Gary, Ind. The stocky Atlas boss attended New York Military Academy at Cornwall, N. Y., Rose Polytechnic Institute at Terre Haute, Ind., and the Illinois Institute of Technology at Chicago.

EX-FURNACE FOREMAN

For 13 years before World War II, he worked for the Carnegie Steel Corp. at South Chicago. He was general foreman in the blast furnace department when he entered the Navy.

He served as an ordnance officer on aircraft carriers, with shore duty in research and development at the Navy Air Test Center, Patuxent River, Md. There he won a Presidential citation for development of an antikamikaze weapon for use against Japanese suicide planes. He took part in the first firing of a ballistic missile from a ship at sea, the carrier Midway.

From 1948 to 1955 he had research and operations with the Sandia Corp., the Pullman Standard Car Co., and the Cambridge Corp. With the latter, he was field operations manager on the hydrogen bomb program at the Atomic Energy Proving Grounds in the South Pacific. He joined Convair-Astronautics in February 1955.

His wife is the former Iris L. Cook, of Chicago. Their daughter, Doris Ann, is a secretary in New York. The MacNabbs live in Cocoa Beach at the foot of Fourth Street, just west of Route A1A. But the exact address, according to anyone but Mr. Mac himself, is 398 MacNabb Parkway.

ATLAS MEN START 3-DAY DATA STUDY—INITIAL 3-ENGINE LAUNCHING BELIEVED SATISFACTORY—ICBM GOES 2,500 MILES

Air Force generals on opposite coasts of the country kept in close touch yesterday in the wake of the first successful firing of a three-engined Atlas intercontinental ballistic missile from Cape Canaveral, Fla.

It was understood that Maj. Gen. Bernard A. Schriever, Chief of the Air Force Ballistic Missile Division in Inglewood, Calif., and Maj. Gen. Donald N. Yates, commander of the Air Force Missile Test Center, with headquarters at Patrick Air Force Base, south of Canaveral, were more than satisfied by the flight Saturday night.

The generals conferred by telephone to determine what additional details of the test, and its significance, should be announced officially.

Meanwhile, the Convair-Astronautics firing crew that fired the 80-foot Atlas-B "right into the pickle barrel" was taking it easy today after a celebration last night.

EIGHTY-HOUR CLUB IN SESSION

But other Convair personnel were on the job. These included the "Eighty-Hour Club," made up of engineers and technicians who start poring over telemetered data from the moment a missile is fired. It was their preliminary report at T plus 3 hours that led to the original enthusiasm. The complete data evaluation will take more than 3 days.

Also working at the cape yesterday was the host in the Saturday night festivities—Byron G. McNabb. The party began at the motel where Convair has its office, and continued at his home. Mr. McNabb is chief of operations for the Atlas project.

The Atlas-B is propelled by two boosters, a sustainer, and two small vernier engines. The boosters and sustainer are ignited together. The boosters drop off, leaving the sustainer to continue. The verniers provide the final adjustment to the velocity for accurate delivery.

The Atlas-B flew on about 150,000 pounds of thrust in each booster, 60,000 in the sustainer, and 1,000 in each vernier. The distance of about 2,500 miles was kept short of the full ICBM range of 6,325 miles by incomplete fueling.

Originally, the thrust pattern of the Atlas (in the A series) was 135,000 pounds for each booster, 100,000 for the sustainer, and for each vernier, 1,000 pounds.

A Matter of Life or Death

EXTENSION OF REMARKS

OF

HON. ROLAND V. LIBONATI

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Monday, August 4, 1958

Mr. LIBONATI. Mr. Speaker, the controversy over Krebiozen, a new drug, as outlined in previous articles listed in the CONGRESSIONAL RECORD Appendix, pages A4957, A5370, and A6712, has touched off a furore both in medical and layman circles; since the release of a new book treating with this subject, A Matter of Life or Death, written by Herbert Bailey, and published by Putnam.

This concern is one of the oldest and most respected publishing companies in the United States, and enjoys a reputation of only publishing books which must be proved, truthful in every degree, particularly in the field of medical science on a controversial subject—one as serious as krebiozen.

The recent release of the book resulted in the unanimous approval of the reviewers as to the treatment of the controversy and the favorable reviews recommending the book to the reading public as interesting and informative.

"From the reviewers' standpoint, if the book gets wide reading, the repercussions will be great," comments Robert S. Keckner, Chicago Sun Times, April 6, 1958.

In view of these developments, Congress should do something about this question in the public interest—a congressional investigation would force the American Medical Association to change its stubborn attitude against an intelligent and scientifically controlled study to determine officially the value of Krebiozen in cancer treatment. Present public appeal and the results of Dr. Andrew Ivy's experimental research, together with the favorable reports of the 200 physicians who administered the drug to their patients and reported the progressive observations of its successful effects in a personally prepared report to the Krebiozen Foundation.

Surely in the face of this overwhelming evidence of Krebiozen's activity, the American Medical Association cannot honestly disregard and with a disinterested attitude stubbornly refuse Dr. Andrew Ivy's request for fair play and a chance to prove its medical worth. In the interest of humanity, the AMA should cooperate and welcome this opportunity to recheck its previous evaluations of Krebiozen.

Otherwise, Congress must initiate its unpleasant prerogative and investigate this organized conspiracy of a few officials to suppress the freedom of research in the field of medical science.

The following articles pointedly show the future trend of the public attitude on this question. The men of the press specializing in evaluating the books of our time are equipped by their special talents to recognize an honest issue regardless of their personal opinions. It is evident that their comments on the treatment of the subject matter by Herbert Bailey is not only interesting but would also exert a persuasive influence upon public opinion:

A MATTER OF LIFE OR DEATH

Here are a few representative newspaper reviews which Herbert Bailey's book, A Matter of Life or Death, has received thus far. We have been assured that more are to follow. In spite of its being one of the most "embattled" books ever published, and on a subject which has torn the medical and lay world apart, it is highly significant that to date A Matter of Life or Death has not received even one unfavorable review.

As one of our reviewers has told us: "You might be able to ignore Bailey's book and not review it at all, but if you really read it your sense of public responsibility will be so aroused you'll be forced to bring it to public notice, even though several power-manipulator medical groups are trying to suppress the book. It answers all the really important questions about a national scandal any reviewer, medical or otherwise, would wish to know. You don't have to have much medical or scientific knowledge to know that the facts glare out at you and are undeniably true.

G. P. PUTNAM'S SONS.

NEW YORK, N. Y.

[From the Chicago Sun-Times of April 6, 1958]

TWO ABSORBING BOOKS ON CANCER, ONE BRISTLING WITH CONTROVERSY

(A Matter of Life or Death, by Herbert Bailey; There Is an Answer to Cancer, by Dr. Leonard B. Goldman)

(By Robert S. Kleckner)

It can be forecast with almost certainty that if Herbert Bailey's new book on Krebiozen, the controversial cancer drug gets wide reading, repercussions will be great.

It also can be forecast definitely if Dr. Leonard B. Goldman's work hits large circulation many fears about cancer will be allayed and more lives will be saved by conventional treatments.

The first book tells the amazing story of Chicago's internationally known researcher, Dr. Andrew C. Ivy, who because of his championing Krebiozen as biologically active and worthy of further study in management of cancer, has become to his partisans a martyr persecuted by the Chicago Medical Society, the American Medical Association and others. To some he has become almost a crackpot.

There is no question Bailey has done a devastating job of presenting dramatically what he set out to do, attempting to bolster these theses:

1. Businessmen and one official of the AMA sought to gain financial control of Krebiozen.

2. Because of failure they conspired against Ivy and the drug.

3. The official got support from AMA staff men.

4. Krebiozen was damned before it had a chance in the professional eye because it was unintentionally announced in lay rather than scientific publications.

5. A concerted campaign by organized medicine forced reputable doctors to change testimony about the drug and prevented others from testing it.

6. This campaign has even carried to Government circles in Washington.

Principals involved have at least to their satisfaction denied the charges—but not to Bailey's and many others over the country who are convinced that Krebiozen has been of benefit.

Much of the Krebiozen story in this latest book has been told but Bailey makes one wonder anew not only about the possible worth of the drug but whether the material developed by Dr. Steven A. Durovic displaced Yugoslav physician who came to Chicago has really had a proper chance for widespread controlled testing.

New statistics are presented to show that since the drug had first trials beginning in 1949 with hopeless cancer patients, it has been used by some 200 doctors and several clinics experimentally on about 1,500 sufferers, with more than 50 percent having pain relieved, cancers diminishing, and many still alive, several back at their jobs after being on their deathbeds.

This would be in direct contradiction to early findings of an AMA committee which held the drug worthless after a review of the first 100 cases treated. If there had been any improvement, AMA witnesses later said, it might have been due to natural remissions of cancer, admittedly unusual even in medical circles.

Bailey's book is thought-provoking. However, organized medicine as such is likely to continue to disregard the charges, having taken the position that nothing relative to Krebiozen has changed since its early investigation.

As to Dr. Goldman's book, no facts presented are controversial.

He does a masterful job of telling in simple language the signs of various cancers and what can be done not only for treatment as recognized by the medical profession, but how many cancers may be prevented.

One excellent chapter is devoted to simple questions and answers which concern everyone.

[From the Charlotte (N. C.) News of May 17, 1958]

MATTER OF LIFE OR DEATH

(A Matter of Life or Death, by Herbert Bailey)

Herbert Bailey, veteran medical reporter and general champion of suppressed causes, goes to work with the firm touch of a master surgeon as he brings to life the incredible story of Krebiozen, a drug intended by its discoverers to alleviate the ravages of cancer in humans.

Presenting what he calls incontrovertible evidence of its effectiveness in many cases, Bailey excoriates the American Medical Association and the American Cancer Society, accuses their leaders of not only persecuting the Yugoslav doctor and his American associate but of sabotaging the use of Krebiozen in a determined campaign, both political and medical, to suppress any approval of this amazing drug.

Now, 8 years after its discovery, there is evidence that public opinion is beginning to assert itself. Opponents now are giving way to the people's demand that Krebiozen, or any other efficaceous drug for cancer, be given a chance to show what it can do, freed from opposition of a group of kingmakers who ought to be champions of any remedy that lessens the ills to which man is subject.

[From the Orlando (Fla.) Sentinel Star's Florida Magazine of May 25, 1958]

NEW HOPE FOR CANCER

(A Matter of Life or Death—Herbert Bailey)

(By Ruth Smith, Florida magazine books editor)

If you would canvass any group of people to discover the disease they hold in the greatest dread, you would probably find that it was cancer.

The reason, of course, is that because so often this disease is not discovered in early stages when it is possible to arrest its course, a cancer victim usually feels that his case is hopeless.

Many times there have been news stories that someone has at last discovered a cancer cure. The medical profession, justifiably cautious, has not accepted these cures until they have undergone long and exacting tests.

A new book which came out April 7 tells the fantastic yet purportedly true account of the discovery and development of an effective anticancer agent, krebiozen, and the courageous fight of the discovers of their allies for its acceptance.

The book, A Matter of Life or Death, is by Herbert Bailey, a veteran reporter who has worked for newspapers in North Carolina, Nashville, and Chicago. At one time he was radio and dramatic critic for Billboard.

AMA DENOUNCED

In July 1952, he first became interested in krebiozen, which has been termed a "natural immunity" agent against cancer and was discovered in 1949 by Dr. Stevan Durovic, former assistant professor at the University of Belgrade Medical School.

Since then Krebiozen has been tested by Dr. Andrew C. Ivy, eminent cancer re-

searcher, formerly a director of the American Cancer Society and now head of the department of clinical science, University of Illinois Medical School.

Bailey scathingly denounces certain high officials of the American Medical Association who, he maintains, have falsified and suppressed favorable evidence of krebiozen.

He calls for a congressional investigation of the AMA outlining with documentary proof the suppression and reprinting sworn testimony given at the Illinois State legislative hearing on krebiozen in 1953–54.

Mr. Bailey states: "The American Cancer Society owes it to the American people whence it receives all its funds to settle the controversy once and for all."

The society is now considering Dr. Ivy's proposal. The AMA refused a similar proposal by Dr. Ivy.

[From the Miami (Fla.) News of April 27, 1958]

INSIDE STORY OF DRUG TO CURB CANCER

(A Matter of Life or Death, by Herbert Bailey)

(Review by Jack Oswald)

This is the story of the research, skulduggery, slandering, greed, egotism, and altruism that were unleased when the medical and financial world learned of a drug that might control cancer.

Subtitled "The Incredible Story of Krebiozen," the book tells how a Yugoslav scientist arrived in Chicago in 1950 with a substance isolated from horses' blood. The chemical was the result of the physician's search for a growth inhibitor he hoped would stop cancer-cell multiplication.

Three years later, Krebiozen was the subject of a legislative investigation involving the American Medical Association, eminent doctors, Senators, the FBI, businessmen and cancer victims. Author Bailey writes a medical cloak-and-dagger tale to satisfy the most cynical observers of this business of science.

[From the Wilmington (Del.) News of June 2, 1958]

(A Matter of Life or Death, by Herbert Bailey)

A writer with a newspaperman's background of appreciation of the laws of libel, Herbert Bailey, includes in these pages a compilation of information and facts, which had it not been carefully weighed, investigated and backed by actuality and proof could bring about serious repercussions for the writer.

Why should the American Medical Association, or certain members of that group attempt to block the progress of research, by nonrecognition, of what could be the possible answer to humanities' most dread disease—cancer? Part, if not all the answers are here recorded.

For 6 years past Dr. Andrew Ivy, tireless medical researcher, interested only in the welfare of his fellow men, has led a cry in the wilderness on behalf of the cancer drug Krebiozen. His criest have reverberated against the bastion walls of the principal walls of the principal group behind the medical profession—the AMA. To their cries for proof he has added proof upon proof of the greatness of the drug's work.

Hertbert Bailey has replied to the opposition here as in his original book K-Rebiozen of several years back, to some of the intrigues motivating this disregard by the AMA or its specific members.

[From the New York Times of March 22, 1958]

BOOKS—AUTHORS

Krebiozen, as a natural immunuity agent against cancer, has been the subject of disagreement in the medical profession since its discovery in 1949. In A Matter of Life and Death, Herbert Bailey gives an account of the discovery and development of the substance and tells of the fight of the discoverers and their allies for its acceptance. He denounces certain high officials of the American Medical Association, who, he maintains, have falsified and suppressed favorable evidence of the material. The book will be published April 7 by Putnam.

[From the Pittsburgh Press of April 13, 1958]

CANCER DRUG FIGHT AIRED; HANDBOOK RECOMMENDED—CURE HANDLING STIRRED TEMPEST—INFORMATIVE NEW VOLUME EXCELLENT FOR LAYMAN

(By Campbell Moses, M. D., Director, Addison H. Gibson Laboratory, University of Pittsfiburgh School of Medicine, and past president, Allegheny County unit, American Cancer Society)

Subtitled The Incredible Story of Krebiozen, A Matter of Life or Death, by Herbert Bailey is a reporter's dramatic account of the chain reaction in American medicine following the 1951 public introduction of a new and controversial drug for the treatment of cancer.

This drug, Krebiozen, was developed by Yugoslav Dr. Stevan Durovic and first studied in the United States by a front-rank scientist, Dr. Andrew C. Ivy, distinguished professor of physiology and vice president of the University of Illinois.

March 26, 1951, in Chicago, at a meeting called by Dr. Ivy to present a cautious preliminary report to the physicians who had been cooperating in the Krebiozen study, an unauthorized publicity release stated:

"The battle of medical science to find a cure for cancer achieved its realization today. * * * Cancer need no longer signify certain and inevitable death."

This release, supposedly with the prestige of Dr. Ivy behind it, was worldwide front-page news.

Medical scientists' reaction to this announcement was one of critical dismay. And in the events that followed Dr. Ivy was dropped as vice president and Dr. George D. Stoddard resigned as president of the University of Illinois. Dr. Ivy was suspended from the Chicago Medical Society and the American Medical Association became embroiled in a violent and continuing controversy.

The author, a strong supporter of Dr. Ivy's actions in this controversy, ably presents the events in dramatic, narrative fashion. Except for Dr. Ivy, none of the individuals or groups involved escaped unscathed and the American Medical Association is especially scarred in this account.

Despite the evident bias of the author, the book is a most interesting account of the maelstrom of events that can becloud the scientific issues when an exciting new observation is first presented in an unconventional way.

The sobering thesis of the book is that the unconventional presentation of an unorthodox idea may prevent its careful scientific appraisal even when the stakes are as high as they are in achieving the control of cancer.

There Is an Answer to Cancer, by Leonard B. Goldman, M. D., is a small volume, written to provide the public with accurate answers about cancer. It is both informative and delightful in its approach.

The author faces many questions that are frequently asked and answers them frankly and with excellent descriptive detail.

While all physicians will not agree with all the author's recommendations, a successful effort is made to present the alternative methods of treatment in an unbiased manner.

The book is highly recommended as an interesting volume with accurate answers to cancer.

[From the Northwest Arkansas Times, Fayetteville, Ark., of May 30, 1958]

FIGHT OVER KREBIOZEN MAKES BIZARRE TALE OF INTRIGUE

(By Allan Gilbert, Jr.)

(A Matter of Life or Death, by Herbert Bailey)

Controversy and conflicting stories concerning Krebiozen, an agent for the control of cancer, continue today on only slightly less bitter a plane than during the early stages of what has become a protracted war between its proponents and the American Medical Association.

Herbert Bailey, a professional journalist with a long background of newspaper and magazine work, has compiled the story of this running battle.

The facts as set forth in his book point to an incredible conspiracy in which the AMA hierarchy has deliberately misled not only the public but its own members as well. Bailey indicates from testimony at several hearings on the drug that the motive behind this conspiracy has been a grab at control of the manufacture of Krebiozen.

It is hard to believe that the American Medical Association would purposely prevent the distribution and use of an agent that has promise of providing a cure for cancer. Yet, according to the mountain of facts in this book, it is this feeling that has enabled the AMA to accomplish this very thing. Too many persons, Bailey contends, feel that the AMA obviously wouldn't be a party to the deliberate suppression of a possible cancer cure, and hence ignore the accusations.

Whether this is the actual situation or not is a moot question. But the contention makes one of the most bizarre stories ever to see print.

Bailey starts out with the original theory behind the discovery of Krebiozen by a distinguished Belgrade doctor, Stevan Durovic. He traces experiments carried on in South America, where Dr. Durovic took exile residence during the war, and explains how a substance known as Krebiozen was isolated and found to be effective in control of cancer on animals.

The next step was Dr. Durovic's trip to the United States where he gained support for research and experiment with the drug from a number of persons including Dr. Andrew Ivy, vice president of the University of Illinois.

Use of the drug was finally undertaken and the results amazed those in charge. Dr. Ivy helped set up a thorough trial and became convinced that there was great merit in the substance. It not only alleviated pain in many terminal cases of cancer, but in some caused the cancer to disappear entirely.

Dr. Ivy prepared to expand the testing phase of the drug in 1951, but an overzealous press agent released a story that Dr. Ivy was announcing a cancer "cure." This created a serious ethical problem. Then, too, the wheels of economics had begun to turn with several persons seeking to gain the obviously valuable rights to the manufacture of the drug.

Dr. Durovic refused to grant rights to anyone until Krebiozen had been proven effective and medically acceptable. This created an impasse.

At about this point a member high in AMA circles instigated a quick and, according to all evidence, cursory look at Krebiozen and had an article prepared for the AMA's Journal to the effect that the drug was worthless. This article, according to Bailey, was written by a doctor who had had no actual experience with the drug.

Dr. Ivy attempted to set the record straight in the light of research to that date and lost his vice presidency at Illinois and his membership in the AMA as a result. Even the president of the University of Illinois was unseated in the controversy.

A hearing by the Illinois Legislature was virtually pigeonholed by delaying tactics of the AMA legal staff, which refused to permit a conclusion to the hearings. A proposed congressional investigation was nipped by the death of Senator Tobey of New Hampshire, who had become convinced that something was wrong somewhere.

Tobey, aware of the powerful AMA lobby in Washington, quietly secured an investigator from the Department of Justice. This man found the same facts that are outlined by Bailey, and turned them over to Tobey shortly before he died. Senator BRICKER assumed chairmanship of the committee that had been headed by Tobey and carefully ignored the investigator's report.

Drew Pearson ran a series of articles on the report and finally a hearing was forced. However, the investigator was not called as a witness and Krebiozen was carefully sidestepped.

The investigator shortly, according to Bailey, lost his job.

Bailey carried the fantastic story into 1957, a time in which Dr. Ivy was succeeding in his attempts to duplicate Krebiozen himself as a final step in the scientific proof of the drug's worth.

But even Bailey's story has its contradictions.

A Fayetteville doctor reports that he wrote inquiring about Krebiozen for one of his patients and was informed the cost would run almost $50 a day, indefinitely.

Bailey quoes the principals in the fight to have Krebiozen recognized as saying on numerous occasions that they have never charged a penny for the drug and that they have never authorized any doctor, anywhere, to charge for the drug.

And so it goes.

Whether Krebiozen is a "quack" cure, or the real answer to control of cancer will never be decided on a book review page. But the story of this drug and the tangled web into which it has fallen makes one of the most interesting tales of intrigue you'll run across. And it will provide a great deal of food for thought.

[From the Houston (Tex.) Chronicle of May 25, 1958]

In a scathing denunciation of certain high officials of the AMA, Herbert Bailey charges that the medical men have falsified and suppressed favorable evidence of the anticancer substance, Krebiozen, and calls for a congressional investigation in his new book, A Matter of Life or Death. Author of numerous medical articles, Bailey has spent 6 years accumulating evidence, both pro and con, and now believes Krebiozen's efficiency is so overwhelming it can no longer be challenged.

[From the United Press Book Review of April 20, 1958]

The sensational pro side of the long-continuing controversy over Krebiozen, a chemical substance used in treatment of cancer, is minutely detailed in A Matter of Life or Death, by Herbert Bailey.

Bailey leaves no doubt that he is a Krebiozen partisan and of his conviction that it has helped and even cured victims of cancer. He charges that certain officials of the American Medical Assiciation conspired against Krebiozen and asks for a congressional investigation of the AMA.

This charge was made first before the Illinois State legislative commission which investigated the Krebiozen controversy in 1953 and 1954. It was the basis of Bailey's first book on the subject, Krebiozen—Key to Cancer? published in 1955.

It is the basis of his second book which also includes charges made since against some medical men and medical organizations by Krebiozen proponents.

Bailey reports on the treatment of 1,500 far-advanced cancer patients by more than 200 physicians, all members of the American Medical Association. He says Krebiozen showed favorable results in half these patients.

Bailey formerly was a reporter who worked for newspapers in North Carolina, Nashville, and Chicago. He now writes for magazines.

[From the International News Service]

CANCER DRUG TIFF ON AGAIN

(By Patricia McCormack)

NEW YORK.—The long controversy over a hotly disputed cancer drug broke out again Saturday with the publication of an explosive report on it.

G. P. Putnam's Sons, publisher of the new book, A Matter of Life or Death, claimed that author Herbert Bailey presents documentary evidence that the drug—Krebiozen—has helped 50 percent of the 9,800 patients who have taken it.

The drug has not been accepted by the American Medical Association, the American Cancer Society or by most leading cancer scientists—who rely on an independent AMA investigation in 1951 which found the treatment of no value.

However, Bailey's book revolves about one highly respected scientist, Dr. Andrew C. Ivy, who has backed Krebiozen since the early fifties—after watching it used on dying cancer patients.

Dr. Ivy is head of the department of clinical science at the University of Illinois medical school and a former American Cancer Society director. Before his endorsement of Krebiozen, he had been slated for a much bigger post at the university.

In A Matter of Life or Death, Bailey calls for a congressional investigation of the American Medical Association, which, according to the publisher, has suppressed facts about Krebiozen.

Bailey says the reason for such an investigation is the fact that millions of persons the world over have died and are dying of cancer—when they may have been saved.

Leo Brown, public relations director of the American Medical Association, meanwhile, told International News Service that the AMA has no comment on Bailey's book—or the charges made in it.

Bailey, a medical writer, spent 6 years accumulating evidence, pro and con, on Krebiozen, a treatment with a substance derived from horse blood.

Critics of Krebiozen maintain that they have never been able to learn the exact chemical nature of the drug. They say that this, to some extent, places them at a disadvantage when attempting to evaluate its effectiveness.

But Bailey's publisher said that the proof of Krebiozen's efficiency against cancer is so overwhelming it can no longer be challenged.

The mystery drug thought to regulate cell growth, was discovered in 1949 by Dr. Stevan Durovic, former assistant professor of medicine at the University of Belgrade, Yugoslavia.

It is taken from the blood of horses which have been previously injected with an antibiotic substance.

Bailey reports on 50 cancer cases treated with Krebiozen in which, he says, the patients have survived 5 years or longer—the period ordinarily used in establishing whether there is a cure.

In addition, the book's publisher says, there are "hundreds of 1-, 2-, 3- and 4- year cases in which the cancer has regressed or disappeared, or the progress of the disease has been halted consistently."

[From the Fort Wayne (Ind.) News-Sentinel of May 31, 1958]

KERBIOZEN-CURE, QUACK? SCIENCE STILL DOESN'T KNOW

(A Matter of Life and Death, the Incredible Story of Krebiozen, by Herbert Bailey)

(By Edward Kintner)

The first scene in this remarkable story is set in the council chamber of the city of Chicago, where a committee of the Illinois Legislature was to investigate the causes of a controversy over Krebiozen at the University of Illinois. This was in 1953 and the hearings were held intermittently over a period of a year. Unfortunately, the legislative committee did not end the controversy.

Prominent men in the medical world have been involved in charges of conspiracy to control the distribution of this material for their own financial gain. Some have believed that Krebiozen is of much value in the treatment of cancer. Others have seemingly been convinced that it is worthless and have roughly denounced it as a fake. The author has been interested in the controversy for several years and this is the second book he has published on the subject. This one apparently carries much of the material of the first, with the addition of the developments of the past 3 years.

It is the story of many charges and countercharges without any certain conclusions reached as to the value of the drug or the lack of it. It tells of Dr. Stevan Durovic, a Yugoslav physician who believed that since cancer is characterized by a wild growth of cells, that the body should develop in the blood an antigrowth substance that would be effective against cancer if it could be isolated. He tried to isolate this substance from cattle with actinomycosis a disease characterized by tumor formation, but was unsuccessful. He then tried horses that had been inoculated with the same fungus and this time he was able to secure minute amounts of what he thought to be the substance he sought. It was tried on cancerous dogs and he found that their tumors shrank appreciably and in some cases, disappeared completely. Later it was given a trial on hopeless human cases. Some showed improvement, others did not. Dr. Durovic did most of this work in Argentina, as World War II had forced him from his own country. Later he came to Chicago with the hope of perfecting his methods and of having his material given a trial that would prove its worth. From there on the story reads like those involving hunting for pirate treasure, with their intrigues, plots, and threats, until one wonders if he is not concerned with underworld characters rather than with men interested in arriving at scientific truth.

No claim is made that Krebiozen is a cure for cancer, but considerable evidence in the form of case histories is given to show some objective improvement in 50 percent or more of the cases treated. Some of the patients, in the last stages of the disease did not recover but were free from pain after treatment was begun. Others were much improved and continued as arrested cases while the injections were continued, and still others have been symptom-free for as long as 5 or 6 years.

When one remembers turtle serum of some years ago and the many quack remedies that unscrupulous men have used to enrich themselves at the expense of the unfortunate victims of this disease, he is inclined to be skeptical of anything new. Nevertheless would it not seem like good sense to give this a carefully controlled trial and an unbiased evaluation, by competent doctors of unquestioned integrity? This seems to be the purpose of the author.

[From the Charleston (S. C.) Evening Post of April 4, 1958]

(By Michael M. Gildea)

Pain and death are much too personal subjects to permit logic and reason to prevail when medicine is discussed by laymen.

The disease that today signifies pain and death to most people is cancer. With doctors estimating that 1 out of every 4 persons now living will develop cancer, a cure for this disease is one of the most sought after.

One aspect of the search for a cancer cure, and possibly a preventive, deals with the controversial drug Krebiozen.

Developed by Dr. Steven Durovic, a Yugoslav working in Argentina, the drug was first brought to this country for testing in 1949. Since then it has been the subject of the most violent accusations and countercharges.

Herbert Bailey, a reporter who has written a number of medical articles for popular magazines, has undertaken to chronicle the dramatic history of Krebiozen in A Matter of Life or Death.

The author seeks to answer two basic questions with this book: Can Krebiozen be of value in the treatment of cancer and have the results of investigations of its use been deliberately obscured?

Evidence he presents apparently proves that, as a result of the attempts of pharmaceutical firms to control the drug's distribution, an organized compaign to discredit it was inaugurated. Charged with taking a dominant part in this campaign are a number of officials of the American Medical Associatfon.

The AMA has often been accused of entering too eagerly into the field of politics and of failing to promote the interests of medical research. The evidence presented by Mr. Bailey seems to back up these accusations.

Obviously he is impressed with the results of the drug on a number of cancer patients and the volume includes a number of case histories. However, he refers to an AMA report tending to discredit the drug but fails to report its findings in the same detail.

The real question raised by the publication of this book, however, is that of the value of presenting such a discussion to the public in this manner.

Admittedly, the development of a cancer cure is not only of interest but of importance to everyone. But how much good is done by arousing the public with an essential, emotional appeal?

Even though Mr. Bailey's charges might be completely valid, just what is the value of stirring up the public with articles in magazines over a question that can only be settled by diligent scientific research and evaluation?

Mr. Bailey feels the public and Congress should demand that the Federal Food and Drug Administration allow the manufacture and distribution of the drug. But what would be the value of an agency to regulate the production of drugs if it could be controlled by public hysteria?

Perhaps of more value would be his suggestion of a congressional investigation of the AMA. He would have the probe delve into the group's stand on health insurance, veterans hospitals, and other issues, as well as the Krebiozen controversy.

Finally, and probably most pertinent, he would have the American doctors clean out their own house and wipe out the political intrigues of the AMA.

After all, doctors are neither fools nor gods, but simply men with the training and experience to handle our medical problems for us.

Public opinion has its value in forcing issues, but it does not seem to be the force needed to decide a controversy that must depend on an accurate analysis by medical experts.

Mr. Bailey's book is valuable in that it presents readable and presumably accurate statements of one side of the story. It should not be accepted as the complete evaluation of the Krebiozen controversy.

[From the Saturday Review of July 5, 1958]

TRADEWINDS

A Matter of Life and Death (Putnam). Herbert Bailey's second book on Krebiozen, the first one being published 3 years ago and entitled "Krebiozen—Key to Cancer?" (Saturday Review August 13, 1955). The pro-Krebiozen forces don't bother with the question mark any more, and this current book is just as controversial a story as you could expect. What it boils down to, according to the author: A cure for cancer has been sabotaged by all the insidious power of the American Medical Association because some of its officials want control of it. Now: Is it a cure, has it been sabotaged, or is it as ineffectual as the AMA declared some years ago? In any case, read the book and find yourself in the midst of the hottest medical imbroglio since the Pharaohs started trepanning.

[From the San Francisco Daily Commercial News]

BOOKS

(By Hugh Russell Fraser)

Is there a cure for cancer? Of course not. Don't be silly. Not for serious forms of cancer, anyway.

For certain other forms—skin cancer, for example, yes. Cure is possible in 85 per cent of the cases. But the possibilities of cure are limited.

Are they?

How about a little footnote? Perhaps all the facts are not in, perhaps all the truth is not known yet. I say 'perhaps'. Nobody has a right to make any claims.

This week a reputable New York publisher—the ancient firm of G. P. Putnam Sons—has put on the stands a disturbing and challenging book. It is titled "A Matter of Life or Death: The Incredible Story of Krebiozen," by Herbert Bailey.

Now I am not saying the thesis of it is right or wrong. I am only saying the merits of it should be carefully examined. First, because the author does not offer the drug (Krebiozen) as a "cure" for cancer. Second, because the American Medical Association has denounced it as worthless. Or at least, it did so several years ago. It has said very little about it lately.

What makes A Matter of Life or Death absorbing reading, however is the amazing array of documented evidence it presents that many supposedly hopeless victims of cancer who have been treated with it are now living and well.

Some of the curious angles of it are:

The late Senator BRIAN MCMAHON, Democrat, Connecticut, went on record as saying Krebiozen brought him freedom from pain and prolonged his life. His own physician said it diminished his cancer, but that so much of his body tissue was destroyed before it was administered that death was inevitable.

MCMAHON WAS so impressed that he persuaded SAM RAYBURN, Speaker of the House, to pass legislation granting the developer of it, Yugoslav physician Dr. Steven Durovic, permanent residence in this country.

Seven cancer patients, reported in an issue of the AMA Journal to be dead or dying after the administering of Krebiozen, are still alive and well. Their affidavits cover two pages in the book.

About 200 members of the American Medical Association have expressed faith in the drug. (A relatively small number, of course, out of the total.)

The claim of some major hospitals that they have tested Krebiozen in hundreds of cases and found it worthless has been denied by the Krebiozen Foundation on the ground that these hospitals never at any time received a single ampule of the drug.

One of America's most distinguished medical scientists, a former director of the Naval Medical Research Institute at Bethesda, Md., and a former vice president of the University of Illinois, Dr. Andrew Ivy, has been driven into obscurity because he insisted that the drug should have the most exhaustive tests, not merely on hopeless or terminal cases but on incipient cancers.

The defense of the possible merits of of Krebiozen on the one hand by Drew Pearson, plus the magazines Pageant and Argosy, and the cry of "fake" on the other hand by publicists like Walter Winchell has only tended to becloud the whole issue.

Author Bailey's book would be more intelligible if it had an index. A controversial book, without an index, is almost worthless. Names must be checked against names, facts against other facts.

Not illogical, however, is the author's suggestion that a Senate investigation is in order. If the late Senator TOBEY (Republican, New Hampshire) had lived a little longer, he would have had it.

[From Writer's Digest of June-July 1958]

Mr. Howard Cady, vice president and editor in chief, has a strong instinct for books that will please many people. He is partial to good solid Americana, to light, subtle humor, to distinguished biography, or to well authenticated readable books which convey important information of help to the general reader.

A good example of this last category is Herbert Bailey's new book, A Matter of Life or Death, dealing with aspects of cancer treatment which have aroused considerable opposition in some quarters. After careful investigation Putnam's published this title in the belief that it may turn out to be one of the most important books of our time. If you have any reason to be interested in cancer, get this book.

[From Argosy magazine of April 1958]

EDITOR'S NOTE.—A new book dealing with the highly controversial anticancer agent, Krebiozen, entitled A Matter of Life or Death, has recently hit the stalls. It is authored by Herbert Bailey, who also penned the article about Long John Nebel on page 24 of this issue. Bailey wrote the provocative pieces on Krebiozen for Argosy last summer.

[From the Chicago Sunday American of May 25, 1958]

NEW WORK REVIEWS KREBIOZEN PROGRESS

(A Matter of Life or Death, by Herbert Bailey)

(Reviewed by Effie Alley)

Dr. Andrew C. Ivy, the University of Illinois' internationally known physiologist, continues to plug away at research on the controversial cancer drug, Krebiozen.

And medical writer Herb Bailey continues to plug away at the American Medical Association for what he alleges are its persecutions of Dr. Ivy and efforts to suppress the drug.

In his new book A Matter of Life and Death he summarizes the material previously presented in his 1955 publication Krebiozen—Key to Cancer? and brings the reader up to date on Dr. Ivy's later researches.

Among these is Ivy's new production of what he claims is Krebiozen, accomplished during 1956. Using basically the same methods as Dr. Stevan Durovic, the drug's discoverer, Ivy succeeded in obtaining from 40 horses miniscule amounts of a substance

which Bailey reports had the same anticancer effects as the original Krebiozen.

As to the latter, Bailey presents new statistics on patients treated with the drug. All, he says, were in the hopeless stage of the disease and had previously exhausted benefits to be gained by other forms of treatment, he says.

Included are terminal cases of cancer of the stomach, bladder, breast and colon and one case of widespread melanoma or "black cancer."

The latter patent was reported by her physician to have been "failing rapidly," with a life-expectancy of 2 to 3 months in August 1951, when Krebiozen treatment was started.

As of 1957 with no other treatment, Bailey says, the same doctor reported her well and with "no evidence of cancer." The doctor is said to have commented:

"I have never seen a 'cure' of malignant melanoma by any method of treatment. This one is miraculous and surpasses all understanding.

According to another report quoted by Bailey, eight ampules of Krebiozen brought complete disappearance of widespread cancer of the stomach as proved by exploratory operations before and after treatment. The patient was alive and symptom-free 3 years later, the report states.

A bedridden, terminal patient with cancer of the bladder who weighed only 90 pounds when Krebiozen treatment was begun in 1951, is reported well and with no sign of tumor as of 1957.

These are among the cases cited by Bailey among the 1,000 treated with Krebiozen.

Such results doubtless account for Dr. Ivy's recent proposal that the American Cancer Society sponsor a blind controlled test of the drug.

The society is now considering the proposal and it is to be hoped that it will undertake the project since on the face of the claims made for it—and claims made by a man of Dr. Ivy's stature in science cannot be ignored—Krebiozen would seem to be well worth investigating.

[From the Hollister (Calif.) Free Lance Hacienda of April 1958]

A MATTER OF LIFE OR DEATH

(By Herbert Bailey)

Cancer and its cures has been a hotly contested subject for decades. Countless cures have sprung up from time to time only to be proven valueless after extensive investigation. Now, Herbert Bailey, a medical writer but not a medical doctor has published a book about the drug, Krebiozen, that he claims has cured cancer in many dying victims of the disease. He produces evidence that he says proves that 50 percent of 1,800 patients treated with this wonder drug have been helped and in many cases have been entirely cured.

To the layman reader Mr. Bailey presents a convincing argument, but the American Medical Association and the American Cancer Society are far from convinced. The AMA, after an intensive investigation in 1951, found the treatment of no value. However, Mr. Bailey presents evidence from many leading recognized scientists that seems to back up his claim.

To us, this sort of thing is always dangerous for it gives hope when often hope should not be given. Naturally, anyone who has cancer and knows it, will reach for any straw that is offered, and this false hope is what the AMA is fighting.

Bailey calls for congressional investigation complaining that the AMA has suppressed information concerning the drug and he quotes Dr. Andrew C. Ivy, a highly respected scientist and head of the Department of Clinical Sciences at the University of Illinois Medical School as proof that Krebiozen has done wonders in the treatment of the disease.

With 800,000 cancer patients in these United States, Mr. Bailey has a tremendous potential reading public. Without question the American Medical Association will have to change its views of "no comment," for it must either back the claims for the drug or completely repudiate them. Cancer is one of leading killers in the Nation today. The public is vastly interested in any supposed cure. Krebiozen must either be accepted or rejected after Mr. Bailey's A Matter of Life or Death. This is indeed an intriguing book and Mr. Bailey has produced a book of national interest.

[From the Westport (Conn.) Town Crier of May 8, 1958]

A MATTER OF LIFE OR DEATH

(By Herbert Bailey)

This is a new edition of Krebiozen—Key to Cancer? revised and brought up to date, and reissued by a publisher with greater facilities for distribution than the publisher of the first edition. Just as the book appeared, a news story in the New York Times announced that the American Cancer Society was seriously considering a new and more extensive test of this anticancer chemical, krebiozen, than any that has been conducted to date. The book itself is still as forcefully written as the earlier edition and the story it tells more dramatically than most novels. The new material includes references to one case that occurred here in Westport, among Mr. Bailey's neighbors; he, himself, is a resident of Norwalk. We hope that the new edition will give this important book the wide distribution it deserves, though we are aware of a certain irony in the fact that, while one part of our society works so hard to find a cancer cure, another part of our society is busy making bombs with carcinogen fallout on such a scale that the whole business of a cure may become purely academic.

[From the Ontario (Canada) St. Catherines Standard of April 19, 1958]

A MATTER OF LIFE OR DEATH

The sensational "pro" side of the long-continuing controversy over krebiozen, a chemical substance used in treatment of cancer, is minutely detailed in A Matter of Life or Death by Herbert Bailey.

Bailey leaves no doubt that he is a Krebiozen partisan and of his conviction that it has helped and even cured victims of cancer. He charges that certain officials of the American Medical Association conspired against Krebiozen and asks for a congressional investigation of the AMA.

This charge was made first because the Illinois Legislative Commission which investigated the Krebiozen controversy in 1953 and 1954. It was the basis of Bailey's first book on the subject Krebiozen—Key to Cancer? published in 1955. It is the basis of his second book which also includes charges made against some medical men and medical organizations since by Krebiozen proponents. Bailey reports on the treatment of 1,500 far-advanced cancer patients by more than 200 physicians, all members of the American Medical Association. He says Krebiozen showed favorable results in half these patients.

Bailey formerly was a reporter who worked for newspapers in North Carolina, Nashville, and Chicago. He now writes for magazines.

[From the Akron (Ohio) Beacon-Journal of April 27, 1958]

BOOK SHELF—ANGRY WRITER HITS CANCER DRUG "PLOT"

(By Margot Jackson)

Has an arrestant, a pain-reliever, perhaps a cure for cancer, been developed? Is it being withheld from the public by a powerful group of proud men because they could not cut themselves in on the honors and/or money that might accrue?

Such are the charges made in A Matter of Life or Death, by Herbert Bailey, a newspaperman and a medical writer.

He revives the furor of a few years ago over krebiozen. His book details the theme that certain Chicago businessmen and some top medicos of the American Medical Association (AMA) have joined forces to thwart its testing, development, and use.

A Matter of Life and Death reads like a fantastic and complex scheme of greed and power. Yet it is full of names and addresses, quotes testimony before investigating groups, names dates, and publications.

Krebiozen was developed by a Yugoslav doctor, Stefan Durovic, who came to the United States on a visitor's visa from Argentina. He had tested a cancer arrestant on animals. He wanted facilities for further testing and so sought out the head of the School of Medicine at the University of Illinois, Dr. Andrew Ivy.

Bailey comments that usually a new hope, an untried drug, comes from a well-known pharmaceutical house.

He characterizes Dr. Ivy as a thoughtful, hopeful researcher who did not believe that wisdom, genius, and science were prerogatives only of the established.

Anyway, Dr. Ivy helped the foreign doctor with his testing—even though, again contrary to custom, he did not himself know the complete process by which krebiozen was extracted.

The patients responded surprisingly well, says this book. The wonder news spread to some Chicago businessmen, who promptly, insistently, demanded they be sold full rights to distribute krebiozen.

The Yugoslav doctor refused—for scientific and personal reasons—and a vast plot began, Bailey charges, against him and against the drug.

When Dr. Ivy invited selected medical writers to a cautious showing of the drug, says Bailey, a sensational news release was distributed before his quiet meeting began. Dr. Ivy still does not know who wrote this, Bailey charges, but it made such fantastic claims that Dr. Ivy was promptly suspended "for unethical practices" by the AMA.

He explains for the layman that doctors are not supposed to sponsor drugs. He also says there is a tradition that a drug is not properly introduced until the Journal of the AMA has presented it.

Shortly after this, the Journal published reports from doctors who said they'd used Krebiozen, Bailey writes. Yet his research, through the Krebiozen foundation, shows that the doctors signing had not requested sufficient dosage of the drug to treat a patient, let alone make a worthwhile testing.

Case histories favoring Krebiozen were not printed, Bailey says.

Another episode is more bizarre. There are a couple of chapters here, full of quotes and testimony, involving an alleged attempt to bribe a South American businessman so that Dr. Durovic's visa would be invalidated and his drug turned over to other parties—those same Chicago businessmen who originally wanted it, says Bailey.

Perhaps Bailey's strongest charge is that the AMA officials ignored an invitation from Dr. Ivy that both parties cooperate on a definite test.

Bailey's anger is intense, but his material is written clearly despite the complexities of the actions he describes. He wants science to be free from greed or vanity. He knows the public is the loser when it is not.

[From the Evansville (Ind.) Press of April 10, 1958]

CLAIMS OF AUTHOR ARE CONTROVERSIAL

(By Bish Thompson)

It's fantastic to consider that there may be even now an effective anticancer agent.

Herbert Bailey insists it is not fantastic at all. The astounding fact in his mind is that

this agent, called Krebiozen, has been frowned upon, suppressed, and even falsified against by the medical profession.

In a scathing denunciation of certain high officials of the AMA, Mr. Bailey calls for a congressional investigation of that organization.

"The fact that millions of persons the world over have died, and are dying, of cancer—when they may have been saved—is reason enough," the writer asserts, "but just as important is that such a thing could happen in our country."

Certainly his book, A Matter of Life or Death, makes a stout bid to become the most controversial volume of the year. Such shocking accusations as it contains, cannot help but create a verbal riot.

After a study of 6 years, Mr. Bailey presents his findings and conclusions. He traces the struggles of the discoverers and testers of Krebiozen since 1949. He offers documentary proof of actual suppression of the facts by AMA officials.

He builds an impressive case for Krebiozen and against AMA. It is disturbing, to say the least, to think there may be something in what he says. Because it is indeed "a matter of life and death." It is hoped the charges he makes will be either refuted by evidence to the contrary or carried into a further investigation of the case.

[From the Cleveland (Ohio) Plain Dealer of May 11, 1958]

BATTLE OVER CANCER CLAIMS STILL RAGES HOTLY

(A Matter of Life or Death, by Herbert Bailey; There is an Answer to Cancer, by Leonard B. Goldman)

The sensational pro side of the long-continuing controversy over Krebiozen, a chemical substance used in treatment of cancer, is minutely detailed in A Matter of Life or Death, by Herbert Bailey.

Bailey leaves no doubt that he is a Krebiozen partisan and of his conviction that it has helped and even cured victims of cancer. He charges that certain officials of the American Medical Association conspired against Krebiozen and asks for a congressional investigation of the AMA.

This charge was made first before the Illinois State legislative commission which investigated the Krebiozen controversy in 1953 and 1954. It was the basis of Bailey's first book on the subject, Krebiozen—Key to Cancer? published in 1955.

It is the basis of his second book which also includes charges made since against some medical men and medical organizations by Krebiozen proponents.

Bailey reports on the treatment of 1,500 far advanced cancer patients by more than 200 physicians, all members of the American Medical Association. He says Krebiozen showed favorable results in half these patients.

Bailey formerly was a reporter who worked for newspapers in North Carolina, Nashville, and Chicago. He now writes for magazines.

DR. GOLDMAN'S BOOK

There is no controversial matter in Dr. Goldman's book, There Is an Answer to Cancer. Asserting that factual information about the causes, prevention, and treatment is the best answer to this baffling killer, Dr. Goldman attempts to reply to such questions as:

What are the latest findings in cancer research?

What steps can you take to minimize its dangers to you and your family?

In popular vein he then goes on to describe in detail the most common forms of cancer, the parts of the body most vulnerable to attack, and the different methods of attacking the disease. One of these notably is a byproduct of the atomic reactor, particularly in diagnosis and treatment.

Dr. Goldman has been a practicing cancer specialist for 25 years and is now clinical professor in radiotherapy at New York Medical College.

[From the Norwalk (Conn.) Hour of April 29, 1958]

HAVE INTEREST IN NEW BOOK

Herbert Bailey, of Saugatuck Shores, is the author of a new book, A Matter of Life or Death, published by G. P. Putnam & Sons, of New York City. The story deals with a new drug, Krebiozen, an agent used to treat cancer. David M. Kasson of Ellery Lane, Westport, president of a Brooklyn, N. Y., electronics firm, is mentioned in the book as one who was treated with the drug.

[From the Springfield (Mass.) Republican of May 18, 1958]

WRITER DISCUSSES ANTICANCER AGENT

The account of the discovery and development of what is said to be an effective anticancer agent, Krebiozen, and the courageous fight of the discoverers and their allies for its acceptance, is the subject of the aptly titled book A Matter of Life or Death, by Herbert Bailey. In a scathing denunciation of certain high officials of the AMA, who he maintains have falsified and suppressed favorable evidence of the anticancer substance, Krebiozen, the author calls for a congressional investigation of the AMA.

"The fact that millions of persons the world over have died, and are dying, of cancer—when they may have been saved—is reason enough," he asserts, "but just as important is that such a thing could happen in our country."

Bailey, author of numerous medical articles, has spent the past 6 years accumulating evidence, both pro and con, and now presents in A Matter of Life or Death his claims of Krebiozen's efficiency, which he feels is so overwhelming it can no longer be challenged. He charges actual suppression of the facts by various officials of the AMA.

[From the Berkeley (Calif.) Gazette of May 3, 1958]

A MATTER OF LIFE OR DEATH

(By Herbert Bailey)

Reputable publishers like Putnam's always have controversial books like this one checked very carefully for possible libel suits and the fact that they allowed Herbert Bailey to make the statements he does must mean they believe the book is true. For this in a book about Krebiozen, a drug which has been used as a cure for cancer during the last 6 years but which has been attacked by the American Medical Association.

Herbert Bailey gives the history of development of Krebiozen, the attacks against it, and the records of the cures which have been made through its use. He documents all the claims he makes for Krebiozen, its discoverer, Dr. Steven Durovic of Yugoslavia, and one of its leading sponsors in this country, the eminent scientist, Dr. Andrew Ivy, and the story he tells of the persecution they were subjected to is not a pretty one.

As he suggests, some action should be taken immediately to either approve Krebiozen or prove it worthless. And, as long as they can show the number of cures they do, it should be approved.

[From the Atlanta Journal and Constitution of June 1, 1958]

CANCER CURE?—EX-ATLANTIAN PENS INDICTMENT OF AMA

(By Sam F. Lucchese)

(A Matter of Life or Death)

Subtitled "The Incredible Story of Krebiozen," this book, by a former Atlantan, is an angry indictment of the American Medical Association, which has refused to accept the drug Krebiozen for cancer treatment.

Herbert Bailey, a southern newspaperman who was at one time promotion manager for defunct radio station WCON, makes out a dramatic case for the drug, citing miraculous results and cures in cancer cases.

Krebiozen was developed by a Yugoslavian, Dr. Steven Durovich, and is derived from horse blood.

Dr. Andrew C. Ivy, professor of physiology and vice president of the University of Chicago, became interested in the drug and a subsequent hassle ensued. Dr. Ivy was dropped as vice president and Dr. George D. Stoddard resigned as president of the University of Illinois. Dr. Ivy was suspended by the Chicago Medical Society and the AMA board found itself in the middle of the violent controversy.

Herbert Bailey does not pretend to be unbiased as he tells the story of Krebiozen and the squabble that has raged around it for the last 6 years. He presents documentary evidence of the drug's positive effects on 50 percent of the "hopeless" patients treated with it. He says that "several doctors" in Atlanta are using it successfully.

Krebiozen is thought to regulate cell growth. This is his second book on the mystery drug. The first, K—Krebiozen—Key to Cancer? was published in 1955.

In view of the documented "testimony" presented by Bailey, it would seem that the Krebiozen controversy should be easy to settle. If it is as successful as Bailey claims it is, the AMA and the American Cancer Society should give it the green light. If it isn't—and tests could prove it—then it should be repudiated officially.

If Krebiozen can forestall cancer, the killer, or even minimize the pain that afflicts the sufferer, it deserves the wider use acceptance would assure it.

Meanwhile, if something isn't done, Bailey if apt to get the congressional investigation he clamors for in this book.

A Matter of Life or Death was favorably discussed over Ray Henley's Three-Star Extra (NBC); Henry P. Morgan's News (ABC); Long John Nebel's Party Line (WOR and Mutual network); Dr. Carlton Frederick's Living Should Be Fun (WOR); Norman Ross Show (WBKB–TV, Chicago).

Forthcoming: favorable mention in Saturday Review (Trade Winds); Mike Wallace interview in the New York Post.

Department of Defense Appropriation Bill, 1959

SPEECH

OF

HON. LESTER HOLTZMAN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 31, 1958

The House in Committee of the Whole House on the State of the Union had under consideration the bill (H. R. 12738) making appropriations for the Department of Defense for the fiscal year ending June 30, 1959, and for other purposes.

Mr. HOLTZMAN. Mr. Chairman, much has been said here by those of us who favor the bill now pending in the House of Representatives, to give a much needed increase in benefits to some of our senior citizens.

In the past I have supported legislation to liberalize the Social Security Act, and I feel that this legislation now before us deserves our favorable consid-

eration and attention. With the tremendous increase in the cost of living over the past years our elder citizens have, to a great extent, exhausted what little savings they might have had, and have been forced to exist solely on pensions or annuities for which they might have been eligible, on the benefits they have been receiving through the Social Security Act, or on public welfare. When you realize what the maximum benefits payable under the Social Security Act amount to, the very fact that they can exist on such a sum, or even less, is quite remarkable.

During the last Congress, and earlier this year I introduced legislation which would remove the present limitation of $1,200 per annum on outside income that can be earned by those who are recipients of social security; which would make full social security benefits payable to men at the age of 60, and to women at the age of 55; and which would eliminate the requirement that an individual must have attained the age of 50 before he is eligible to receive disability insurance benefits. Unfortunately, none of these provisions has been incorporated in this current bill, but there are certain other benefits and protections now offered to the many citizens for whom the system was originally designed. For that reason, I shall be happy to support the bill. I am hopeful that further consideration will be given these provisions called for in my bill, possibly during the next Congress after the Advisory Commission on Social Security has completed its study of the social security program and has had an opportunity to report to the Congress in 1959.

I have said before, and I shall say it again, the welfare of all our citizens, whether they are young or old, able or disabled, should be of utmost concern to us all. We should continue our efforts to improve and liberalize the existing system, and to correct any inequities which might be revealed.

I shall be happy to pledge myself to work for the continued improvement of the social-security system.

Tribute to Wisconsin Teachers

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Tuesday, August 5, 1958

Mr. WILEY. Mr. President, I was pleased to read in the July 1958 issue of the Wisconsin Alumnus magazine, official publication of the Wisconsin Alumni Association, whose able executive director is Mr. John Berge, a most interesting article in tribute to a particular group of faculty members.

These particular professors and instructors are the honored individuals who have devoted literally decades to teaching at the university and who are retiring this year.

In reading the brief tributes which have been paid to each of these faculty members, one is impressed by several facts:

(a) The outstanding caliber of the individuals, themselves. How fortunate it is, I say that the university has been blessed with their services.

(b) The breathtaking way in which these members of the teaching staff have not only served the university, but have served the State of Wisconsin, as a whole. This is, of course, part and parcel of the university's entire concept of serving all of the people of the entire State; and not simply the cause of higher education.

(c) The inspiring way in which these dedicated individuals have carried their vocational talents and skills into what might be considered in other States almost extracurricular activities but which, in our State and our university, are part of the whole career of whole leaders.

These faculty members have been pacemakers. Their names stand out in the ranks of the teaching profession in the 48 States. Many of their names have become bywords in texts which they have written; in organizations which they have served.

They represent a vast number of man-years and woman-years in the devoted service to the cause of education and of our American system, as a whole.

I congratulate these faculty members for all that they have meant and all that they have done on behalf of the university and of my State.

We need more members of the teaching profession like them. There are few, if any, professions more noble than that of teaching.

In singling out these individuals we honor them for what they symbolize in the faculty of other institutions of learning across the land.

I ask unanimous consent that the text of this Wisconsin Alumnus article be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THE WISCONSIN ALUMNUS SALUTES RETIRING FACULTY MEMBERS OF 1958

(These statements are not intended to be complete biographies. But they do express the sincere and personal feelings of friends and colleagues, prepared especially for the alumnus.)

William H. Liesch, director, bureau of high school courses extension. The retirement of William H. Liesch closes an effective service of nearly 4 decades for the promotion of education through university extension programs. Joining the staff at Milwaukee in 1919, he was given a field organizer's status the next year at Oshkosh, where he served a large populous area until called to the Madison headquarters in 1942 to direct the program of extension courses for high-school students. In evaluation of total results of this program, it may be said that large progress has been made in the acquirement of credits and proficiencies by countless young people in our high schools. The large yearly increase in enrollments and known benefits are one index of a program that few States can equal, none surpass. Mr. Liesch has given this undertaking the assiduity and energy that have brought about its still growing reputation so widely creditable to the University of Wisconsin.

Alma L. Bridgman, executive secretary and instructor, economics. For 37 years Alma Bridgman, more than anyone else, has personified the economics department for our graduate students, both American and foreign. She has been concerned with the personal and educational problems of them all. And those who studied economics as undergraduates remember her, too—some for her stimulating quiz sections in 1a and b, others in the main economics office where so many came to her with their problems and were encouraged by her to high standards of performance. In the UW economics department since 1921, and its executive secretary since 1927, her familiarity with the complex university organization and her personal contacts with so many campus personalities have been of immeasurable value to the department and its successive chairmen. By her example she has helped us all to put the interests of students and of the university above personal or even departmental aims or ambitions. For years to come we shall do well to test many of our departmental decisions by asking the question: "Would Alma approve?"

Arthur R. Albert, associate professor, soils. "A. R." devoted 37 years of outstanding service to the improvement of soil management through research. Most of this work was carried out in various parts of the State on the branch experiment stations where farmers came to him with their problems. He designed and constructed the first cultpacker seeder for sowing grass seed, and is widely known in the sandy areas of the State as the best-informed man on management of sandy soils. His work showed the great importance of lime and fertilizer, and, in some cases, irrigation, in the efficient production of farm and vegetable crops. He was a pioneer in the use of shelter belts to protect crops and soil from blowing sand. His cordial manner, enthusiasm, and willingness to lend a helping hand have won the affection of all who come to know him.

Harlan Seyforth, assistant professor, agriculture extension. A certificate of distinguished service from the National Agricultural Agents Association is an indication of the respect for Harlan G. Seyforth after 37 years' service as Pierce County agricultural agent. He has been a driving force behind adoption of many improved farm practices. He started the first 4–H Club program in the county and has helped its growth from 82 members in 1921 to over 500 in 1958. He also started the first homemaker program in Pierce County. Mr. Seyforth received certificate of merit awards from the Wisconsin Extension Workers Association in 1937 and 1946. In 1945 he received a citation from Epsilon Sigma Phi, national extension fraternity. He served as regional director of the National County Agents Association and was secretary of the Wisconsin County Agents Association for 10 years. In spite of these and many other activities, he never failed to find time to render services when needed. His many friends are grateful for his contributions to agriculture and his willingness to work for the betterment of rural life.

Philip H. Person, professor, sociology and anthropology. Phil Person has served his university and the Milwaukee community as teacher, scholar and dedicated citizen for 27 years. He was attracted to Wisconsin for his graduate work by the university's dedication to academic freedom and the informed liberalism of Ross, Gillin, Ely, and Commons. As charter founder and president of the International Institute of Milwaukee for 12 years, organizer and first president of the Milwaukee chapter of American Civil Liber-

ties Union, and member of many committees of the community fund, he helped to give substance to the Wisconsin idea. As scholar, he compiled many ecological maps of Milwaukee. As teacher, he has helped generations of students to see their world in the light of sociology. To his friends he embodies the best in the legacy of Wisconsin progressivism.

Alanson H. Edgerton, professor, education. "Lon" Edgerton came to the University of Wisconsin 30 years ago after taking 3 degrees at Columbia and holding positions in New York, Michigan, Indiana and the Canal Zone. In his 34 years here his writing and teaching have resulted in national recognition which was recognized in his election to the office of president of the National Vocational Guidance Association. His services to the State included many years as an adviser in employee selection and classification. Space does not permit elaboration of all his accomplishments in research, teaching and writing, but special mention must be made of his willingness to spend endless hours in counseling with individuals. In this process he has truly practiced what he has taught about the importance of concern for the individual.

William D. Stovall, director, State laboratory of hygiene and professor, clinical pathology. The hygienic laboratory to which "Bill" Stovall came in 1914 was examining some 7,000 specimens annually with a staff of about 6. From that meager operation he has built for the State board of health and the people of Wisconsin a laboratory service whose staff of 90 examines over half a million specimens annually, and which is unexcelled anywhere in the world. In the field of cancer control he has been a leader among physicians, and has fostered the citizen's activities of the American Cancer Society. His untiring efforts with the medical societies as a speaker, adviser, and friendly counselor in medical problems has endeared him to the medical profession throughout the State. He has lived his motto "example is better than precept" by spending many hours through the years at the laboratory bench and microscope with other workers, to give the physician a laboratory service so vital to the treatment of his patient. He has been an inspiring teacher to the many medical students and nurses through the years. In medical and sanitary laboratory service he has made the boundaries of the university the boundaries of the State.

Blanche L. Lee, professor and assistant agricultural extension director. Doubling in size of the home demonstration program in the 22 years Blanche L. Lee has served as leader of home economics extension work in Wisconsin is only one indication of the real change she's brought about. Today's program now extends to 69 counties (this figure contrasts with 19 in 1936), and shows great change of emphasis. In 1936, making clothing and feeding the family was a large part of homemaker training. Today, State specialists and county home agents train, too, in the field of child development, family economics, housing, home management and consumer marketing, study of government, health, and safety programs. Influenced by Miss Lee's interest in the development of people, Wisconsin women now carry out their own programs of scholarships, youth work, and international understanding through county home demonstration councils. This interest, coupled with her respect for her county and State staff, her leadership, fairness, and friendliness, has been responsible for the development of today's strong program.

George F. Baumeister, associate professor, agricultural extension. George F. Baumeister has been an outstanding leader in development of dairy organizations, farm cooperatives and other special agricultural programs in Wisconsin. He led organization of the largest direct-number dairy breeding association in the United States and also Wisconsin's largest milk marketing cooperative. Mr. Baumeister entered Wisconsin extension work as Shawano County agent in 1929. His continuous efforts to develop capacities and interests of people in his county have made Shawano County outstanding in farm leadership, particularly in cooperatives. In 1942, his appointment as district county agent leader brought Mr. Baumeister in contact with extension workers throughout Wisconsin. He assisted in formation of the Pacemaker Corn Club to promote adoption of improved practices in corn production. He cooperated in development of procedures for getting farmers to raise alfalfa in north central Wisconsin areas where it had practically gone out of production. These are but a few of his many contributions to Wisconsin farmers. George Baumeister's influence on farm practices will benefit Wisconsin agriculture for many years to come.

Cornelius C. Janzen, professor, economics. Cornelius C. Janzen is a recognized pioneer in economics education. His dictionary of terms in economics was the first such book to be published in the United States; he has devoted 39 years to the teaching of economics, the last 29 of which were to the State of Wisconsin in the former State college in Milwaukee and later the University of Wisconsin-Milwaukee; he served as head of his department in the State college for 26 years. The unpredictable quality of life, as he calls it, has led him to have an insatiable curiosity about the behavior of people. His extensive knowledge about the economic behavior of individuals has made his teaching unusually interesting and stimulating to students.

Charles L. Fluke, professor, entomology. A versatile, mild-mannered person who may well be called a Father of Entomology Teaching in Wisconsin, Charles L. Fluke has distinguished himself well within his profession and by his teachings. He has attracted to the field of entomology the enthusiasm and interest of many students who enrolled in his classes, and the effectiveness of his teaching has brought to him the reward of having been one of the best instructors on the campus of the college of agriculture. Many technical papers on the taxonomy of Syrphidae have been published by Dr. Fluke and at the present time he is considered a world authority on this important insect group.

Robert Nohr, professor, director, physical education for men. Robert Nohr has devoted the past 32 years to teaching hundreds of Wisconsin students the fine points of physical education and athletic coaching. He has served as director of the men's professional course in physical education since 1945. During his administration, the department has continued to grow and expand while maintaining a healthy relationship and balance between the learning of physical skill activities and academic studies. Now, in Florida, Bob will indulge in his favorite pastimes of fishing, golf, and gardening the year around.

Ernest V. Ryall, assistant professor, agriculture extension. Ernest V. Ryall has been named the dean of county agents, by the National Director of Agricultural Extension, C. M. Ferguson. Ernie, as he is called by his many friends, has served agriculture in Wisconsin for 37 years, 31 of those years as agent in Kenosha County. He is the only Wisconsin county agent to receive the Superior Service Award of the United States Department of Agriculture. Ernie has been instrumental in working for adequate extension retirement systems throughout the Nation. His efforts made it possible for all extension workers on a Federal appointment to benefit from the Federal retirement program. He has served on committees of the National Association of County Agricultural Agents for many years, as well as the State association. He has always had an interest in professional improvement and worked in establishing some of the first summer agricultural extension courses. Extension workers all over the Nation hold him in high esteem.

Selma S. König, assistant professor, German extension. Selma S. König became a member of the university faculty in 1946 and has since that time taught German at Racine and Kenosha. In this capacity, she has introduced many a student not only to the German language but also to German culture, for she is a firm believer in the precept that a language cannot be learned in a vacuum. Her students will long remember her for the thoroughness of the training she imparted to them, a thoroughness that stands them in good stead both in their knowledge of German and in their general approach to the tasks of life.

John H. Kolb, professor, rural sociology. John Harrison Kolb is internationally known for his research on Wisconsin rural communities and neighborhoods. Born on a farm near Berlin, Wis., on April 18, 1888, he took his doctor of philosophy degree from Wisconsin in 1921. He organized the department of rural sociology in 1930, serving as its chairman for almost 25 years, and his reputation as scholar and teacher has attracted many graduate students. Over the years he trained more doctors of philosophy than any other rural sociologist in the world. Generations of students will testify that he was also a superb undergraduate teacher. His contributions to the improvement of rural life in the State, through community and neighborhood organization, school reorganization, and the cultural arts, will be a lasting influence. On a number of occasions he has been called upon by Federal and international agencies. His colleagues at the university will miss his energetic and insightful leadership as much as his warm and friendly companionship.

Chester Allen, director, special service correspondence study. A dedicated exponent of the concept of adult education in many phases, Chester Allen has devoted nearly five decades to the cause of learning for the out-of-school citizenry. His introduction to the university extension division was in 1910; from that start in Milwaukee his service led to the Oshkosh office and to Appleton, and in 1926, to Madison, where he was called to administer the farflung extension field services in the State. Among the programs he administered most effectively were the courses of study for inmates in the State's correctional institutions and the division's efforts to protect individuals from ill advised enrollments in shady commercial correspondence schools. His direction of the statewide field work in its many ramifications has, however, constituted his major accomplishment toward extension's highest vocational and cultural aims.

The Grain Processing Program

EXTENSION OF REMARKS
OF
HON. W. PAT JENNINGS
OF VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 5, 1958

Mr. JENNINGS. Mr. Speaker, the House yesterday approved H. R. 13268, relating to the Government's grain processing program. Several of my colleagues have expressed strong interest in this program, so I include with these remarks information from the Depart-

ment of Agriculture on the donations both here at home and overseas.

H. R. 13268, as approved by the House, does not begin any new program. It is aimed at improving and simplifying the existing operations of the Department. This bill authorizes the Commodity Credit Corporation — CCC — when it deems advisable, to purchase wheat flour and cornmeal for donation purposes, rather than entering into a contract to have flour and cornmeal milled from grain in the CCC inventory. It also authorizes CCC to sell an equivalent amount of wheat and corn to offset purchases of flour and cornmeal.

Thus the grain donation program would continue with an improved method of operation and with some saving to the Government.

The need for this legislation is apparent from the statement presented to the House by the Department of Agriculture and from the hearings by the House Committee on Agriculture. I refer you to the committee's report for detail on the grain processing program.

Mr. Speaker, the Department of Agriculture started its grain processing program following the passage of Public Law 311 in the 84th Congress in 1955. The House Agriculture Committee reported in May of 1955, H. R. 2851, a bill that I introduced to give authority for the processing of surplus grain into a form suitable for home or institution, and for donation to needy persons. The House approved this bill on May 25, 1955, by the overwhelming vote of 344 yeas to 1 nay.

Final congressional approval of this processing authority came later in the year, and the President signed an amended version of H. R. 2851 on August 9, 1955.

Support of this 1955 legislation for processing and donation of wheat flour and cornmeal came from many Members of the House and Senate with high unemployment in their areas, especially in the coalfields of the Nation. The purpose, essentially, was to make bread available to the many thousands of unemployed who were receiving surplus food commodities.

Public Law 311 provided for a 2-year program. In 1956, Public Law 540—the omnibus farm bill of that year—was approved by the Congress. Included in this law was a provision to make the processing authority permanent. Since the passage of Public Law 540, the program has continued to make wheat flour and cornmeal available to domestic outlets in all 48 States, Alaska, Hawaii, Puerto Rico, Guam, and to nonprofit voluntary welfare agencies at east, gulf, west coast, and Great Lakes ports for export to needy persons in foreign countries.

The importance of this donation program to those areas of the Nation with substantial unemployment is great. Many of my colleagues advise me of the need for these processed grain products, and it is essential to the welfare of many thousands of persons that we continue these operations. Of course, donation of our surplus grains to those in need is as important part of the surplus disposal program.

The Department of Agriculture has provided the following information on the domestic and foreign donations of cornmeal and wheat flour for fiscal years 1956, 1957, and 1958:

[In thousands of pounds]

Fiscal year	Cornmeal	Flour
DOMESTIC		
1956	50,560	77,051
1957	117,060	243,693
1958 (preliminary)	120,000	270,000
Total	287,620	590,744
FOREIGN		
1956		
1957	268,229	528,179
1958 (preliminary)	299,200	776,300
Total	567,429	1,304,479

I also include the following tabulation, by State, of domestic donations for fiscal year 1958. These are preliminary totals of the Department of Agriculture and may be subject to some revision, but they give a good estimate of the program in the past 12 months:

UNITED STATES DEPARTMENT OF AGRICULTURE
AGRICULTURAL MARKETING SERVICE

Quantity of surplus cornmeal and wheat flour distributed to domestic outlets, fiscal year 1958 (preliminary)

[In thousands of pounds]

	Cornmeal	Flour
Alabama	5,155	9,993
Arizona	229	1,273
Arkansas	7,329	14,108
California	1,745	10,233
Colorado	227	2,508
Connecticut	145	1,708
Delaware	54	404
District of Columbia	554	1,517
Florida	762	3,375
Georgia	2,404	5,200
Idaho	38	473
Illinois	2,280	7,658
Indiana	2,139	3,399
Iowa	1,566	4,470
Kansas	264	2,912
Kentucky	7,312	9,248
Louisiana	7,590	11,059
Maine	375	1,506
Maryland	345	960
Massachusetts	248	2,430
Michigan	5,690	14,886
Minnesota	40	3,276
Mississippi	16,788	25,204
Missouri	2,420	5,513
Montana	87	649
Nebraska	42	1,434
Nevada	11	80
New Hampshire	90	977
New Jersey	295	3,806
New Mexico	808	2,087
New York	1,736	17,468
North Carolina	1,199	3,409
North Dakota	301	1,778
Ohio	572	3,027
Oklahoma	8,902	14,312
Oregon	183	1,292
Pennsylvania	5,479	22,761
Rhode Island	103	836
South Carolina	778	2,770
South Dakota	1,203	3,643
Tennessee	8,939	11,356
Texas	5,054	8,986
Utah	374	2,681
Vermont	95	599
Virginia	2,223	4,547
Washington	275	2,084
West Virginia	6,191	11,550
Wisconsin	518	3,461
Wyoming	217	525
Total continental United States	111,374	269,431
Alaska	27	137
Hawaii		239
Puerto Rico	8,587	
Virgin Islands	12	
Guam		3
Trust territories		190
Total United States and Territories	120,000	270,000

Mr. Speaker, the grain processing program has been of tremendous help to the needy people of the Nation; it has enabled the school-lunch program to receive needed supplies of processed grain; it has been utilized in aid to charitable institutions; it has helped our friends overseas; it has made a significant contribution to the farm program by using surplus stocks of grain.

The legislation now being considered by the Congress will serve to eliminate difficulties being encountered by the Department of Agriculture and, in effect, help to meet the objectives of the donation program.

Principle Sound, Details Negotiable

EXTENSION OF REMARKS
OF
HON. J. ARTHUR YOUNGER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 5, 1958

Mr. YOUNGER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial taken from the Redwood City (Calif.) Tribune of July 16, 1958, on the Trinity River partnership proposal:

PRINCIPLE SOUND, DETAILS NEGOTIABLE

If we accept the theory that private capital and private enterprise have a legitimate place in our economy, then the principle underlying the Trinity River partnership proposal is sound.

If, as some of its opponents charge, details of the proposed contract with the Pacific Gas & Electric Co. are not in the public interest, then the thing to do is to seek a revision of the contract—not to let the matter drop and commit more tax money to the powerplant.

In principle, the partnership proposal provides for the Federal Government to build the multipurpose Trinity Dam as part of California's great water program—a mammoth project not attractive to private capital but of such general benefit as to justify Uncle Sam's expenditure of tax money.

The power-creating potential of the water falling over the dam would be sold to the Pacific Gas & Electric Co., which offers to build a powerplant and distribute the power as a part of its business.

The opposition which killed the proposal as far as the present session of Congress is concerned fell into two general categories. There were the public power doctrinaires and there were those who, while agreeing with the partnership principle, criticized details of the Pacific Gas & Electric offer.

The former are dedicated to the policy of having all development of natural resources financed and controlled by the Government, regardless of efficiency and in spite of the dangers of growing bureaucracy. Many details of the Pacific Gas & Electric offer have come in for question or criticism. For instance, E. A. Heath, chief electrical engineer for the city of Palo Alto, takes issue with certain cost estimates on which Pacific Gas & Electric bases its proposed payment for falling water, and notes that the 50-year contract carries no provision for renegotiation if conditions change.

Confronted by a 2-foot-high stack of documents, opinions, arguments, and conflicting statements on the Pacific Gas & Electric proposal, we are in no position to agree or disagree on the specific points at issue. We

believe, however, that it is proper and should be profitable for the Federal Government to sell the falling water potential to the utility.

We believe that a further effort should be made to meet the objections of those who accepted the plan in principle but opposed certain contract terms. If this can be done, then new legislation can be introduced at the next session of Congress.

If it cannot be done, then it will apparently be necessary for the Federal Government to commit additional millions to the project and further extend its control over our economy.

Two Democrats View the Economy

EXTENSION OF REMARKS
OF
HON. EMMET F. BYRNE
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 5, 1958

Mr. BYRNE of Illinois. Mr. Speaker, the second session of this Congress has heard many pronouncements of gloom about our economy. Despite the prophets of gloom, the economic situation throughout the Nation is better and the upturn is more apparent daily.

It is interesting to read of the differences of opinion on this subject which two of my colleagues across the aisle in the Senate hold. The editorial appearing in the Chicago Tribune of July 31 is quoted:

TWO DEMOCRATS VIEW THE ECONOMY

Two prominent Democrats felt the country's economic pulse over the weekend and came up with conflicting diagnoses. Senator BYRD, of Virginia, a conservative who believes in economy and sound money, was alarmed at what he called the seeds of a terrific inflation." Senator DOUGLAS, of Illinois, a liberal who believes there is nothing that a little Government cash won't cure, found a distinct improvement in the outlook.

For Senator DOUGLAS to be able to look ahead and not see a depression is indeed a novelty. In fact his very optimism is perhaps the most convincing justification for Senator BYRD's pessimism. Senator DOUGLAS' forebodings became the gloomiest when, after the Republican victory in 1952, the galloping inflation of the Democrats was slowed to a walk. If the outlook is pleasing even to Senator DOUGLAS, an inflation of large proportions may be in prospect.

There are a good many other signs that Senator BYRD is right. In order to make up its deficit of about $10 billion a year, the Government has asked for an increase in the debt limit and is going to have to borrow more money. By the end of the year, its refunding operations and new borrowing will total about $33 billion. Large Government borrowing is an accepted prelude to inflation. The Government spending in itself—aggravated now by the Middle East crisis—tends toward inflation.

Senator BYRD sees "no possibility of any tax reductions in the next 2 years and probably for a long time after that," and he sees no chance of balancing the budget for a long time.

With this prospect, it is hard to see how we can escape the inflation which beset us after World War II. The whole vicious circle of rising costs and prices will be on us again. As long as the Republicans do not seem to have a policy of their own to follow, they would do far better to follow the Democratic policies according to Senator BYRD than the Democratic policies according to Senator DOUGLAS.

Letter to Hon. Clarence Cannon, of Missouri

EXTENSION OF REMARKS
OF
HON. HARRY G. HASKELL, JR.
OF DELAWARE
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 5, 1958

Mr. HASKELL. Mr. Speaker, I feel it an obligation, in order to keep the record straight, to place the following letter which I believe speaks for itself in the RECORD:

GROTON, CONN., *July 7, 1958.*

Hon. CLARENCE CANNON,
House of Representatives, Committee on Appropriations, Washington, D. C.

SIR: You have failed up to the present time to provide me with the name of the individual whom you quoted in your remarks appearing in the CONGRESSIONAL RECORD of May 6, 1958, as authority for your statement that General Short and I were not on speaking terms when the Japanese attacked Pearl Harbor. I know that to be wholly false and believe I am entitled to the name of the person so testifying. Whether or not he testified under oath and his qualifications. Moreover, I would appreciate a definite reference to the hearing of the subcommittee of the Appropriations Committee if printed, and if not, a transcript of that part of the record to which you refer.

The receipt of your remarks in the CONGRESSIONAL RECORD of June 18 is acknowledged. It was forwarded without accompanying letter in a franked envelope bearing your name and I presume sent by your direction.

Your remarks are a continuation of the frantic efforts of the Roosevelt administration to divert attention from the failures in Washington and to place the blame for the catastrophe on the commanders at Pearl Harbor. Your account of the testimony that General Short and I were not on speaking terms given to your committee shortly after Pearl Harbor was effectively publicized, though 16 years later I am still denied the name of the individual who perpetrated this lie.

For 4 years, from 1941 to 1945, the administration supporters and gossip peddlers had a field day making statements which the wall of Government wartime secrecy prevented me from answering.

One of the most persistent and widespread was to the effect that General Short and I were not on speaking terms at the time of the attack. Another was that the uniformed services in Hawaii were all drunk when the attack came. This is the reason the Naval court of inquiry investigated these charges thoroughly and set forth their falsity in unmistakable language.

You still seek to sustain these charges by the simple expedient of attacking the integrity of the investigators and witnesses who reached conclusions or gave testimony which does not suit you.

You have slandered the honorable, capable, and devoted officers who served as members of the Army board of investigation and the Navy court of inquiry. You have also slandered the personnel of the Army and Navy stationed in Hawaii in 1941, many of whom gave their lives in defense of this country.

It is astounding to me that you should charge General Short and me of falsely testifying as to our personal and official cooperation even when as you phrase it "all but life itself depended on their convincing the world that they had been friends when they should have been friends."

The testimony on this matter, given before the Naval court of inquiry, was given under oath and was true to my personal knowledge and is substantiated by much other testimony.

You, yourself, refer to the statements in the Roberts report to the effect that General Short and I conferred on November 27, and December 1, 2, and 3. You further state from the Roberts report: "They did not then or subsequently hold any conferences specifically directed to the meaning and significance of the warning messages received by both" (General Short, Admiral Kimmel).

How ridiculous it is to assume that the commander in chief of the Pacific Fleet is unable to understand a message sent by the Navy Department without conferring with the commanding general of the Hawaiian department to determine what the Navy Department meant by the messages that were sent to him and conversely that the commanding general, Hawaiian department, had to confer with the commander in chief, Pacific Fleet, in order for him to know what the messages sent to him by the War Department meant. If the messages were so worded the fault lay neither with me or General Short.

You imply that my request to revise the transcript of my testimony before the Roberts commission is censurable and completely ignore the published statement of Adm. William H. Standley, United States Navy, retired, a former Chief of Naval Operations and a member of the Roberts commission. He wrote regarding Admiral Kimmel: "He was permitted no counsel and had no right to ask questions or to cross-examine witnesses as he would have had if he had been made a defendant. Thus both Short and Kimmel were denied all of the usual rights accorded to American citizens appearing before judicial proceedings as interested parties." Even Communist plotting the overthrow of our country are accorded far more legal safeguards than were granted to me and General Short. Admiral Standley also wrote: "In spite of the known inefficiency of the commission's reporters, when Admiral Kimmel asked permission to correct his testimony in which he had found so many errors that it took him 2 days to go over it, the commission voted to keep the record as originally made although the answers recorded to many questions were obviously incorrect and many of them absurd. At my urgent insistences, the commission did finally authorize Admiral Kimmel's corrected testimony to be attached to the record as an addendum."

Your remarks with regard to the conduct of both officers and men on the evening preceding the Pearl Harbor attack is an insult to the gallant men who died in the treacherous Japanese attack and to all the members of both Army and Navy stationed on the Island of Oahu. Infrequently there might be an individual who overindulged in intoxicants but these were promptly apprehended by the shore patrol or military police and returned to their ship or station. The evidence as to the sobriety of officers and men was clear in the documentary evidence available to the investigation boards and yet in spite of their findings you state: "But the very fact that it was considered necessary to emphasize this testimony naturally gives rise to some doubt." You apparently are quite willing to doubt the testimony given and believe the worst of the fine young men in the Armed Forces that were stationed in Hawaii.

I was not permitted to know what testimony was presented to the Roberts Commission and was never given an opportunity to clarify or refute any statement made before it.

I was not made a defendant before the Hewitt one-man investigation, was not called to testify, and was not permitted to have any knowledge of the proceedings. I requested authority to attend this investiga-

tion and was advised that time did not permit. When I repeated my request the Secretary of the Navy did not even reply. Perhaps the reason may be found in the testimony of Captain Safford who narrated before the joint congressional committee the pressure to which he was subjected by the committee counsel to make him change his testimony. All did not have the strength of character of Captain Safford and some modified their preceding sworn statements.

Although I requested the joint congressional committee to call certain witnesses many of them were not called to testify. Among these was Fleet Adm. William F. Halsey, my senior fleet air officer at the time of the attack.

The Navy court of inquiry was the only investigation of Pearl Harbor before which I was permitted to cross-examine and call witnesses. You are substantially correct in your statement that this inquiry "found Admiral Kimmel as pure as the driven snow." In more moderate language expressed by Admiral Murfin, the president of the court, years later, "we found Admiral Kimmel had done everything possible under the circumstances."

On advice of counsel I declined to take part in the Hart investigation because the stipulations demanded of me would have placed my fate completely in the hands of the Secretary of the Navy. This I did regretfully because it was through my efforts that this investigation was initiated. The proceedings of the Hart investigation were a valuable contribution.

Why were the Secretary of the Navy and the Secretary of War so anxious to have the damaging testimony in both the naval court of inquiry and the Army inquiry changed? The answer is very simple, both inquiries had found that the responsibility for the Pearl Harbor disaster rested in large part at the headquarters of our Government in Washington. Admiral Standley, whom I have referred to above, wrote:

"From the beginning of our investigation I held a firm belief that the real responsibility for the disaster at Pearl Harbor was lodged many thousands of miles from the Territory of Hawaii."

Even the Hewitt investigation found:

"During his incumbency as commander in chief of Pacific Fleet, Admiral Kimmel was indefatigable, resourceful, and energetic in his efforts to prepare the fleet for war."

You refer to the information that had been forwarded to me and to General Short and specifically to a message based upon information from our Ambassador in Tokyo, Mr. Grew, dated January 27, 1941, to the effect that the Peruvian Ambassador in Tokyo had heard rumors that, in the event of trouble breaking out between the United States and Japan, the Japanese intended to make a surprise attack against Pearl Harbor; but you make no mention of the letter of the Chief of Naval Operations which forwarded this information to me on February 1, 1941, to the effect that "The Division of Naval Intelligence places no credence in these rumors. Furthermore, based upon known data regarding the present disposition and employment of Japanese Naval and Army forces no move against Pearl Harbor appears imminent or planned for the foreseeable future."

This estimate was never changed.

When you refer to "A position so admirably defended as Pearl Harbor with every facility, submarine nets, radar, sonar, planes, and ships of the line," you create a very false impression. Admiral Richardson was relieved because he so strongly held that the fleet should not be based in the Hawaiian area.

The Army antiaircraft batteries were woefully lacking but the War Department was unable to supply more.

Of 180 long-range bombing planes authorized by the War Department early in 1941 only 12 had arrived, and of these 6 were out of commission as they had been stripped of vital parts to enable other planes of similar type to continue their flight to their destination in the Philippines.

Of 100 Navy patrol planes authorized for the 14th Naval District at Pearl Harbor not 1 had arrived prior to December 7, 1941.

With regard to the radar installations, these had just been installed and their personnel were under training. The installation of these stations had been delayed due to the inability of the Army and the Interior Department to agree upon the location of these stations.

With reference to personnel for the ships there were serious shortages of both officers and enlisted personnel and men were constantly being detached to provide crews for ships being newly commissioned.

No one has ever explained why the weaknesses so clearly described in the Secretary of the Navy's letter of January 24, 1941, were permitted to continue during all the months at this outlying station whose security was vital to the safety of the fleet and of the United States.

Facilities to fuel the fleet were inadequate and a severe handicap to all fleet operations.

The only planes in Hawaii suitable for long-distance scouting were the patrol planes assigned to the fleet and they were totally inadequate to cover the approaches to Hawaii. The only planes suitable for long-range bombing were the 6 B–17 Army planes and those attached to the 2 carriers.

At the time of the attack the two carriers were on missions initiated by the Navy Department.

These and other deficiencies had been repeatedly reported by General Short and me as well as by our predecessors.

The messages of October 16, November 24, and November 27, 1941, from the Navy Department to the commander of the Pacific Fleet and the messages of November 27 and November 29, 1941, to General Short from the War Department stressed sabotage and that an attack if made would be directed against ports in southeast Asia or the Philippines. With the benefit of the intercepted Japanese messages, how they arrived at this conclusion will always be a mystery to me.

To add to our difficulties the messages also directed that "if hostilities cannot, repeat cannot be avoided, the United States desires that Japan commit the first overt act."

The message of November 27, 1941, from the War Department to General Short specifically directed him to "report measures taken." On the same date General Short replied, "Department alerted to prevent sabotage. Liaison with Navy."

Recorded testimony shows this report was read by the Secretary of War, the Chief of Staff of the Army, the Chief of War Plans, Army, and the Chief of War Plans, Navy. There can be no reasonable doubt that this report was read and understood by these responsible officials in Washington. For 9 days and until the Japanese attack the War Department did not express any disapproval of this alert and did not give General Short any information calculated to make him change the alert.

What was most needed at Pearl Harbor at this time was the information in Washington from the Japanese intercepts that indicated clearly an attack on Pearl Harbor.

The Navy Department sent me various messages quoting from intercepted Japanese dispatches. I believed I was getting all such messages and acted accordingly. After the attack I found that many vitally important messages were withheld from the Hawaiian commanders.

I was never informed that Japanese intercepted messages had divided Pearl Harbor into five areas and sought minute information of the berthing of ships in those areas.

A Japanese dispatch decoded and translated on October 9, 1941, stated:

"With regard to warships and aircraft carriers, we would like to have you report on those at anchor (those are not so important), tied up at wharves, buoys, and in docks. (Designate types and classes briefly. If possible, we would like to have you make mention of the fact when there are two or more vessels alongside the same wharf.)"

On October 10, 1941, another dispatch was decoded and translated in Washington which described an elaborate and detailed system of symbols to be used thereafter in designating the location of vessels in Pearl Harbor.

A dispatch of November 15 decoded and translated in Washington on December 3, 1941, stated:

"As relations between Japan and the United States are most critical, make your "ships in harbor report" irregular, but at the rate of twice a week. Although you already are no doubt aware, please take extra care to maintain secrecy."

A dispatch of November 18 decoded and translated in Washington on December 5, 1941, stated:

"Please report on the following areas as to vessels anchored therein: Area N, Pearl Harbor, Mamala Bay (Honolulu), and the areas adjacent thereto. (Make your investigation with great secrecy.)"

A dispatch of November decoded and translated in Washington on December 6, 1941, stated the Japanese consul general in Honolulu had reported that in area A there was a battleship of the *Oklahoma* class; that in area A there were 3 heavy cruisers at anchor, as well as carrier *Enterprise* or some other vessel; that 2 heavy cruisers of the *Chicago* class were tied up at docks "KS." The course taken by destroyers entering the harbor, their speed, and distances apart were also described.

On December 4 a dispatch was decoded and translated in Washington which gave instructions to the Japanese consul in Honolulu to investigate bases in the neighborhood of the Hawaiian military reservation.

On December 5, 1941, a dispatch was decoded and translated in Washington which stated:

"We have been receiving reports from you on ship movements, but in future you will also report even when there are no movements."

In no other area was the Japanese Government seeking the detailed information that they sought about Pearl Harbor.

In the period immediately preceeding the attack reports were demanded even when there were no ship movements. This detailed information, obtained with such painstaking care, had no conceivable usefulness from a military viewpoint except for an attack on Pearl Harbor.

No one had a more direct and immediate interest in the security of the fleet in Pearl Harbor than its commander in chief. No one had a greater right than I to know that Japan had carved up Pearl Harbor into sub areas and was seeking and receiving reports as to the precise berthings in that harbor of the ships of the fleet. I had been sent Mr. Grew's report earlier in the year with positive advice from the Navy Department that no credence was to be placed in the rumored Japanese plans for an attack on Pearl Harbor. I was told then that no Japanese move against Pearl Harbor appeared "imminent or planed for the foreseeable future." Certainly I was entitled to know what information in the Navy Department completely altered the information and advice previously given to me. Surely I was entitled to know of the intercepted dispatches between Tokyo and Honolulu on and after September 24, 1941, which indicated that a Japanese move against Pearl Harbor was planned in Tokyo.

Yet not one of these dispatches about the location of ships in Pearl Harbor was supplied to me.

Knowledge of these foregoing dispatches would have radically changed the estimate of the situation made by me and my staff.

General Willoughby, in his book MacArthur, 1941–1945, quotes a staff report from MacArthur's headquarters:

"It was known that the Japanese consul in Honolulu cabled Tokyo reports on general ship movements. In October his instructions were sharpened. Tokyo called for specific instead of general reports. In November the daily reports were on a grid system of the inner harbor with coordinate locations of American men-of-war: this was no longer a case of diplomatic curiosity; coordinate grid is the classical method for pinpoint target designation; our battleships had suddenly become targets.

"Spencer Akin was uneasy from the start. We drew our own conclusions and the Filipino-American troops took up beach positions long before the Japanese landings."

If MacArthur's headquarters which had no responsibility for Pearl Harbor were impressed by this information, it is impossible to understand how its significance escaped all the talent in the War and Navy Departments in Washington.

The dispatches about the berthing of ships in Pearl Harbor also clarified the significance of other Japanese dispatches decoded and translated in the Navy Department prior to the attack.

The deadline date was first established by a dispatch decoded and translated on November 5, 1941, the date of its origin.

"Because of various circumstances, it is absolutely necessary that all arrangements for the signing of this agreement be completed by the 25th of this month. I realize that this is a difficult order, but under the circumstances it is an unavoidable one. Please understand this thoroughly and tackle the problem of saving the Japanese-United States relations from falling into a chaotic condition. Do so with great determination and with unstinted effort, I beg of you.

"This information is to be kept strictly to yourself alone."

The deadline was reiterated in a dispatch decoded and translated in the Navy Department on November 12, 1941.

"Judging from the progress of the conversations, there seem to be indications that the United States is still not fully aware of the exceedingly criticalness of the situation here. The fact remains that the date set forth in my message No. 736 is absolutely immovable under present conditions. It is a definite deadline and therefore it is essential that a settlement be reached by about that time. The session of Parliament opens on the 15th (work will start on (the following day?)) according to the schedule. The government must have a clear picture of things to come in presenting its case at the session. You can see, therefore, that the situation is nearing a climax, and that time is indeed becoming short. * * *

"Whatever the case may be, the fact remains that the date set forth in my message No. 736 is an absolutely immovable one. Please, therefore, make the United States see the light, so as to make possible the signing of the agreement by that date."

The deadline was again repeated in a dispatch decoded in Washington on November 17.

"For your Honor's own information.

"1. I have read your No. 1090 and you may be sure that you have all my gratitude for the efforts you have put forth, but the fate of our Empire hangs by the slender thread of a few days, so please fight harder than you ever did before.

"2. In your opinion we ought to wait and see what turn the war takes and remain patient. However, I am awfully sorry to say that the situation renders this out of the question. I set the deadline for the solution of these negotiations in my No. 736 and there will be no change. Please try to understand that. You see how short the time is; therefore, do not allow the United States to sidetrack us and delay the negotiations any further. Press them for a solution on the basis of our proposals and do your best to bring about an immediate solution."

The deadline was finally extended on November 22 for 4 days in a dispatch decoded and translated on November 22, 1941.

"It is awfully hard for us to consider changing the date we set in my No. 736. You should know this; however, I know you are working hard. Stick to our fixed policy and do your very best. Spare no efforts and try to bring about the solution we desire. There are reasons beyond your ability to guess why we wanted to settle Japanese-American relations by the 25th, but if within the next 3 or 4 days you can finish your conversations with the Americans; if the signing can be completed by the 29th (let me write it out for you—twenty-ninth); if the pertinent notes can be exchanged; if we can get an understanding with Great Britain and the Netherlands; and in short, if everything can be finished, we have decided to wait until that date. This time we mean it, that the deadline absolutely cannot be changed. After that things are automatically going to happen. Please take this into your careful consideration and work harder than you ever have before. This, for the present, is for the information of you two Ambassadors alone."

Again on November 24, 1941, Tokyo specifically instructed its ambassadors in Washington that the November 29 deadline was set in Tokyo time.

In at least six separate dispatches on November 5, 11, 15, 16, 22, and 24 Japan established and extended the deadline finally advanced to November 29.

After the deadline date a Japanese plan was automatically going into operation. It was of such importance that the Japanese Government declared: "The fate of our Empire hangs by the slender thread of a few days."

On December 1, 1941, Tokyo advised its Ambassadors in Washington,

"The date set in my message No. 812 has come and gone and the situation continues to be increasingly critical."

A dispatch on November 28 decoded and translated on the same day, stated:

"Well, you two Ambassadors have exerted superhuman efforts but, in spite of this, the United States has gone ahead and presented this humiliating proposal. This was quite unexpected and extremely regrettable. The Imperial Government can by no means use it as a basis for negotiations. Therefore, with a report of the views of the Imperial Government on this American proposal which I will send you in 2 or 3 days, the negotiations will be de facto ruptured. This is inevitable."

Not one of the Japanese messages about the "deadline" were supplied to me although the American commanders in the Philippines were supplied with this information as they were also supplied with all the information in the decoded Japanese intercepts that were denied to the Hawaiian commanders.

The commanders at Pearl Harbor were not kept informed of the progress of negotiations with Japan. I was never supplied with the text of Mr. Hull's message of November 26, 1941, to the Japanese Government which has been referred to frequently as an ultimatum. Mr. Stimson characterized it as Mr. Hull's decision to "kick the whole thing over."

Among other terms this note provided:

"The Government of Japan will withdraw all military naval, air, and police forces from China and Indochina.

"The Government of the United States and the Government of Japan will not support—militarily, politically, economically—any government or regime in China other than the National Government of the Republic of China with capital temporarily at Chunking.

"Both governments will agree that no agreement which either has concluded with any third power or powers shall be interpreted by it in such a way as to conflict with the fundamental purpose of this agreement, the establishment and preservation of peace throughout the Pacific area."

The reply to this note was delivered in Washington within hours of the Japanese attack.

My information on this and previous exchanges between the two governments was obtained from newspapers and radio. I believe Washington newspaper correspondents and the editors of our leading newspapers were kept better informed than were the commanders at Pearl Harbor.

After receipt by Tokyo of the American note of November 26, the intercepted Japanese dispatches indicate that Japan attached great importance to the continuance of negotiations in order to conceal the plan that would take effect automatically on November 29, as evidenced by the Japanse dispatch of November 28:

"I do not wish you to give the impression that the negotiations are broken off. Merely say to them that you are awaiting instructions and that, although the opinions of your government are not yet clear to you, to your own way of thinking the Imperial Government has always made just claims and has borne great sacrifices for the sake of peace in the Pacific."

I never received this information.

Again the dispatches from Tokyo to Washington of December 1, 1941:

"To prevent the United States from becoming unduly suspicious we have been advising the press and others that though there are some wide differences between Japan and the United States, the negotiations are continuing. (The above is for only your information.)"

I never received this information.

Again in the transpacific telephone conversations and dispatches the same theme is stressed, be careful not to alarm the Government of the United States and do nothing to cause a breaking off of negotiations.

This information was decoded and translated in Washington on November 30 and was never sent to me.

The intercepted Japanese diplomatic dispatches show that on and after November 29 a Japanese plan of action automatically went into effect; that the plan was of such importance it involved the fate of the empire; that Japan urgently wanted the United States to believe that negotiations were continuing after the deadline date to prevent suspicion as to the nature of the plan.

What was the plan? Why such elaborate instructions to stretch out negotiations as a pretext to hide the unfolding of this plan? Anyone reading the Japanese intercepted messages would face this question.

No effort was made to mask the movements or presence of naval forces moving southward, because physical and radio observation of that movement were unavoidable. The troop movements to southern Indochina were the subject of formal exchanges between the Governments of Japan and the United States as evidenced by the communication which Mr. Wells handed to Mr. Nomura on December 2, 1941.

Other dispatches were received in Washington which gave evidence of the deepening crisis.

On the afternoon of December 6, 1941, a Japanese intercept was decoded which warned a 14-part message from Japan was

on its way to the Ambassadors in Washington. That the time for presenting this message to our State Department would be supplied later.

By 3 p. m. December 6, 1941, 13 of the 14 parts had been received. The decoding and translation was completed by 9 p. m. and distributed to the most important officers of the Government by midnight. Nine p. m. in Washington was 3:30 in the afternoon in Hawaii. At midnight it was 6:30 p. m. in Hawaii.

When the 13 parts were delivered to Mr. Roosevelt about 9 p. m., he remarked, "This means war."

The time of delivery message and the 14th part were decoded and translated by 9 a. m. December 7, 1941, the time for delivery was set at 1 p. m. Washington time which was 7:30 a. m. at Honolulu and 2 a. m. at Manila.

Yet not one word of the receipt of these messages which again clearly indicated an attack on Hawaii were ever given to General Short and me.

The story of the whereabouts of the Chief of Staff of the Army and the Chief of Naval Operations and their unaccountable lapse of memory has been publicized so much that it is unnecessary for me to repeat it.

I have written a documented account of Pearl Harbor. Other accounts which also tell the true story have been published by Charles A. Beard, Charles Callan Tansill, Frederic R. Sanborn, Harry Elmer Barnes, Adm. Robert A. Theobald, John T. Flynn, George Morgenstern, Walter Trohan, Percy L. Greaves, Jr., and many others.

I repeat to you once more, Mr. CANNON, the success of the attack on Pearl Harbor was not the result of interservice rivalries at Pearl Harbor. This success was caused by the deliberate failure of Washington to give the commanders in Hawaii the information available in Washington to which they were entitled. This information which was denied to the Hawaiian commanders was supplied to the American commanders in the Philippines and to the British.

Finally Mr. Congressman, the officers and men stationed in the Hawaiian Islands were fine, upstanding, and well disciplined young Americans whom the American people should ever remember with gratitude and honor. In the attack launched by the Japanese they showed themselves fearless, resourceful, and self sacrificing and I shall always be proud of having commanded such men but I cannot forgive those responsible for the death of the more than 3,000 soldiers, sailors, and marines who died for their country on the 7th of December 1941 nor accept your insinuation that hangovers from intemperance ashore on the night of December 6 may have contributed to the delay in opening fire on the attacking Japanese planes. As a matter of fact many antiaircraft guns on the ships were manned at the time of the attack and all antiaircraft guns of the fleet were in action in less than 10 minutes.

It is requested that you insert this letter in the CONGRESSIONAL RECORD.

Yours very truly,

HUSBAND E. KIMMEL.

The Record of Congress

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Friday, August 1, 1958

Mr. MULTER. Mr. Speaker, the cooperation which the Democratic 85th Congress has given to President Eisenhower is recounted in the following article by Rowland Evans, Jr, which appeared in the New York Herald Tribune of August 1, 1958. I commend it to our colleagues:

THE RECORD OF CONGRESS
(By Rowland Evans, Jr.)

The President decided early this year not to keep books on Congress with the usual list of "must" bills and, all things considered, it's just as well.

Because if there were the customary "must" list, it would be quite unimpressive. In fact, except for labor-reform legislation, tax relief for small business, some odds and ends dealing with immigration and a few other items, the "must" list would look remarkably like a blank piece of paper.

That does not mean, of course, that every single "t" has been crossed and every "i" dotted on Mr. Eisenhower's bristling legislative calendar. But it does mean that the President has won from the Democratic-controlled Congress a remarkable degree of cooperation on the really important items on his program. It does also mean, in retrospect, that despite the President's somber warning of the danger of a "cold war of partisan politics," with the Democrats in control of Congress and the Republicans installed in the White House, the Federal Government seems to function reasonably well as a coalition of two parties.

If anything this session of Congress has erred more on the side of too much than too little and that is the administration's chief concern today. Too much antirecession spending, for example, is worrying the fiscal experts almost as much as the tumult in the Middle East is worrying the diplomats. But on the biggest of all antirecession proposals, the proposal for a substantial tax cut, the President's opposition was sustained by Congress.

It is no exaggeration to say that Senator LYNDON B. JOHNSON, of Texas, the Senate majority leader, and House Speaker SAM RAYBURN turned Congress last January away from the acutely partisan atmosphere of economic recession and Soviet sputniks and guided it into generally bipartisan achievement. If a symbol is wanted, it is the strange and fruitful alliance between the Treasury Department and the Democratic leaders that decided the matter of tax reduction.

The overall record of the 2d session of the 85th Congress, even though it has several more days to run, by any standard of measurement sums up well. These are the chief accomplishments:

Statehood for Alaska, something that both parties have been promising, and failing to deliver, for years.

Defense reorganization, whereby the President's blueprint for a more efficient command structure built around a more powerful Secretary of Defense, was approved by Congress, if not in every detail, at least in enough to draw his commendation.

An extension of reciprocal trade and renewed authority to lower the tariff. Of all the President's objectives, this seemed last January to be the likeliest casualty. Mr. Eisenhower asked a 5-year extension. He will get at least 4, the longest duration of any extension since the Trade Agreements Act was originally approved for 3 years in 1934.

A foreign aid bill shaved well below the President's original figure but, according to all the signs, ample to meet the urgent requirements growing out of the Middle East crisis. Congress always carves away generous portions of the annual foreign aid request but the vote in the House this year, owing largely to small-minded Democrats, cut far deeper than usual. The Senate, however, is now in process of doing what the House failed to do—face up to the endless obligations of free-world leadership. Odds-on bet: The President finally will get a satisfactory bill.

Farm legislation that finally modifies the rigid parity concept and moves toward the more flexible price support system that the President has made the keystone of his farm policies. This bill passed the Senate and is given a good chance in the House.

To these must be added the Federal scholarship program, now appearing on the brink of probable passage; the increase in the price of postage stamps, even though somewhat less than asked; the boost in military pay scale; the new space agency, a LYNDON JOHNSON special; extension of unemployment compensation; exchange of atomic secrets with Great Britain; full disclosure of welfare and pension funds; and many others.

Teamwork and Cooperation in Soil-Conservation Work

EXTENSION OF REMARKS
OF
HON. WILLIAM H. AVERY
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES
Monday, August 4, 1958

Mr. AVERY. Mr. Speaker, I should like to bring to the attention of Congress a fine example of leadership in teamwork and cooperation for soil and water conservation. It is a summary of a statement made to soil conservation district supervisors of Kansas, Nebraska, South Dakota, North Dakota, Montana, and Wyoming.

This statement was made by Don Williams, Administrator of the Soil Conservation Service, at the annual meeting in June of the northern Great Plains area, National Association of Soil Conservation Districts. It represents the type of dynamic leadership for which Don Williams was awarded the Department of Agriculture distinguished service award last spring.

This spirit of public service for soil and water conservation, I know, is helping farmers in Kansas to make rapid progress toward the level of permanent protection and improvement of soil that will insure our Nation's welfare.

The following is the summary:

1. Soil Conservation Service has but one major responsibility and one major objective—to provide farmers and ranchers sound technical help they need to carry out their planned programs of soil and water conservation.

2. Soil and water conservation is a complex operation, involving a number of related sciences and requiring consideration of many different soils, topographic and climatic factors. It requires not only a combination of such sciences as engineering, soil science, agronomy, forestry, biology and range management, but requires a skillfully planned combination of different practices, as well, as indicated by the physical conditions and needs of each piece of land and the plans of each farmer or rancher, To provide such services requires local conservationists who have been thoroughly trained and who have supporting services of specialists in the several related scientific fields.

3. The soil and water conservation job, to be fully successful, needs several other ingredients, in addition to technical assistance. It requires research, to provide a sound scientific base for practices. It requires education, to communicate knowledge of new methods as rapidly as possible.

And it often requires credit or cost-sharing help, to enable farmers and ranchers to install needed conservation measures without delay.

4. State and local government should participate in the soil and water conservation program as much as possible so as to keep the administration and character of the program responsive to the needs and wishes of local people. For this reason, the Department of Agriculture encourages and supports the creation of soil conservation districts, local units of State government created under State law expressly for the purpose of carrying out local conservation work with aid from the Soil Conservation Service, the Agricultural Conservation Program Service, and any other agencies which have assistance available.

5. Nongovernmental organizations and groups have a responsibility and a big part to play in the progress of soil and water conservation. Evidence of this type of support for soil conservation districts is seen in the financial and other material and moral support which business and industry, educational and religious and other organizations provide in increasing volume each year.

6. We do not believe or propose that local soil conservation districts can or should assume the work of the ASC committees, which are in existence to carry out certain directly administered programs of the United States Department of Agriculture. And, since local soil conservation programs are in the hands of units of State government, the ASC committees cannot assume the work of the governing bodies of the soil conservation districts.

7. As a public agency, the SCS has its operations reviewed regularly by appropriate units of both the executive and legislative branches of Government. It constantly strives to improve its efficiency and service, and has gained recognition as one of the most efficient agencies in Federal Government. However, since soil conservation districts operate independently of SCS, alleged deficiencies in SCS operations are not a logical basis for abolishing any local soil conservation district.

8. Maximum conservation can be achieved only when each program, each agency, and each level of government plays its full part. SCS will continue to emphasize the importance of full teamwork between the component agencies of the Department of Agriculture, the ASC committees, and the soil conservation districts and other agencies or units of State government.

Bill Lee Proves It

EXTENSION OF REMARKS
OF
HON. EMMET F. BYRNE
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 5, 1958

Mr. BYRNE of Illinois. Mr. Speaker, I was interested in the editorial appearing in the Chicago Daily News of July 29, which reads as follows:

BILL LEE PROVES IT

Why is there so much racket picketing in and around Chicago?

In an editorial last Thursday, we said:

"Too many influential people didn't want it stopped. Even among the unions that have not practiced unabashed extortion, there were some that wanted freedom to compel organization of employees by attacking the employer instead of persuading the employees."

This was a mild understatement.

Yesterday, William A. Lee, president of the Chicago Federation of Labor, declared flatly that he would oppose any legislation to ban organization picketing.

It should be remembered that Lee isn't merely the president of the Chicago Federation of Labor. When Richard J. Daley became mayor, Lee was the first man he appointed to a high place in the city administration—the presidency of the Civil Service Commission. He had been a powerful backer of Daley's candidacy.

The proposed legislation against organization picketing attempts only one thing—to forbid the blockade of establishments where there are no labor disputes, no union members, and no employees expressing any desire to become union members.

We think Mr. Lee downgrades the unions when he says they couldn't get along without the privilege of doing what the legislation would forbid.

After Labor Day labor hearings will begin in Chicago and I hope sincerely that all those involved will cooperate fully with the committee so that sound and fair legislation can be drawn up and enacted.

World Order and Peace

EXTENSION OF REMARKS
OF
HON. ROY W. WIER
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 5, 1958

Mr. WIER. Mr. Speaker, under leave to extend my remarks in the CONGRESSIONAL RECORD, I include a letter from Dr. Morris C. Robinson, president, Minnesota division, American Association for the United Nations, Inc., 1124 Metropolitan Building, Minneapolis, Minn., with resolutions adopted by the division concerning world order and peace.

The letter and resolutions follow:

MINNESOTA DIVISION, AMERICAN ASSOCIATION FOR THE UNITED NATIONS, INC.,
Minneapolis, Minn., July 29, 1958.

DEAR ROY: While the current crisis tends to absorb all of our attention at the moment, I believe the enclosed resolutions adopted by the Minnesota division, AAUN, are worthy of consideration and respectfully submit them as your representative of the thinking of Minnesotans deeply concerned for world order and peace.

Often our best thinking is done in times of relative calm and when this crisis is over we shall need to work toward the accomplishment suggested in these resolutions.

With cordial good wishes, I am,

Sincerely yours,

MORRIS C. ROBINSON.

RESOLUTIONS APPROVED AT THE ANNUAL MEETING, MINNESOTA DIVISION, AMERICAN ASSOCIATION FOR THE UNITED NATIONS, INC., JUNE 3, 1958

1. RECIPROCAL TRADE AGREEMENTS ACT

We urge the Congress of the United States to enact the draft legislation (H. R. 10368) proposed by the Administration to extend for 5 years the reciprocal trade agreements program. We believe such authority is essential to a consistent policy of encouraging the growth of international trade. Such encouragement is one of the major contributions the United States can make to economic well-being and progress and to the easing of international tensions.

2. ORGANIZATION FOR TRADE COOPERATION

We believe that the United States should assume membership in the Organization for Trade Cooperation. We therefore urge approval of H. R. 6630 by the Congress of the United States.

3. DEVELOPMENT PROGRAMS

It is essential that this country should continue for some years to assist underdeveloped areas, primarily through technical assitance programs and by providing capital for long-range development programs. There are marked advantages in channeling such assistance increasingly through an international agency, for this removes any suspicion or possibility of economic imperialism and enlarges the pool of experts available for staffing technical assistance teams. We urge that the United States enlarge the proportion of its economic aid channeled through the United Nations and heartily endorse the recommendations to that effect made by Congressman WALTER JUDD. We also urge the need for making available substantial development capital to be allocated by an international agency competent to channel it into fruitful projects.

4. MIDDLE EAST PROBLEMS

We urge the United States Government to use its leadership in the United Nations to:

(a) Press for the acceptance by the Arab States and Israel of an equitable plan for the division of the waters of the Jordan River in the interests not only of the States concerned, but also of the Arab refugees;

(b) Continue such measures within the framework of the United Nations as may be necessary to guarantee the present borders between the Arab States and Israel against violation by force;

(c) Recommend the acceptance of the principle of resettlement for both Arab and Jewish refugees and the adoption by the countries involved of the principle of compensation for abandoned or lost properties;

(d) Contribute to the creation of a Middle East Development Authority in which both the Western powers and the nations of the area should be invited to cooperate, which would open up vast new areas for settlement of refugees.

5. UNITED NATIONS PEACE FORCE

We believe that the United Nations Emergency Force has demonstrated the usefulness of a small international police and that availability of such a force can best be assured by direct recruitment by the United Nations of a limited body of men. With such a core of career personnel as a cadre it would be possible to draw in additional forces when needed by inviting the smaller states to contribute contingents pledged to such service. A modest beginning in this direction may provide very useful guideposts for the future development of international security police.

6. DISARMAMENT

Disarmament, particularly in the field of nuclear weapons, continues to be a problem of great urgency. We believe that negotiation should continue, preferably within the framework of the United Nations, to determine whether the principal powers are disposed to accept an effective system of inspection which will permit termination of armament production and progressive reduction of weapons by stages.

We note with approval the efforts made by our Government to secure consideration of the possibility of ending atomic missile testing in conjunction with a system of inspection, and the proposal made for an Arctic inspection area. These advances have not been accepted. Nevertheless, we believe our Government should continue its efforts to find a formula which will prove mutually acceptable.

7. CONTROL OF OUTER SPACE

Technical progress in developing rockets, satellites, and space vehicles capable of propulsion without atmospheric support has opened the alternative possibilities of extraordinary scientific advances through cooperative effort or a vast and dangerous extension of great power rivalries. The principle of national jurisdiction in superjacent airspace has already been established. National security may require its extension to include a contiguous zone within which missiles and low orbit satellites would operate. Outer space beyond this point should be placed under control of the United Nations and restricted to peaceful, scientific uses approved by it. We urge the authorization of a United Nations space agency for this purpose. We also suggest the immediate formualtion by scientific and legal experts representing the member states of a draft convention defining the legal status of a contiguous zone and outer space and delegating jurisdiction over the latter to the United Nations. We consider that the Soviet Union acted improperly in apparently conditioning its proposal for a United Nations space agency upon withdrawal of military forces from foreign bases, but hope that the proposal my reflect some disposition to accept United Nations control of outer space as a goal having independent value.

8. GENOCIDE CONVENTION

We urge that the Senate of the United States give its consent to ratification of the Convention on Genocide.

9. HUMAN RIGHTS

We express our sense of the value of the Universal Declaration of Human Rights as a standard which has influenced legal protection and education in many countries, and our earnest hope that the Government of the United States will give careful consideration to ratification of the two Covenants on Human Rights when these have been approved by the United Nations General Assembly and opened for ratification.

Tiger's Voice To Haunt

EXTENSION OF REMARKS

OF

HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 5, 1958

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a very interesting article by Fulton Lewis, Jr., on the late Gen. Claire Chennault, of Flying Tiger fame, which appeared in the Boston Daily Record on August 1, 1958:

"TIGER'S" VOICE TO HAUNT

WASHINGTON.—Stashed away in the security of a law office vault here in Washington are 12 reels of tape recordings which will long haunt the friends of Communist China in our official circles.

They are recordings in the voice of the late fighting Gen. Claire Chennault, of Flying Tiger fame, made last February while the general was being hospitalized at Walter Reed Hospital here, in the last stages of his fatal battle against lung cancer.

As a friend and champion of Nationalist China, who fought the Institute of Pacific Relations' pro-Communist policy for China within the State Department, General Chennault knew the whole conspiracy behind the sellout of Chiang Kai-shek, in minute detail.

From memory and from notes, he knew the people and the parts they played, and the sabotage of the military aid program from the United States which had been ordered by Congress, but which never went through.

All this he recorded in his hospital room, with the help of his long time friend Edward B. Lockett, writer and former Hearst State Department correspondent, and at the instance of an even longer time friend and controversial figure in the Roosevelt New Deal, Thomas G. (Tommy the Cork) Corcoran.

Like General Chennault, Tommy Corcoran was and is a devout supporter of Chiang Kai-shek. It is he who will arrange publication of the Chennault memoranda, as soon as the 18 hours of aggregate tapes can be transcribed and edited.

There are additional Chennault papers, made in his last months, in the hands of the House Un-American Activities Committee as late as last April, which are of no less importance than the recordings.

These are the unexpurgated transcripts of an unpublicized consultation which the committe and staff members had with the general in his hotel room at the Willard Hotel, on which occasion he discussed the cause for the failures of American diplomacy over the world, not only in the Far East but elsewhere as well.

Part of this testimony has been published as a committee document, and is available to the public, but the most pointed and acrid of his analysis was off-the-record for personal reasons.

The kernel of it was that the United States Foreign Service is infested with incompetents and social dilettantes who overdrink, overplay, and overintrigue, and that the interests of the United States would be better served if we had no representation at all in many countries rather than the representation we do have.

He said also that what is true of the State Department Foreign Service is even more dangerously true of the International Cooperation Administration (foreign aid program) and the United States Information Service.

He described a system of post-hopping, in which personnel get themselves assigned for a few months to one country, then get themselves moved to another, and continue this process until they have enjoyed an around-the-world luxury tour at Government expense, never contributing any worthwhile service anywhere.

Could be that the general's ghost is more to worry about than the general himself, when he was alive. He had some qualms; the ghost does not.

Still No Farm Legislation

EXTENSION OF REMARKS

OF

HON. ROBERT W. HEMPHILL

OF SOUTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 5, 1958

Mr. HEMPHILL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Camden Chronicle, Camden, S. C., of July 30, 1958:

STILL NO FARM LEGISLATION

Congress is now turning its thoughs toward adjournment, and, to date, nothing has been done to help the plight of the farmers. Some type of legislation is urgently needed to insure that the position of the farmer—already poor—will not rapidly get worse.

Conceded that the problems of the farmer are complex, nevertheless we are surprised that congressmen haven't come up with some sort of general farm bill before this late date.

The only farm legislation passed during this session of Congress has been a resolution calling for a stay of any reduction in support prices of acreage allotments. The main purpose of this piece of legislation was to maintain the farmer's standard of living while work proceeded on measures of a more permanent nature, but nothing has come forth.

During the 5 years from 1952 to 1957, the deterioration of the farm position can be documented by the following facts, among others:

1. During the 5-year period, farm prices declined 16 percent.

2. Realized net farm income declined 19 percent.

3. The purchasing power of farm income declined 23 percent.

4. Farm population declined 12 percent from 24,283,000 in 1952, to 20,396,000 in 1957.

5. In 1957, the returns to all farm workers for their labor and management reached a low of 69 cents per hour, while the average wage of industrial workers reach a high of $2.07 per hour.

Our farmers are not asking for a welfare program. They are only asking for a chance to stay in business and keep their homes, to maintain that portion of God's land which is in their trust, and to have the opportunity to earn a decent living.

Hon. John A. Burns, of Hawaii

SPEECH

OF

HON. BARRATT O'HARA

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 31, 1958

Mr. O'HARA of Illinois. Mr. Speaker, no Member of this body is more highly regarded by his colleagues than the distinguished delegate from Hawaii, the Honorable JOHN A. BURNS, and I am happy to join with the many others in commending the gentleman for a service that has been truly dedicated. He has set a pattern for industry and for faithful attendance to every call of duty that is nothing short of an inspiration. What is equally important is that he has made so many warm and enduring friendships. He has put upon the cause of Hawaii the touch of a warm personality, and as we all know so well the Congress is not lacking in the human response. Many of us, voting as a matter of conviction to give statehood to Alaska, nevertheless when we voted were thinking of Delegate BOB BARTLETT. So the 86th Congress, when again as a matter of conviction we vote to give statehood to Hawaii, we will be thinking of Delegate JACK BURNS.

I doubt if any Member in the history of this body has done as much for the cause of his heart in one term as the distinguished gentleman from Hawaii. I wish especially to commend him for his wisdom in assuring statehood for Hawaii by refraining from the grandstand tactics that might have been expected from one of lesser stature and that would have drowned all statehood hopes for at least another decade.

I was a Member of the 81st Congress when we tried desperately but without success, although with the wholehearted support of the Truman Administration, to get statehood for Hawaii and Alaska, wrapped in one package. I was honored by having my speech on that occasion singled out for editorial mention by the daily newspaper in Honolulu and the entire speech printed by that newspaper in three installments. So I am by no means a newcomer in the fight for statehood for both territories.

The fact is that there was not a chance in the world for the passage this year of a bill giving statehood to both Hawaii and Alaska, and everyone at all acquainted with the Congress and the political aspects knew that the Alaska bill had by far the better chance of winning out on a trial run and thus breaking down the opposition to admitting states that were not contiguous to the American mainland. By a grandstand play, demanding that Hawaii come first, the delegate from Hawaii would have upset the apple cart, accomplished what the opposition wished and killed statehood for both territories. As it is, Alaska already has been voted statehood, Hawaii is assured of statehood in the 86th Congress, and in all fairness much of the credit must be given to the outstanding statesmanship of the Honorable JOHN A. BURNS, the distinguished Delegate from Hawaii.

I thank the gentleman from New York [Mr. O'BRIEN] for yielding to me that I might join with him and others in tribute to a truly great legislator.

Prevailing Wage Rate Determinations in Nebraska

EXTENSION OF REMARKS
OF
HON. JAMES ROOSEVELT
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 5, 1958

Mr. ROOSEVELT. Mr. Speaker, it is not unusual for confusion and misunderstanding to arise out of the operation of the Davis-Bacon Act, particularly with respect to the Department of Labor's determination of prevailing wage rates for federally financed projects. I have recently received a letter from the Nebraska Chapter of the Associated General Contractors of America, which illustrates this point. The letter, which follows immediately, contends that construction has been held up in specific instances by delays on the part of the Department of Labor in their predetermination of wage rates.

The Davis-Bacon Act represents an important facet of Government labor policy. Its enactment was a vital step in the progress that has been made and will be made toward recognizing the particular responsibility that the Government holds for leading the way in good employment practices. Constructive criticism is always valuable. But critical contentions which are not founded in fact could, in this instance, serve to undermine the public confidence in a policy that is vital to the continued strength and vigor of the labor force. In order to set the record straight, I include the complete correspondence that I have had on the subject in the RECORD under leave to extend my remarks:

NEBRASKA CHAPTER,
ASSOCIATED GENERAL CONTRACTORS OF AMERICA,
Lincoln, Nebr., July 18, 1958.

The Honorable JAMES ROOSEVELT,
House of Representatives, House Committee on Labor Standards, House Office Building, Washington, D. C.

DEAR CONGRESSMAN ROOSEVELT: Enclosed is an article from the Sunday Omaha World-Herald reporting on delays letting agencies here are experiencing with United States Labor Department predeterminations.

Also enclosed are two other articles about delays caused by Labor Department wage lists.

You may recall that proponents of Davis-Bacon provisions in the 1956 Federal-Aid Highway Act assured Congress that these requirements would neither hamstring nor delay the interstate program.

Sincerely yours,
JAMES CRITCHFIELD,
Manager.

[From the Omaha World-Herald of July 10, 1958]

LACK OF WAGE RATINGS HALTS IMPERIAL AIRPORT

(By James Denney)

The State aeronautics department Wednesday disclosed construction improvements at Imperial Municipal Airport are being delayed by failure of the United States Labor Department to supply a schedule of minimum wage rates.

Aeronautics Director Rolland Harr said Federal law requires that the Labor Department make a predetermination of minimum wages for the $60,000 project.

ASKED FOR 57

Financing of this job will include: Federal Government, $30,000; State of Nebraska, $15,000.

"We requested through the Civil Aeronautics Administration the wage rates for 57 job classifications for the Imperial construction May 27," Mr. Harr said.

"We received an answer June 19, giving us rates for only 20 jobs."

The director said construction cannot proceed until the Department provides rates for every job so that a contractor can bid.

ONE OF 17 CITIES

Among the jobs left off were rates for bituminous surfacing.

The difficulty apparently is similar to that faced by State Engineer L. N. Ress, who sought minimum wages for construction of Interstate Highway 1 interchange at 114th and L Streets near Omaha.

Mr. Ress said his office still has not been given a complete wage schedule.

Imperial was 1 of 17 Nebraska cities approved for local air service by the Civil Aeronautics Board in the Seven States Area case.

SERVICE DELAYED

It is to be served twice daily by Frontier Airlines on a route from Denver to Omaha, including stops at Sterling, Colo., Sidney, McCook, Kearney, Hastings, and Lincoln.

Until the airport is completed, there will be a delay in Frontier service.

James Critchfield, spokesman for the Highway-Heavy Chapter of the Associated General Contractors of Nebraska, said the rates supplied "average about 30 cents an hour above prevailing rates."

USED WRONG DATA

He said it appears the Labor Department "inadvertently used rates on Bureau of Reclamation projects in Red Willow and Hitchcock Counties for its Imperial determination."

The incomplete minimum hourly rate schedule given the Aeronautics Department for the Imperial project:

Air tool operators	$1.25
Carpenters	2.05
Cement masons	2.00
Ironworkers, reinforcing	2.375
Laborers	1.25
Painters	1.75
Pipe layers	1.25
Air compressors	1.725
Blade graders	2.15
Cranes, derricks and draglines	2.30
Euclid load operators	2.30
Firemen	1.45
Oilers	1.65
Mechanics	2.15
Mechanics' helpers	1.65
Farm tractors	1.50
Tractors, 35-horsepower	2.15
Truckdriver, up to 4 tons	1.30
Truckdriver, 4 tons and over	1.40
Euclids and dumpsters, under 12 tons	1.60

[From the Lincoln Star of February 7, 1958]

WAGE LIST POSTPONES LETTING OF BIDS ON INTERSTATE

(By Betty Person)

Nebraska's first scheduled interstate highway project for 1958 has been deleted from the highway department's February 27 letting, State Engineer L. N. Ress said Thursday.

The project involved was a $1,300,000 interchange at 114th and L in Omaha.

The highway chief said the deletion was necessary because the Labor Department submitted only 20 wage predeterminations when 60 were requested, and that the wage rates on the 20 submitted "averaged 60 percent in excess of the average set by this (highway) department."

Ress had receive wage predeterminations on 19 classifications by long-distance phone call Tuesday, and received the official notification of 20 wage rates Thursday.

IMPOSSIBLE

"In discussing this situation with several Nebraska contractors, it was their considered opinion it would be impossible for a contractor to submit an intelligent bid on the basis of the limited number of wage rates and the substantial increase over rates currently in effect in this area," he continued.

Citing an example, Ress said the Nebraska Highway Department had submitted a wage predetermination of $1.35 an hour for the iron worker reinforcing classification, and that the Labor Department submitted its wage rate for this classification at $3.20 an hour.

The highway department "worked for months" establishing its wage predeterminations, Ress said, and had used as its basis the prevailing wages paid on all highway jobs in the Douglas County area in 1957 and late 1956.

MADE ADJUSTMENTS

He also stressed that the highway department had made adjustments to increase many classifications where it was warranted.

Ress said he had discussed the matter with a representative of the Labor Department by telephone late Thursday afternoon. "It appears that a considerable difference of opinion exists between the Department of Labor and this department as to the manner of arriving at the prevailing wage rates in the area," he added.

According to the 1956 Federal-Aid Highway Act, he said, the Secretary of Labor shall

consult with the highway department on wage rates required on 90–10 projects.

Ress declared the Department of Labor had not done this, but that he will write them Friday requesting them to furnish Nebraska with the information they used in making wage predeterminations.

THIRTY-DAY ASSURANCES

The State engineer also noted during hearings before Congress of the 1956 Highway Act, there were assurances that wage predeterminations would be made by the Labor Department in a period not to exceed 30 days.

Nebraska submitted its wage predeterminations December 14, Ress said, noting that it did not receive the official list until 54 days after the submission of the request.

The State engineer said negotiations will continue with the Department of Labor and that the letting of the Omaha interchange will be undertaken as soon as acceptable rates and a complete schedule of wages can be determined.

Noting that another interstate project is scheduled for the April letting, this one in the Lincoln area involving the Havelock interchange west to Highway 77, Ress said, "If they do the same thing on the Lincoln job as the Omaha job, the same thing will occur and the same differences prevail."

[From the Omaha World-Herald of July 13, 1958]

LABOR PAINS DELAY BUILDING IN NEBRASKA—DEPARTMENT SLOW TO SET WAGE RATES—HOSPITALS, HIGHWAYS, ROADS HELD BACK

(By James Denney)

Nebraska was suffering from United States Department of Labor pains Saturday.

The Davis-Bacon Act, which allows the Department to approve minimum wages for construction of projects in which Uncle Sam shares the cost, was blamed for delaying construction of new highways, hospitals, and airports across the State.

Three statehouse officials said the trouble lies in too much Washington redtape.

STARTED IN DECEMBER

They are State Engineer L. N. Ress, State Aeronautics Director, Rolland Harr, and Verne Pangborn, chief of the State health department's hospital division.

Mr. Ress' trouble started in December when he sought a wage predetermination based on prevailing wages in rural Douglas County for construction of the Interstate Highway 1 Interchange at 114th and L Streets near Omaha.

He wanted to advertise the project for bids in February. He finally was able to take bids in June.

NO APPRENTICE

Reason: "Delay in getting a wage schedule."

Mr. Harr's troubles came to light last week with a disclosure that runway improvements at the Imperial Municipal Airport are being held up "because the Labor Department will not supply us a complete list of wages."

And Mr. Pangborn revealed that for several years his division has had difficulty getting the Labor Department to recognize a wage schedule for apprentices because the Washington officials say there are no apprentice training programs in some Nebraska towns.

What do statehouse officials do to iron out their troubles?

SOLUTION OFFERED

They appeal to the Nebraska Association of General Contractors in Lincoln, which in turn appeals to its Washington office.

Eventually, this results in a wage schedule, sometimes not. All too frequently it ends with Washington officials ordering higher wages than the prevailing rates, statehouse officials say.

The solution?

Former Gov. Robert B. Crosby, attorney for the Better Nebraska Association, hopes that next year he can convince some congressional committee that it is time to investigate administration of the Davis-Bacon Act.

CONGRESS OF THE UNITED STATES,
HOUSE OF REPRESENTATIVES,
Washington, D. C., August 5, 1958.

Mr. JAMES CRITCHFIELD,
Manager, Nebraska Chapter, Associated General Contractors of America, Lincoln, Nebr.

DEAR MR. CRITCHFIELD: This is in reference to your letter of July 18, 1958, which enclosed an article from the Sunday Omaha World-Herald reporting on wage determinations issued by the United States Department of Labor to be included in contracts for highway construction in the Omaha area.

The data you submit indicates that the Department of Labor did not consult with the State highway department as required by the Federal-Aid Highway Act; that 60 wage classifications were requested and only 20 were set up by the Labor Department and that the delay in the bid lettings was due to the delay in the issuance of wage determinations by the Department of Labor.

Information furnished me from other sources, however, seems to indicate that an entirely different set of circumstances actually exists with regard to this matter.

I am informed that the Solicitor of Labor was in consultation with the Nebraska State Highway Department representatives, as well as representatives from your organization, for a full 2 days and that after such consultation representatives of various Nebraska organizations were personally interviewed by the Secretary of Labor. I understand that the evidence submitted by the highway department in substantiation of their recommendations for lower rates on this type of construction included out-State projects far beyond the immediate locality of the project at Millard, and that such evidence did not include the highway and bridge projects on which collective-bargaining rates had been paid. Further, representatives of the State highway department were interviewed by representatives of the United States Department of Labor when they made on-the-spot field investigations of this matter. It would appear that the United States Department of Labor had not only consulted with representatives of the State highway department, but had given the evidence furnished by them every consideration.

With regard to the number of classifications in the wage determinations issued by the United States Department of Labor, I note that the decision of the Solicitor of Labor dated March 22, 1958, contains 40 different wage classifications. I am informed that the successful bidder on the Millard project has expressed no dissatisfaction with the number of wage classifications available to him for performing this work. I, therefore, fail to see the materiality of this point.

With respect to the delay in award of the Millard contract, it appears from the record that the first wage determination for this work was issued February 4 and the second issued March 22, 1958, and that the delay in letting of the contracts until June was due, not to the failure of the United States Labor Department to issue a wage determination, but rather due to the dissatisfaction expressed by you and others with the wage rates predetermined by the Solicitor of Labor. I am informed that several disinterested representatives of the public outside the Labor Department examined personally the wage data on which these rates were predetermined, and that it was their opinion that the rates were fully justified by the facts as reported to the Department of Labor. It appears that in protesting these wage determinations the point was stressed that the same wage rates prevailed on highway-construction work in Douglas and Sarpy Counties as prevailed throughout the rest of the State. This is completely contrary to the views you expressed on page 59 of a hearing at Omaha, Nebr., on January 28, 1953. The excerpts furnished me indicate that you had omitted wage data on Douglas and Sarpy County projects because in your opinion the differential which existed between rates paid on building and highway construction in the rest of the State of Nebraska did not exist in Douglas and Sarpy Counties. I am informed that the United States Department of Labor actually made two field investigations of this wage matter, and that the decision of the Solicitor dated March 22, 1958, was made only after an exhaustive review of the report of these two field investigations and evidence submitted by all parties concerned. The United States Department of Labor could not have done much more than it did in this case. It is my opinion that we would have to go far to find a case which has had more impartial, exhaustive, and far-reaching consideration than the one you have referred to me here.

I have also had occasion to discuss this matter with some of my colleagues, and it has been pointed out to me that this whole matter is the result of some out-State Nebraska contractors trying to come into the Omaha area and freeze out the Omaha contractors from doing any interstate highway work. It seems to me if the rates applicable to work in the Omaha area were those paid by out-State contractors, such contracts could and would be awarded to contractors from out of the State of Nebraska entirely; and not only would the Omaha contractors and workers be deprived of the construction employment, but also the same thing could happen to the out-State Nebraska contractors. I am sure you are not in favor of such an eventuality.

I believe that the foregoing clearly shows the United States Department of Labor has in this case complied fully with all applicable laws and regulations.

Sincerely yours,

JAMES ROOSEVELT.

South Dakota Publisher Hailed on 90th Birthday

EXTENSION OF REMARKS
OF
HON. GEORGE S. McGOVERN
OF SOUTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 30, 1958

Mr. McGOVERN. Mr. Speaker, one of South Dakota's most distinguished citizens, Mr. R. W. Hitchcock, publisher of the Rapid City Journal, has just observed his 90th birthday. This event is all the more remarkable considering the fact that Mr. Hitchcock has utilized to the fullest these past 90 years. He has won the respect of all South Dakotans because of his vigor, his keenness of mind, and his personal integrity.

The editor of the Sioux Falls Argus-Leader speaks for all South Dakota residents when he salutes Mr. Hitchcock in the following editorial in the August 1, 1958, issue of the Argus:

A GOOD CITIZEN OF SOUTH DAKOTA

A grand old gentleman of South Dakota—R. W. Hitchcock, publisher of the Rapid City

Journal—has just celebrated his 90th birthday.

Congratulations are in order—congratulations to him on his many notable achievements in a busy life and congratulations to South Dakota because it has been our rich privilege to have him as a citizen.

Hitchcock assumed control of the Rapid City newspaper in 1939, moving to that city from Hibbing, Minn. He was then 71 years old—an age at which most persons prepare for retirement. But not Hitchcock. He moved with vim, vigor, and dispatch into the fast-moving tempo of the Black Hills city and quickly became a part of it as well as of the State. Much younger men were left behind as he paced the procession of growth and progress for the exuberant metropolis of the west and promptly he left the imprint of his robust character, his forward look, and his eager interest upon his new home community and his new home State.

These years in South Dakota have been good ones for him and for us. We are happy that destiny turned his eyes in this direction and we hope that he will be permitted to continue his constructive activities for many years to come.

Statement by Representative Frank M. Coffin, of Maine, in Support of Legislation To Provide Assistance to State and Territorial Maritime Academies, House of Representatives, August 4, 1958

SPEECH
OF
HON. FRANK M. COFFIN
OF MAINE
IN THE HOUSE OF REPRESENTATIVES
Monday, August 4, 1958

Mr. COFFIN. Mr. Speaker, it is very gratifying to me as a Representative from a coastal State to witness the concern of the House in acting favorably on S. 1728, a three-point program to make suitable training vessels available to the qualified maritime academies and colleges; to raise the limits on the annual grant to an academy which accepts out-of-state students, and to increase the annual subsistence allowance for each cadet.

In these closing days of the session, it would be easy to overlook such a bill. It is not dramatic, it cannot be rated as equal in importance to such matters as social security, defense appropriations, or major farm legislation. But, this bill is of great importance in maintaining the high standards of training established by our merchant marine academies and colleges.

We are very proud of the Maine Maritime Academy in Castine, Maine. Over the years it has made a great contribution to our merchant marine fleets, and in time of war, to our Navy. This legislation will enable academies like Castine to plan for the future, with stable programs designed to train the best possible merchant marine officers.

I earnestly believe that this legislation is an essential step toward our objective of meeting the needs of this vital branch of service to sustain the Nation's commerce and defense.

New Conservative Leadership

EXTENSION OF REMARKS
OF
HON. JOHN H. RAY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, July 21, 1958

Mr. RAY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include an article by David Lawrence entitled "New Conservative Leadership," which is a thoughtful discussion of a program which should have wide circulation.

Judging by the views of constituents who have communicated with me, the program will find many supporters:

NEW CONSERVATIVE LEADERSHIP—ACA SUPPORTS UNITED STATES CONSTITUTION, FREE ENTERPRISE, BALANCED BUDGET

Conservatives of both the Republican and Democratic Parties, as well as the many independents in the country who believe in the basic doctrines of conservatism, now will have an opportunity to combine their efforts for the cause in which they believe. This will be made possible through the Americans for Constitutional Action, the foundation of which organization has just been announced by Retired Adm. Ben Moreell, of Pittsburgh, and a number of other prominent Americans in the field of business.

Admiral Moreell, who won fame during World War II for his leadership of the Seabees—the Navy's big construction corps—will have associated with him as trustee both Democrats and Republicans.

The main purpose of the ACA program is "to support, regardless of partisan considerations" the causes and candidates conforming to objectives "which are essential to the preservation of the opportunity state created and preserved by our Republic." Here are the six main points of the platform of the ACA:

"1. Preservation of our Government as a Republic through the support and utilization of the guidelines established by our Declaration of Independence, the Constitution of the United States, and its Bill of Rights.

"2. Unqualified support and protection of free enterprise and private ownership, with its reward of merit system, as it functions within the framework of sound and workable two-party government.

"3. Adherence to government and economic concepts which will protect the principles of sound money, effective economy, taxation for revenue only, and to operate our Government within the framework of a balanced budget.

"4. Articulate and effective support of the constitutional provision guaranteeing that all powers not expressely granted to the Federal Government are reserved to the States and to the people.

"5. Intelligent and energetic use of the secret ballot and the demonstrated desirability of an effective two-party political system in implementing the capacity of free men and women to control their own destinies.

"6. Active participation in the primary and political convention decisions within the political party of our own choice, so as to select appropriate nominees, and the determination to support—regardless of party affiliation—candidates for office who most nearly embrace and support the provisions of this policy statement."

Such an organization has long been overdue in American politics. The Americans for Democratic Action usually reflects the radical point of view in American politics, particularly that of the big labor organizations which create their own political committees in every campaign. They have been giving money for political literature or precinct-worker help in congressional as well as presidential elections, for the most part in support of the Democratic Party nominees in the North. The ACA will probably be supporting many Democrats, but primarily these will be conservatives from the South. This is a significant move because the northern radicals have begun to support radicals in the Democratic primaries in the South, and here and there have been successful either in electing their own men or in intimidating those who would otherwise remain conservative.

Ever since the close of World War II, Congress has continued in the main conservative or at least nonradical because of the presence of a coalition majority derived from both parties. Such a coalition has never been given the direct political help and financial support that the radicals, with their millions of dollars collected from unionized workers, have been able to give their spokesmen in Congress.

Admiral Moreell has recently retired as chairman of the board of Jones & Laughlin Steel Co. and is a natural for the leadership of the movement that has just been christened Americans for Constitutional Action. The new organization has the blessing of many conservative Democrats and Republicans in Congress who have been instrumental in helping it to get started.

U. N. Fails

EXTENSION OF REMARKS
OF
HON. ROBERT W. HEMPHILL
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 5, 1958

Mr. HEMPHILL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Gaffney Ledger, Gaffney, S. C., August 2, 1958:

U. N. FAILS

The United States now finds itself on a precarious footing in the United Nations. Our situation is more delicate than it was when we ordered Army troops into South Korea to defend that nation against an attack from North Korea.

In that case, after President Harry Truman had ordered United States troops into battle, the United Nations stood firmly behind our action. This time, after President Eisenhower has ordered troops into Lebanon, many members of the United Nations, and most of the neutral members, are not going along with us.

This may come as something of a shock to those who have not followed the action in the United Nations closely. The key to it may be an announcement by Secretary Dag Hammarskjold, the day after Marines had landed near Beirut, that he had been successful in arranging with Lebanese rebels for inspection of the entire border area between that country and Syria.

At first glance this seems to be an impressive achievement, but it will be noted that this agreement was achieved after United States troops had been ordered into Lebanon. Had Hammarskjold been able to achieve this on his earlier tour into Lebanon, with his U. N. observers, then the United States might not have been faced with the decision to send troops in to aid the duly elected Government in Lebanon.

That is, if the rebels had not been furnished with so many supplies and so much

equipment prior to that time so as to have found themselves in a position to overthrow the Government.

The Coal Research Program

EXTENSION OF REMARKS
OF
HON. JOHN H. DENT
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 29, 1958

Mr. DENT. Mr. Speaker, in behalf of management and labor in the coal and railroad industries, and also speaking for other residents of coal communities and shipping centers, I should like to thank the members of the Committee on Interior and Insular Affairs as well as the responsible subcommittees for reporting out the bill to establish a Coal Research Commission. While it is not in the precise form of the proposal which I introduced, I am confident that enactment of this legislation will go a long way toward reaching the objective we all hope to attain.

Because coal's vital role in a national emergency and in America's long-range fuels programs is generally understood. I shall not, in my remarks today, dwell on this phase of a coal research program. Having been raised in the coal regions, and speaking from experience as a coal operator, I should like to point out just a few of the potentialities that Pennsylvania and other coal-producing States may look to in the application of science and engineering to coal's production, transportation, and market problems.

We do not anticipate that creation of a coal research commission and subsequent fulfillment of its specified duties will bring new prosperity to our mining camps and adjacent communities. We do, however, detect latent advantages that will accrue to the long-range benefits of our mining people and to coal's customers as well.

Mr. Speaker, the district I represent in Congress does not by any means have a preponderance of mining families among constituents. Our manufacturing industries are highly diversified, and we also have a considerable number of farm families. There, at the foothills of the mountains, the arable soil is the exclusive provider of livelihoods for a good number of families. You will also find many truck gardens in the area; it is, as a matter of fact, unusual for a home owner not to have at least a small plot for vegetables and perhaps some fruit trees. We appreciate the progress in agriculture that has come about through research and development. The United States Department of Agriculture has led the way toward greater productivity, increased efficiency, and higher nutrition.

What the Department of Agriculture has done for the farmer and his consumer over the years, a Coal Research Commission can undertake to stimulate comparable progress in the mining industry. Methods of extracting coal from the ground have improved sensationally in the past decade. A better product and greatly increased efficiency of consumption have likewise been achieved.

The United States has by far the most efficient coal industry in all the world, yet it would be folly to rest on our laurels. Energy demands will continue to spiral upward at a progressively greater rate as population increases and standards of living improve. The coming decades will require such an enormous amount of energy that coal industry production will of necessity tend ever upward. Meanwhile the tools and the methods of recovering, preparing, and delivering this fuel need to be under constant study to assure maximum efficiency in every operation.

I remember very clearly how coal was mined in the 1920's and early 1930's. Most of it was produced by pick and shovel, and when it came out of the mine the bigger plants had picking tables so that slate could be thrown out before the coal went into the railroad cars or trucks. Cutting machines were coming into popularity in the bigger mines, but there was still very little mechanical loading. Immediately before World War II, hydraulically controlled loading machines and improved cutting machines were introduced. Eventually—along about 10 years ago—the continuous miner began to move up to the face of the coal seams and substitute for the normal mining cycle.

Today working conditions have been improved through the introduction of roof bolting, rock dusting, better lighting facilities, and more adequate ventilating systems. Outside the larger mines are preparation plants, which not only extract slate and other impurities, but also "launder" and sort the product into the sizes desired by consumers.

We have come a long way in a short time in the producing of both bituminous coal and anthracite, but there are so many more secrets to be revealed by the scientist and engineer for the welfare of the miner, the increased efficiency of his operations, and the conservation of this vital natural resource that the national interest demands that we undertake a research program as soon as possible.

I wonder how many of my colleagues recognize coal's role in the development of our railroads? Originally coal mines were opened near streams because erosion of their banks disclosed the whereabouts of coal veins. As a matter of fact, a map drawn up by Joliet after his expedition of 1673–74 listed a deposit of "charbon de terre" along the Mississippi River in northern Illinois. A few years later a member of the LaSalle expedition reported that coal had been observed along the Illinois River.

When the Nation was in its infancy, proximity to a waterway was a prerequisite in the planning of a community. Thus, with mines also located on streams, coal was transported almost exclusively by water. Then came the railroads with a horse-drawn line built in 1827 from the coal mines in Carbon County, Pa., to the Lehigh River. Carrying coal was big business in those days, just as it is at the present time. It is a major source of railroad revenue, accounting for in the neighborhood of 14 percent of all rail freight revenue in the United States. Moving coal brings in upward of $1 billion a year to the railroad industry in freight revenue.

To the trucking industry and the inland waterway system, coal is also vitally important. Trucks carry approximately 50 million tons of coal annually, and almost that much coal is loaded at the mine for shipment by water.

To carry coal from mine to market, railroads have developed larger gondolas and hoppers, larger barges are in operation on our waterways, and a host of innovations for loading, unloading, and transferring coal have been developed. Nevertheless, considerable more research must be continued in this field. The railroads are hopeful that the coal research program which I am advocating will be quickly enacted. Both the rail executives and members of the brotherhoods recognize that, even though new methods of transporting coal are expected to come about, an increase in coal freight is inevitable in the years ahead.

I am sure that most Members of Congress have heard about the coal-carrying pipeline that is now in operation between Cadiz and Eastlake, Ohio. The line is transporting upwards of 80,000 tons of coal a month to a generating plant of the Cleveland Electric Illuminating Co. It is an outgrowth of an intense and persistent effort on the part of Pittsburgh Consolidation Coal Co. in cooperation with the public utility.

Yes; a research program will result in improved transportation methods, just as it will contribute to increased production efficiency and to the conservation of coal reserves. What is in store for us in the way of utilization is too wonderous for conjecture. Besides carrying out its primary functions to provide heat and power, coal has become the source of a wide variety of chemical products including sulfa drugs, nylon, plastics, explosives, perfumes, and fertilizers. I remind you that up until 1908—just half a century ago—almost all coke was made in beehive ovens. Thereafter, as chemists began to discover the valuable contents of coal gases and tars, the steel industry constructed by-product ovens so that there materials might be captured and converted into useful byproducts. The steel industry's use of coal not only offers new materials to be developed in the coking process, but it also provides a starting point for research into new methods of utilization in the actual steelmaking process. To supplement reserves of metallurgical coal, mixtures of other coals are in the experimental stage. Tests of this nature must be encouraged.

Mr. Speaker, there is no limit to what science and engineering may do for coal, for everyone connected with the industry, and for the millions everywhere who stand to benefit by what coal and its products may bring to them. I urge you to pass this legislation. The people of my State will be most appreciative, and in the years to come all America is going to benefit.

Where Are We Headed?

EXTENSION OF REMARKS
OF
HON. GORDON H. SCHERER
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 5, 1958

Mr. SCHERER. Mr. Speaker, under leave to extend my remarks, I include my speech to the Cincinnati Rotary Club on July 31, 1958:

WHERE ARE WE HEADED?

I am deeply appreciative of this opportunity to talk to this cross-section of the leaders of Cincinnati as represented in Rotary.

You may not recall it—but within a short time after I was elected to Congress for the first time in 1952, I talked to Cincinnati Rotary. I looked at that speech the other day and wondered if the applause I received at that time wasn't motivated by the same courtesy and kindness which the Members of Congress show to a freshman upon the completion of his maiden speech on the floor.

He gets—for perhaps the first and the last time—a goodly round of applause, no matter how bad his effort might be.

Today I want to comment briefly on a few of the issues with which the Congress and the Nation have been wrestling during the past number of years. I hope to avoid engaging in the political game of fence-straddling so that you will know where I stand. Of course, I always reserve the right to change my mind on any issue because, as you well may guess, I have found myself to be wrong on—well, I'll take the fifth on how many occasions.

Even some constitutents change their minds. Let me give you an example.

FOREIGN AID—FOR WHAT?

When I first went to Congress, there were a number of industrialists who, about as forcibly as they dared, insisted that I vote against foreign aid and the liberalization of our tariff laws. Lo and behold, this year these same gentlemen were just as strenuously urging that I support the multi-billion-dollar foreign-aid program and the free-trade policies. These men had reversed their stand and could not quite appreciate why I had not.

Of course, I could not quite understand their switch until I learned that they had invested a considerable amount of money in plants in Europe to take advantage of tax concessions and cheap labor. Naturally, they now want no tariff barriers so that they can more readily find markets in this country for their finished products.

The multi-billion-dollar foreign-aid program, which was a sin just a few years ago to these gentlemen, became a great Christian endeavor to aid the underprivileged peoples of the world so that they would not succumb to atheistic Communist ideology. I would not be so cynical as to suggest that some of these giant corporations which have plants and investments abroad have a more practical reason for now backing the foreign-aid program; namely, to protect and give greater assurance of success to their foreign enterprises.

I am not criticizing these coroprations for starting industries abroad and taking advantage of substantial tax concessions and labor costs that run as low as one-tenth of those for comparable services in the United States. Reuther and his crowd must share the responsibility, along with organizations like United States Steel, and excessive government spending for pricing ourselves out of markets, devaluating the dollar, skyrocketing taxes, and feeding the fires of ruinous inflation, all of which have started this migration of American industry. What concerns me is this unusual flow of American capital abroad for these reasons instead of its investment in the expansion of local plants and new industry so that we might cope with the unprecedented growth in our population and the coming influx of immigrants if the present agitation to destroy our immigration barriers is successful.

What happens to small business and industry—the backbone of this country—which cannot establish plants in Europe, which, in order to maintain our high standard of living, must continue to pay high labor costs, the 52 percent corporate tax, and even higher personal taxes to sustain this orgy of spending in which we are engaged?

What happens to small business and American labor when it will be compelled in the next 5, 10, and 15 years to compete with goods made abroad in American-owned factories and produced at a fraction of the cost of those made here?

Under our foreign-aid programs we have already given to the Japanese and many others the most modern mass-production machinery available—later models than many of those in American factories.

Yesterday the House Committee on Interior and Insular Affairs reported a bill which has already passed the Senate to pay subsidies in the amount of $650 million to sustain the mining industry. Why? Simply because our foreign-aid program, together with extremely liberal tariffs, has all but ruined that great industry in this country. With foreign-aid money we have helped to develop the mining industry of foreign countries and then permitted their minerals to be sold in this country below United States mining production costs. I predict that we are going to have more legislation calling for subsidy payments to more and more industries in this country.

RECIPROCAL TRADE MESS

Because of our high standards of living and high cost of production, most foreign countries can easily afford to enter into mutual tariff cuts with this country.

In many instances for concessions here they can afford to admit American commodities free of any duties because we cannot possibly compete in their markets. If our standards of living were anyway near comparable to those of foreign countries and our taxes and costs of production were likewise comparable, I would be a more enthusiastic freetrader than our mutual friend, Charlie Taft.

I realize that we are the leader of the free world, and that we have had thrust upon us obligations which we do not want but which we cannot avoid. I realize that there is miserable poverty throughout the world. There is no Christian, no sensible man, who does not want all people to have more of the good things in life.

I realize further that this is the greatest and strongest Nation in the world (although our leadership is being seriously challenged by the Soviets today), and that as such leader we have certain obligations to the less fortunate people of the earth.

But I also realize that we cannot carry the whole world on our back; that we cannot cure the poverty and wretchedness of the whole world; that we cannot buy loyalty and allies. We just don't have the ability to do it without eventually destroying ourselves. Our first duty is to keep America strong so that it can continue to stand, as we do today, as the only real obstacle to world domination by the Kremlin.

SPENDING, DEBT, AND CREDIT

I admit that the countries who are asking for aid or to whom we are giving it without their asking are broke—but so are we. The trouble is they admit they're broke, but we do not.

Our acknowledged national debt today is $280 billion dollars. We are this week being asked to raise the debt ceiling another $8 billion. There is now legislation pending in the Rules Committee such as the community facilities and distressed area bills calling for new and expanded activities of the Federal Government, which, if passed, will add $11 billion a year to our estimated $80 billion budget for next year. I am happy to say these are not this administration's proposals. Our deficit this fiscal year will be $12 billion, the greatest peacetime deficit in all history.

There are potential obligations of the United States which almost double the $280 billion. Even at the $280 billion figure, the debt of the United States is approximately $40 billion more than the total combined debt of all of the other countries of the world. Why do we not realize that it is only the credit of the United States which sustains our precarious position today?

There is a limit to that credit. Just exactly what that limit is no one can tell. But I'm worried that we are somewhere near the breaking point. In the operation of our homes, in the management of our businesses, the intangible and uncertain question always is and should be: How much will our credit stand? How much debt can we carry without courting disaster and bankruptcy?

Remember, one phase of the total offensive now being waged against us by the Soviets is economic. Obviously, such an offensive is directed toward the destruction of the economy of the United States. In fact, the Communist strategists have often said that one of the weapons they will use in bringing about our eventual capitulation is to have us spend ourselves into bankruptcy.

Gen. Claire Chennault, who died this week of cancer, was one of the truly great soldiers of our time. He was the leader of the famous Flying Tigers and later commanded the United States Air Force in the Far East.

He was a man who understood the Communists because he had fought them for more than 20 years. The Committee on Un-American Activities wanted the American people to have the benefit of his experience and expert knowledge before he died.

General Chennault said in his testimony just a few weeks ago, and I quote:

"I believe the Communists will not take over a lot of Asia where they could. They want us to continue pouring aid into those areas, break us, build up a national debt—spend everything that we earn from day to day, month to month, and year to year, until our currency is no longer of any value. Then they will be ready to take the United States in turn."

Yes; we are learning day by day that we cannot buy allies, that they will act in their own self-interest when the chips are down, no matter how many American dollars have been poured into their economy. President Eisenhower made a significant statement the other day. When he sent the marines into Lebanon—and he had no alternative, as I intend to point out later—the West German Government said some mighty harsh things about his action. A leading German newspaper called him an idiot. The President asked: "Is this what we get for giving Germany $7.5 billion of aid since the war?"

We know that other recipients of American aid have acted similarly, and you and I know further that, when the showdown comes—human nature being what it is—self-interest and self-preservation will prevail.

Gen. Albert C. Wedemeyer, who headed strategic planning for the Army in World War II, testified before our comittee. He said that, if we should get into an all-out war with Russia, we will never have the opportunity to use our air bases or missile-launching sites in Europe or North Africa because our current allies and friends have

a terrific fear—and properly so—of nuclear retaliation by the Soviets.

But for a few minutes let's get back to the precarious financial condition of the United States. It has been this precarious financial condition of the country—the more than $7 billion interest payment on its debt alone each year—coupled with the crushing burden of taxes which the American people and American business have been compelled to carry for three decades, that has controlled and dictated my attitude toward much legislation which has faced the Congress since I went there 6 years ago.

Long before the late Bob Taft suggested that I run to succeed Charlie Elston, those of us who follow the Taft-Byrd philosophy in Government complained and campaigned against the ever-increasing bureaucracy of the New Deal, the astronomical expenditures of the Federal Government, and the ever-increasing tax load on the American people and American business. I did not go to Washington to support programs and legislation which augment those evils. I did not go to Washington to participate in the dissolution of the economy or fiscal stability of the United States.

These things which we considered wrong when propounded and enacted by the new and fair deals do not gain respectability or soundness under the name of modern republicanism. Just remember, we are never going to get tax reductions that are justified and which do not adversely affect the economy of the United States until we put a stop to unbridled spending. Tax cuts without spending cuts lead to greater debt, move us closer to fiscal collapse, and, of course fan the fires of ruinous and uncontrollable inflation.

I have on occasion opposed new and expanded activities for the Federal Government which have merit and are desirable. There are two principal reasons, however, for my opposition:

First, because the program would further increase the indebtedness of the Federal Government, the tax burden on our people, and weaken the fiscal structure of the United States.

Second, because I felt that the project or program was one that should be carried on by local or State government.

Let me give you one or two examples.

FEDERAL AID TO EDUCATION

Those who have opposed various Federal-aid programs for education have been charged with being insensible to the welfare of the children of the country, benefits for teachers, and education generally. Just the opposite, however, is true.

Everyone with a grain of sense knows that eventually any type of Federal-aid program results in Federal interference, domination, and control. To argue differently is to disregard the record completely.

Whenever you pour Federal money into local government, Federal control automatically becomes necessary if for no other reason than to see that Federal dollars are not wasted at local levels because somehow the impression is gained by many local governments that Federal money in some mysterious way is manna from Washington, and, therefore, its spending need not be scrutinized as carefully as State and local dollars.

Education is one of the last major activities that we have kept in the hands of the local authorities.

If the Federal Government takes over—and I predict it will if the present trend continues—you are going to have a department of education filled with hundreds of thousands of new bureaucrats that will dwarf all other departments of Government with the exception of defense. Your schools, your children, your teachers, and your curricula will eventually operate under mandate from Washington.

I believe our school boards, our school administrators, our teachers, and our PTA's can do a better job for Cincinnati schools with our own tax dollars than can some bureaucrat in Washington, just as I believe if Washington lets us use our own money that our city council, our planning commission and citizens development committee, and our metropolitan housing authority can do a better job at urban redevelopment, free from the red tape and dictation of Washington bureaucrats who have never seen fountain square. You know that for every educational and urban redevelopment dollar Ohio sends to the Potomac, in will be lucky if it gets 50 cents back.

I realize that the States and local governments would have an easier time meeting their financial obligations if the Federal Government did not siphon off so much of the tax dollar. That is one reason why the handful of conservatives in the Congress continue to oppose the ever-expanding activities and programs of the Central Government—so that we will not have to siphon off more and more tax dollars to the detriment of local government.

DEFENSE REORGANIZATION

One could hardly be talking about current government problems, particularly in Cincinnati, without mentioning the man who has perhaps the second biggest job on the Potomac. Ninety-nine and fourty-four one hundredths percent of those in both political parties agree that our fellow Cincinnatian is doing a terrific job as Secretary of Defense even though his honeymoon is now over. Of course, there are a few admirals and generals whom he has refused to soft-soap.

The President's and Secretary McElroy's Defense reorganization plan was long overdue.

It was a major step toward centralizing the control of the four branches of the armed services to eliminate much of the waste, inefficiency, duplication of effort, and rivalries which have plagued our defense setup for many years. The House, in my opinion, made a serious mistake in not going along in three instances with the President's recommendations. However, the Senate and the conference committee corrected most of these mistakes, and the President and Secretary of Defense now will get practically what they asked for.

Some people feel—but only whisper it—that the President's program does not go far enough—that we are not going to have real unification of the services with the most effective striking force, free of silly rivalries, until and unless we establish a modern "defense corps of the United States" in one uniform. I admit this is heresy. And my mail in the next few days will be bristling with some well-known army profanity for just repeating the rumor.

This rivalry and jealousy among the various branches of the service is so bad that even many Members of Congress have chosen up sides to the extent that they are labeled, stamped, and marked as Army, Navy, Marine or Air Force votes.

The fast-changing concepts of modern warfare have the four branches of the service confuse, upset, and at times angry as to their changing roles. As an example, not too many years ago the Air Force took away from the Army—principally the Artillery—the job of delivering projectiles to their targets.

The Army is now happy because, with the advent of the rockets and guided missiles, it looks as if that task will again return to the Army—over the Air Force's dead body, however.

Here is another example. There is not much dispute that the nuclear submarine—a moving target—will play an even more vital role than it has in the past, especially if we are prevented from using our overseas airbases and launching sites. Submarine warfare is an assignment carried out by the Navy. But antisubmarine warfare has radically changed. It lookes as if planes and helicopters will be able to deliver the best knockout punch against enemy subs. Both the Navy and the Air Force now claim this as their job. When teacher finally makes the assignment, one or the other is going to be most unhappy.

The answer may be, as has been suggested, a defense corps of the United States in one uniform. It is argued that it could carry out various fighting assignments, just as the Army today is comprised of the Infantry, Artillery, Tank Corps, etc. Each performing a different fighting function. I assure you, however, that if our friend, Neil McElroy, would push for one uniform at this time, his Hooper or Neilson rating, particularly at the Penatgon, would drop fast. There is a lobby that is a lobby.

LABOR LEGISLATION

Other than the Soviet threat, there is nothing of greater importance than the passage of effective labor legislation to bring to a halt the theft, fraud, extortion, blackmail, and the sordid abuse of power by certain labor bosses as revealed by the shocking testimony before the McClellan committee.

I will not attempt to review the long history of usurpation of power not only against the public interest but also to the detriment and cynical betrayal of the man in the shop.

The AFL–CIO, of course, acted wisely—and is to be commended—for expelling the corrupt unions. Expulsion alone is not enough. It is not the answer. Quite a few years ago the CIO expelled a number of the Communist-dominated unions after revelations by congressional committees. Such expulsion did not relieve the union and the rank-and-file membership from Communist domination and control, as was predicted. The fact is that today the Communist leadership in some instances has a greater stranglehold than before the CIO acted.

Neither has expulsion eliminated from labor's ranks the mobsters, racketeers, and men with long criminal records who have forced their way into positions of power in certain unions and businesses and preyed not only upon the public but especially upon labor's rank and file.

The expelled Hoffa-Beck Teamsters Union, the largest single union in the United States, is presently joining forces with the Harry Bridges', Communist-dominated, Longshoremen's Union and the corrupt east coast waterfront unions. In fact, a criminal background in the Hoffa and Bakers Unions and Communist Party membership in the Bridges' outfit appear to have been a prerequisite for a job and advancement in the union hierarchy. The strategic position and power of this unholy Hoffa-Bridges alliance under the present helpless status of the laws of this country is terrifying to contemplate. Our entire shipping and transportation system could be paralyzed in time of war or other internal upheaval upon the whim of 2 or 3 utterly corrupt and power-hungry men.

In the face of this possibility and many other factors, how can anyone say that big labor must not be made subject to the antitrust laws? Of course, even the responsible unions do not want this although it will not hurt or interfere with their operation any more than it does with industry which is willing to play according to the rules of the game. Labor unions have grown up; they have become big business. The overwhelming evidence indicates that they should be made subject to reasonable antitrust legislation.

Unfortunately this Congress in this election year does not have the courage to pass a labor bill containing such a provision and at least half a dozen other provisions needed

not only for the protection of the general public but in particular to free the man in the shop from those in both labor and management who would abuse him. One of these days some of us will learn that the smartest thing to do politically is to courageously do the right thing.

I have come to the conclusion that the rank and file members of the laboring force in this country want representatives in Congress who are beholden neither to the labor boss nor to management.

They are learning that their interests are not always necessarily the same as those of certain labor bosses or of some in management who would exploit them.

While the Kennedy-Ives labor bill, which has passed the Senate, contains needed provisions to correct some of the abuses with which we are all familiar, it is weak and totally inadequate to do the job. Actually the last section of the bill seriously weakens rather than strengthens existing provisions of the law.

COMMUNIST AGGRESSION

I could not close this talk today without mentioning the issue which transcends and dwarfs all others—our struggle against the forces of international communism. Because of its importance and my identification and familiarity with at least certain facets of the problem, I should perhaps have devoted my entire talk to this subject.

Since the close of the Korean war, until the marines landed at Beirut on July 15, during a so-called period of peace, we have spent the staggering sum of $180 billion for the defense of this Nation and the free world against the conspirators of the Kremlin. This amount for defense alone in the last 6 years and, as I said, in a so-called period of peace, is more than 3 times the amount spent by this Government for all of its functions in war and peace from its founding in 1776 to and through the end of World War I.

If this expenditure and the fact that we have American boys stationed in 69 countries of the world did not convince some that this is the life and death issue of our day, then the current crisis in the Near East has wiped away all doubt.

I am certainly not an expert on this perilous and explosive situation in which we find ourselves today in the Near East. I do know, however, what the Committee on Un-American Activities has been trying to tell the American people for many years—about a general pattern of infiltration and subversion, recently called indirect aggression, that has happened and is happening, to a greater or less degree, in the Near East, in Africa, in Asia, in almost every country of the world, including the United States.

It comes from the testimony of countless witnesses, from ex-Communists, secret agents of the FBI, from those who suffered the bestiality and privations of Soviet labor camps, from experts such as Bishop Fulton J. Sheen, Rabbi S. Andhil Fineberg, Dr. Daniel A. Poling, J. Edgar Hoover, Edward Hunter, Constantine Brown, Generals Chennault, Willoughby, and Wedemeyer, and dozens of others.

First, let me say that I do not believe—and I pray that I am right—that we are going to have an all-out nuclear war in the foreseeable future for two reasons:

First, because the firepower and destructive force of the East and the West is fairly well balanced and neither side is going to risk almost total destruction.

Second, because the Soviet Union, in the short span of 40 years of existence, has been incredibly successful in expanding its empire from a handful of Bolsheviks who took over Russia in 1918 to the domination and control of one-third of the land mass of the world and one-third of its people, with another one-third in the so-called neutral bloc fast drifting toward the Communist orbit.

NEW WEAPONS OF WARFARE

Russia has done this largely through the use of a new weapon of warfare which is more effective than the atom bomb or nuclear guided missiles and certainly less costly. It is the insidious and diabolical weapon of infiltration and subversion with which she has penetrated the countries of the free world, their peoples and institutions, and taken them one by one behind the Iron Curtain. So why should the Soviets risk the total destruction of their cities?

Those who today still think of war in terms of military aggression are living in a fool's paradise. Russia has abandoned the centuries-old concept of war.

This may come as a shock to you, but the Soviets do not want to destroy the cities of the United States or any of the cities of the free world if they can help it. And why?

Mr. Edward Hunter answered this question in his testimony before the House Committee on Un-American Activities a few months ago. Mr. Hunter is one of the great authorities on Communist psychological warfare, a newspaper correspondent, author, lecturer, and former officer in the O. S. S., a man who has spent more than 31 years in countries under various forms of Communist pressure and attack. Out of the wealth of his experience and firsthand knowledge, he said:

"War has changed its form. The Communists have discovered that a man killed by a bullet is useless. He can dig no coal. They have discovered that a demolished city is useless. Its mills produce no cloth.

"The objective of modern warfare is to capture intact the minds of the people and their possessions so that they can be put to use. This is the modern conception of slavery, that puts all others into the kindergarten age."

Hunter continued: "The United States is the main battlefield in this war. I mean specifically the people and the soil and the resources of the United States.

"They seek to conquer the United States in a manner so that it voluntarily falls into the Red orbit. If we have to be conquered by destructive nuclear-age weapons, it will be considered a setback by the Kremlin."

Of course, we don't have to take the word of Edward Hunter or the other experts. Way back in 1923, in outlining the steps the Soviets would take in bringing the world under the heel of the Communist apparatus, Lenin said:

"First, we will take Eastern Europe; then the masses of Asia; then the Near East; then Africa; then we will encircle the United States which will be the last bastion of capitalism. We will not have to attack. It will fall like an overripe fruit into our hands."

And how do they say they plan to do this? Not by outward aggression, but by indirect aggression, by infiltration and subversion, by abduction and assassination, just as they did in the Near East this month. Oh yes, there are those who contend that this is purely an uprising of Arab nationalism, the throwing off of the last vestiges of European colonialism, just as they said that the revolution in China and the attack on South Korea were the uprising of agrarian reformers.

No one with a grain of sense will deny that Arab nationalism, anti-Semitism, oil, and half a dozen other complex problems are factors in the Near East crisis. But anyone who understands Communist techniques knows that the guiding and directing hand is that of the conspirators in the Kremlin. In the Lenin school of political and psychological warfare, the Communist agents are taught not only to foment strife and hatreds of every nature and description, not only to create contempt and ridicule for the established government and law-enforcement agencies of the nations which they are infiltrating, but also to support, promote, and augment so-called popular causes and revolutionary movements within those countries.

Nasser is the tool of Moscow, whether he knows it or not. Today Russia is hypocritically pretending to support the nationalist aspirations of all of the countries of Africa and the Near East. By the use of her vicious propaganda machine, she is beating the dead horse of European colonialism, while at the very moment she has her agents, her dedicated Communist followers, in key places in every one of those governments. At the proper time the Soviets plan to take over the African countries, not by outward aggression, but as she has most of the countries which are now behind the Iron Curtain, by gradually placing her agents and followers in key and sensitive positions.

It takes only a comparatively few highly trained and skilled agents and saboteurs to throw a country into the Communist orbit. The masses of the people have little to say or at least are powerless to do anything about it. The fact is that today in Russia and in her satellites only a small percentage of the people are dedicated Communists.

These few are the people, however, who occupy the positions of power and control; when they act, it does not make much difference whether the country and its people are poor or wealthy, whether they have had the benefit of the foreign-aid programs of the United States or not.

Iraq was considered the most stable and pro-Western government in the Near East. In the last few years she has received $60 million in economic and military aid. The pro-Western leaders were assassinated, a few key jobs changed hands, and the coup was accomplished quicker than a wink. How? We find the answer in an editorial in last Sunday's Cincinnati Enquirer, and I quote:

"The Baghdad coup was a masterpiece of stealth, plotted down to tiny detail in the Soviet Union's foreign espionage general headquarters at Bern, Switzerland."

It was this event in a long series that broke the camel's back and caused us to act on Lebanon's request for help by landing the Marines in Beirut.

The worldwide Communist propaganda machine charges us with being the aggressor. Actually we moved into Lebanon to stop the continuous indirect aggression and infiltration which the Soviets have been accelerating in every nation of the world, including the United States. Since we have never engaged in the diabolical use of infiltration and subversion as a means of aggression, it was necessary for us to send in the Marines and use the conventional means of stopping the Soviets and their puppets in their drive toward world domination.

To me the great tragedy is that there are so many people in this country who for one reason or another refuse to believe that the same pattern of indirect aggression, infiltration, and subversion is taking place here and now. I could talk to you for hours about those things which are happening in the effort to destroy us and every other free country from within. I could tell you about the more than 2,000 potential saboteurs working in defense plants today—about the identified Communists who work for Western Union and Radio Corporation of America and who have access to the nine transatlantic cables which carry vital secret messages to our Embassies and allies over the world—how they could sabotage those cables in a matter of moments.

I could tell you how there is being poured into the United States over 10 million pieces a year of clever, subtle, effective Communist propaganda to subvert selected and key groups. I could tell you that at the direc-

tion of the Kremlin there are people in the United States who are ready, willing, and able to engage in demonstrations and attacks similar to those of the Communist-directed mobs in South America against DICK NIXON. Again, in Sunday's Cincinnati Enquirer we find this significant statement, as it relates not only to the Nixon incident but also to Lenin's statement about encircling the United States which I just quoted:

"International communism seems to have chosen South America as one of its targets in the Soviet drive for world domination. The Soviets hope to first make South America neutral in the East-West conflict. Russia is working to pry Latin America away from its traditional friend, the United States. Once they have accomplished this the Reds think complete domination is just around the corner."

It is essential to our survival that all Americans understand the Communist technique—that all Americans realize that we are not engaged in a popularity contest with a competing economic system, that we are not merely faced with certain annoying adjustments which should be made so we may coexist with a different system of government.

We are now—at this moment—in a death grip with an enemy the likes of which for debasement and inhumanity the world has never before experienced—an enemy whom we can ignore, appease, negotiate with at summit conferences—only at the expense of our survival.

This, rotarians, is the challenge of our day to all patriots of this Republic. We must accept this challenge. We must either dedicate ourselves to it or face eventual slavery and destruction.

The Canadian Manufacturers' Association Urges "Buy Canadian"

EXTENSION OF REMARKS
OF
HON. RICHARD M. SIMPSON
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 5, 1958

Mr. SIMPSON of Pennsylvania. Mr. Speaker, while we have been urging Americans to help strengthen the economy of other countries, our neighbor, Canada has urged its people to "buy Canadian." A publication, Industrial Canada, published by the Canadian Manufacturers' Association, has recently come to my attention. The title page reads "Buy Canadian—Keep Canadians Working."

So that my colleagues may better appraise the attitude of other countries toward the protection of their basic industries, I have prepared some excerpts from this interesting issue which I am including as an extension of my remarks.

It will be noted that our Canadian friends recognize the absolute necessity of strengthening their domestic economy as being the primary goal of their national economic policy. In my opinion, we would profit from a similar concern for the welfare of our own home industries, rather than bargaining away their markets to foreign producers, as we have been doing for a number of years.

The above-mentioned follows:

[From Industrial Canada of June 1958]

YOUR BEST BUY IS CANADIAN

The Canadian Manufacturers' Association is putting all its energies into a program designed to demonstrate to Canadian purchasers that their best buy is Canadian.

We are doing this because we believe that Canada's prosperity, on which the welfare of each individual citizen depends, hinges on the strength of its manufacturing industries. That strength depends, in its turn, on the support of the individual citizen.

His freedom to buy as he chooses is part of our way of life, and quality and price determine his choice. Our task is to demonstrate that when his choice lies between a product of domestic manufacture and a similar imported product, his best buy, provided the overriding considerations of price and quality are comparable, is always to buy Canadian. In so doing he will help to stimulate Canadian industry, encourage enterprise, create jobs, raise living standards, and keep his country strong.

The Canadian Manufacturers' Association has urged Canadians to follow the principle behind this program for well over half a century. The current phase is an enlargement of the program. We seek the active support of all interested organizations, group and individuals and of government at all levels.

There's nothing new about the "buy Canadian" program. But there's a lot that's new in the present intensified phase of the program.

The new phase was formally announced to press and public on April 30, when President H. V. Lush released a statement that the Canadian Manufacturers' Association had launched an intensified "buy Canadian" program. But there were earlier indications—for example, in a speech delivered by the president on February 24 to the National Sales Executives' Association, and at other speeches given at various times in April—that a revitalization of the program was underway, and the nation's press was quick to pick up the story. Plans for the renewed campaign, urged by members from coast to coast, had, of course, been maturing for some weeks before the story broke.

The beginnings of the "buy Canadian" program antedate such recent activity by many years. In one form or another the program has been carried on by the association for almost 60 years, sometimes as the "produced-in-Canada movement," sometimes as the "made-in-Canada program," but always with a single aim: to encourage Canadians to buy Canadian products and services and in so doing to secure fuller employment for themselves and increased prosperity for the whole country.

In the earliest days emphasis was strongly on the promotion of industrial exhibitions, including some traveling ones. Some of the older hands among the members will recall the "made-in-Canada" train which toured the country under association auspices. Others will recall the "Produced-in-Canada Weeks" that were a feature of the period between the World Wars. Throughout this period there was a wide distribution of posters, placards, labels, leaflets and other publicity material, as well as special appeals to members through the association's circular service and Industrial Canada.

The program was conducted less insistently after World War II, but on the recommendation of a special subcommittee which met in 1954 emphasis was renewed in the association's monthly publications, Industrial Canada and Industry, and the "buy Canadian" message continued to find expression in presidential addresses.

When the "buy Canadian" committee met to consider an intensification of the existing program, it decided immediately that the association should seek the greatest possible measure of cooperation and active support from other national organizations having a direct interest in the program's aims. The benefits to be won by the purchase of Canadian goods and services, in preference to those of foreign origin, accrue to all Canadians: not alone to manufacturers and other industrial buyers, but to the consuming public, retailers, professional groups and governments. The greater the number and variety of participating groups, the greater the chances of success in establishing the "buy Canadian" principle as an accepted guide for Canadian buyers.

It was decided that the association's program would be offered to a wide variety of groups, such as trade associations, service clubs, and government departments. These would be requested to advocate "buy Canadian" principles in their respective fields and, wherever possible, to implement a program of activities similar to that which Canadian Manufacturers' Association members would be asked to adopt.

One of the "buy Canadian" committee's first concerns was to produce a distinctive symbol and slogan to identify the program. After numerous designs had been studied, a maple leaf was chosen as the identifying symbol, with the slogan "buy Canadian" incorporated in the design. A number of secondary slogans were selected for use with the principal slogan; among them "keep Canadians working," "protect employment," "a wise Canadian buy Canadian," and others which most members are now familiar with.

When the symbol and slogans had been selected, and a program outlined in detail, a formal report was made to the association's executive council, which approved the "buy Canadian" committee's recommendations. Details of the program were immediately released to members by circular, together with proofs of the maple-leaf symbol and instructions for securing electros for use in advertising and printed matter.

Response to the association's approach to other national organizations was encouraging, a number of these, representing labor, retail distribution and consumer groups, indicating immediate interest in the program. Governments, too, were quick to express approval: The personal endorsement of the majority of the Provincial Premiers, was added support for the Canadian Manufactuerers' Association program. As the program continues, the list of individuals and organizations whose cooperation is to be solicited will be expanded. Among these will be members of Parliament and of the provincial legislatures, mayors, reeves, daily and weekly newspaper editors and columnists, public-relations personnel, radio and television news editors and commentators, Canadian legions, and service clubs.

A CONTINUING PROGRAM

The "buy Canadian" program as envisaged by the Canadian Manufacturers' Association is, above all, a continuing program, which should gain in intensity over the months and years. The response of the membership to the new phase has been highly enthusiastic; the amount of publicity accorded it by the press has been notably encouraging.

Though support for the program has been sought on as many fronts as possible, manufacturers have recognized their responsibility to put their own house in order. They have begun by reviewing their own buying practices to insure that as many as possible of their purchases are made from Canadian sources. Evidence of their efforts in this direction wil be found elsewhere in this issue.

[From Industrial Canada of June 1958]

THE WHY OF BUY CANADIAN

The best solution, of course, for our perennial woes would be an adequate tariff to protect our Canadian economy and our Canadian wage standards from the devastating effects of cheap labor and mass-produced imports.

Do Canadians realize that manufacturing today is Canada's biggest employer of labor? Do they realize that their wage rates are 3 times those of the United Kingdom and Western Europe and 8 to 12 times those of Asia? Do they realize that United States manufacturers can produce more cheaply than we can simply because they are geared to a domestic market containing 10 times as many people as we have in Canada? I confess to much doubt as to whether any of these things are realized.

And yet, if Canada's manufacturing industry is to continue to furnish employment for 1 out of every 4 gainfully employed persons as it does today, it must be permitted to operate in a business climate of fair competitive conditions.

Naturally, any policy of adequate tariffs should be abetted by enthusastic subscription by Canadians in all walks of society to a health-giving policy that would result in the replacement of a big slice of our imports from the production of our own factories.

Let us from the very outset leave patriotism and sentiment right out of this discussion.

We have got to show that buying made-in-Canada goods will bring prosperity to the family of the consumer to whom we are speaking and not just to some unknown family a few blocks up the street.

We have got to satisfy the Canadian woman in particular that, unless she buys the goods made by Canadians, other Canadian wives will not have the money with which to buy the goods made by her husband or, for that matter, any other Canadian worker.

We have got to establish in the minds of all consumers that their individual well-being, for the most part, is indivisible from that of manufacturing industry and that no one in this country can hope for personal prosperity if all do not work for national prosperity.

There is another group of people which should be particularly concerned with this "buy Canadian" program. I refer to the wholesalers and retailers. I know they must stock the goods their customers want, but surely they cannot imagine that they are any less dependent upon national prosperity than everybody else. Where will the Canadian women who frequent their stores get the money to buy their goods if Canadian men are out of work? And how can Canadian men remain employed if the goods they make are not sold?

There is still a lot more to this problem. We, as manufacturers, cannot ignore our own responsibilities. What right have we to demand that people buy our products and do nothing more about it? We are on weak ground if we hope to persuade customers to buy second-rate goods or to pay exorbitant prices. The responsibility of price and quality is ours.

We can meet it. Canadian craftsmen are just as good as those of other countries at producing quality goods. Canadian technicians and techniques are equal to competing in efficiency with any in the world. As manufacturers it is our duty to see that the "buy Canadian" symbol is synonymous with value for money.

Naturally, we manufacturers must apply the magnifying glass of efficient discontent to our own buying policies. We may well discover that materials we are importing could, in fact, be obtained from native sources and, quite possibly, on more favorable terms.

There is little doubt that reasoning commentators will ask this elementary question:

Since Canada is neither self-sufficient nor populous enough to consume all we produce, will not our selling to other countries suffer if we do not buy from them?

This question does not come within the framework of our "buy Canadian" program. We have never been foolish enough to suggest that the consumer buy blindly or refrain from buying what is not made in Canada. We have only argued that where two comparable products—one made domestically and the other made abroad—are displayed for sale, the shopper is acting in his own best interests by choosing the Canadian product.

At the expense of being repetitious, let me again say that the Canadian housewife, businessman, unionist, store and company managements, governments at every level, must all come to realize that they have a vested interested in exercising a definite preference for made-in-Canada goods.

I do not think that it is too strong to say that our very survival as a nation in fact as well as in name depends above all else on our willingness and ability as Canadians, corporately and individually, to do four interrelated things.

The first is to invest in the development of our own industries. The second is to process more and more of our own raw materials. The third is to enforce a realistic tariff policy reflecting our hopes for our country's future. The fourth is to consume our own manufactured products.

No, This Congress Will Not Dare

EXTENSION OF REMARKS

OF

HON. RALPH W. GWINN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 5, 1958

Mr. GWINN. Mr. Speaker, this Congress will not dare—and many State legislatures will not dare—to enact the right to work.

Not until those elements in society who want freedom and the right to work organize, will we have anything but a continuing take-over by AFL–CIO of greater control in the assemblies and in the Congress.

Not until there is a reversal of this trend will the right to work be restored in a majority of the States and in the Congress.

This is brought out very well by Earl Harding, vice president, National Economic Council, Inc., in an Economic Council Letter dated May 1, 1958, as follows:

NO, THIS CONGRESS WILL NOT DARE, BUT MORE STATES WILL DARE ENACT THEIR OWN RIGHT TO WORK LAWS

Will Congress dare outlaw compulsory unionism, apply antitrust laws to all forms of monopoly, and repeal Federal laws giving labor monopolies special privileges denied to others?

The answer to our questions, raised in Economic Council Letter No. 424, February 1, 1958, was foretold by Representative WINT SMITH when he introduce that Letter into the CONGRESSIONAL RECORD of February 13. The plain-spoken Kansas Republican told Congress: "The union bosses have the power. The answer will be No."

The Senate began, on April 25, to confirm the accuracy of the WINT SMITH forecast. By 53 votes to 37 the Senate rejected Senator WILLIAM F. KNOWLAND'S amendments by which he sought to convert a "be honest" welfare and pension bill into a bill of rights to protect all union members from the excesses of their new masters.

Senator FRANK J. LAUSCHE, whom the labor bosses tried many times to defeat while he was Governor of Ohio, was the only Democrat voting on April 25 to support a KNOWLAND amendment. LAUSCHE may be heir to the victorious defiance of union bosses by his predecessor, the late Senator Robert A. Taft.

ISLANDS OF FREEDOM

States where the worker doesn't have to join a union to get or keep a job: Alabama, Arizona, Arkansas, Florida, Georgia, Indiana, Iowa, Mississippi, Nebraska, Nevada, North Carolina, North Dakota, South Carolina, South Dakota, Tennessee, Texas, Utah, Virginia.

RIGHT TO WORK

Campaigning active in 1958: California, Colorado, Connecticut, Delaware, Idaho, Kansas, Kentucky, Louisiana, Maryland, Michigan, Ohio, Rhode Island, Washington.

Present prospect: As we reported in Letter No. 424, "Congress will talk much and do little or nothing about the corruption, racketeering, and abuse of trust and power mentioned in the Eisenhower-Mitchell message to Congress."

Even if the half-way reform measures sponsored by the President and his Secretary of Labor should survive the united assaults of big labor's bosses, their horde of lobbyists and their bipartisan allies in Senate and House, the strangling power of inflationary unionism will not be seriously impaired by this Congress.

The politically entrenched labor bosses will be allowed to keep their power to coerce depression-harassed employers into signing new or renewing old closed shop or union shop contracts. Workers thus caught in the trap of compulsory unionism will be compelled to support the labor monopoly or lose their jobs.

The only now foreseeable exceptions will be in the 18 islands of freedom—the 18 States with their own right-to-work statutes that outlaw compulsory union membership—and in the States where the constitutional right to work may be restored this year or next by pending legislation or, as in Kansas, by voters' ratification on November 4, 1958, of the pending amendment to the Kansas State constitution.

The Kansas amendment is typical. Its full text follows:

"No person shall be denied the opportunity to obtain or retain employment because of membership or nonmembership in any labor organization, nor shall the State or any subdivision thereof, or any individual, corporation, or any kind of association enter into any agreement, written or oral, which excludes any person from employment or continuation of employment because of membership or nonmembership in any labor organization."

The real test of the labor bosses' political power in Congress is not likely to come until the rank and file of dues-paying Americans realize what they have lost—their individual right of choice—besides $620 million a year they have been paying into 191 national and international unions.

More and more the thoughtful members of labor unions will, despite the propaganda in many labor publications, awake to the enormity of the conditions disclosed by the McClellan committee's hearings. The decent union members—and most of them are decent, useful citizens—will come to realize that so long as they cannot quit a racket-

ridden union without losing their jobs they are helpless to bring about a housecleaning. Sooner or later they will see that their right to work without paying tribute to a union boss is their most precious freedom. And they will hate the employer who has sold them into slavery.

THE MORAL ISSUE

More and more the immoral principle of compulsion in a free society is being recognized and is reshaping public opinion. Two Manion Forum broadcasts, April 20 and 27, 1958, have carried coast to coast on more than 80 radio stations, most of them on Sunday evenings, Catholic and Protestant spokesmen's analyses of the moral basis of the right-to-work laws now in force in 18 States. Printed texts of these broadcasts are obtainable from the Manion Forum, South Bend, Ind.

The Reverend Father Ferdinand C. Falque, a Navy chaplain in World War II, now pastor of the Diocese of St. Cloud, Minn., told the vast Manion audience:

"Right-to-work laws are aimed at taking away the sovereign right of compulsion from the unions and giving the right to join or not to join back to the individual where it belongs. * * * They do not impede unions in their legitimate purposes and growth. They do not prevent any worker from joining a union but they prevent unions, as collectivities, from enforcing membership against the will of workers and against their consciences."

Dean Manion's other clerical broadcaster, the Reverend Edward W. Greenfield, lived through the violence and near murder of a child in the wildcat strike in his Princeton, Ind., parish. In one of his published accounts of last year's labor war in his parish, Mr. Greenfield wrote:

"When the Governor of Indiana was faced with the question of signing or vetoing the right-to-work bill, he was warned by labor lobbyists that if he allowed it to become law 'accidents' would happen to workers, that recalcitrants would be 'persuaded' in back alleys to join even against their will. What an indictment of organized labor. * * * This tyranny is so flagrantly anti-American and anti-Christian that I am at a loss when I see citizens and clergymen failing to take an uncompromising stand against it.

"The right to work is no more and no less than the right to live as a free being, and there is no greater moral imperative than defending and demanding that right for every living soul."

Protection of this basic right to work was wrested in 1215 from King John by Magna Carta, which guaranteed that no Englishman should be deprived of his means of livelihood. The tools of the worker were exempted from seizure by any process of law. Decisions of English courts sustained that principle through the centuries and handed it down in the English common law to become the foundation of our basic law.

Only an uninformed and unsensitized public opinion would tolerate, without immediate and drastic reform, the violence, extortion, thievery, deceit, and disregard of law and decency in segments of the union-organizing business disclosed by the McClellan committee. Why, with an elected Congress, must the American people have to wait for relief by State legislatures enacting right-to-work laws? Here is one authoritative explanation:

Representative RALPH W. GWINN, Republican, of New York, said recently in a letter to businessmen that the top officials of the organized unions dominate Congress. He further said:

"One hundred and seventy-six Members of the House have benefited from union contributions, free campaign help, radio, TV time, advertising, extensive publicity in the labor press, scores of voluntary workers furnished by the unions, doorbell ringers, telephone brigades, and all the rest of it. * * * Our trouble is not that we don't know what legislation is needed. We don't have the votes to get it passed."

To what extent, then, are leaders of the Democratic and Republican Parties responsible? Here are two flashbacks:

In October 1939 Franklin Roosevelt's Acting Secretary of the Navy requested permission for Navy men to cross a picket line and remove from the then strikebound Detroit plant of the Bohn Aluminum Co. Navy property—patterns and castings needed for national defense. The union's answer, reported in an official record, was emphatically "No."

And, also from the record: "No further action was taken by the Navy."

July 27, 1944, the Republican nominee for the Presidency, Gov. Thomas E. Dewey, was given a memorandum urging him to promise publicly that if elected he would "stand for voluntary, and against compulsory, association of Americans of any group or class." Instead, Mr. Dewey delivered in Seattle the speech prepared by a top union boss promising that he would administer the already-hated Wagner Act more efficiently than the fourth-term candidate, F. D. R. I know influential Republicans who stayed home in 1944 because of that speech.

Now, while Walter Reuther, the early advocate of a soviet America, is moving up to capture the Democratic Presidential nomination in 1960, will the GOP leaders continue to imagine they can win the labor boss vote by a policy of compromise and appeasement?

Or will Senator LYNDON JOHNSON's Democrats imagine they can force compulsory unionization upon the South and still offer special advantages to the textile industries which union bosses drove out of New England?

Will the Democrats learn nothing from their past failures? The Dunn survey of political trends has shown these facts: The Democratic vote for President in 1936 was 27.5 million; in 1940, 27.2 million; in 1944, 25.6 million; in 1952, 27.3 million—despite the growth in population. Voters of both parties lost interest and stayed home because neither party offered any alternative. GOP "me-too-ism" offered only to administer more efficiently the socialism of the Communist-infiltrated New-Fair Deal.

Or will politicians of both parties learn from the forthrightness of lately enlightened industrial leadership, such as that of the National Association of Manufacturers, and insist upon attacking the disease of union lawlessness at its source—the excessive power of the labor monopolists?

WHERE COURAGE COUNTS

Newspaper readers who sometimes question the accuracy of labor news written and edited by members of unions should know the thinking on union monopoly by Mr. D. Tennant Bryan, of Richmond, Va., the new president of the American Newspaper Publishers Association, as reproduced in Editor and Publisher, April 19, 1958. Mr. Bryan is publisher of both of Richmond's great dailies, the Times-Dispatch and the News Leader. The following editorial is from the News Leader:

"THE A B C'S OF UNEMPLOYMENT

"Congress is concerned today about unemployment.

"It is trying to decide between two things:

"A reduction in taxes, or increased spending in public works.

"But this is not the major issue.

"Unemployment today is the result of lowered consumer demand.

"Consumer demand is lower because of resistance to higher prices.

"Prices are higher because wages have gone up more than productivity.

"Wages have outpaced productivity because of union monopoly.

"Congress has created the union monopoly.

"So what we have today is unemployment created through excessive wage gains obtained by union monopoly.

"Instead of facing up to this directly, the Congress is thinking about ways to pump more money into the economic system.

"Whichever way is selected, the result is the same: deficit financing and more inflation.

"Thus the real decision of Congress is a choice between two courses of action:

"1. Eliminate union monopoly so that wages may be set by true collective bargaining; or,

"2. Preserve union monopoly at the cost of continued inflation and the risk of national bankruptcy."

Conversation With Hashim Jawad of Iraq

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 5, 1958

Mr. MULTER. Mr. Speaker, I commend to the attention of our colleagues the following account of an interview between Hashim Jawad, Iraq's former representative at the United Nations, and Bushrod Howard, Jr., as it appeared in the New Republic magazine of August 4, 1958:

CONVERSATION WITH HASHIM JAWAD OF IRAQ

(Hashim Jawad was Iraq's representative at the United Nations until December of last year when he voted in favor of Greece on the Cyprus question and was recalled to Baghdad. He left Baghdad right after the revolution and is back as the U. N. representative—as yet unseated—of the new Iraq Republic. Mr. Jawad had been in Baghdad during the revolution and agreed to answer questions about old friends and his knowledge of recent events.)

1. Many say here that the revolt was inspired by President Nasser and some say it was inspired by the Communists.

You know that this is not true. The people in Iraq and Arabs everywhere, know that a revolution must be made by the Army. No one else could do it. No one knew when the revolution would come but the atmosphere was electric in Baghdad.

2. Why did the revolution occur in July 1958? Why not sooner?

There have been plots and discontent in the Army for some years. They have never succeeded or gone very far. A great number of Army officers were retired or transferred when they were suspected. The best estimate was that at least 10,000 secret police were in Baghdad alone. It was hard to make a plot. The opportunity came when General Qasim's brigade was ordered to Jordan. They had then a perfect opportunity. They were to leave on the 14th and so no suspicion was aroused when they traveled about.

3. The events at the palace seemed unnecessarily bloody to some.

I assure you that the Army went into the palace to demand a new cabinet and intended the king to be a constitutional monarch. Abdul Ilah ordered the guards to arrest the officers. They had to escape and return to fight it out. The king's body was never touched and Abdul Ilah's was rescued by the army very quickly.

4. When do you think the chance for peaceful revolution was lost?

When Nuri Said dissolved the Parliament of 1954 which had an opposition of less

than 30 out of 144, people realized that a revolution would be the only answer.

5. What will happen to those who served with Nuri Said? How many are in jail? Will any of the old politicians be able to participate in national politics?

Some must be brought to account. Only Nuri Said and Abdul Ilah were really hated. There are some 20 or 30 arrested now. Many prominent politicians who served with Nuri are free. For example, Nadim Pachachi and the former Prime Minister Mouktar Baban. I do not think anyone wants to have any vindictive punishment. A few may be tried. The question of the secret police will certainly be investigated. Some will just retire to private life because they have made illegal profits.

6. What of the civil service?

I do not think any or hardly any of the civil service will be changed. They are technicians and are as sympathetic to the revolution as the rest of the country. Certainly people like our friend Ibrahim Alussi, director of mines, is a technician and will not be affected.

7. What of the new government? What will their international policies be?

The present government is very moderate. The Sovereignty Council is even conservative. General Rubai is a very religious man and Muhammad Kubbah, the head of the Istiqlal (Independence) Party, and Naqshabandi are both conservative. The cabinet is representative and you know Muhammad Hadid, the deputy head of Kamil Chaderchi's party, and Joumar the foreign minister and Shanshal the minister of guidance. They are all Iraqis who have opposed Nuri for a long time but are reasonable and moderate men.

I am very interested in having trade unions and other associations. This will give us a chance to progress. Under the old regime there could be no associations of any kind—artistic, cultural, let alone political or trade unions.

8. What of the oil companies and concessions?

The oil company has done a very good job in social welfare, workers' housing and vocational training. We expect and hope to obtain greater production but we want the oil company to continue and for the oil to continue to go to the West.

9. What of foreign policy?

We want good relations with the United States and the West. Also Iraq lives next to Iran and we do much trade with her. Above all we need good relations with our neighbors and we also hope the United States will recognize us soon because people will not understand it otherwise.

10. Will you join the UAR?

I do not think so at this time. We shall have close relations on many matters—including economic, cultural, foreign and defense policies. Iraq has, as I said, special problems with Iran and Turkey that are important to her. The UAR does not have these relationships. We in Iraq must be considerate first of all of our neighbors.

BUSHROD HOWARD, Jr.

Telegram From George Meany Regarding H. R. 13507

EXTENSION OF REMARKS
OF
HON. JOHN D. DINGELL
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 5, 1958

Mr. DINGELL. Mr. Speaker, pursuant to permission granted, I insert at this point in the RECORD, a telegram received from Mr. George Meany, president of the AFL–CIO, expressing the views of that organization in regard to H. R. 13507:

WASHINGTON, D. C., *August 4, 1958.*

Hon. JOHN D. DINGELL,
House Office Building,
Washington, D. C.:

AFL–CIO urges you vote for the Teller bill, H. R. 13507, relating to public disclosure of health, welfare, and pension funds. While the bill does not meet all our objectives in this field, we believe it has sufficient merit to be passed by the House. However, any attempt to eliminate any plans from coverage as the Bosch and Ayres amendments propose should be resisted. Disclosure legislation is necessary to help prevent corruption in all funds regardless of who controls their administration.

GEORGE MEANY,
President, AFL–CIO.

Ninety-fifth Anniversary of the Founding of the Army Navy Air Force Journal

EXTENSION OF REMARKS
OF
HON. CARL VINSON
OF GEORGIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 5, 1958

Mr. VINSON. Mr. Speaker, I would like to call the attention to the Members of the House to the forthcoming 95th anniversary of the founding of the Army Navy Air Force Journal.

The first issue of this venerable service paper was published on August 29, 1863. Its editor was Col. William Conant Church, an experienced newspaper man who had previously been a correspondent for the New York Times. Its original title was the Army and Navy Journal and it continued under this designation until the Air Force was established as a separate service under the Department of Defense.

Those of us on the Committee on Armed Services know how well this weekly paper has served the interests and welfare of the men and women who wear the uniform. Through all the ups and downs of the Nation's attitude toward its defense forces, The Journal has fought steadily for the maintenance of strong defenses and has kept up the spirit and morale of Service families during those long periods of neglect which have marked the treatment of the Armed Forces over our history.

We in Congress are particularly cognizant of the thoroughness and accuracy of its reporting on all defense legislation. Through the columns of the Army Navy Air Force Journal we are often able to learn the views and reactions of personnel in the field as opposed to the actions and official views of the Departments themselves.

The long life and steady growth of the Journal reflect the confidence and faith placed in it by generations of service personnel. As the services have progressed from horse cavalry and muskets, from wooden ships and sails, to missiles and aircraft, the Journal has kept service personnel abreast of the times. In fact, its success and growth over the years reflects its high devotion to national defense and to the welfare of service personnel.

Because it covers and serves all components of the defense team, the Journal throughout its 95 years has taken a broad view of military problems, concerning itself with the overall security of the Nation, rather than the restricted interests of a single service. It consistently, too, has called attention editorially to Congress' responsibility under the Constitution to provide for the national defense.

I congratulate the Journal on its long span of service in support of the Nation's defenses, confident that the years ahead will add to its usefulness and prosperity.

It Took 35 Years To Get Labor Law

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 5, 1958

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include a very interesting article written by Peter Edson which appeared in the Boston Traveler on July 30, 1958, in reference to the long, hard, and difficult fight for the passage of the Fair Labor Standards Act, in which one of my predecessors in the Congress took a very sincere, active, and praiseworthy part as chairman of the House Committee on Education and Labor, and I refer to the late Hon. William P. Connery:

IT TOOK 35 YEARS TO GET LABOR LAW

WASHINGTON.—The Fair Labor Standards Act which gave the United States its present child labor law and provided for minimum wages and overtime to workers in interstate commerce is 20 years old this year. It's worth a backward glance.

For this wage and hour law, as it's called, was bitterly contested before it was passed.

From today's viewpoint, the surprising thing is that it took 35 years to get the law on the books. In oversimplified summary, the record went like this:

In 1892 Congress established the 8-hour day for laborers and mechanics employed on public contract work. In 1907 the 16-hour day was made maximum for railroaders.

A 1914 law establishing the 8-hour day and the 48-hour week for women in the District of Columbia—to protect their health and morals—was declared unconstitutional in 1923.

But in 1916—to prevent a strike—Congress established the 8-hour day for the railroads.

The National Industrial Recovery Act of 1933 permitted minimum wages under the Blue Eagle codes. But in 1935 this law was declared unconstitutional.

Then in 1937 the United States Supreme Court upheld a Washington State minimum wage law for women. That paved the way for Federal legislation on wages and hours.

President Roosevelt asked Congress for it in May 1937. Senator Hugo Black of Alabama, now on the Supreme Court, and former Representative William P. Connery of Massachusetts, introduced legislation. But it took over a year to get it passed.

Even after passage, a huge public relations campaign had to be waged to educate and crusade for compliance.

The minimum wage was set at 25 cents an hour when the act first went into effect October 24, 1938. After a year it was raised to 30 cents. Even these low minimums gave increases to 950,000 workers.

When the minimum wage went to 40 cents in 1945 it gave a raise to 1.7 million workers. Another 1.3 million benefited by the raise to 75 cents in 1950, and 2.1 million more by the raise to $1 in 1956. This $1 rate was a compromise between 90 cents and $1.25.

Wage-Hour Division of Department of Labor now makes annual payroll inspections on about 6 percent of the 900,000 employers with 24 million employees in nonexempt industries.

From October 1938 to May 1958 nearly 4 million employees have received back-pay adjustments totaling over $180 million through enforced compliance.

Two provisions of the act not commonly associated with it restrict child labor and require overtime pay.

Sixteen years is set as the minimum age for general employment—18 years in hazardous industry—though children of 14 and 15 may be employed part-time outside school hours.

The act provided for time and a half minimum overtime payments after 44 hours in 1938–1939, after 42 hours in 1939–1940, and after 40 hours on October 24, 1940.

There is said to be no way to estimate how many American workers are now receiving less than $1 an hour.

Arkansas and the Constitution

EXTENSION OF REMARKS
OF
HON. THOMAS G. ABERNETHY
OF MISSISSIPPI
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 5, 1958

Mr. ABERNETHY. Mr. Speaker, under leave to include my remarks in the Appendix of the RECORD, I include an article by Mr. David Lawrence, one of the Nation's outstanding journalists, on the Little Rock situation, and respectfully commend the reading thereof to the Members and the country.

The article follows:

ARKANSAS AND THE CONSTITUTION—FAUBUS VOTE HELD RETURN TO THE LAW AS WRITTEN, NOT AS INTERPRETED

Maybe it's a demonstration of "Arkansas nationalism" we are witnessing—though perhaps "statism" is a more fitting word—but for some reason not clearly understood in the North the people of Arkansas, by the biggest landslide in their voting history, have just assured a third term for Governor Faubus.

Isn't this the man, it will be asked, who "defied the supreme law of the land"? Don't the people of Arkansas know what the "law of the land" is, or have they come to the conclusion that maybe the "law of the land" is what the Constitution says it is and not what nine Justices say it is? For the Bill of Rights in the Constitution does say that "the powers not delegated to the United States by the Constitution, nor prohibited by it to the States, are reserved to the States respectively, or to the people."

The people of Arkansas weighed all the arguments and decided to back the Constitution as it is written. They had listened for nearly a year to radio and television speeches of abuse and had read many articles in the press telling them they are lawless folks who don't obey the orders of the Federal courts. The Arkansas voters had protested in vain that critics in other States were oversimplifying the issue by saying that it was merely "that man Faubus" and a few zealots who were responsible for the crisis in the schools of Arkansas and that, if the present Governor were not in office, things would be different.

Now the people of Arkansas, in a free and fair election, have given their answer. They have voted by an overwhelming majority—about 70 percent of all ballots cast—to retain Governor Faubus. It's a break in tradition to give a third term to a Governor in Arkansas. It was, therefore, an electorate deeply stirred which threw precedent aside in order to say to the rest of the States of the Union that Arkansas craves the privilege of deciding for itself how it shall educate its children.

For, up to 1954, education was considered to be solely a State problem, with no right to the Federal Government to assign pupils to public schools, much less to send Federal troops to police the corridors of school buildings. But, while the Supreme Court 4 years ago vetoed "segregation," it has not yet prescribed a formula for integration. Other States besides Arkansas are struggling with the same problem of how to retain control of their schools and yet keep them from being interfered with by the Supreme Court's edicts.

There wouldn't have been any such rumpus in Arkansas or in any other southern State if the Congress, as specifically provided in the 14th amendment, had passed a law compelling desegregation. But for the Supreme Court suddenly to turn down its own 58-year-old order for "separate but equal" facilities in the schools by terming it now a violation of the 14th amendment—especially since the Court, itself, could not find the slightest bit of history to show that the framers of that amendment intended to take over control of educational systems of the States—is to arouse the people to demand that the "law of the land," namely, the Constitution, itself, be followed. The 14th amendment stipulates that "Congress shall have power to enforce, by appropriate legislation, the provisions of this article." This never has been done. The Supreme Court, moreover, isn't supposed to exercise any legislative power.

It is significant that the two candidates opposing Governor Faubus in the Democratic Party primary in Arkansas expressed themselves in favor of segregation in the schools, although they differed on how the formula is to be applied.

There is no doubt that the renomination of Governor Faubus in the Democratic primary—which is equivalent to election because there is no effective Republican Party in the State—will be regarded in other Southern States as encouragement and moral support.

Every Southern State would vote on the segregation issue exactly as has Arkansas. The same American "liberals" who are so quick to recognize as legitimate the aspirations of the Arabs or the Algerians or other nationalities to autonomous rights seem to forget that even in the United States there are aspirations to self-government by units known as "the several States." When the Constitution was written, all the people were told that the States were never to be deprived of their sovereignty except under the means prescribed in the Constitution, itself, for amending that document. "States rights" have since suffered as the Federal Government has gradually centralized more and more economic power in Washington. But where questions of sentiment and customs are concerned, the doctrine of "States rights" is as alive and as virile today as it was when Thomas Jefferson first taught it.

It is time for a more constructive approach to the problem of "segregation" and "integration." It's an issue that can be resolved only by patience, reason and tolerance of lengthy debate—and certainly not by bayonets.

Foreign Trade and the Dollar Gap

EXTENSION OF REMARKS
OF
HON. RICHARD M. SIMPSON
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 5, 1958

Mr. SIMPSON of Pennsylvania. Mr. Speaker, during the recent debate on the extension of the trade-agreements program, proponents stressed the need to lower our tariff so that others could secure dollars to purchase more of our goods.

An examination of international financial statistics shows that the United States gold stocks have been falling. We are rapidly losing gold to the rest of the world. The May 5, 1958, issue of Barron's National Business and Financial Weekly, contained this illuminating statement:

The record of what has been happening is clear enough. For the past 25 years, the flow of gold into the United States has been so nearly constant as to produce an occasional embarrassment of riches. Only a few times has the long-term trend been interrupted, notably during World War II and the Korean conflict, when the United States drew down its gold stock rapidly in the scramble for raw materials and other supplies. The recent shift, then, represents a conspicuous departure from previous peacetime experience. Yet there is no disputing the evidence. During January 1957 the United States gained $310 million in gold; in March of this year, it lost nearly $250 million. Indeed, in the first 4 months of 1958, the outflow already exceeds $750 million. For the year as a whole, it easily could run as high as $2 billion.

The same editorial also shows that other countries in their borrowings from the World Bank have often used international credits to purchase goods elsewhere. The editorial said:

The dreary picture is highlighted by some World Bank statistics, pinpointing how the proceeds of its foreign loans have been spent. In the 7 years through June 1954, borrowers the world over spent no less than 65 percent of their funds for goods made in the United States. In fiscal 1955, that proportion dropped to 54 percent, and in the latter half of calendar 1956 to less than 48 percent. In the first quarter of this year, America's share plummeted to 33 percent.

Few Americans realize that the export of gold and currency actually means a decline in job opportunities for Americans. Dr. Lewis E. Lloyd, economist for the Dow Chemical Co., at a meeting before the Synthetic Organic Chemical Manufacturers Association of the United States, on June 10, 1958, clearly showed how jobs disappear when our international payments are not in balance. He said:

Foreign nationals have been increasing their dollar credits almost $2 billion per year. This represents $2 billion annually which was not spent in the American market and did not make jobs for American workers. At an average annual wage of $4,000, this represents a half million jobs in manufacturing industries. Today, half of our employment is in services; that is, in a sense, each manufacturing worker supports an additional worker in the service industries. To include the service workers we

should double our figure. This means that if our international payments were in balance, we would have jobs for an additional million workers in this country.

Now that we have extended the trade-agreements program, it is necessary for the Congress to closely observe the international payments position of the United States. It is our responsibility to suggest remedial action if our gold position continues to deteriorate.

Government-Enforced Monopoly

EXTENSION OF REMARKS
OF

HON. GEORGE P. MILLER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 5, 1958

Mr. MILLER of California. Mr. Speaker, I am happy to extend in the CONGRESSIONAL RECORD the remarks made by Mr. Willard L. Gleeson, vice president of the National Health Federation, before the Richmond, Va., Organic Food Growers on June 3, 1958.

Mr. Gleeson through the years has made a great contribution to the welfare of the little people of America:

GOVERNMENT-ENFORCED MONOPOLY

(By W. L. Gleeson, vice president of the National Health Federation of Washington, D. C.)

The founders of the United States came closer to setting up in this country not only the ideal government but also the most smoothly running economy ever conceived by man.

The Government was blessed with a great domain on which its ever-increasing population could move on to and develop.

The economy was likewise blessed, in that the Government was so conceived that the individual citizen could go into business and develop that business to ever-increasing proportions without being hampered by anyone except his competitors, who, like himself, had no restrictions placed on them beyond that of being fair and honest with customers and competitors.

We greatly prospered under this arrangement, with but little dislocation other than an attempt now and then to corner the market on something.

When this happened, either a competitor smacked down the offender or the Government stepped in with its monopoly-busting powers, and the evil was swiftly corrected.

Our way of life came down through the years, building up steam, under these favorable conditions, until 1912, and in that year two things hapened. First, the great *Titanic* disaster came upon us, and this was the begining of sorrows. Second, we in this country set out in that same year to put into the hands of the American banker a complete monopoly of our money and the credit money system.

Congress abandoned its constitutional mandate to coin money and set the value thereof, and in the Federal Reserve Act, it handed over to the bankers the authority to create money and determine how much circulation credit the American people would be allowed to use, and the authority to set the value of it and the rate of interest.

When this monopoly was set up by the Government, for the bankers, the monopoly was enforced with the power of the United States; then and there a new concept of the American free competitive enterprise system came into being.

A system of private commercial profit money, a gambler's money on a national scale. Following this bankers monopoly a system of Federal and State enforced monopoly, similar to this banking deal, quickly developed throughout the whole Nation and its economy. Obviously others wanted to have the same system of protection the bankers had pressured for themselves.

There were several additional causes for this pattern which the bankers had created to be followed. It was speeded up, it seems to me because there was a breaking down about then of the political moral fiber. Politicians began resorting to the introduction of bills in the legislatures and the Congress to regulate certain industries.

These bills, in too many cases, were introduced to secure campaign contributions or shakedowns from those who would be most affected by the bill, or for the purpose of gaining free publicity.

When this shakedown bill racket became a regular feature of our lawmaking bodies, it caused the industries and professions affected, to form organizations to fight for their common cause.

After the bill situation was brought under control by the associations each of the associations had to find something to do, or go out of business, so they set out to do a little bill passing of their own—bill passing to protect their profession or industry from competition, and for the past 40 years or so, 90 percent of the legislation passed in our country is not for the people and their protection. It is passed at the instigation of some lobbyist or trade association for the benefit of the special interests represented in the associations. Since that time the people have gained little without being organized.

Today, just about every industry and profession and trade have their powerful associations to protect them from anything new that might become new or competitive and to pressure through the lawmaking bodies, laws to stifle these competitors, especially competition from individuals who are brazen enough to enter a business or profession, without the consent of the association or union.

So today everybody is represented before the lawmaking bodies, except the best interest of the people and their welfare. To prove this, just try to get a bill through for the people and all the associations jump on you.

This situation has developed, not only in our country, but it prevails universally.

Strangely enough, this condition was prophesied in the Scriptures, as happening in the end of this age.

The Scriptures called it a beastly system, and when we see some of the things it does, we must agree that it has become beastly.

The Scriptures said in the end of the age, you could not buy or sell, unless you first obtained "the mark of the beast." (We all know Scriptural reference to a "mark" means approval in writing to those having control.) "Mark" means to put the cross and seal of authority on a document and that is what you must obtain before you can do anything today. You have the "mark" of the beast.

Now, I ask you, Can you go into business, buy or sell, or set up a professional office anywhere on the earth today, without first obtaining the written approval of not only the government authorities but also the unions and associations that have set themselves up to police that business or profession?

No; you cannot, and remain in business very long.

Today the Federal and State governments, enforce the will of these monopoly organizations, against anyone who may dare to come up in opposition to them.

You too are faced in your work with this Government-enforced monopoly. In fact, I dare say you have already been up against it in some form.

There is a Government-enforced monopoly of labor, medicine, law practice, farm production and prices, banking, and every other activity you can name, and you cannot live without bowing to it.

Yet, it is mostly waste and of little real value to the life and happiness of the people and in many cases it is the cause of great damage to the people.

What we have is dictatorship by monopoly associations over our economy and dictatorship over our Government by minority group associations.

In the case of food, there are several trade associations busy at the job of having the Government enforce their adulteration of the food they make or market, so they can earn more profit on a more stabilized and regular basis, regardless of the people's health, and the Government will see to it that you do not have a chance to come into their field and market a product, that is not adulterated with preservatives, reenforcements or bug poison, similar to that made by the members of the monopoly protecting association, and the Government enforces it on the grounds it is not an accepted practice in that profession or business. Marketing of milk is a good example.

And did you know, even religion has fallen into this same rut.

Now, maybe you have never thought of it, but we have set up in the Federal and State government departments to look after the welfare and enforce the rules of certain industry organizations and professions.

What are the food and drug departments but the private agency of the medical profession and its allied groups, such as the druggist, his suppliers, hospital monopoly, and their suppliers; and tied to this are the State health departments and professional boards, and the medical departments of colleges.

It makes no difference how good your product is, or how well you serve your people, when one of these decree that you must go, they move to destroy you and they have the Government agency at their side doing the dirty work against you, using your own tax money to do it with.

Before I deal with the only possible way open to you to combat such a beastly monopoly condition in your life, may I ask your pardon in referring to some personal experiences as examples? For, we learn from example and from experience.

In my day I have managed quite a number of political campaigns, and to my surprise 19 out of 21 of them have been successful. It is this fact I think more than any other that led me to several conclusions about this monopoly field.

About 20 years ago, a friend of mine operating several optical offices and who advertised his eyeglasses found himself faced with the wrath of his profession's State association and their determination to put him out of business once and for all.

So they went to Sacramento and had a bill passed, saying a licensed optometrist could have his license revoked forever, if on his door, he used doctor as a prefix to his name, he could not use his degree of O. D. as a suffix to his name; if he used doctor as a prefix, he had to spell out optometrist after his name in prescribed size type.

This friend had 8 offices and before he could get a sign man to all the offices, to make the changes according to the new law, the board, at the request of the State association, had a horse doctor from Southern California visit the offices and make a photograph of the signs on the doors.

This horse doctor found two that had not been changed, so 5 days later, on a Friday night at about 6 p. m. the optometrist was

served with an order to appear within the next 5 days for trial before the State board for his violation of the new law, and they counted the Saturday and Sunday as part of the 5 days the law allowed him to prepare his case.

At the hearing in Los Angeles, which lasted all of one day, the board would not permit my friend's attorney to put one bit of evidence in the record in his own defense.

At the end of the day, the board asked the doctor, his attorney and me to leave the room while they decided his fate. Two minutes later they called us back and and stated his license had then and there been revoked forever.

On the way back to the doctor's home in Fresno, we decided the 8 offices would need to be transferred to the doctor's son, or else all the employed doctors in the 8 offices would be proceeded against and the 8 offices closed.

The doctor took on this job, while I worked on a counterattack to prove to these monopolists that two could play at their own game.

I secured a top optometrist from out of the State and had him and a nurse visit all the officers of the association and the members of the State board and have his eyes examined by them and to record all the conversations and all the acts of the doctors, while in their offices for professional services. Out of 100 cases called on, 61 were found to be violating the State laws governing their profession, 38 were chargeable with malpractice and 11 had committed criminal libel against my doctor friend; all three of the board members were guilty.

Just a few days after this report was in, my doctor friend's son was served a 5-day notice of hearing at Sacramento to revoke his license.

I called the president of the State association in Oakland and got a luncheon date with him for Monday, before the hearing on Tuesday.

After the lunch was over (I did not want to ruin his lunch by telling him what I was there for), I said, "Doctor, I see you people are going to try and take the license of my friend."

He said, "Yes; we will finally wipe them out."

I said, "Doctor, this is an election year. If you take his license tomorrow, on Wednesday following, I will start a statewide circulation of a petition, to take the optometrist laws off the statute books of California and in an election campaign I can say on the radio what I please, as the political reason for asking the people to vote to repeal the optometry laws; and doctor, you can take a look at this material I have as the reason for doing so. And what I can tell the people of California about you fellows."

The surprised president of the association thumbed through the book and read some of the reports. He found his own.

He said, "I can only reach two of the board members before the meeting."

I replied, "Two is a majority. So, if I do not hear favorably from you by 2 p. m. tomorrow, I will release news at that time, announcing our campaign and the reasons for it."

The call came through ahead of time and my doctor friend has had no further trouble since then, and we had the father's license restored in one of the most famous Supreme Court cases of this State.

You see, in our selfishness we have passed 3 million laws in our efforts to avoid living by the Ten Commandments. As a nation, we are now so entangled with laws that if you can afford it you stop your monopoly boys, by wrapping them up in the web they have spun in which to catch you and your money.

In my optical friend's case, the State monopoly, soon after losing the Supreme Court case, made one last attempt to gain their point. They induced their allied national manufacturer's association to place the doctor's factory on the retail list—that is, not sell him at wholesale for his raw materials. Luckily, I was in Washington, D. C., when they made their move and the doctor sent me all the evidence. I took it to Thurman Arnold and filed an antitrust action against the wholesalers.

Needless to say, he was back on the wholesale list in less than 12 hours and the antitrust 2 years later won its case we had started against the monopoly. So you see, while the Government enforces monopoly through one or more bureaus of the Government, there are two departments you can go through to counter the others.

Mr. Fred Hart, President of the Electronic Medical Foundation, has a real story which you can get in written form. His most unusual experience with the monopoly is in a full story, printed in Herald of Health.

It is only through learning from these experiences of others, first hand, that we can master the way to survive the onslaughts of the Government-enforced monopoly.

I have been in an 11-year fight in a case, where the Government took from me my television channel, after I had spent $306,000 in building my television station. It was taken in order to let a large monopoly have my channel in Los Angeles. This has possibly been the most epic case in the history of the Nation, and it too will require a full reading to tell you the interesting parts of it.

Now, before closing, may I tell you a bit about you and your problems and the service you can render to the long suffering public by standing up and educating the people about what is going on.

We, the people, are faced today with several real perils, such as war, economic collapse, famine brought on by the changing of the elements by man, and the poisoning of our food and water.

Now, of these dangers facing us, not the least is the danger we are bringing on ourselves from the junk we eat and the poisons we take.

Why do we do this thing to ourselves?

Strangely enough, we are born that way.

Adam and Eve had pure foods in their Garden of Eden home, life-giving foods in abundance, but Lucifer misled Eve as to the value of the foods that were not perfect, just as we find some adulterators of foods are misleading the people about their food products in the advertising mediums today.

Lucifer, in inducing one to eat poisonous foods, was not advertising. He was doing a direct selling job. Eve ate of the poisonous foods, given her by Lucifer, and she induced Adam to eat the foods she had eaten and from that day, until now man's bloodstream has contained poisons—that is, degenerating chemicals and mineral elements, so man dies therefrom. He spends billions of dollars on medicines in an effort to live longer, while taking into his system daily, poisons that are slowly degenerating him to death, and man has built his whole economy on death. Most of his tax load, now about 50 percent of his gross income is to buy new death-dealing instruments for war, or to pay for the past wars, both of course, dealing with death.

Man pours out his propaganda for funds from you for cancer drives, heart association and TB drives, to raise money to try and find a way to slow down the death rate, and the same mediums that carry these appeals carry the appeal to drink more and smoke more cancer-making tobaccos, and 90 percent of the programs on the television, radio, and in the theaters are educational features on murder—which is death.

Man spends millions to find a serum for polio, while stuffing his kids with white sugars, and products made therefrom, white bread and poisonous polio-creating junk in the form of candy and fizz drinks.

He spends millions to find the cause of heart attacks, when anyone with a little sense knows it is caused by the mess we eat, the fizz drinks, too much coffee, liquor, and other useless things we try to live on and cannot, while we are wasting our time and money on what we call good living. All our effort seems to be to cover up the effects of our sins, whereas the only cure is to give up our sins.

Even our automobiles are moral degenerators of our children, and kill our neighbors faster than do our wars, and all the while the fumes from them are slowly gassing and smogging all of us to death and changing the weather around us—against us.

Well, we can thank the Almighty, for we are nearing the end of the death cycle. We have His word for it—for, in spite of all the efforts of the human race to keep the death cycle going, the good Lord will institute life and the living cycle, and the health food people are the only commercially organized people I know of who are in the business of providing organically pure food and aiding this life cycle to get going.

This fact is, it seems to me, a great opportunity—an opportunity to set up a strong and effective organization, and through it to talk some sense into the people, regarding their food and eating habits and to carry on a much needed educational campaign, showing the people of this country how to work for life and living—and not for death and destruction for profits.

There will be of course much opposition from the dictators of the monopoly groups who have the government agencies organized to oppose such efforts, with the taxpayers money.

But, such a cause is worth the effort.

The monopolists are afraid of losing their hold and their monopolies. The little people have no such fears for they have no monopoly to lose, so this very fact is their greatest asset.

Here is how I mean that:

In 1942, while this Nation was in war, the medical monopoly and its State affiliated associations in California circulated petitions and put on the November ballot a constitutional amendment to set up in California a basic science board of five members. These 5 members were to be appointed by the Governor, 1 from each of the 5 medical colleges in the State and each had to be a teaching member in the medical school.

This basic science board would have been given authority to control all of the healing arts and professions in that State, including religious healing.

Had this bill passed, it would have ended the chiropratic, osteopathic, optometric, mental healing, and all health foods, health food stores, and all advertising of any of these.

At the same time the bar association had an amendment to be voted on, wherein you could not represent your own case before any board, body, or court in California without an attorney, and that the decision of all State and county boards were to be final, from which there were to be no appeals.

Do you realize what those monopolies were doing with these measures? They were setting it up so the people in the health business would pay for their own destruction, with their own tax money, so they would be rid of this competition forever as a danger to their monopoly; which proves that no one suffers as a result of laws that are not passed. We have not been harmed by these proposed laws being defeated. They did not get away with it.

I was drafted to manage the campaign against these becoming law by several of the groups that would be affected by the basic science law.

Now, I am not pinning roses on myself for helping defeat this thing, but I do become frightened when I think what could have happened had they been successful.

They tried to bribe me. This failing, they put two big burly thugs tailing me for the last 3 months of the campaign, trying to force me out of the campaign; they threatened me with dire results, if I did not give up the campaign.

I do not frighten easily. However, I told our people I did not see how we could win over the medical monopoly and all its allies, so I would need to find some other way than a straight political campaign to do the job.

After a week of arguing, I succeeded in getting approval of my way for doing it.

My way was the rough way—the way the monopoly plays while putting on the airs of angels.

I could see but two things we could do to win—one was to tie the campaign into defeating the lawyer's monopoly and the medical monopoly together and knock both out at the same time, tagging each with the weak points and the sins of the other's measure, thus forcing both into a defensive campaign all the way; secondly, find something as an issue to frighten off their allies. We found two of their circulators of the petitions who had committed election fraud, so we had them arrested and fully publicized and we found where the medical tried to and did, through their president at the time, coerce the druggist, hospital, and nurses association, so on this thing we had a monopoly charge.

We won 3 to 1, as we should have, in the interest of American freedom, unhampered by monopoly control, being further tightened over our government.

So, when these monopoly people take after you directly or through their government departments, just remember they are not lily white or they would not be a monopoly, so with courage and good sense, you can do as much damage to them as the proverbial mouse biting the foot of the elephant.

They cannot do you harm, if you attack them with courage and wisdom as the mouse takes on the elephant.

Then, to win your way in competition to these monopoly associations, you need to get similarly organized, change the laws they now have that are no good for the people and no good for you, and throw out the stooges in the Government, who, at your expense as taxpayers, do the bidding of the monopolies.

The National Health Federation is an organization you can use as a good ally in helping you do this job. It is ideally organized to help you protect yourselves.

In conclusion, may I urge you people who are in the business world, and professions, dealing with life and living, to step up your efforts and find what foods are best for fully supplying the exact nutritional needs of the human body and in exact proportions find what supplements are needed to be added to balance out these foods to replace elements lost by depleted soil.

Learn what sprays now used to kill insects are doing to the human race through the people consuming these poisons, in their diet and water.

Then organize your knowledge, through your associations and let us educate the people to these good items and just as boldly tell the people what is harmful and what is to be avoided.

And, when this is done, let's defeat any group or Government agency that, to protect their monopoly masters, try to stop us.

I mentioned at the start of this article the beginning of sorrows. The Scriptures tell us we can measure the end of this evil condition from the beginning of sorrows. Sorrows are caused by too many laws, restrictions, and too much taxload. We must keep our freedom—our freedom of action.

The need is for freedom—that is our fight, for freedom—to tell your story to the people without government interference and confusion. For when the affairs of men and the nations they form reach the extremity of confusion in their laws and human relations and in the information mediums and when the burdens of the people, resulting from such confusion and waste as we now have become too great, and it becomes unbearable.

Then the people in their distress need to and should turn for guidance and relief to the only laws divinely authorized for men and nations to live by, the divine laws of Jehovah, the Almighty God. Only when living by these laws will the human race and their nations find relief from the distress now upon them—a distress brought on by the very organized selfishness and monopoly and confusion of laws we have been discussing here.

Before it is too late, before the wrath of God comes upon us, let us go up to the house of the Lord and learn His ways, learn of His laws and of His foods, and let us live in conformity with His ways, let us learn of Him and teach His laws. Then we will have peace, prosperity, and happiness forever.

It is the only way to escape the great tribulation now faced by the entire human race, being brought on us by this selfish confusion of laws. Regardless of the ideologies and religions in which we believe the laws made by men, which are not in complete harmony with the divine laws of God are causing much of the trouble and burden now existing among men and nations.

This mass of law, with its waste and confusion, designed solely to serve special interests is bringing ever increased suffering to the peoples of this earth and destruction of those nations, whose laws are made by men, out of harmony with the laws of God.

Blessed is the nation and its people whose laws are the laws of God, both the laws that guide them in their conduct and in what they eat to live.

National Science Teachers Association Endorses H. R. 13247, the National Defense Education Act of 1958

EXTENSION OF REMARKS
OF
HON. CARL ELLIOTT
OF ALABAMA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 5, 1958

Mr. ELLIOTT. Mr. Speaker, under leave to extend my remarks, I include the following letter which speaks for itself:

NATIONAL SCIENCE
TEACHERS ASSOCIATION,
Washington, D. C., July 29, 1958.

Hon. CARL ELLIOTT,
House Office Building,
Washington, D. C.

DEAR MR. ELLIOTT: I am writing to indicate the support of our association for H. R. 13247 as a scholarship and special aid bill. This bill in its present form would provide Federal support for a number of items deemed to be essential for the improvement of science teaching in our schools.

In testimony given on various bills designed for this purpose, our association, with the approval of our board of directors, has advocated Federal support to provide facilities for science teaching, consultants for science in State departments of education, guidance and counseling, scholarships, and other items needed for strengthening and expanding the teaching of science in elementary and secondary schools.

We believe that the provisions of H. R. 13247 go a long way toward meeting needs that we consider essential and which are not now being met adequately in most places through local or State support. We hope that the Congress will pass H. R. 13247 and that you will give it your personal support.

Sincerely yours,

ROBERT H. CARLETON,
Executive Secretary.

Extension of the East Front of the Capitol

EXTENSION OF REMARKS
OF
HON. CHARLES B. BROWNSON
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 5, 1958

Mr. BROWNSON. Mr. Speaker, it has been 4 months since I introduced my bill, H. R. 11113, to repeal the appropriation to extend the east front of the Capitol. The House Public Works Committee has chosen to ignore this and other similar bills.

It has been 4 months, also, since the Senate Public Works Committee voted out S. 2883, a bill identical to mine. This legislation still is pending on the Senate Calendar.

The days of this 85th Congress are on the wane. If we are to prevent desecration of our Capitol, it is necessary that legislative action be taken immediately. Public opinion and the Nation's architects have been all that have restrained commencement of construction so far. It is time that the Congress heeded that opinion.

Mr. Edward D. James, an outstanding architect of Indianapolis, Ind., has helped significantly to spearhead the fight to renovate and preserve the present front of the Capitol. Mr. James sent me a release from the American Institute of Architects, which I now request permission to insert in the RECORD.

I also ask, Mr. Speaker, permission to include an article from this morning's edition of the Washington Post and Times Herald pointing out the outstanding job Tennessee has done in restoring her historic State capitol:

ARCHITECTURE IN THE NEWS

WASHINGTON, D. C.—John Noble Richards, newly elected president of the American Institute of Architects, today urged Congress to "heed the will of the American people and the advice of the Nation's architects" and enact legislation promptly to block alteration of the United States Capitol Building until expansion needs can be studied.

The statement of the prominent Toledo, Ohio, architect followed on the heels of the A. I. A. national convention last week in Cleveland, where delegates from chapters and State groups all over the Nation voted overwhelmingly to continue opposition to the proposed extension of the Capitol's east front. The vote was cast after a showing of plans and drawings of the extension project by several architects engaged to carry it out.

Richards also called upon members of the architectural profession throughout the country to "act in concert" with civic, service, and patriotic groups in their communities in urging Congress to expedite passage of the Smith bill in the United States Senate. The bill was reported out unanimously by the Public Works Committee several

months ago but has never been called to the floor by Majority Leader LYNDON JOHNSON.

The bill calls for a review of Capitol expansion needs prior to any extension of the east front as now demanded by Speaker of the House SAM RAYBURN.

"It is a sad commentary on our national political process," Richards said, "that the greatest legislative body in the world can be held in immobility by 1 or 2 determined persons, even though the fate of that body's legislative plant—which also serves the American people as an historic monument and symbol of patriotic faith—hangs on the issue."

Richards also called for reassessment of the title and duties of the Architect of the Capitol. The full text of his statement follows:

"For more than 20 years, a number of persons have attempted to place their personal mark on the United States Capitol Building. For the same length of time, the American Institute of Architects has sought to forestall such a move, and, instead, bring about a proper and comprehensive study of the legitimate expansion needs of Members of Congress.

"Legislation which would call for a judicious study of Capitol needs is now in the United States Senate, and the professional body representing the Nation's architects has just voted overwhelmingly to continue its opposition to such expensive and destructive piecemeal projects as the proposed east front extension.

"The purpose of this statement is to urge the United States Congress to keep faith with its constituents, heed the will of the American people and the advice of the Nation's architects, and enact without further delay the Smith bill (S. 2883) which is now pending before the United States Senate.

"The will of the public is clear. Extension of the east front of the Capitol has been opposed by nearly every major newspaper in the land—from the New York Times in the East to the San Francisco Chronicle in the West. A multiplicity of organizations representing all shades of citizen opinion—organizations representing such diverse views as the Daughters of the American Revolution and the International Bricklayers' Union—have banded together in common cause to halt this extension project. It would appear that everyone can appreciate the importance of protecting the Capitol from this unreasonably expensive and ill-considered alteration but the handful of politicians who would leave their mark on the Nation's more revered building.

"As the new president of the American Institute of Architects, I consider it my duty, and the duty of the professional organization which I represent, to present to the public the issues as they appear to us. I therefore ask that all professional architects and their chapter and State organizations act in concert with the civic, service, and patriotic organizations in their communities to make it clear to the Members of Congress that their constituents do care enough about the United States Capitol Building, the disposition of public tax monies, and the efficiency of the national legislative plant to raise their voices against the present extension proposal and seek passage of the Smith bill.

"The facts are these:

"1. The United States Capitol is our proudest possession. Any alterations made to it should be considered fully and openly in a manner which gives the public—the building's true owner—a voice in the discussion.

"2. The east front wall of the United States Capitol has been allowed to fall into a state of unsightly disrepair and should be restored immediately by the associate architects employed by the Architect of the Capitol, and, if necessary, with the aid of a restoration specialist. This would, by all current estimates, halve the expense of the extension project. According to the United States Bureau of Standards, the well is structurally sound. Many historic buildings here and abroad have been so restored. One example is the Tennessee Capitol Building, at Nashville, which was in far wore condition than the United States Capitol Building until the matter was put to rights by an enlightened legislature.

"The argument of extensionist politicians that a wall need be moved to be repaired is, to put it baldly, incredible nonsense.

"3. The slight overhang of the Capitol Dome has been called an architectural defect by those who want to move the east front. It is significant that the only fashion in which this could be shown to us was by means of a photograph taken from a helicopter hovering directly above the building. The defect, as such, is a myth.

"4. The present status of the Capitol alteration project is fundamentally at odds with architectural practice. Design cannot be legislated. It is a creative process dependent upon free and searching study. Yet, today, we have a situation in which a political person bearing a professional title has handed over to several professional architects a set of outdated design instructions with an accompanying order to carry them out. This is utterly improper.

"The piecemeal nature of this project is seen in the statement that only the east front alteration is being considered at this time. The east front, moved a distance of 32 feet, would accomplish nothing but the creation of a handful of offices and a small dining area—this at a cost of $10 million. Yet even this substantial expense would be but a tiny down payment on a vast series of further alterations and these, according to the admission of the Architect of the Capitol, would cost well over $100 million. This little-discussed series of further alterations would eventually convert the Capitol into a totally different building. The east-front project is only the first in a series of involved and severe changes. These plans have not been tested against the realities of a present-day study of space use within the Capitol. According to Senator RALPH FLANDERS, of Vermont, himself an engineer, there are offices located within the Capitol that need not be there. It is also known that there are a number of unlabeled rooms within the building.

"A space-use survey of Capitol facilities should be undertaken immediately. In conjunction with this should be an examination of the duties and title of the Architect of the Capitol. The present Architect of the Capitol is not an architect and has never been trained as an architect. He is a former Congressman and excontractor who functions as a maintenance and administrative employee. If this post is to involve architectural duties, it should be filled only by an experienced and licensed professional architect. If architectural duties are not to be involved, the title should be changed in keeping with those duties actually performed so as to avoid confusion and misunderstandings.

"5. There is undoubtedly room for expansion of the United States Capitol Building, should a proper study show that it is necessary. But it is not to the east, where there is room only to move a well enough to destroy a graceful design and create a thin sliver of space at a prohibitive cost of $200 per square foot of space. Should proper study demand expansion, the American Institute of Architects feels that the physical needs of Congress can be amply met in harmony with the desires of the American people and the architectural profession to retain the Nation's most important historic building and, at the same time, guard the interests of the Nation's taxpayers."

STATE CAPITOL, BEFORE AND AFTER

(By Elsie Carper)

The Tennessee State Capitol at Nashville, a century-old limestone monument to Greek revival architecture, has been carefully restored at a cost of $2 million.

The restoration project undertaken by the State government is fast nearing completion under the direction of the architectural firms of Woolwine, Harwood & Clark and Victor H. Stromquist.

There are many parallels between the Nashville restoration and what would be involved if Congress should vote to repair the historic central section of the United States Capitol rather than wall it in with a 32½-foot annex.

Legislation to halt the $10.1 million United States Capitol extension project, while a restoration study is undertaken, was reported out unanimously by the Senate Public Works Committee in March but the Senate leadership has not yet brought it to the floor.

Unless some action is taken, Congress may adjourn leaving the Commission for the Extension of the Capitol to go ahead with construction.

Tennessee considered replacing its capitol but because of the historical importance of the building decided instead to restore it. Plans to reface the building in marble likewise were discarded.

The Tennessee capitol was designed and the construction supervised by architect William Strickland, who was trained by Benjamin Latrobe.

Latrobe was the architect who carried out the original design of the United States Capitol and planned the renovation after it was burned by the British in 1814.

Like the more famous United States Capitol, the Nashville building is constructed with two thicknesses of stone. Between these two stone walls is a sand and rubble fill held together with lime mortar.

The floors are supported by brick arches that thrust outwardly against the walls. The foundations and footings also are of brick.

In the restoration, approximately 45 percent of the stone was replaced, according the architect John Howard Clark.

"We regarded every stone as sacred," Clark said, "but where it was in poor condition we replaced it."

The building remained in use during the entire period that the exterior work was in process.

The original stone for the Nashville building was brought from nearby stone quarries by prison labor.

Cornices, entablatures, intricately carved columns, and capitals were replaced. Stones as heavy as 13 tons were lifted into the cornice.

The building now looks as it did when completed in 1855.

Congratulations, Pat

EXTENSION OF REMARKS

OF

HON. ROBERT W. HEMPHILL

OF SOUTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 5, 1958

Mr. HEMPHILL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Rock Hill Herald, Rock Hill, S. C., July 30, 1958:

CONGRATULATIONS, PAT

Pat Moss, of York, may not have been the most beautiful gal in the Miss U. S. A. con-

test—although we'll argue the point—but she's certainly one of the most sensible beauty queens in a long time.

Pat was picked among the top 15 in the national contest—a tribute to her loveliness.

Equally impressive is her friendly, level-headed commonsense and her ability to keep her feet on the ground despite a flood of fanfare and publicity.

Some quotes when 19-year-old Pat returned Monday from the Miss U. S. A. competition in California:

On marriage:

"That isn't going to be for a long time—I'm too young and it's too much responsibility."

On a movie contract:

"Oh, I wasn't interested in anything like that."

On her plans for the future:

"I'm going back to school in the fall." (She'll be a sophomore at the University of South Carolina, where she's studying for a career as a high-school English teacher.)

On coming home:

"It's wonderful."

Because of her beauty, Pat Moss has found the limelight. Unlike many another beauty queen, it has not distorted her sense of values.

That is a credit to her—and to her rearing—and of far greater worth than a pretty face.

The National Security Clause in the Trade Agreements Act

EXTENSION OF REMARKS

OF

HON. RICHARD M. SIMPSON

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 5, 1958

Mr. SIMPSON of Pennsylvania. Mr. Speaker, the act extending the trade agreements program, H. R. 12591, provided new criteria to define the point where imports may imperil our mobilization base. Section 8 (c) reads as follows:

oFr the purposes of this section, the Director and the President shall, in the light of the requirements of national security and without excluding other relevant factors, give consideration to domestic production needed for projected national defense requirements, the capacity of domestic industries to meet such requirements, existing and anticipated availabilities of the human resources, products, raw materials, and other supplies and services essential to the national defense, the requirements of growth of such industries and such supplies and services including the investment, exploration, and development necessary to assure such growth, and the importation of goods in terms of their quantities, availabilities, character, and use as those affect such industries and the capacity of the United States to meet national security requirements.

Many of our strategic industries vital to our national defense have been affected by import competition. I propose to make sure that the provisions enacted by the Congress to preserve our mobilization base will have meaning and substance.

At the present time the aluminum industry is experiencing great difficulties. Meetings have been held between representatives of the entire industry and the State and Commerce Departments. The chemical industry, particularly manufacturers of synthetic organic chemicals vital to our national security, have presented evidence of injury in their testimony before the Congress. Producers of heavy electrical equipment used by public utilities and manufacturers must be in a position to promptly meet emergency demands for spare parts so that there will be no interruption to our power supply.

I expect that concerted efforts will be made to determine whether the provisions adopted by the Congress will provide the necessary security for these vital industries. If they do not, the Congress must take further steps next year to provide real protection for our mobilization base.

In an address to the Synthetic Organic Chemical Manufacturers Association on June 10, 1958, Dr. Lewis E. Lloyd, economist for the Dow Chemical Co., said:

I need not remind the members of the Synthetic Organic Chemical Manufacturers Association that dye imports have cut heavily into dye markets. Less well known, however, is the fact that petrochemicals are coming in in sizable quantities. In 1956, about 23 million pounds of trichloroethylene were imported; in 1957, this had jumped to more than 41 million pounds. Since 1950, imports of trichloroethylene have increased almost thirtyfold and now represent about 20 percent of United States sales. Trichloroethylene, of course, is one of those mass-produced petrochemicals that the United States chemical industry is supposed to have unchallenged superiority at producing. In the past 8 or 10 months, there has also been a rapid increase in the importation of carbon tetrachloride and perchloroethylene. Those of you who have seen the reports on imported chemicals know that there are literally hundreds of individual products entering our ports every month. Imports are particularly prone to give competition in the small-volume, expensive specialty chemicals field, but are not confined to these products. In addition to the chlorinated solvents, one can add products like polyvinyl chloride, aniline, mono and trichloroacetic acids and their salts, indigo, and then even heavy inorganic chemicals such as calcium chloride and magnesium sulfate.

Our mobilization base is dependent upon the availability of many materials. Our experience during the Korean emergency clearly shows that even basic minerals such as copper, lead, and zinc were unavailable to us, although we were carrying the major portion of the military burden.

This is the time for us to determine that the legislation we have adopted will at least maintain the sinews for our national defense.

Bipartisan National Defense Education Act of 1958, H. R. 13247

EXTENSION OF REMARKS

OF

HON. CARL ELLIOTT

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 5, 1958

Mr. ELLIOTT. Mr. Speaker, on yesterday I issued the following statement:

After consultation with a number of Republican and Democratic members of the Committee on Education and Labor who are proponents of the national defense education bill, I have been authorized to announce that we will support amendments on the floor of the House to reduce the number of scholarships to 10,000, and to provide that they be awarded to individuals with the requisite ability on the basis of financial need only.

This agreement was arrived at in the light of certain suggestions with respect to the scholarship title of the bill expressed in President Eisenhower's letter dated July 7, 1958, to Congressman STUYVESANT WAINWRIGHT, and in the light also of the similar views of some of the members of the Rules Committee.

These amendments will bring the committee bill fully into line with the President's recommendations. I am confident that their adoption will assure solid bipartisan support for the bill on the floor of the House.

Today the following members of the House Committee on Education and Labor have authorized me to associate their names with the foregoing statement: Majority members: CARL ELLIOTT, CARL D. PERKINS, ROY W. WIER, LEE METCALF, EDITH GREEN, JAMES ROOSEVELT, HERBERT ZELENKO, FRANK THOMPSON, JR., STEWART L. UDALL, ELMER J. HOLLAND, LUDWIG TELLER, GEORGE MCGOVERN, JOHN DENT. Minority members: STUYVESANT WAINWRIGHT, PETER FRELINGHUYSEN, JR., ROBERT P. GRIFFIN, HARRY G. HASKELL, JR., JOHN A. LAFORE.

Faith on the March

EXTENSION OF REMARKS

OF

HON. ALFRED E. SANTANGELO

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 4, 1958

Mr. SANTANGELO. Mr. Speaker, my congressional district is probably the most cosmopolitan district in the country. It is populated by large segments of nationality groups, among whom are the Slovaks, the Italians, the Irish, the Hungarians, the Spanish, the West Indians, the Germans, and others. Each group has distinctive customs and traditions which form part of our American way of life.

Recently the Slovak nationality group living in my area demonstrated their religious faith by a pilgrimage to New York from the adjoining States of New York, New Jersey, Connecticut, and eastern Pennsylvania. They celebrated a religious feast at the Bohemian National Hall in my area where prominent religious leaders delivered inspirational messages. A newspaper report of the pilgrimage will prove of interest to freedom loving peoples who decry the enslavement of religious leaders by the Communists:

TWO THOUSAND PILGRIMS FROM FOUR STATES HONOR SAINTS CYRIL AND METHODIUS

More than 2,000 pilgrims from four States—New York, New Jersey, Connecticut, and eastern Pennsylvania—made the annual pilgrimage in honor of Saints Cyril and Methodius, patron saints of the Slavonic nations July 6. The pilgrimage was sponsored by the eastern district of the Slovak Catholic Federation of America.

The program started with the procession to St. John Nepomucene Church, 66th Street and First Avenue, Manhattan, where the Most Reverend Philip Furlong, auxiliary bishop of New York, representing His Eminence Cardinal Spellman celebrated pontifical mass. He was assisted by prelates and priests, who were welcomed by the Right Reverend Monsignor Stephen J. Krasula, pastor of the host parish. The Reverend John F. Murcko, of Bridgeport, Conn., preached in Slovak on the life of the two apostles who brought Christianity to the Slovaks more than 1,000 years ago.

Bishop Furlong commended the Slovaks for their fealty to the Holy See. Later, at the dinner at the Bohemian National Hall, 323 East 73d Street, the bishop spoke on the faith and its importance in our lives.

A talk on the Slovak customs in religious and civic life was given by the Right Reverend Monsignor Andrew J. Romanak, director of Pope Pius XII diocesan high school, Passaic, N. J.

The Reverend Joseph Baran, of Lansford, Pa., reviewed the history of the Slovak Catholic Federation since its founding on February 21, 1911, by the late Rev. Joseph Murgas, priest, scientist in Wilkes-Barre, Pa., and its catholic action.

The pilgrims welcome the Reverend Doctor Francis Skoda, professor in Rome, who is visiting his aunt and uncle, Mr. and Mrs. Daniel V. Skoda, of Astoria, Long Island, members of St. John Nepomucene choir.

At the dinner the group adopted a series of resolutions read by the Reverend Theodoric Zubek, OFM, professor of Seton Hall University. Among the resolutions was one which protested the enslavement of the Most Reverend Michael Buzalka and the Most Reverend Jan Vojtassak and Paul Gojdic, by the Communists in Bratislava. All were sentenced to life imprisonment January 15, 1951. Closing remarks were made by Martin Kopunek, of Lansford, Pa., president of the eastern district of the federation.

The Small Farmer and National Decay

EXTENSION OF REMARKS
OF
HON. GEORGE HUDDLESTON, JR.
OF ALABAMA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 5, 1958

Mr. HUDDLESTON. Mr. Speaker, in this month's issue of the Progressive Farmer, one of our outstanding agricultural publications, there appeared an editorial which I consider of vital importance to every Member of the House of Representatives. The editorial deals with the migration of our Nation's small farmers from the land and the current plight of the independent agriculturist. With the thought that the editorial would be of interest to the Members, it is my pleasure to include same herewith:

THE SMALL FARMER AND NATIONAL DECAY

History may have some words of counsel for America in this era when small farmers are leaving the land in such great numbers and when so many even in agriculture are saying, "The day of the small farmer is gone."

In the seventh and eighth centuries B. C., Old Testament prophets were thundering out warnings to the Jewish people. Open your Bible to Isaiah 5: 8: "Woe to those who join house to house, who add field to field, until there is no more room, and you are made to dwell alone in the midst of the land." In Amos 8: 4 we find the sheepherder upbraiding those "who * * * bring the poor of the land to an end." These prophets and others in their group fall in the period broadly of 800 B. C. to 695 B. C. Jerusalem was destroyed and the Jews taken away into captivity in 587 B. C. The Kingdom of Israel was carried away into captivity in 721 B. C.

In Rome, around 133 B. C., Tribune of the people Tiberius Gracchus sought to stop the depopulation of the land and the decline of farming. He proposed to divide up state lands, mostly controlled by powerful patricians, into small farms. Not only did he lose his life in the attempt; 9 years later his brother Gaius perished as well in pushing these and other reforms. The reforms achieved little success, and people continued to pour into the cities. A hundred years later, in 31 B. C., the Republic was dead and a dictatorship established.

In England in the 16th century (the 1500's), the fight between powerful interests taking up more and more land and small farmers being driven from their holdings by the thousands reached unbelievable levels. Those gobbling up the land and causing unemployment actually got through Parliament laws permitting mutilation and hanging of vagrants.

Fortunately for Britain, the discovery of the New World released the pressures of land hunger and of conflict for over 150 years. In the 1700's trouble began building up again. A generation before 1800, Oliver Goldsmith had written in the Deserted Village:

"One only master grasps the whole domain,
And half a tillage stints thy smiling plain.

Ill fares the land, to hastening ills a prey,
Where wealth accumulates, and men decay.

A time there was, ere England's grief began,
When every rood of ground maintained its man.

But times are altered; trade' unfeeling train
Usurp the land and dispossess the swain;
Along the lawn, where scattered hamlet rose,
Unwieldy wealth and cumbrous pomp repose."

Again, if it had not been for new lands overseas and the tremendous growth of British world trade, the results might have been disastrous. World War I and near starvation finally brought England to her senses. The lesson was further emphasized in World War II. Yet England as the world's No. 1 power is no more.

No one who knows history would presume to say that the squeezing of small farmers off the land will of itself bring a nation to disaster. But it can be said with emphasis that the forcing of small farmers off the land is one of the sure symptoms of a highly complex disease that leads to national disaster. America needs to awaken to some of these symptoms while there is yet time to cure the disease.

Department of Chemistry, the University of Tennessee, Endorses H. R. 13247, the National Defense Education Act of 1958

EXTENSION OF REMARKS
OF
HON. CARL ELLIOTT
OF ALABAMA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 5, 1958

Mr. ELLIOTT. Mr. Speaker, under leave to extend my remarks, I include the following letter which speaks for itself:

THE UNIVERSITY OF TENNESSEE,
DEPARTMENT OF CHEMISTRY,
Knoxville, July 30, 1958.

The Honorable CARL ELLIOTT,
House of Representatives,
House Office Building,
Washington, D. C.

MY DEAR CONGRESSMAN ELLIOTT: I hope you will lend your support to the passage of H. R. 13247.

Very sincerely yours,

C. A. BUEHLER,
D. A. SHIRLEY,
H. A. SMITH,
Department of Chemistry.

Distinguished Service

EXTENSION OF REMARKS
OF
HON. FRANK THOMPSON, JR.
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 5, 1958

Mr. THOMPSON of New Jersey. Mr. Speaker, I would like to pay tribute to a distinguished citizen who is observing his 70th birthday today. He is Hon. George A. Garrett, former Ambassador to Ireland and currently president of the Federal City Council. The council is a nonprofit, nonpolitical organization dedicated to promoting the economic, social, and cultural growth of our Nation's Capital. As its head, Mr. Garrett is playing a unique, bipartisan role of leadership in helping guide and spark a vast program of physical improvement and better planning designed to transform Washington into a truly great Capital City of the free world.

This is an effort in which all Americans should take a keen interest. Our first metropolis belongs, not only to those citizens who reside here, but to your constituents and mine. Washington should exemplify our highest American standards for urban development. But like most cities, it shares vast problems of economic, social, and political change. Americans everywhere can be glad that leaders such as Ambassador Garrett and the other members of the Federal City Council are helping to meet this challenge.

I have had the privilege of working with Mr. Garrett on several major projects designed to improve our Capital City. My admiration and respect for him have been kindled by his statesmanship and vision, and his exceptional grasp of this city's basic difficulties. His remarkable ability to mediate civic differences is due in no small part to the high esteem in which he is held by top governmental and congressional leaders of both parties.

It was in recognition of Ambassador Garrett's talent for mediation that President Eisenhower appointed him White House emissary in 1955 with the task of expediting redevelopment of Southwest Washington. This gigantic $400-million program is designed to clear 600 slum acres within the shadow of the Capitol. It is easily the largest single redevelopment program ever launched. However, it has stumbled on several occasions when serious roadblocks developed. Mr.

Garrett has played a lead role in resolving official differences which threatened the program's success.

Only last December the Ambassador helped negotiate the $5,800,000 loan for construction of the first units in pilot area B. At that time, the Washington Daily News commented editorially:

Without awarding it exclusive credit, which it would be the first to disclaim, the Federal City Council under Mr. Garrett's presidency can take a bow for this triumph over the local interia that permitted this valuable section of Washington to retrogress. The FCC has made a valuable contribution to the Capital * * * in moving the rehabilitation plan for Southwest Washington toward reality.

Ambassador Garrett has personally guided the ambitious program of civic development voted by council members ever since the organization was formed in 1954. In addition to southwest redevelopment, this ranges from the recommended creation of a Metropolitan Authority for dealing with Washington's metro problems, to agreement on a compromise site for the city's proposed cultural center. In a recent statement, Mr. Garrett summed up the purpose of these activities as follows:

We who compose the Federal City Council share a deep concern for the economic future of our people * * * a future that has been endangered with vast suburbanization, changing land uses, and deploying populations. We have full and abiding faith in the capacity of our public and private institutions * * * free and democratic * * * to cope with the central problems which confront us. But we are convinced too that through citizen action we can help in great measure to mold vital urban trends.

Mr. Garrett's concern over the future of the Nation's Capital is deep-rooted and long-standing. He has been a resident of Washington for nearly 50 years. His civic achievements also include outstanding service as president of Washington's Emergency Hospital, as vice president and director of the National Symphony Orchestra, in key roles with the American Red Cross, and in leading many other worthy causes.

During President Truman's administration, he served as Minister to Ireland and, later, as our first Ambassador to the Republic of Ireland. He was appointed by President Truman as a member of the District Redevelopment Land Agency in 1947.

The salient facts of Mr. Garrett's life include the following:

He was born in LaCrosse, Wisc., on August 5, 1888. He obtained his schooling at Cornell University and the University of Chicago—in the intervening years, the Ambassador has received honorary degrees of doctor of laws from Trinity College in Dublin, and doctor of humanities in "Humane Letters" from the Clarkson Schol of Technology.

Mr. Garrett began his Washington business career in 1912 as vice president of the Dupont National Bank of Washington. Since 1940 he has served as general partner with the investment banking firm of Merrill Lynch, Pierce, Fenner & Smith.

Today, the Federal City Council is presenting its first distinguished service citation to the Ambassador. This congratulatory plaque reads as follows:

The Federal City Council presents this distinguished service citation to the Honorable George A. Garrett on the occasion of his 70th birthday, with warmest congratulations and in recognition of his distinguished leadership as president of the Federal City Council since its inception in 1954, and his unflagging devotion to the present and future development of the Nation's Capital City as a significant symbol of civic achievement in the free world.

We honor George Garrett today in sincere appreciation of his dedicated service, his practical vision—and for his outstanding example which is a continuing source of strength and inspiration to us all.

The distinguished service award was signed by each officer of the Federal City Council in behalf of the 75 members of the council's board of trustees. The following men were the signatories: Francis G. Addison, Jr., chairman; William J. McManus, vice president; Louis W. Prentiss, vice president, project planning; Edward C. Baltz, vice president, finance; Bruce Baird, secretary; Frank J. Luchs, treasurer; James C. Wilkes, general counsel; G. Yates Cook, executive director.

I am pleased to include editorial tributes to Mr. Garrett from the Washington (D. C.) Evening Star and the Washington (D. C.) Post and Times-Herald:

[From the Washington Evening Star of August 5, 1958]

DISTINGUISHED SERVICE

The selection of George A. Garrett as recipient of the Federal City Council's first distinguished service citation comes on a felicitous occasion—none other than Mr. Garrett's 70th birthday.

There is no need to review in detail the contributions to a better life in his community which have brought Mr. Garrett this recognition. To mention but a few, he has been president of the council since its formation in 1954. He has played a leading role in the Southwest Revelopment project. He participated actively in the recommended creation of a Metropolitan Authority to deal with area problems. He has served as president of Emergency Hospital, as vice president and director of the National Symphony Orchestra, and in key positions with the American Red Cross. With all of this, he is a good friend and a congenial companion. We would like to express our hearty endorsement of the council's choice for its first distinguished service award.

[From the Washington Post and Times Herald of August 5, 1958]

CITATION FOR SERVICE

The first distinguished service citation of the Federal City Council could not have been conferred by its trustees upon a more deserving citizen of Washington than George A. Garrett, the council's president since its founding 4 years ago. Much of the council's success in expediting such projects as the Potomac bridges, rezoning and Southwest Washington redevelopment has been due to the patient persistence of Mr. Garrett, aided by Council Chairman Francis G. Addison, Jr., and other prominent men from the city's business and professional circles who have given generously of their time and talent to these public enterprises. The award to Mr. Garrett coincides with his 70th birthday today, and we are pleased to join with his friends in extending congratulations and best wishes.

The Middle East Situation

EXTENSION OF REMARKS

OF

HON. JOE HOLT

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 31, 1958

Mr. HOLT. Mr. Speaker, I want to call the attention of my colleagues to the following article on the Middle East situation:

[From the Los Angeles Times of August 3, 1958]

RUSSIANS NOT READY TO FIGHT, SWIFT MIDEAST SHOWDOWN INDICATES

(By Robert Hartmann)

WASHINGTON, August 2.—One fundamental fact emerges from the swift showdown of the last 3 weeks which transcends everything else that has happened in the Middle East or is likely to occur at the summit.

It is this: The Soviet Union is not yet ready for world war III.

If it were, this and millions of other commentaries would never have been written. But the astonishing thing is that such a starkly significant fact has been generally ignored in the preoccupation of pundits, amateur and professional alike, with the moral and legal aspects of the United States landing in Lebanon, whether Nasser is a Communist or Brigadier General Kassem is a Nasserite, the subtleties of De Gaulle's notes and when shall we all meet again in New York or Geneva.

Fortunately, it can be confidently reported that President Eisenhower and his top advisers in the National Security Council, the Joint Chiefs of Staff and the policymaking echelons of the State Department have kept their eyes on this crucial point: The Soviet Union is not ready to fight now for any real estate, resource or revolutionary movement beyond its own borders or those Communist-controlled territories immediately adjacent.

This has been the prevailing assumption in Washington for some time, though it has not been tested since Korea, and it was not perfectly proved then. In 1950 there were two layers of satellite insulation, North Korea and Red China, between United States fighting forces and the Russian homeland. Furthermore, there was nothing the Soviets wanted or needed in the whole Korean peninsula.

But what on July 14 was a good guess is now a demonstrated truth, not only here but in every world capital, large and small, where worried men constantly calculate the balance sheet of power. There is precious little moralizing in the inner councils of any government where survival is concerned. For all but the two contending giants the rock-bottom consideration is which way to lean or to jump. More simply, who's winning?

There is little doubt that President Eisenhower's patient and persistent talk of peace, at home and abroad, misled the cynics in foreign chancelleries to conclude that the United States, for all its power, would never use it except to repel an attack on its own soil. His consistent, though historically debatable, decision to stop the British, French and Israeli attack on Egypt in 1956 seemed to confirm this, as did the passive United States reaction to the kidnaping of American servicemen by East Germans and Cuban rebels.

SUEZ RECALLED

At the time of Suez, Khrushchev rattled his intermediate range ballistic rockets and

practically panicked London and Paris, along with the rest of Western Europe. This was the genesis of our NATO allies' clamor for another summit conference, on the one hand, and a share in United States missiles and nuclear know-how on the other.

Before the current Middle East crisis was a week old Khrushchev was again brandishing his intercontinental missiles and whole arsenal of atomic weapons. But this time nobody was much alarmed because the United States had acted. They knew that if Khrushchev intended to use his missiles he would already have fired them at Turkish airbases and the United States 6th Fleet off Beirut.

Mr. Khrushchev has been cut down to size, in the opinion of United States strategists, and the Soviet Union has lost tremendous "face" all over the world where the bald facts of his bluff calling are known and where the realities of power are recognized.

CALAMITY HOWLERS

Right now many sincere, patriotic citizens are howling that the United States faces a terrible defeat in the propaganda war whether or not there is a summit meeting between President Eisenhower and Premier Khrushchev. The fact is, if we only back away from Baghdad and Beirut long enough to look at the global battlefield, we have already won half of a momentous propaganda victory.

We have demonstrated (to President Nasser among others) that the Soviet Union is not ready yet to fight, for all its sputniks and scaremongering, and that the United States will risk war for its friends and is capable of moving formidable forces halfway around the earth in a matter of hours.

Now, if we can remove our troops promptly (having already proved they could come back on short notice) and confirm our contention that we have no colonial designs before anybody gets shot, United States prestige will rise as Russia's falls.

Khrushchev's best bet always has been to keep American troops in the Middle East forever or until we get as sick of the whole affair as we did Korea and leave the job half finished, hated by the people we tried to help.

ONE ALTERNATIVE

His alternative hope is to make any United States withdrawal appear to have been forced by Soviet wrath and threats of counteraction. This is becoming less credible every day. One peril point remaining is the chance that Khrushchev in desperation might try a limited military move to upset the slowly stabilizing situation.

Otherwise, whether the argument is conducted at a summit meeting or at long range as it has been thus far, it is essentially a post mortem. The main point stands: the Russians aren't ready. We are.

What pseudopsychological warriors so often overlook is that propaganda is not and never has been a substitute for physical force. If this were so, we could have more preachers and no policemen, and the United Nations, or for that matter the League of Nations, could indeed guarantee world peace.

Propaganda is a valuable and relatively cheap supplement for force. It sometimes has temporarily held off superior forces (as Hitler did while rearming, as Churchill did when Britain stood alone, and as Khrushchev and his predecessors have been doing for 40 years) but it has never won a battle alone.

OPEN CRITICISM

—There is ample reason to criticize the clumsy efforts of United States propagandists, but the deed and not the word is what really matters. It was not Moscow's boasting that impressed the world when the first satellite went into orbit, it was the launching itself. President Truman's dire hints of devastating weapons did not bring Japan's surrender, but two atomic bombs did.

The Communists are exceedingly good at propaganda, but are perhaps more aware than we are of its limitations. Certainly they never neglect physical force.

Marxist ideas got nowhere until the Russian Navy and Army came under control of the Bolsheviks, and the practical necessity of keeping power has prevailed over doctrine within the Kremlin ever since.

In short, the best-informed and clearest-thinking American officials and observers with whom this reporter has talked throughout this hectic period have this outlook for the future: We don't have to be afraid of losing this propaganda duel. All we need to worry about now is losing our nerve.

Opinion Poll Results

EXTENSION OF REMARKS
OF
HON. ROBERT J. CORBETT
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 5, 1958

Mr. CORBETT. Mr. Speaker, I am reporting herewith the results of my latest poll of public opinion on 12 major issues. I hope my colleagues in the Congress find them interesting and informative.

As background, I might point out that I have been taking these polls since first coming to Congress in 1939. They are in the form of a printed questionnaire, requiring simple "yes" or "no" answers, and they are mailed to registered voters in my district, regardless of political party. The district is almost evenly split between Republicans and Democrats.

My congressional district is probably as representative and contains as many varied interest groups as any in the Nation. It has a high concentration of labor, white-collar workers, small business, large industries, and some very fine farmlands. The district includes a thickly populated section of Pittsburgh, extends to the rural areas, and takes in many large and small residential towns in northern Allegheny County.

The returns to this questionnaire were exceptionally good, and the total response virtually constitutes a referendum of the district.

The questions and the percentage replies follow:

1. Do you believe that the Federal Government has done about all it should do to end the recession? Yes, 51 percent; no, 49 percent.

2. Would you favor giving the President the necessary funds and discretionary power to provide economic aid to Communist nations other than Russia and China? Yes, 26 percent; no, 74 percent.

3. Would you vote for the main objectives of the President's reciprocal trade program as against stronger tariff protection? Yes, 76 percent; no, 24 percent.

4. Do you agree with the President and the congressional leadership that there should be no major tax cut at this time? Yes, 77 percent; no, 23 percent.

5. In your opinion, can we safely cut the size of our Army, National Guard, and Ready Reserves? Yes, 25 percent; no, 75 percent.

6. Do you believe that labor unions should be compelled by law to ballot secretly on strike issues, election of officers, and union dues? Yes, 93 percent; no, 7 percent.

7. Are you generally satisfied with the administration's conduct of foreign affairs? Yes, 55 percent; no, 45 percent.

8. A major church in a recent policy statement declared that we must learn to coexist with the Russians or face coextinction. Do you agree? Yes, 34 percent; no, 66 percent.

9. Would you favor a pension of $100 per month for every World War I veteran over 65 years of age? Yes, 47 percent; no, 53 percent.

10. Would you have the United States quit testing nuclear weapons, regardless of what other nations do? Yes, 9 percent; no, 91 percent.

11. Do you believe that inflation is a greater threat to our welfare than recession or depression? Yes, 81 percent; no, 19 percent.

12. Are you satisfied that the United States is making adequate progress in conquering outer space? Yes, 65 percent; no, 35 percent.

New Solo Record Established

EXTENSION OF REMARKS
OF
HON. J. FLOYD BREEDING
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 5, 1958

Mr. BREEDING. Mr. Speaker, under leave to extend my remarks in the RECORD, I would like to call attention to a previous article entered therein, on Monday, July 14, 1958, entitled "Long Distance Record Sought for United States of America." This article described the efforts of Capt. "Pat" Boling, of Palo Alto, Calif., to establish a new international record for long-distance flying. On last Friday, August 1, 1958, Captain Boling successfully completed his efforts in this direction. The article set forth below describes same:

BOLING SETS SOLO NONSTOP RECORD

PENDLETON, OREG.—Capt. Marion (Pat) Boling, who said "I'm sorry I couldn't take it farther," landed his Beechcraft Bonanza here at 11:52 a. m. Friday after flying 6,873 miles across the Pacific Ocean from Manila to shatter the record for a solo, nonstop flight in a single-engine plane.

The veteran United Airlines pilot left Manila at dawn Thursday (2:06 p. m. P. s. t. Wednesday) and flew over the North Pacific and northwestern North America to Pendleton in an unofficial time of 45 hours, 46 minutes. His bright orange plane consumed 401 gallons of gasoline on the flight. "I feel remarkably well," Boling said when his Beechcraft touched down at Pendleton Airport. "I'm sorry I couldn't take it farther."

On hand to greet Boling when he landed were his wife, Joyce, and their 9-year-old son, Kevin. They had been waiting at Boise, Idaho, where Boling originally planned to land. He changed his plans when his fuel supply began to dwindle and told the Civil Aeronautics Administration at Seattle he would set down at Yakima, Wash. However, he decided to press on another 67 miles to Pendleton. Mrs. Boling and Kevin flew to Yakima in a plane supplied by the Beech Aircraft Corp., and then returned to Pendleton 5 minutes before Boling landed. They also have two daughters, Kerry, 4, and Jullian, 2.

The 43-year-old Palo Alto, Calif., pilot told newsmen who pressed around him when he stepped from his plane that he had subsisted on dried fruit and fig newtons. "I

hope I never eat another fig newton," he commented.

Boling bettered by some 1,600 miles the former single-engine plane distance mark of 5,273 miles set in 1949 by the late Capt. Bill Odom.

Boling's route from Manila took him over Japan to the Aleutians, over Vancouver Island off the Canadian coast to a landfall east of Seattle, then southeast to Pendleton in the northeast corner of Oregon.

He told newsmen, photographers and well-wishers that all went well on his long, lonely flight but that for a time Thursday night "I was afraid I was going to have to set it down in the cold, blue Pacific." He said the engine threatened to quit because of icy conditions. But as the roughness smoothed out he was able to continue the flight without incident. He said he had about 3 gallons of gasoline left when he landed here.

Along with the welcoming crowd here was a customs official who had dogged Boling's path from Seattle as it appeared that the light plane would not be landing at an official port of entry.

Goodbye to a Dollar a Barrel

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 5, 1958

Mr. MULTER. Mr. Speaker, the following article by Bushrod Howard, Jr., as it appeared in the New Republic of August 4, 1958, is worthy of the attention of our colleagues.

Before his recent return to the United States, Mr. Howard headed the Middle East legal department of the Iraq Petroleum Co. at Tripoli—1948–52—and had responsibilities for government and concessionary relations for Socony Mobil Oil—1952–57. He represented Socony Mobil Oil on missions at the United Nations and was an observer at the first London Conference on Suez in August 1956. Since 1957 he has served as a consultant to the Middle East Institute and to various oil companies in Washington:

GOODBYE TO A DOLLAR A BARREL—A PROPOSAL FOR A NEW OIL POLICY IN THE MIDDLE EAST

(By Bushrod Howard, Jr.)

"What Mr. Dulles and Mr. Lloyd have apparently agreed upon is a policy of encouraging the development of independent Arab States that will be free to continue oil commerce between the Middle East and the West. The British have made clear to the Soviet Union in the past * * * that this is essential to the security of Britain and that Britain will fight, if necessary, to prevent those oil resources from being denied to Britain by a hostile power. The new factor is that the United States is now apparently backing that policy." (James Reston, the New York Times, July 21.)

"The Western governments say that they are interested in using oil and other raw material resources in this area of the world. But the nations of this area do not deny this opportunity to the Western Powers. They demand only one thing: That this problem should be solved on an equitable and mutually profitable commercial basis—which is the most reasonable principle." (Nikita Khrushchev, message to President Eisenhower, July 20.)

In my opinion it is not yet too late to win Arab agreement on equitable terms for a guaranteed flow of oil to the West. But it is indeed too late for any lasting agreement based on the old definition of "equitable." Do we want to assure a place for western oil companies in the Middle East? Do we want to avoid economic blackmail at the hands of Arab governments? Then far-reaching and fundamental reforms are necessary in the oil companies' pricing policies and patterns of corporate organization. What Arab leaders—including the new Iraqi regime—are saying publicly and privately has reinforced my belief that most Middle East leaders would presently accept, in their own interest, long-term arrangements conceding a place to the oil companies in the Middle East—providing the companies can be made to accept important changes in their relations with each of the Arab governments.

The need for reform turns on 2 facts: 8 private oil firms, 5 of them American, are today free to put unconscionable prices on—and take unconscionable profits from—Middle East oil without answering to any public authority; and, most of these firms are vast international combines embracing companies and interests spread over a number of rival countries.

Let us consider why these facts are so crucial; what workable reforms should, as a consequence, be considered, and why these reforms are preconditions for any successful Middle East regional development.

I. A PRICE ARBITRATION PLAN

At the outset it is necessary to dispose of the often-heard argument that the West can, after all, call the tune in the Middle East insofar as oil is concerned. Fortune magazine, for example, recently assured its readers that "the Middle East must do business with the West, for only the West can use and pay for its oil." Most reassuring. But such statements ignore the uncontested fact that the West has no substitute for Middle East oil. Europe and much of Asia must either get their oil from that area or they will not get oil in the amounts needed. Even if the Western Hemisphere could supply Europe for more than an emergency period, which is doubtful, the price would be bankruptcy: the cost to Europe for its oil would at least double. To say, therefore, that the Middle East must do business with the West is the equivalent of saying that monopoly must sell to consumers. It is true in one sense, but the unanswered question—and crucial one—is under what conditions and at what price?

The Middle East has 170 billion barrels of proved reserves which were discovered by drilling less than 1,500 oil wells. (By comparison the United States drilled 1,638,000 oil wells to discover 94 billion barrels, of which all but 30 billion barrels have been consumed.) Today the Sheikdom of Kuwait at the head of the Persian Gulf has 60 billion barrels of proved oil reserves—twice as much as the United States. But such figures are not the sum of the oil deposits in the countries bordering the Persian Gulf, for the Middle East seems to be an almost unique geologic province. There marine sedementary deposits, which are the ones that produce oil, lie in great depth and are combined with large, relatively unbroken foldings which result in accumulations of oil that measure 10 to 150 miles in length and that contains 5 billion to 30 billion barrels of oil. Although there are encouraging indications that major discoveries may be made elsewhere, notably the Sahara and offshore United States, the chairman of a major American oil company expressed the universal belief of oil experts in saying that "on the basis of nearly a century of experience, the odds against finding another oil province on this earth comparable to that around the Persian Gulf are too great to make such a hope a sound basis for the free world's long-range planning."

Presently this oil province is being exploited by 8 major international companies: Standard Oil (New Jersey), Standard Oil (California), Texas, Gulf, Socony, and Royal Dutch Shell, British Petroleum (55 percent controlled by the British Treasury), and Compagnie Française des Petroles (the French Government company). The major oil-producing countries of the Middle East are the Sheikdom of Kuwait, a British-protected state with 2,000 square miles of territory, 200,000 population, a production of 1,350,000 barrels a day, and an oil income of better than $375 million a year; the Kingdom of Saudi Arabia, population 6 million, production 1,050,000 barrels per day, annual oil income $300 million; Iraq, population 5 million, oil production 700,000 barrels, oil income $250 million; Iran, population 20 million, oil production 850,000 barrels a day, oil income $275 million; the Sheikdom of Qatar, population 20,000, production 150,000 barrels a day, oil income $50 million a year.

In my view, since there is no practical alternative for Europe and most of Asia to using Middle East oil, the insistence that the price of this oil continue to be set by private oil companies is indefensible. It makes no sense to argue, as does a leading oil economist, that price is determined by the economic fact that when oil becomes too expensive Europe will turn to low-grade coal or other energy sources such as atomic power. This is like telling the householder that if electricity becomes too expensive he can always use candles. Middle East oil is the cheapest source of energy available to the European consumer for his increasing needs. Therefore, Middle East oil prices must eventually be regulated on the same basis as that of any public utility.

If the oil companies could—by leaving present arrangements undisturbed—assure the continued supply of Middle East oil to consumers, perhaps it would make sense to go on paying them their average of a dollar per barrel in after-tax profits. But the trouble is: present arrangements will not endure, and while sufficient unto the day may be an adequate maxim for a business venture, it should not be the rule that guides the United States Government.

Actually, if the companies are realistic, they will be willing to settle for regulation under national and international controls in preference not only to nationalization but to sweeping schemes for internationalization. At the time of the London conference on Suez in 1956, an influential British weekly, the Observer, proposed that Middle East oil resources be transferred to an international public corporation representing both the local States and those providing the capital, which after payment of compensation would use the profits for the joint development of the region. Such proposals involving compensation unfortunately run aground on the fact that the companies would claim payment for their assets and future profits, not just the payment for the capital value of their installations; and since, combined, they can expect to earn about $170 billion in the next 30-odd years as after-tax profits, at the anticipated dollar per barrel average, any agreement on the amount of compensation due would be impossible. This impossibility has been used by Washington to justify maintenance of present private arrangements—no matter what the corresponding political price and even at the risk of war. But between continuing the dollar-profit-a-barrel policy and compensating the companies in the amount of $170 billion, there is an alternative.

On the surface it might seem that the Arab Governments themselves stand to gain.

along with the companies, from high prices and consequently larger oil royalties. But this ignores the old economic truth that high prices keep down sales, sales which should—given sensible pricing policies—increase on an astonishing scale of progression. Oil is not only essential to Europe today but is the only major reserve for a world whose rising population requires rapid industrialization. The United States will be using 40 percent more oil in 1967 than in 1957. Europe's demand for oil will, at the least, double every 8 years. The less-developed areas of the world will have an even greater demand for oil, Asia and particularly India depending on the availability of cheap energy for their industrialization.

Already the new Iraqi regime has made clear—without yet threatening nationalization—that it will insist on greater revenues from its oil. Increased revenues for Iraq can be accomplished, it goes without saying, through price increases by the Iraq Petroleum Co. accompanied by new concession terms giving Iraq a greater share of the profits. But why should this happen when, in the long run, everyone would be better served by lower prices?

To take another example, how can Kuwait, with a production cost of less than 5 cents a barrel, justify a price of $1.85?

I propose that the producer and transit states of the Middle East, the oil companies (financing and operating) and the consumer states all submit themselves to compulsory jurisdiction of an international arbitration board—under the tutelage of the U. N. General Assembly—empowered to resolve disputes on prices and other matters between companies and governments (i. e., producer, transit, and consumer governments). The board would arbitrate price disputes, not fix prices. Revision of price, or refusal to allow price changes, could only come as a consequence of a complaint to the board by one of the interested parties.

In the absence of this, or a similar price arbitration mechanism, the price of Middle East oil will remain administered (i. e., not based on the market) by companies which are often at one and the same time sellers and producers, refiners, and marketers. Under existing policies, the price they set takes into account the price of oil in the United States as well as the demands of producer and consumer states and of other potential troublemakers who are not direct parties—such as the United States Department of Justice, the United States Congress, and domestic producers. In the past nearly all price conflicts have been resolved against the consumer, i. e., a higher cost to the user has been the answer.

There are, to be sure, certain dilemmas implicit in any reduction of the price of Middle East oil. The world needs more oil and more venture capital to find the oil: the profit must be high enough to attract such venture capital. Also, our domestic producers—those advocates of "no governmental interference"—want ironclad quotas to prevent any flooding of the United States market with Middle East oil which even now is cheaper—delivered to the United States—than domestic oil.

Neither of these dilemmas need defeat us. A tariff could be levied on Middle East oil imported into the United States, set at the difference between the United States price and the delivered cost of Middle East oil. The revenues from this tariff could be used to buy shut-in production (i. e., discovered fields) for a United States national petroleum reserve. To encourage new exploration in the Middle East, the present 50-50 formula—splitting half and half, between company and producer country, the difference between cost and so-called posted price—could be amended to 66⅔ percent for the company and 33⅓ percent for the country for the first 500 million barrels, and 33⅓ percent for the company and 66⅔ percent for the country thereafter. The price of Persian Gulf oil should be reduced 20 percent from an average of about $2 a barrel to about $1.60 a barrel. The present concession holders in Iraq, Saudi Arabia, Iran, and Kuwait would, of course, get less profit—but even half of what the Kuwait owners now get annually ($375 million)—would not be a bad profit after taxes.

This would be a reasonable proposal for the United States to put to the producing countries of the Middle East. The producing countries could well agree to such new price levels because their unit profit would remain the same and with a lower price their production, which is to say markets, would rise appreciably.

Saudi, Iraqis, and Americans with whom I have discussed this proposal raise an important related question: The companies would, they say, hike their prices indirectly beyond the control and even knowledge of the producing countries—through refinery, transportation, and other charges. This fear seems to me groundless. But it leads to my second proposal.

II. A NEW CORPORATE STRUCTURE

It is a fact of profound political importance that the small Middle East state feels powerless before the major integrated oil company. Standard Oil (a term once used to describe any major American oil company) and Anglo-Iranian (the pre-Mossadegh British company in Iran) are now replaced with the epithet "the oil companies." The memory of some of the rather questionable practices of the oil companies in influencing internal affairs of the various Arab countries is ever present. The possibility of sincere reformation of the oil companies is simply not believed. Kamil al-Chaderchi, the leader of the National Democratic Party of Iraq (one of the parties represented in the new regime) once said in talking to an AP correspondent:

"Iraqi public opinion regards the oil companies as usurpers, the latter having conspired with the British Government to rob the country of its most vital resources. The British Government has exploited Iraq's weakness, as in the case of the Mosul region which the Turks once claimed unrightly fully for themselves, and whose maintenance as part of Iraq the British said they would not uphold unless the Iraq Government was most indulgent with the oil company, failing which the Mosul region would go to the Turks who would readily grant the oil company the concession.

"Whether or not the British warning was meant as such it caused the Iraq Government to grant the concession to the company on a long-term basis and at a very cheap price."

This charge is true, and the defense that it happened in 1925 is not adequate in Iraq—even in 1958.

In Saudi Arabia, too, officials and intellectuals chafe at their helplessness in dealing with a group of integrated major companies. The Director General of Oil Affairs in the Saudi Government, Sheikh Abdullah Tariki, has said that the parent companies of Aramco—Standard Oil (New Jersey), Standard Oil (California), Texas, and Socony—encompass many interests opposed to those of Saudi Arabia. He feels Aramco should be an independent company doing business only in Saudi Arabia. It is being recognized to some extent—and indeed, it seems to me self-evident—that government-owned or controlled companies—such as British Petroleum or Compagnie Française des Petroles—will not be tolerated for long in the Middle East (government-controlled companies are not permitted in most Latin American countries). But it is not recognized at all that the Arab governments will never fully trust the major integrated international company and want instead companies with interests restricted to each national jurisdiction.

What the Arabs want, in short, is what the United States courts wanted when Dupont was ordered to divest itself of General Motors. In the case of Aramco, many Arab suspicions would be removed if the parent companies were to distribute their shares in Aramco to their shareholders. Aramco would then be a new and independent entity with economic interests more parallel to those of the Saudi Government. The Saudis would then have less reason to feel—as they do now—that some of the owners sell other oil before they sell Saudi oil. If an independent Aramco decided on a reduction in price, its decision would be trusted as one made with long-range Saudi interests in mind.

To encourage the companies to disperse their stock I would favor legislation exempting such a "spin-off" of stock from capital gains taxation. This might seem to constitute a windfall, but if the oil companies could, by this means, be made to consider fundamental reorganization, I believe this would be a small price to pay for the attendant political benefits. Such a breakup of the operating companies would, moreover, help keep within bounds the ever-increasing political power of the integrated oil companies.

As a general rule I propose that ways be explored to restrict holdings by integrated companies to those foreign producing companies which export less than 200,000 barrels per day.

III. KUWAIT AND REGIONAL DEVELOPMENT

With these two proposals as the basis for a new approach to the Middle East, we can proceed—and should proceed—to realize the full economic benefits of our reforms. We should move on toward the often-discussed regional development fund into which surplus oil revenues would be channeled. Senator HUBERT HUMPHREY is one of the many who have pressed for such a fund—under U. N. auspices—to serve as a capital reservoir and technical planning body for Middle East development.

To establish such a fund the revenue surpluses of Kuwait would be essential—this year, for example, Kuwait could contribute $250 million—and here joint action with Britain becomes necessary. With its production of 1.3 million barrels per day and its population of only 200,000 Kuwait has had enough surplus income (despite lavishness if not extravagance) to become the largest single provider of new capital to the London money market. Kuwait has exported three-quarters of a billion dollars of capital to Britain since 1950 and this year is expected to export at least $200 million more. Needless to say this fact is known to Nasser, who is also aware that with capital-poor Egypt's rapidly increasing population he must obtain surplus capital for economic development unless Egypt is literally to starve. The increase in Egypt's population, now 23 million, is at a rate of close to 400,000 a year. That, not Israel, is Nasser's major problem.

A regional development fund financed by surplus revenues would do more than anything else, it seems to me, to assure a continuous flow of oil. Given such a fund, the transit countries—Egypt, Syria, and Lebanon—would have a strong vested interest in keeping the oil coming from the fields through the pipelines to Western and Asian consumers.

As matters stand, in the absence of a fund, the knowledge that so much surplus capital is leaving a region that is in such need of capital enrages Arab nationalists. It has seemed to many that the British have compromised their position as a trustee by overeagerness to obtain the Sheikh of Kuwait's funds. The State Department, when asked

if it had considered advising the British to have some of this sum invested in the Middle East, replied that the Sheikh of Kuwait insisted on his money being invested in London. I am informed that this is the view generally held by State Department Middle East experts: it isn't up to us, they say, to tell the Sheikh of Kuwait where to invest his funds. But since Kuwait exists only by virtue of British protection, American acquiescence in this channeling of massive amounts of capital from an underdeveloped region to a highly industrialized United States ally is interpreted as American indifference to the welfare of the Middle East. Far from acquiescing, the United States should, on the contrary, be prepared to help underwrite the loss to Britain of Kuwait investment capital.

While Nasser confers with the Sheikh of Kuwait, our State Department tells us that regional development plans are impractical. There is some talk in the Department that transit dues might be raised (this to pacify for a time Arab owners), but this sounds suspiciously as though only another charge is to be passed on to the consumer. Less radical proposals than the diversion of Kuwait's surplus have been made recently by former British Minister of State Anthony Nutting, by the Lebanese politician-pipeline builder Emile Bustani, and by the Foreign Minister of Italy. They envisage contributions by oil-producing governments and by the oil companies of 5 to 10 percent of their profits to a Middle East Regional Development Fund. But all such ideas have fallen on barren ground. On at least one occasion a plan of this nature was submitted to authorities in Washington by an oilman with the knowledge and approval of his company; the company was willing to have the plan discussed but not willing to sponsor it. State Department officials sympathetic to the project privately advised, however, that it would get nowhere unless it was sponsored by the companies. (Investigation confirmed that this was correct.) The project remains undisturbed in the archives of the Department.

I hold no illusions that any of the parties concerned will rush to adopt the proposals which I have set forth. But I submit that these are realistic suggestions. Certainly a clinging to the status quo can only lead to a succession of new losses by the West in the Middle East. The immediate goal of United States policy must be to avoid nationalization until we can have internationalization.

The order of priority of those who must be persuaded to accept these proposals (and, also, in my view, the order of difficulty) is the administration, the American oil companies, the foreign oil companies—last, the Arabs.

LOW-COST, HIGH-PROFIT OIL

The immensity of Middle East oil fields permits extremely low production costs, ranging from less than 10 cents to a maximum of 30 cents a barrel for oil that is sold for $2.12—an average profit per barrel of from $1.75 to $1.90. This, together with low exploration costs, results in astronomical profits, as it takes only 5 feet of drilling to discover the same amount of oil in the Middle East as is discovered by drilling 1 mile in this country.

This year the oil companies and the producing States will split a profit of more than $2.5 billion. In 1966, by which date the Chase Manhattan Bank estimates that the present production rate of 4 million barrels per day will increase to 8 million barrels per day, the profits under present prices would be $5.5 billion. By 1974, production will again double for a profit of $11 billion.

Meat Price Trends

EXTENSION OF REMARKS
OF

HON. VICTOR L. ANFUSO

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 5, 1958

Mr. ANFUSO. Mr. Speaker, the current high price of meat to consumers has, for some time, been of concern to the Consumers Study Subcommittee, of which I have the honor to be the chairman. We have been surprised, as I am sure have most Members of the House, to witness the paradox of meat prices climbing to record levels at a time of unemployment and economic recession.

The March, the subcommittee issued a brief report, Trends in Efficiency in Meat Processing and Distribution. That document considered efficiency trends in the meatpacking industry from 1947 to 1954.

The problems of meat prices and efficiency in meat processing and distribution have continued to intrigue me. I have, therefore, continued to study them beyond the scope of the subcommittee's report. As a result of this study, I have found much additional material concerning these important problems.

Briefly, Mr. Speaker, here are a few of the findings I have made:

First. Prices received by farmers for livestock have increased in recent months, but these prices are still below those of previous peak periods. The increases in livestock prices reflect the temporary shortage in the marketing of hogs and cattle. This shortage is primarily the result of the following factors: (a) The drought in 1957 reduced cattle stocks, and (b) high feed ratios appear to have brought on more extended feeding periods for livestock.

The shortage of hogs and cattle is temporary and there is reason to expect that some reduction in livestock prices paid farmers will occur before the end of the year, especially in hog prices. In other words, scarcity again will prove only short-term support to farm prices and an illusory prop to farm income.

Second. When livestock prices go up, these changes reflect in the wholesale and retail meat prices, but when livestock prices fall, retail meat prices do not march in step. Obviously, the margins between the prices paid to farmers for livestock and the prices paid by consumer for meat have been widened. Meatpackers and retailers have a greater power to protect their price margins against price trends than do farmers have the power to stabilize their price structure.

Third. Many of the devices by which the major meatpackers used to control or influence livestock markets in former years are no longer operative. The packers complain, on the other hand, that food chains are able to bid on their output on a take-it-or-leave- it basis. Competition certainly exists in the food retailing industry. But the meatpackers complain that the buying power of the chains guarantees that margins between wholesale and retail prices do not disappear and that substantial profits are made. The meatpackers claim that they are increasingly becoming mere subcontractors for big chains.

Fourth. In large measure and at some saving in total economic cost, food chains have taken over the earlier functions of major meatpackers in the distribution of meat from the packinghouse to the retail store. The complicated and extensive distribution networks which gave major packers a firm control over markets have been duplicated by chains.

Fifth. The meat industry is currently undergoing a technical change. It is being promoted with substantial investment by major packing companies, who see in it rebuilt competitive strength vis a vis the food chains and hope for a rejuvenation of profit margins. It can result in lowered retail prices if savings are passed on to consumers. However, such changes will also have social costs in that they will (a) probably reduce the number of small independent meatpackers, (b) result in the displacement of workers in the meatpacking industry and (c) reduce job opportunities to farmers who are forced to leave their farms and seek employment in nearby cities.

Sixth. Efficiency gains in the meatpacking industry have been close or equal to those in most American industries. This productivity increase has offset wage increases and avoided any substantial increase in labor costs per unit of production.

Currently, wage costs of producing a pound of meat is 3.5 cents, as compared with 3.4 cents in 1952 and 3.2 cents in 1951. During these years the processing of meat has increased. When this increased processing is computed, then labor productivity in the meatpacking industry becomes quite considerable in recent years.

Seventh. Workers in retail meat markets appear to have made comparable gains in efficiency. Retail wage costs per pound of meat has dropped from 6.1 cents in 1953 to 4.2 cents in 1956. When the labor costs in a meatpacking plant and retail store are computed together, labor cost per pound of meat amount to less than 10 cents a pound. This is a drop from 1953. In fact, even if workers could be persuaded to work for nothing and if companies passed on to consumers every penny so saved, the price of meat today would remain higher than it was in 1956.

My studies have also led me to suggest two additional recommendations. These are:

First. That the Livestock Research and Marketing Committee of the Agricultural Marketing Service be broadened to include representatives of consumers and labor organizations.

Second. The social cost of technological programs should be estimated, budgeted, and balanced off along with direct economic cost of new investment.

Mr. Speaker, under leave to extend my remarks in the CONGRESSIONAL RECORD, I

should like to include my additional views on trends in efficiency in meat processing and distribution:

ADDITIONAL VIEWS ON TRENDS IN EFFICIENCY IN MEAT PROCESSING AND DISTRIBUTION

RETAIL MEAT PRICES

In the closing months of 1957 and the first 4 months of 1958, retail meat prices paid by consumers over the country have steadily mounted.

The latest BLS index of retail meat prices (April 1958) reports average meat prices at a level of 21.5 percent above the average of 1947–49. This represents a 30-percent gain over prices prevailing in April 1956, and a 16-percent gain over April of 1957.

Retail meat price trends in recent years are highlighted in the following table:

Retail meat prices (1947–49 average, 1951, 1956, 1957, and current months)

Year:	Price per pound (in cents)
1947–49	59.2
1951	70.7
1956	57.9
1957	64.3
1958:	
January	68.1
February	69.1
March	70.3
April	71.9

Source: Average price paid per pound of meat by all United States households as reported in Food Consumption of Households in the United States, U. S. Department of Agriculture, Report No. 1, pages 66–70, adjusted by BLS index of retail meat prices.

These increases in meat prices have come at a time of general economic decline. Inevitably, therefore, they have become the subject of public question and comment. Many have pointed to the paradox of rising prices on meats at a time of declining income and buying power for millions of our Nation's families.

Livestock prices

Prices paid by consumers for meat are close to or above their highest points in history.

Prices received by farmers for livestock, despite substantial increases, are below previous peak periods. In April livestock prices were 17 percent below their 1951 peak.

At the same time farmers in April received prices for livestock which were 38 percent above the low points of late 1955 and early 1956.

Such levels appear to have continued through May and June.

Livestock quotations in April compared as follows with earlier dates:

[In dollars per hundredweight]

	Choice steers	Canner and cutter cows	Hogs, 240 to 270 pounds
April 1958	$29.37	$17.19	$20.54
December 1955	20.30	8.25	9.55
1951 average	35.89	20.89	21.12

Source: BLS and Livestock Division, Agricultural Marketing Service.

This is a record of price fluctuation to be found in few other sectors of the Nation's economy. And from 1951 through to the middle of 1957 it had been a record of steadily declining income for farmers.

Recent increases in livestock prices reflect current temporary shortages in marketings of hogs and cattle. This has cut slaughter rates reported for federally inspected packinghouses in the period from January 1, 1958, to April 5 by 8.3 percent under the comparable period of 1957. Beef output in the same period showed a 10 percent decline and pork, a drop of 5 percent.

Such shortages of livestock have sharply raised prices received by producers. There has been a full reversal of the situation of early 1956 when adequate marketings of meat animals drove livestock prices down 40 percent below 1947–49 averages. Current relatively high prices have come only after reductions in national meat supplies from an average of 166 pounds per capita in 1956 to 159 pounds per capita in 1957 and to an annual per capita rate of 145 pounds in the first quarter of 1958.

It would appear that when livestock supplies begin to be adequate for the American people, farm producers suffer heavy losses. Only when supplies dwindle sharply below the apparent needs of our expanding population do prices received by farmers come close to a fair parity ratio.

Today's rising livestock prices are not evidence that the recurrent cycle of brief feast and long famine has been broken for American livestock raisers. Such prices invite strongly increased production and subsequent price declines. No stabilization of livestock prices at levels of supply adequate to the needs of an expanding population has been attempted by Department of Agriculture officials.

Livestock marketings in 1958 have been reduced by two factors: (1) Following last year's break in the drought which had reduced cattle stocks over the Plains States, ranchers began a long range program of rebuilding herds. This rebuilding has sharply curtailed marketings of cows and heifers. (2) High feed ratios appear to have brought more extended feeding periods. The hog-corn ratio for the week ending April 5 was 17.6 as compared with 13.9 in the comparable week of 1957. In February and March, it had reached even higher levels. This price ratio encourages longer feeding periods and the transformation of more low-cost feed into high-priced pounds of livestock. The Department of Agriculture, for example, reported the number of cattle and calves on feed, as of April 1, 1958, to be 12 percent higher than on the same date in 1957.

Current shortages are temporary. An estimated 6 percent increase in this spring's pig crop is expected. Cattle marketings are expected to rise somewhat above first quarter levels, although full year totals will remain below those of 1956 and 1957. Accordingly, there is reason to expect some reduction in livestock prices before the end of the year. This is likely to be most true of hog prices.

Scarcity again will prove only a short-term support to farm prices and an illusory prop to farm income.

Wholesale and retail meat price trends

When livestock prices go up such price changes have always reflected themselves quickly at wholesale and retail levels. Between 1947–49 and 1951, for example, livestock prices rose 19.9 percent. In the same period retail meat prices rose 19.5 percent.[1] But when livestock prices fall, retail meat prices no longer march in step. Then consumer prices fall slowly, if at all, even while farm prices are dropping precipitously.

This is shown by the following comparison of changes in livestock, wholesale and retail meat prices after 1951:

	Livestock	Wholesale meat	Retail
Percent change:			
1951 to 1956 average	−40	−34	−18
1951 to 1957 average	−31	−24	−9
1951 to April 1958	−17	−8	+1.7

Source: BLS indexes of wholesale and retail prices.

Footnote at end of speech.

By 1957 prices received by farmers had fallen more than three times as fast as prices charged consumers for meats—31 percent as compared with 9 percent.

As of April 1958, livestock prices were still 17 percent below the 1951 peak. But retail prices were 1.7 percent above 1951's high level.

Obviously margins between prices received by farmers for meat and prices paid by consumers have been widening. This is true even though statistical devices so far developed to measure this trend cannot give any sure measure of its extent.

There can be little doubt that the power of meatpackers and retailerst to protect their price margins against downtrends is greater than the farmer's power to stabilize his own price structure. There has been no charge that competition has been eliminated in the food retailing industry. No food chain has the power to set and maintain a monopoly price far above a free market place. However, competition among food chains appears to be limited by pricing formulas which protect profit margins.

The chain's buying power at wholesale and their ability to control retail prices certainly do not protect against considerable fluctuations in profit margins. They do guarantee, however, the margins between wholesale and retail prices do not disappear and that substantial profits are made under any and all circumstances.

Farmers who sell their livestock in "free" markets are paid prices over which they have individually no control. They must sell at a "market price" whether or not it brings a return on labor and investment or a net loss. They are subject to the unchushioned impact of supply and demand.

Packer influence

It is true that many devices by which meatpackers controlled or influenced livestock markets in former years are no longer operative. There is substantial competition among packers for available stock, especially at times when supplies are inadequate. At times of "surplus" packers appear to succeed in driving prices down sharply.

Current trends in marketing are in fact strengthening the position of livestock buyers. Increasingly cattle sales are direct from large feed-lot operators to packers. This by passes the central stockyards where a fair competitive price for livestock is presumably established. Thus, the livestock producer is tending to become a subcontractor for the packer. There is fear among small livestock producers that integration, as in the poultry industry, may emerge as a controlling pattern.

Many packers, on the other hand, complain that they are increasingly becoming mere subcontractors for the big chains. (The economic disadvantages of such relationships have been often described by parts suppliers to major automobile producers.)

Many packers also complain that the prices they receive at wholesale from major food chains are in effect buyer-administered prices. Increasingly, they say, food chains bid for the output of meatpackers on a dictated price, take-it-or-leave-it basis. Many operate their own packinghouses as yardsticks on prices for occasional sales at less than costs of production.

Retail chains have strengthened their position also by promoting their own brands of meat at the expense of packer brands and labels. This means added freedom to shift orders from packer to packer in a drive for continued price advantage.

This, too, accounts for the concentration of packer research and development programs on processed meats which can be merchandised under the packer's own brand. Profit returns on such processed meats are clearly higher than on carcass or dressed meats. Packinghouse corporations which have concentrated their output on such

meats have consistently reported higher profit levels than those wholesaling traditional cuts for the retail-meat counters.

A further indication of these economic relations shown in the following tables showing percentages of profit to net worth for meatpacking corporations and retail food chain corporations in key past periods:

[In percent]

	11 meatpackers	51 food companies combined
Average 1935-39	3.6	7.4
1947	11.0	13.4
1951	5.1	8.5
1956	7.0	10.5

Source: The Marketing and Transportation Situation, July 1957, United States Department of Agriculture.

Full data for such interindustry comparisons covering 1957 are still not available. However, the following table comparing profits of 3 major retail chains with 3 major meatpackers, is significant.

	3 retail chains [1]		3 meatpackers [2]	
	Profits	Percent on net worth	Profits	Percent on net worth
1947	$47,989,000	15.1	$57,734,000	8.4
1956	74,710,000	11.8	35,025,000	5.4
1957	91,809,000	14.6	21,830,000	3.5

Changes in distribution

In large measure and at some saving in total economic costs, major retail food chains have taken over the earlier function of major meatpackers in the distribution of meat from the packinghouse to the retail store. The complicated and extensive distribution networks which 30 and 40 years ago gave major packers a firm control over markets have been duplicated by the chains. Branch houses, sales units, and fleets of refrigerated cars by which packers brought their meats wholesale to the smallest communities have been made in large part obsolete. Now in the era of the large food chain, the supermarket, and the truck, much of this system of distribution has become an economic handicap to the big packer. Shutdowns and consolidation of such outlets have been frequent in recent years, although they retain a major economic function in supplying meats to independent retail and institutional buyers.

EFFICIENCY TRENDS

Under the conditions of imperfect competition existing in the meat industry, as suggested above, it is difficult to predict the consequences of technological progress. What impact this dynamic factor for change will have on the industry cannot be foretold. Increased efficiency and lowered costs may bring lowered retail prices or higher income for farmers and workers—or the lion's share of such gains may be taken as profit to swell corporate dividends and earned surplus accounts.

Such progress, too, may bring losses which do not appear on corporation income accounts. These include social costs flowing from the displacement of thousands of workers now in the meatpacking industry. Included with this also, must be the loss of potential industry employment to thousands who are now being displaced on American farms. The packing industry, concentrated in Midwest farm areas, has drawn largely on the farm population for its past labor force. The consequences of reducing job opportunities in farm areas will not be light.

Change underway

Meanwhile, in the meat industry technological progress—the development of new machines, new processes and new methods—is taking place. It is supported on all sides as unlocking the door for new opportunities. It is being promoted with substantial investment by major packing corporations, who see in it rebuilt competitive strength vis-a-vis the food chains and hope for an early rejuvenation of profit margins. Also much progress is looked to as a means of reducing the number of small independent packers who have entered the industry in recent years. This latter goal was urged on the industry at the 1957 meeting of the American Meat Institute by an automation engineer of the Ford Motor Co. He pointed out that newer and smaller packers, lacking the capital required for automation, could be quickly outdistanced by the industry's leading producers.

The present situation

It is true that technological progress made so far in the industry has not been sensational. Often old and established ways of doing things in the industry—the first in the Nation to establish assembly line techniques—have blocked the path to needed innovation.

Special difficulties do exist. The industry deals with a live and unpredictable raw material, which unlike spark plugs or strips of sheet steel, is not uniform in dimensions or in quality.[2] It turns out thousands of special products in accordance with differing recipes and procedures.

Nevertheless, efficiency gains of the packing industry have been close or equal to those of most American industries even in recent years of speeding technological change.

The subcommittee's report of March 10 pointed to a 24 percent gain in output per man-hour in meatpacking between 1947 and 1954. Other data show an additional gain of more than 10 percent between 1954 and the first quarter of 1958. This is a 37 percent increase in output per production worker man-hour in a 10-year period, or 3.7 percent a year.

This means that output per man-hour measured in live-weight pounds of animals slaughtered and processed rose as follows:

Year:	Pounds per man-hour
1947	88.9
1954	110.2
1957	117.8
1958 (Jan.-Mar.)	122.1

Source: Derived from Department of Agriculture and Census production data and BLS man-hours.

This has served to offset wage increases and to avoid any substantial increases during recent years in labor cost per unit of production.

Currently, the wage cost of producing a pound of red meat is 3.5 cents. This compares with 3.4 cents per pound in 1952, and 3.2 cents in 1951.[3] This includes the added costs of the greater processing of meat that has come in recent years. More meats than ever before are being frozen, canned, and elaborately packaged before they reach retail outlets. Output volume of frozen precut meats, for example, increased more than 500 percent between 1951 and 1956. Thus, figures based on an increase of 24 percent in man-hour productivity between 1947 and 1954 * * * or 37 percent between 1947 and 1958, seriously understate the true gain in efficiency.

They are based on output measured not in terms of end products but in pounds of raw materials consumed. Necessarily, they must fail to give credit to workers for the added processing of meat done in the modern meatpacking industry. How great this distortion may be is indicated by figures from census reports of the meatpacking industry. These figures show value added by manufacture per man-hour of work rising in meatpacking by 56 percent between 1947 and 1954.

This is more than double the productivity gain of 24 percent shown by the cruder measure of pounds of livestock slaughtered. It suggests sharply that the rise in meatpacking industry labor productivity has been very considerable in recent years. Labor cost estimates used in this statement are all based upon the cruder measure of productivity which admittedly ignores an important part of its actual increase.

Workers in retail meat markets appear to have made comparable gains in efficiency, although complete data on this question have not been developed. This is suggested by a report in Supermarket Merchandising (August 1957) of a survey of meat-market operations in 28 retail food companies operating a total of 741 stores. According to this source, trends of labor cost in meat markets were as follows:

Year:	Cents per sales dollar
1953	9.27
1954	8.47
1955	8.88
1956	7.16

Expressed as cents in retail wages per pound of meat, this record is as follows:

Year	Price per pound	Retail wage cost per pound
	Cents	Cents
1953	65.5	6.1
1954	65.1	5.5
1955	59.9	5.9
1956	58.3	4.2

Wage payments

Wage costs per pound of meat at retail, including labor in retail stores and in packing houses in recent years have moved as follows:

[In cents per pound]

Year	Packing Labor [1]	Retail labor	Total
1953	4.1	6.1	10.2
1954	4.3	5.5	9.8
1955	4.3	5.9	10.2
1956	4.3	4.2	8.5

[1] Labor cost per 1.25 pounds red meat at wholesale.

Current figures for labor costs in meat packing already cited show no substantial increase. Although data for 1957 and 1958 costs in meat retailing are not currently available other evidence indicates efficiency gains in line with 1953 to 1956 trends.

Clearly the combined labor costs for a pound of meat at retail amounts to less than 10 cents per pound. The increase in the price of an average pound of meat since 1956 amounts to 14 cents a pound (from 57.9 cents to 71.9 cents in April 1958) or more than the total packaging-retail wage bill.

Even if workers could be persuaded to work for nothing and if employers passed on to consumers every penny so saved, the price of meat would remain higher than it was in 1956.

RECOMMENDATIONS

The following are proposals supplementary to those contained in the subcommittee's previous report:

1. Changes in Advisory Committee Membership: The livestock Research and Marketing Committee of the Agricultural Marketing Service might well be broadened to include representatives of consumers and of labor organizations in the meat processing and distribution fields.

Such representation will bring not only new approaches to basic problems under

Footnotes at end of speech.

study, but will serve to bring urgently needed support to programs developed from all those concerned with the welfare of the meat industries.

2. Labor-Management Educational Program: Labor relations in the meat industries have been generally constructive in recent years. Wage increases have been offset by increasing output per man-hour of labor. Although precise measures are difficult, it would appear that the average packinghouse worker today receives less real wage per pound of meat produced than 5 years ago or 10 years ago. The buying power of the wage received per pound of meat has shown no perceptible increase.

Any effort to create suspicion and hostility between the men who labor on farms to provide livestock for the industry and the men who labor in packing plants or behind retail meat counters to bring meat to the public must be decried.

Many workers in the industry do fear the impact of technological change. This fear is not baseless. In an industry where there is either a slowly rising or a static volume of total output such changes do reduce total employment. In times of declining volume and rising unemployment, fears multiply powerfully. For the workers made jobless—for the young men who find the employment doors of an industry closed—technological changes to carry the impact of individual or family disaster.

Research and educational programs to speed technical progress can succeed, therefore, only if they give consideration to the total employment problem of the packing industry. They must recognize that the social cost of such change must be estimated and budgeted and balanced off along with direct economic costs of new investment.

Unions in the industry have given evidence of willingness to cooperate for its progress. That willingness should not be disregarded by the employers of the industry.

---

[1] About 70 cents of the retail meat dollar at that time went to livestock raisers. Hence, a 1-percent increase in livestock prices could have been passed on to consumers as a seven-tenths of 1 percent increase in meat prices. In fact, retailers took 1 percent or more. A 14-percent increase at retail would have been more than sufficient to cover higher prices to farmers.

[2] In the same general way farm efficiency in the production of livestock has not kept pace with the gigantic overall efficiency gains made by American agriculture as a whole. Current Department of Agriculture figures show a gain in man-hour efficiency in livestock raising of 25 percent for the period, 1910–56 * * * years in which the output per man-hour in all agriculture rose by an astounding 196 percent.

[3] Pounds, red meat produced per man-hour divided into BLS average hourly earnings in meatpacking.

"Fishbait" Miller

EXTENSION OF REMARKS
OF
HON. COYA KNUTSON
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 5, 1958

Mrs. KNUTSON. Mr. Speaker, last April I received a letter from a gentleman in St. Louis, Mo., asking for my favorite fish story. Upon hearing the word fish, I immediately thought of our always willing and helpful Doorkeeper—and sometime television star—"Fishbait" Miller.

Under permission of my colleagues, I include in the RECORD my reply to the gentleman in St. Louis about our inimitable "Fishbait" Miller and my private candidate for the congressional TV Oscar:

Mr. LESLIE G. KENNON,
St. Louis, Mo.

DEAR MR. KENNON: Thank you for your letter dated April 11, regarding fish tales.

Members of Congress are exposed almost daily to fish tales of one sort of another. These tales usually have nothing to do with fish, but are usually offered to the Representatives of the people as supporting evidence for one legislative cause or another. I am sure that is not the type of fish tale you want. Being a Congresswoman—or gentlelady as weare sometimes called—I don't go for fishing with quite the same enthusiasm as some of my male colleagues. So I can't really offer you any genuine fish tale of that sort either.

However, here is a story—a true story. One which should lend dignity to your collection of fish tales. The Doorkeeper of the House of Representatives—one of the finest people I know, an efficient, noble, and chivalrous gentleman, of old school teaching—is a Mr. "Fishbait" Miller. "Fishbait" has hooked the hearts of all Members of Congress, and no lobbyist or fisherman can make that claim.

Kindest regards.

Sincerely yours,

COYA KNUTSON.

Fate of the Independent Offices Appropriation Bill Shows Need for Presidential Item Veto Power

EXTENSION OF REMARKS
OF
HON. KENNETH B. KEATING
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 15, 1958

Mr. KEATING. Mr. Speaker, the President's veto of the independent offices appropriation bill demonstrates anew the crying need for Congress to act on item veto legislation. Because of the present state of the law, the President was forced either to sign the whole money bill, or veto it entirely.

As it is, a number of important agencies of the Government could be hamstrung unless Congress provides them with funds. Yet the President had no choice because of his strong opposition to the provision relating to the civil service retirement and disability fund. Now, the closing days of the session will be further clogged and delayed because we must reconsider the appropriation bill all over again.

The logical, efficient, and economical way out of such tangles is to give the President power to veto individual items in appropriation bills. Such vetoes could, of course, be overridden by two-thirds vote of Congress.

I have sponsored legislation along those lines for a number of years. Probably a constitutional amendment is the proper approach, as embodied in House Joint Resolution 343.

In any case, America's taxpayers could be saved literally millions each year if the President were allowed to pare individual items from money bills, rather than often having to hold his nose and sign the whole thing rather than let important functions lie fallow due to a veto of the entire measure. It has worked well when actively and prudently applied in the States and could be the soundest budgetary reform possible on the national level.

Mr. Speaker, I hope this latest veto will spur the 86th Congress to zero in on the item veto proposal as a first order of business when it convenes in January. It would solve the whole problem of unnecessary wasteful provisions in money bills and yet not upset the essential balance between legislative and executive fiscal responsibilities.

Mr. Adams Is Due an Investigation

EXTENSION OF REMARKS
OF
HON. JOHN C. WATTS
OF KENTUCKY
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 5, 1958

Mr. WATTS. Mr. Speaker, under leave to extend, I wish to incorporate in the RECORD two editorials which appeared in the Lexington Herald, Lexington, Ky., relating to the charges and countercharges in the Sherman Adams case:

[From the Lexington (Ky.) Herald of June 14, 1958]

MR. ADAMS IS DUE AN INVESTIGATION

Surely the sanctimonious air so often assumed by the Eisenhower administration will be a little less pronounced now that Sherman Adams, the President's right-hand man, has admitted that a Boston industrialist has paid hotel bills for the Presidential assistant amounting to almost $2,000 over the past 4 years.

On top of accepting such generous hospitality, apparently without qualm, the man who has had almost as much to do with the running of the country as President Eisenhower during the last 6 years, says it is also true that he has intervened on behalf of this particular benefactor three times before Federal agencies. And the inference is clear that these appearances were not in opposition to anything his friend sought.

Adams' admission to all this came about as a result of evidence produced by a special House subcommittee in its investigation of regulatory agencies to determine if they have been subjected to undue outside influences. This subcommittee made news earlier this year when it fired its chief counsel, Dr. Bernard A. Schwartz, New York University law professor and one of the country's top experts on administrative law. It was Dr. Schwartz' disclosures that led to the forced resignation in March of Richard A. Mack, a member of the Federal Communications Commission, after evidence showed that he had received financial aid from the successful applicant for a television station license in Florida.

Dr. Schwartz charged that he was fired because he wanted to determine whether the FCC and other Federal agencies were being treated as puppets of big business and the White House. The former chief counsel of the committee was particularly desirous of investigating the activities of Sherman Adams.

Since the dismissal of Dr. Schwartz, the subcommittee reports it has received allegations that Bernard Goldfine, the man who paid Adams' hotel bills, has received preferential treatment from the Securities and Exchange Commission and the Federal Trade Commission by virtue of Goldfine's close friendship with Adams.

Of course, as far as President Eisenhower is concerned, Sherman Adams no doubt will come out of this as clean as a hound's tooth, just as RICHARD NIXON did in 1952 when it was disclosed that he had accepted gifts amounting to $18,000 from well-to-do Californians to supplement his salary as a United States Senator.

But the House subcommittee need not be so tolerant of Mr. Adams' indiscretions. It can and should follow Dr. Schwartz' lead, and make a thorough investigation of White House pressures that Sherman Adams apparently has exerted upon various Federal regulatory agencies.

[From the Lexington (Ky.) Herald of June 17, 1958]

NOW HOW FAR BACK SHALL WE GO?

As was to be expected, our friend of the afternoon has come boldly to the defense of Sherman Adams, presidential assistant and sanctimonious condemner of all that smacks of indiscretion and corruption in government. The leader makes a great to-do about the use of the word "intervened," denying that Mr. Adams "intervened" with any Federal agency from which his well-heeled friend, Bernard Goldfine, sought help.

Mr. Adams, in a letter to the head of the investigating House committee, stated that on two occasions he contacted heads of Federal agencies with which Mr. Goldfine was involved, and either asked for information or arranged an appointment. Mr. Adams emphatically stated that he did not ask special favors for his friend, and we accept that statement at its face value. But face value also must be considered as including the assumption that when the "Assistant President" calls about a matter, little doubt exists in the mind of the listener as to which side he is on.

The leader would do far better to admit that Mr. Adams acted in a stupid manner, and join with Senator KNOWLAND and other Republican leaders in asking that all the facts be disclosed. Charges have been published that in addition to the approximately $2,000 in hotel bills which Mr. Adams admits were paid by Mr. Goldfine, the woolen manufacturer also gave his friend a $2,400 rug and a $700 vicuna overcoat. It is a simple matter for Mr. Adams either to deny or admit the truth of these charges. If there were other substantial gifts it might be well to announce them now, or deny their existence. People will feel better about the whole affair if Mr. Adams will but make a clean breast of the whole ugly mess; otherwise all the wool produced by Mr. Goldfine's many mills will not be enough to pull over the eyes of the prying voters come next November.

The Leader suggests that the Herald, in its newly acquired concern about honesty in the Federal Government, should take a glance backward, and then revise deep-freeze and fur-coat scandals attributed to the Truman administration. We gladly would glance backward, but care must be exercised else the roving eyes go back too far and hit dead center on the Harding regime, with its Teapot Dome and other scandals, none of which ever was touched in magnitude by any later administration.

The Herald condemned extravagances and favoritism in the Truman administration, as it did in the Harding regime. The fact that both the Vice President and Assistant President have been called upon in recent years to explain certain embarrassing or stupid actions does not mean that because they were Republicans their indiscretions should be hushed up or condoned. Vice President NIXON rushed across the Nation to cry out his indiscretion in accepting $18,000 from supporters in California, and apparently was forgiven by the voters as he was by Mr. Eisenhower. So far, Mr. Adams hasn't even put in a telephone call to explain his untenable position.

The editorial statute of limitations has not run out on shady dealings of either the Harding or Truman administrations, and we condemn the derelictions of these eras with all the invectives at our command. We wish that the Leader would join with us and call upon Mr. Adams to come clean and tell the American people everything. We have no confidence that he will listen to us, but he might follow that newspaper's suggestion, knowing full well that it still will defend him in spite of anything that might be disclosed, even though it must for want of sound argument go back to that childhood chant that everything you say about me goes back on you, double.

The Talented Student: A Priceless Resource for America

EXTENSION OF REMARKS

OF

HON. CARL ELLIOTT

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES

Monday, August 4, 1958

Mr. ELLIOTT. Mr. Speaker, the demands of the times in which we live require bold decisions. A continued waste of our precious human resources and our inattention to the needs of America's educational system could result in a national calamity. If we are to meet this challenge to our Nation's security we must make certain that all our citizens have ample opportunity to attain the highest level of their capacities.

This is vital—

As a witness emphasized during hearings before our committee—

because a major key to our Nation's future development and progress, whether in relation to peace or to defense, is our supply of well-educated manpower. Our natural resources are not likely to be our major bottleneck; our main limiting factor will be brain power. Therefore, as a nation we must help every young person develop his potential to the full.

The level of the civilization of a society is determined by the extent to which the talents of its members are developed. The more complicated the society the more imperative the need for the maximum development of every talent of every member of that society. Implicit in the last sentence is the simple fact that the Nation's current needs are so compelling that we can no longer leave the development of talent so largely to chance as we have done in the past.

For several generations we have made provision for equipping every member of our society with certain fundamental skills. In recent months we have had a profound shock and we have suddenly come to see what only a few saw before—that our national needs require us to pay a great deal more attention to the development of the talents of our young people than we have hitherto thought necessary.

This is a time for fact finding and fact facing. First, we have got to find out what material we have to work with. Second, when we know what we have to work with we will have to decide what we are going to do.

Individuals and groups all over America have been busily engaged with these matters for many months past. Their labors have been fruitful. For example, let me discuss with you for a few minutes facts which they have dug up dealing with the alarming rate of school dropouts: Throughout all levels of our educational system there is an increasing annual loss of potentially highly trained talent. One out of 4 high school graduates goes to college; 1 out of 5 college graduates study for a master's degree and only 1 out of 7 students go beyond this to the doctor's degree.

Moreover, studies demonstrate that annually approximately 200,000 superior high-school graduates do not enroll in college, while still another group of about 52,500 high-school students with intelligence scores in the top 25 percent of ability do not even finish high school.

Mr. Speaker, it is plainly evident on the basis of these facts that a very substantial proportion of our young people finish their formal education years before their talents could possibly have reached their full development. That is our problem. This waste of talent which is not developed is the measure of the most appalling shortcoming of our age.

The Committee on Education Beyond the High School said:

Talented young people are our most valuable national resource. The loss both in humand and in social terms that results from failure to identify, inspire and assist able young people for further education and training is incalculable.

Dr. Ralph F. Berdie, professor of psychology and director, office of the dean of students, student counseling bureau, University of Minnesota, reported to the subcommittee of the House:

Thus, almost all of the persons who are at least as competent intellectually as the average college graduate enter high school, a very large proportion of these graduate from high school, but slightly less than one-half of this total high ability group enter college. Of every 100 persons who most likely have more than enough ability to do college work, 56 do not enter college.

If we concern ourselves with a more selected group intellectually, those with scores on the Army general classification test of 130 and above, presumably indicative of enough ability to do advanced graduate and professional work in universities, about 99 percent enter high school, 97 percent graduate from high school, 53 percent enter college, and 46 percent graduate from college. (In 1954, the upper 15 percent of the estimated 1,356,000 high school graduates of that year consisted of 203,400 pupils. If one-third of these did not enter college, 67,800 pupils of ability failed to obtain higher education.) Thus, of our very bright people, only slightly more than 50 percent enter college and slightly less than one-half obtain an undergraduate degree. These estimates, often quoted since they were first published in 1954, are descriptive of the United States as a whole.

Speaking of the situation as it exists in Minnesota, Dr. Ralph Berdie reported:

The conclusion must be that the figures for Minnesota are not much different from the figures found for the entire country. About two-thirds of Minnesota high school graduates do not attend college, or of those in the upper 15 percent about 1 out of every 3 high school graduates do not attend college.

Today, with 40,000 Minnesota high school graduates a year, we can safely estimate that of the 6,000 who most certainly have sufficient intellectual ability to do satisfactory work in almost any college, only about 4,000 actually will attend college. This leaves a group of approximately 2,000 pupils each year who have more than adequate ability to do well in college and yet who never attempt higher education.

A conservative estimate would be that at least 67,800 American high school pupils each year graduate from school with sufficient ability so that they compare favorably to the upper 25 percent of college freshmen, and yet these pupils never matriculate.

Dr. Kenneth Little, director of institutional studies and professor of education, University of Wisconsin, reported for that State:

A preliminary analysis of the plans of Wisconsin's topranking high-school graduates for spring 1957 shows that about 3 out of 4 of the boys and 2 out of 3 of the girls who ranked in the top 25 percent of their graduating classes were planning to continue their education. Of those who ranked in the top 10 percent, about 9 out of 10 boys and 8 out of 9 girls were planning to continue school.

Nevertheless, these figures suggest that about 750 boys and 2,000 girls who ranked in the top one-fourth of their graduating classes were not planning to continue their education. Of those who ranked in the top 10 percent, about 175 boys and 525 girls were not planning to continue schooling beyond high school. (Estimated total number of spring graduates of Wisconsin high schools equal 36,000.)

The alarming box-score showing this loss of talent has been prepared by the New York State Higher Education Assistance Corporation, as follows:

Fortunately, we have one limitless natural resource which can be harnessed to solve any problem. That's the human mind, and we aren't beginning to realize its possibilities. Nearly half of our most promising students are not going beyond high school. Recent figures in New York State (a leader in education) underscore this situation:

Out of 120,000 high-school graduates for the year 2,760 from the top 10 percent of the class did not go to college, 9,300 from the top 25 percent did not go to college, 24,000 from the top 40 percent did not go to college, and the numbers grow larger every year.

Testimony along this general line could be continued ad infinitum. Our witnesses before the committee were all but unanimous in agreeing that a very high percentage of our able young people are not continuing their formal education to the level warranted by their capacities. Faced with this fact one question comes to mind, Why? Why do so few students complete high school? Why do only 50 percent of our very bright youngsters enter college? Why do only half of our college students finish college? Why do so few go on to graduate school?

This is a problem that has been the object of searching study for many months past and the results are persuasive and convincing. We now know at least part of the answer to these challenging questions of why. A large part of that 1-word question is a 1-word reply—money. The President's Committee on Education Beyond the High School in its report of July last year wrote:

Of those who do not continue their education and training, it appears that most are deterred by one or more of the following: lack of money, motivation, and accessible facilities. * * *

For a large number of capable students, finance is the key question to their further education. By 1952–54, the median total expenditure of college students was already $1,462 per academic year—double what it was in 1939–40. However, the expenditures of even the middle 50 percent of students ranged from $800 to $1,700. The cost today is higher, and still rising.

Dr. Kenneth Little, of the University of Wisconsin, reported for that State that:

About 10 percent of the graduates ranking in the top one-fourth indicated a belief that their families had incomes or wealth below the average of other families in their communities.

When asked how much money the family could contribute toward college expenses (if they were to go to college) 35 percent of these graduates reported less than $500 and 63 percent less than $1,000. Nineteen percent reported that their families could provide all of their college expenses.

It is clear * * * that with the average cost of attending college being estimated at approximately $1,400 per year, a percentage of the top-ranking students would require outside financial assistance to attend college.

It is also probable that many of these students are planning to attend nearby schools which do not have the programs of study which they want and are best qualified for, but which are the only schools they can afford to attend.

Dr. Walter Ludeman, president of the Southern State Teachers College, Springfield, S. Dak., reported for his State:

Something like 50 percent of the upper quartile of high-school graduates do not enter college at all, mostly due to lack of funds.

College costs are rapidly mounting both at private and public institutions and many low-income families with bright children cannot afford college for them. Fully one-half of the families in this area in which we live are low-income families.

Mr. Speaker, I am, of course, aware of the fact that many of our talented young people do not continue their education for reasons other than lack of money. This is true of many young women who marry and have families. The House Committee on Education and Labor has also gathered data indicating that many young people are not motivated to continue their education when it appears that they possibly or even probably have the means to do so. The factors lying behind this are many and complex. It is probable that one of the most important explanations of this fact is simply the lack of adequate guidance. That is one reason the committee, under the provisions of the National Defense Education Act, would provide for more adequate guidance, counseling and testing in the Nation's schools to identify and encourage able students. It is a demonstrated fact that adequate testing, counseling, and guidance can make significant contributions to the identification and educational development of all high-school students, but particularly those in the more able category. Since not more than one-half of the high-school students in the Nation are currently provided with the services of a well-rounded counseling program a large number of our capable manpower resources are not identified. This further compounds the Nation's annual loss of talent.

These then are the facts: First, a very large percentage of our able young people do not continue their education; second, society suffers from the loss of talent; third, the talent is lost largely because of lack of money. The solution to the problem is close at hand and our duty is clear. We must expand our educational system to make it possible for the talent of every young person to be developed to its fullest capacity. This is a time for bold decisions and it requires our decisive action.

Extension of Scope of the Espionage Law

EXTENSION OF REMARKS

OF

HON. KENNETH B. KEATING

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, August 4, 1958

Mr. KEATING. Mr. Speaker, I have today introduced a bill to repeal the jurisdictional limitations on prosecutions under the espionage laws. The purpose of this bill is to extend the prohibitions of the espionage laws to actions committed against the United States by persons while residing in a foreign nation.

At present, the espionage laws apply only to actions within the United States or within the admiralty and maritime jurisdiction of the United States and on the high seas. It no longer makes sense to limit the protection of the United States from espionage in this manner. The Nation's military and civilian personnel as well as its tourists are scattered throughout the world. There is no point in limiting our security from espionage on the basis of whether the offense occurs within or outside our geographical boundaries.

The bill I am introducing is based on recommendations of the Department of Justice. It will eliminate the present illogical restrictions on prosecution of espionage perpetrated abroad. This will be accomplished in the bill by the repeal of the present provisions of the Federal Criminal Code limiting the scope of the espionage laws. Under a leading Supreme Court case the effect of this repeal will be to make the espionage laws applicable without regard to locale.

Early consideration of this measure is particularly important because of the increasing difficulty of controlling travel abroad. The authority of the Department of State to withhold passports from suspected subversives and other security risks has been drastically curtailed by recent Supreme Court decisions. This

poses an increasing danger of subversion by such persons overseas. Under the law as it now reads, there is nothing we can do to combat such nefarious activities. This makes imperative the enactment of an amendment to the espionage laws which will protect this country from traitorous conduct wherever it is uncovered.

This measure represents a minimum requirement for dealing with the dangers to this country arising from the fact that the Department of State cannot now exercise any effective supervision of such travelers. I hope this measure will receive prompt study by Congress.

Where Is Truth?

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 5, 1958

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following column by Mr. Bruce Biossat which appeared in the Hazelton (Pa.) Plain Speaker of August 1, 1958:

WHERE IS TRUTH?

(By Bruce Biossat)

As you read the utterances of Soviet Premier Khrushchev and Egyptian President Nasser in the current Middle Eastern muddle, you see at work a technique of politics which by its very nature is destructive of good faith in international relations.

Both these men belong to the school which decrees that, in the interest of your political objectives, you may say anything, no matter how false, wild and irresponsible. But at the same time, they do not expect to be held accountable for these indulgences in verbal violence.

In other words, because they look upon words as tools of war on every level, they regard them with a kind of detachment. And they are considerably astonished when politicians of a different breed insist on viewing their utterances as authentic representations of their character and personality.

Khrushchev, for example, will mount the platform to shout that the Russians will bury the capitalist democracies. He is surprised thereafter when at least a few of the free world's diplomats decline his invitation to a jolly Communist cocktail party. Or when they question his sincerity in proposing disarmament and peace plans.

Nasser's Cairo radio can, as it has, incite Adabs to murder and riot, inflame the passions of the fanatics, blare false reports of fighting in the hope these accounts will touch off the real thing. Yet Nasser expects to be accepted in diplomatic exchange as if he were a sober, wise, responsible and far-seeing leader of Arab nationalism.

It would be about the same if a fellow got your job by malicious scheming against you in the office and then professed to be stunned because you didn't show up for the old bridge games you all used to love so well.

Demagogues there have always been and presumably always will be. And that means we shall always have to contend with the reckless use of words as a device in the struggle for political power.

Decent free men of good will may not be able to stem the flow of violent utterance. But at the very least they can let the demagogues know that they are held accountable by the world for everything they say, that their wild verbal gyrations are not forgiven and forgotten when they decide it is time to smile, shake hands and sit down to talk "in good faith."

They cannot be allowed the luxury of having two voices. They, like everyone else, speak with only one voice. If it is evil, ugly and inflammatory, the world must know it. It cannot be disguised with the fraudulent overtones of good will.

Food Additive Legislation

EXTENSION OF REMARKS
OF
HON. JOHN BELL WILLIAMS
OF MISSISSIPPI
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 5, 1958

Mr. WILLIAMS of Mississippi. Mr. Speaker, the Subcommittee on Health and Science of the Committee on Interstate and Foreign Commerce, of which I am chairman, labored long and hard to bring to the House floor a food additive bill. The subcommittee held 11 days of hearings on 9 bills and these hearings included 2 days of testimony by a panel of outstanding scientists and experts selected by the National Academy of Sciences at the request of the subcommittee to give the subcommittee the scientific background with regard to the testing and evaluating of the safety of food additives. The subcommittee also heard witnesses from industry, labor, and consumer organizations, and representatives of the Food and Drug Administration. The chief judge of the third judicial circuit appeared on behalf of the judicial conference of the United States to testify on the judicial review provisions contained in this legislation.

The job of producing a bill acceptable to the Food and Drug Administration and the affected industries seemed insuperable. Nevertheless, the subcommittee went ahead and after prolonged efforts it reported unanimously to the Committee on Interstate and Foreign Commerce, H. R. 13254. The full committee unanimously reported this bill with certain amendments, primarily of a clarifying nature, which were made after consultation with the Food and Drug Administration and the affected industries.

It is my hope that the great efforts which have been made first by the Select Committee To Investigate the Use of Chemicals in Foods and Cosmetics—better known as the Delaney committee, named after its chairman, Congressman JAMES J. DELANEY—and the efforts of the Committee on Interstate and Foreign Commerce during the 83d, 84th, and 85th Congresses, will not have been made in vain and that the bill, H. R. 13254, in the form in which that bill was reported by the Committee on Interstate and Foreign Commerce, will be acted on during this session.

Certainly, it seems that the present state of the law fails to protect the health of consumers because it fails to require manufacturers of food additives and food processors to protest any potentially unsafe substances which are to be added to food. Furthermore, present law fails to make possible advances in food technology by permitting the use of food additives at safe levels. Thus, the proposed legislation would greatly benefit the public interest and should be considered a great advance in food and drug legislation.

The bill has the support of the Department of Health, Education, and Welfare and the Food and Drug Administration, the American Bakers Association, the Millers' National Federation, the National Canners Association, the Manufacturing Chemists' Association, American Butter Institute, American Dry Milk Institute, Evaporated Milk Association, International Association of Ice Cream Manufacturers, Milk Industry Foundation, National Cheese Institute, and National Creameries Association. The letters received from these organizations in support of H. R. 13254 read as follows:

THE SECRETARY OF HEALTH,
EDUCATION, AND WELFARE,
Washington, July 11, 1958.

Hon. OREN HARRIS,
Chairman, Commitee on Interstate and Foreign Commerce, House of Representatives, Washington, D. C.

DEAR MR. HARRIS: We note with gratification that the Health and Science Subcommittee of your committee has reported favorably a chemical food additives bill based essentially on H. R. 6747. We appreciate your great interest in this bill.

The subcommittee revision is acceptable to this Department.

Because of the urgent public-health need for legislation requiring adequate testing of additives before they are used in food, we hope your committee can give favorable consideration to the new bill, H. R. 13254, in time for it to be acted upon by this session of Congress.

In view of the urgency, this communication has not been submitted to the Bureau of the Budget for advice in accordance with the usual procedure on reports.

Sincerely yours,

M. B. FOLSOM,
Secretary.

AMERICAN BAKERS ASSOCIATION,
Washington, D. C., July 23, 1958.

The Honorable OREN HARRIS,
Chairman, Committee on Interstate and Foreign Commerce, United States House of Representatives, Washington, D. C.

DEAR MR. CHAIRMAN: The American Bakers Association wishes to advise you that it supports H. R. 13254, which would amend the Federal Food, Drug, and Cosmetic Act to require adequate pretesting and prior approval of new food additives by the Food and Drug Administration.

Bakery products are consumed in practically every home in the Nation. We have, therefore, a sincere and serious interest in the safety of every ingredient which goes into our products.

Food technology in the years since World War II has advanced at an incredible pace, and problems of testing new additives have arisen faster than the present food and drug law can handle them. The baking industry as a manufacturer of basic foods believes the consuming public is entitled to assurances that all the ingredients used in the preparation of food it consumes have been adequately tested for safety.

Therefore, the American Bakers Association several years ago adopted a statement of

principles urging the passage of legislation embodying these requirements.

The problem has been complex as the record of the hearings attests. The achievement of the subcommittee under the chairmanship of Congressman WILLIAMS in developing a bill which adequately protects the public interest and appears to provide a workable regulatory system for the affected industries as well cannot be minimized.

In accepting the fundamental conditions of adequate pretesting and prior approval, coupled with an acceptable appeals procedure, H. R. 13254, in our opinion, represents a reasonable compromise of the many divergent approaches to this problem. It is our sincere belief that the public interest will best be served if Congress can pass this bill during this session. To that end, we are communicating these views to you and the other members of your committee.

In supporting this bill, we further support the amendments in the committee print of July 22, 1958, which, in our opinion, improve the bill.

Sincerely,

JOSEPH M. CREED,
Counsel.

MILLERS' NATIONAL FEDERATION,
Washington, D. C., July 24, 1958.

Hon. OREN HARRIS,
Chairman, Committee on Interstate and Foreign Commerce, United States House of Representatives, Washington, D. C.

DEAR MR. CHAIRMAN: As you are aware, representatives of the milling industry have appeared before your committee on several occasions in support of legislation dealing with the subject of food additives. We have supported a number of bills introduced by Representatives O'HARA, the latest of which was H. R. 366 in the 85th Congress.

We noted with interest the introduction of H. R. 13254 on July 1, 1958, by the chairman of the Health and Science Subcommittee, Representative JOHN BELL WILLIAMS. This bill apparently represents the conclusions of the subcommittee following extensive hearings and study. The chairman and the subcommittee are to be commended for developing what appears to be a reasonable approach to workable legislation and, with a few modifications, could be supported by government and industry alike.

The modifications to which I refer are contained in the committee print of H. R. 13254 dated July 22, 1958. We believe the adoption of these changes will improve the legislation.

While we still feel that H. R. 366 would be the ideal approach, we feel that H. R. 13254, with amendments, represents a reasonable compromise on which industry and government can agree. We, therefore, recommend favorable action on the amended bill by your committee so that congressional action can be completed in the present session of Congress.

In addition to the modifications contained in the committee print, we would like to recommend the deletion of those sections of the bill dealing with advisory committees. They do not confer upon the Secretary of Health, Education and Welfare any new authority to consult with experts which he does not already have in the existing Food, Drug, and Cosmetic Act. There appears to be no desire or interest on the part of any of the supporting industries for this provision, nor does the Food and Drug Administration seek it. Furthermore, the advisory committee procedure set forth could give rise to serious legal questions in the event of an appeal to the courts.

I hope you and the members of your committee will give favorable consideration to the views I have expressed.

Kind regards.

Very truly yours,

HERMAN FAKLER,
Vice President.

WASHINGTON, D. C., *July 23, 1958.*

Mr. OREN HARRIS,
Chairman, Committee on Interstate and Foreign Commerce, House Office Building, Washington, D. C.

DEAR MR. HARRIS: The Subcommittee on Health and Science over a long period of time has given careful and intelligent consideration to a number of bills which would amend the Federal Food, Drug and Cosmetic Act so as to regulate the use of new food additives.

The Dairy Industry Committee, composed of the following national trade associations: American Butter Institute, American Dry Milk Institute, Evaporated Milk Association, International Association of Ice Cream Manufacturers, Milk Industry Foundation, National Cheese Institute, and National Creameries Association, has supported amending the basic act in this regard. On behalf of the Dairy Industry Committee the writer testified on April 15, 1958.

We have had the opportunity of examining H. R. 13254. This bill, in our opinion, meets the necessities of the situation very adequately. It has the support of the Dairy Industry Committee.

I trust that the distinguished committee, of which you are chairman, has an early opportunity to consider a favorable report.

Sincerely yours,

DAIRY INDUSTRY COMMITTEE,
C. M. FISTERE, *General Counsel.*

NATIONAL CANNERS ASSOCIATION,
Washington, July 29, 1958.

Hon. JOHN BELL WILLIAMS,
Chairman, Subcommittee on Health and Science, Committee on Interstate and Foreign Commerce, United States House of Representatives, Washington, D. C.

DEAR MR. WILLIAMS: You and your subcommittee are to be complimented for the fine job that has been done in reconciling the differing views on the subject of food additives. We also wish to commend the work of your subcommittee counsel, Mr. Kurt Borchardt.

Although the measure approved by the full committee does not meet all the objections raised by this association to the original administration proposal, it does satisfy a number of the major points. Recognizing that the democratic process is one of give and take, we are pleased to advise you that the bill, H. R. 13254 as amended, has the full and unqualified support of the National Canners Association.

We hope that it will receive prompt House action in order that it may be considered in the Senate prior to the adjournment of this Congress.

Sincerely,

CARLOS CAMPBELL.

MANUFACTURING CHEMISTS' ASSOCIATION, INC.,
Washington, D. C., July 23, 1958.

Hon. OREN HARRIS,
Chairman, Committee on Interstate and Foreign Commerce, House of Representatives, Washington, D. C.

DEAR MR. CHAIRMAN: I am writing you this letter as president of the Manufacturing Chemists' Association to recommend that H. R. 13254, a bill to amend the Federal Food, Drug, and Cosmetic Act, be enacted into law at the present session of Congress.

The Manufacturing Chemists' Association comprises some 170 member companies which produce more than 90 percent of the chemical output of this country. The research and products of this industry have made great contributions to the purity, convenience, and nutritive value of America's food supply. From our interest and experience in this important field we believe, as we have testified before your committee on two occasions, that there is a very real need for modern amendments to the Food, Drug, and Cosmetic Act to clarify and augment the procedures under the act so as to achieve greater protection for the public health, and at the same time to permit scientific development of further improvements in the Nation's food.

Congress has been considering this complex problem during the past 8 years. Members of congressional committees, of regulatory agencies, and the majority of producers of food and chemicals have all felt strongly the need for amendatory legislation. The complex chemical and biological problems to be dealt with have made difficult the reaching of complete agreement regarding the method of Government control which should be embodied in such legislation.

Let me emphasize that it is the view of this association that adequate protection of the public health is and must be the primary consideration of all.

As you know, reputable chemical manufacturers have over the years tested food additives exhaustively before those additives are offered for use and have made it a practice to discuss the results of such tests informally with the Food and Drug Administration. We have, moreover, long favored the incorporation of this procedure in the Food, Drug, and Cosmetic Act.

The new bill does not conform to a number of recommendations made by our witnesses before your committee, which we continue to believe would make possible the most workable law and one which would afford no less protection to the public health than H. R. 13254. However, we understand that H. R. 13254 was drafted by the Health and Science Subcommittee after the completion of its thorough hearings on this subject, and we wish to commend Chairman WILLIAMS and each member of that subcommittee for working out a measure which will provide adequate public protection under a generally acceptable regulatory system.

We favor the immediate enactment of H. R. 13254 at the present session of Congress for three principal reasons. First, because it is in the public interest to clarify the existing procedures at the earliest possible time. Second, because several years are needed to accomplish the pretesting of food additives, it is important that the procedures be settled in order that the scientific development of further improvements in the Nation's food may progress without uncertainty as to future legal requirements. Third, because the interest being manifested by State and local health officials could readily lead to greater consideration of State and municipal regulation of food additives, which recently occurred in Utah, New York State and New York City. The enactment of State or municipal legislation on this subject could take a variety of forms and provide for a variety of sometimes conflicting procedures. The enactment of a Federal law at this time will set a pattern for State and municipal legislation just as the present Food, Drug, and Cosmetic Act has set a pattern for State food and drug acts in the past.

The amendments set forth in the committee print of H. R. 13254 dated July 22, 1958, would, in our opinion, improve the bill, and we would support the incorporation of these amendments in the bill.

Sincerely,

J. E. HULL.

Retail Dairy Prices Show a Slight Drop

EXTENSION OF REMARKS
OF
HON. MERWIN COAD
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 31, 1958

Mr. COAD. Mr. Speaker, under leave to extend my remarks in the Appendix

of the RECORD I should like to bring to the attention of the Members of the Congress a very pertinent item regarding the dairy situation. In this item, from the August issue of Successful Farming, we find the fallacy of Mr. Benson's philosophy graphically pointed out.

At the time Secretary of Agriculture Benson announced that he had decided to drop dairy supports there were some of us who stated then that this action would hurt the farmer, would not create a condition whereby more dairy products would be used, and that the consumer would not benefit from a reduced price. What we pointed out then has been proved correct according to preliminary official reports.

The item from the August issue of Successful Farming follows:

RETAIL DAIRY PRICES SHOW A SLIGHT DROP

One of the big arguments for cutting 1958 dairy supports was that retail prices would drop—and consumption go up.

How has it worked out? According to the Bureau of Labor Statistics—which collects city prices—retail dairy product prices declined in March and April (when support was cut 6 percent). But April 1958 retail prices were somewhat higher than April 1957 prices.

Also, BLS says that while consumer spending for dairy products was up about $13 million this April over April 1957, farmers received about $14 million less—with about the same milk production in both months.

It apparently is working well for someone.

Antarctic Claims

EXTENSION OF REMARKS
OF
HON. THOR C. TOLLEFSON
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 30, 1958

Mr. TOLLEFSON. Mr. Speaker, under leave to extend my remarks, I would like to call the attention of my colleagues to a very timely letter appearing in the July 18 issue of the Wall Street Journal. House Joint Resolution 184, referred to in the letter, is a resolution declaring the right of sovereignty of the United States over certain areas of the Antarctic Continent. I introduced it in this Congress, just as I have introduced similar resolutions in previous Congresses. It is unfortunate that it was not acted upon several years ago. Our interests in Antarctica would have been better protected.

ANTARCTIC CLAIMS

Editor, the Wall Street Journal:

Apropos the present interest in Antarctica, it seems as if it would be a good idea for the press and other public mediums to make available to the public a listing of those civic and patriotic organizations which have expressed themselves upon whether or not the United States should claim its rightful territory in the Antarctic.

It would seem pertinent also to list those foreign groups and organizations which have expressed themselves regarding disposition of Antarctic territory.

Partly due to being extremely busy during the past in developing the land between the Atlantic and the Pacific on the North American Continent and to attending to the five major wars, United States citizens have been somewhat lax in attention paid to the Antarctic. Since 1929 United States explorers have done magnificent work on the continent, in contrast to the Soviets, for example, who never landed on the Antarctic Continent proper until 1956 and who base claims upon an expedition of 1819 to 1821 which may or may not actually have seen the mainland and which did not make a territorial claim, on paper.

So, actually the "new" subject of Antarctica is not so new after all, and it behooves 1958's United States citizens to make known their desires as to whether or not we should claim the territory that our expeditions have explored, mapped, and/or occupied. One measure in Congress since 1951, now numbered House Joint Resolution 184, would cover this matter.

This is not to say that mere paper claims can handle the situation. Occupation is the main thing. If we cannot arrange for the modicum of occupation that is needed to establish proper claims, we should probably fold our tents and retire from world leadership.

E. A. KENDALL.

WASHINGTON, D. C.

An Answer to Un-American Attacks Against a Patriotic Farm Organization

EXTENSION OF REMARKS
OF
HON. GEORGE S. McGOVERN
OF SOUTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 30, 1958

Mr. McGOVERN. Mr. Speaker, by far the largest and most influential farm organization in the State of South Dakota is the South Dakota Farmers Union. This group of nearly 20,000 farm families, has for many years defended that basic American institution—the family farm. Its members are a cross section of a wholesome, religious-minded rural society. Many of them serve as school board members, church trustees, college board directors, 4–H leaders, and in a wide variety of other civic and humanitarian causes.

Doubtless in an organization with this many members there are a few bad citizens—just as there are a few poor members in every other large organization no matter how fine its general membership may be. But the vicious efforts that have been made in some quarters to cast reflection on the Americanism of the Farmers Union ought to draw the indignant wrath of every decent citizen.

It is for that reason that I have been disturbed by the senseless and unscrupulous smears directed at the Farmers Union by one Glenn Martz, a Washington writer of sorts who edits a newsletter on farm affairs, which he very appropriately calls the Lowdown. Its chief purpose seems to be lowdown attacks designed to discredit the leadership and the purpose of a great farm organization—the Farmers Union.

The Lowdown editor, Mr. Martz, has been at the business of low-level shooting for a long time. As a matter of fact some years ago he filed a story in a prominent daily newspaper in my State which promptly involved this fine newspaper in a libel suit that cost them many thousands of dollars in damages.

Recently Mr. Martz took issue with me in the Lowdown because I informed one of my fellow South Dakotans that this gentleman's efforts to equate the Farmers Union with Communist infiltration were entirely unfounded.

Several months ago the Lowdown editor was sponsored by somebody on a speaking tour of South Dakota. I was shocked to learn that among other assignments he was the featured speaker of the Lincoln Club, the Republican Party organization of our State employees at Pierre, S. Dak. Certainly, Mr. Martz' line has no resemblance to the great spirit of our beloved President, Abraham Lincoln.

Two excellent answers to the Lowdown attacks on the Farmers Union include a sparkling editorial by Mr. Robert Lusk, editor of the Huron (S. Dak.) Daily Plainsman, December 29, 1957, and a pamphlet prepared by the National Farmers Union entitled "Smear: The Price of Success." I include both of these articles at this point:

[From the Huron (S. Dak.) Plainsman of December 29, 1957]

THE PUBLISHER'S NOTEBOOK

(By Bob Lusk)

SPEEDUP

In this age of speedup there now appears what might at first blush be regarded as a greatly accelerated method of producing Communists.

There has been for more than a hundred years the traditional Karl Marx method, which, for most people and including this newspaper, has been fast enough.

Now, however, comes a much, much more rapid method. It might well be called the Glenn Martz method.

The Karl Marx method, according to figures put out by the Federal Bureau of Investigation, has produced less than two-score of Communists in South Dakota, for instance.

But the Glenn Martz method would make this figure look positively infinitesimal.

As we see it, given a dime's worth of evidence, Martz can produce a thousand dollars worth of Communists with the twist of a tongue or the click of a typewriter key.

Martz gave a demonstration of his technique in a speech at a meeting of the South Dakota Farm Bureau Federation here in Huron. He also distributed copies of and subscription blanks for a small periodical he publishes in Washington, D. C. This he calls The Lowdown, and it seems most appropriately named for it is, indeed, the lowdown approach to journalism.

Glenn Martz is a former South Dakota newspaperman. And when we mention this, let us make it clear that we are not doing it in a bragging way. Our purpose is purely informational.

WHAT HAPPENS

So much for technique and background. So what happens?

According to Martz, the Communist Party is "launching an underground offensive in the upper Midwest to strengthen its drive for State socialism." Also, according to Martz, the "Communist drive" in South Dakota enjoys a "close affiliation with the National Farmers' Union."

Under the Martz method, the plot spreads out fast. For example, as for those Volga farmers who tossed eggs at Secretary of Agriculture Benson, "the lowdown has no way of knowing the political affiliation of the men responsible for throwing the eggs.

but 10 to 1 the Reds were nudging them on."

Plunging along thus in high gear, the Martz technique sideswipes some of the most unexpected people. In the case of a United States Senator with a long and unbroken record of anticommunism, many, many people would be greatly surprised. But these people just don't know Martz.

According to Martz, the Senator refused to comment on the egg-throwing episode. That is the dime's worth of evidence. What does it prove? Obviously, his refusal to comment carried the implication that he might have been in sympathy with those responsible. You will recall that 10 to 1 those were Red nudgers.

HISTORY

Nor does Martz limit himself to the contemporary scene. He goes back into history. For example, the Farm Holiday Association of the early thirties was a Communist front organization.

And so it goes under the Martz technique. And if the Martz method of producing Communists is valid, let us try it out for ourselves and see what we can produce with it.

Let us, for the moment, take Martz' word for it that the Farm Holiday Association was a Communist front.

Looking back through the Daily Plainsman's bound files for the period, we discover that on July 28, 1932, a meeting was held at Mitchell at which the constitution of the South Dakota Farm Holiday Association was adopted. And whom do you supose were listed as the principal speakers on that occasion? They were Tom Brisbine, president of the South Dakota Bankers' Association; and H. B. Test, president of the South Dakota Farm Bureau Federation.

That same day they elected officers for the association. Barney McVeigh, speaker of the South Dakota House of Representatives, was chosen president. And the directors included, in addition to W. C. Lusk, president of the South Dakota State Chamber of Commerce; E. H. Everson, president of the South Dakota Farmers' Union; J. J. Martin, president of the South Dakota Grange; the same H. B. Test, president of the South Dakota Farm Bureau Federation, Martz' host at the recent Huron convention.

This, then, is Martz' "Communist front" organization as it was established in South Dakota. Does this mean that the bankers were Communists, that the Farm Bureau was Communist? How asinine can you get?

The Martz technique of producing Communists on the gallop may make some cents for Martz but it makes no sense to anyone else.

As for our part, we will limit our concern to those Communists produced by the Karl Marx method.

[From a National Farmers' Union Pamphlet]

SMEAR—THE PRICE OF SUCCESS

(The story of smears against the families in the Farmers' Union, and how smears have developed as our opponents come to realize the need for a strong farm program. Also the story of praise received by Farmers' Union for its fight in behalf of that program.)

1. THE BRIDGES SPEECH

On September 7, 1950, Senator STYLES BRIDGES of New Hampshire, former county agent, former secretary of the New Hampshire Farm Bureau, and then a director of his State Farm Bureau Mutual Insurance Co., rose on the floor of the Senate and launched a 2-hour tirade against the Farmers' Union.

The Senator from New Hampshire accused the Farmers' Union of being a "Communist dominated" organization.

The rebuttal from Senators who know Farmers' Union (BRIDGES has no members in his State) was instantaneous and dramatic. Seldom has any organization been so eulogized in Congress, if ever. Here are samples from the 79 pages of defense in the CONGRESSIONAL RECORD (September 7, 12, 23, and 24, 1950):

Senator WILLIAM LANGER, North Dakota Republican: "The program of the Farmers' Union * * * is one of the greatest bulwarks against communism."

Senator KARL MUNDT, South Dakota Republican who was formerly a member of the House Committee on Un-American Activities: "I think I have known all the State presidents of the Farmers' Union of South Dakota across the period of the last 15 years, perhaps, and they have been consistently a fine, representative group of South Dakota farmers."

Senator MILTON YOUNG, North Dakota Republican: "This great organization, the Farmers' Union, has probably fewer Communists in it than probably most any other big organization in the United States."

Senator WAYNE MORSE, Oregon Democrat (then a Republican): "In my opinion, Mr. Patton, the president of the Farmers Union, is as loyal a citizen as there is in the United States. * * * I deplore the growing tendency in the Senate to use the floor of the Senate as a forum for accusing fellow citizens of disloyalty to their Government and offering not a scintilla of proof in support of such charges."

Senator HUBERT HUMPHREY, Minnesota Democrat: "I ask, in all conscience in all honor, how in the name of commonsense can anyone get up on the floor of the Senate and brand a man like Mr. Patton a fellow traveler or as one duped by the Communists, or his organization as being a Communist-front organization?"

Senator Joseph R. McCarthy, the Wisconsin Republican who was making headlines by chasing Communists, also stated his confidence in Farmers Union. Referring to the president of Wisconsin Farmers Union, Kenneth W. Hones, Senator McCarthy said: "He has the reputation of being militantly and intelligently anti-Communist."

2. THE UTAH CASE

Senator BRIDGES was careful to shield himself from a libel suit by wearing the cloak of congressional immunity. But some of his fellow Farm Bureau members in Utah were not as cagey. They paid for their mistake.

In 1950 the Utah congressional campaigns were underway. Up for reelection was Walter K. Granger, a liberal, forward-looking Congressman. In the previous session, Granger had introduced a bill which would have divorced the Farm Bureau from the extension service whose county agents, in many States, were performing Farm Bureau chores at the expense of the taxpayers.

The Utah Farm Bureau set out to beat Granger. As part of its campaign it circulated rumors that Granger was being supported by the the Farmers Union which was, the Utah Farm Bureau leaders whispered, a "Communist dominated" organization.

The bureau leaders, Secretary Frank Shelley and Vice President A. V. Smoot, circulated their charges against Farmers Union in printed form to newspapers and the newspapers printed them.

Farmers Union promptly sued for libel. A Utah Federal court jury decided that no proof existed that could even remotely link Farmers Union with communism.

It ordered the Utah Farm Bureau to pay Farmers Union $25,000 in damages.

The Utah trial brought out some interesting facts. First, that BRIDGE's speech on the Senate floor had been written by one Robert Cruise McManus, a writer of sorts who has made a living by his attacks on Farmers Union. BRIDGES agreed to make the ghost-written speech after the late Senater Kenneth Wherry, of Nebraska, refused. Wherry was quoted by Drew Pearson as saying, "I was too smart for that. I let STYLES BRIDGES make that speech."

What inspired BRIDGES' attack on Farmers Union?

The author of the speech, Robert Cruise McManus, frankly told the Utah Federal court that "politics was involved." McManus, who then lived in Hopewell, N. J., said he was writing a book on alleged Communist infiltration of agriculture when an unnamed friend dropped by and suggested that McManus write a speech for a United States Senator to deliver against Farmers Union. McManus wrote the speech and with his friend went to Washington where they finally peddled it to Senator BRIDGES—a Farm Bureau executive and staunch member.

During the week-long Utah trial, the American Farm Bureau Federation rushed to the aid of its State organization by hiring ghost-witer McManus to act as counsel for the Utah Farm Bureau's lawyers.

Prior to the trial, the Utah Farm Board tried to apologize and settle out of court, but it quickly canceled its offer after hearing from the national officers of American Farm Bureau Federation.

McManus' counsel failed. Federal Judge Willis Ritter called some of the Farm Bureau's evidence "ridiculous" and continually admonished its attorneys to produce some facts. The principal proof which the bureau attorneys had to support their charges was that Farmers Union was a strong advocate of cooperatives.

When Farmers Union won the Utah trial, the Farm Bureau appealed to the 10th circuit court of appeals, composed of three Federal judges. This high court unanimously sustained the Farmers Union judgment against the Farm Bureau. The Farm Bureau was forced to pay $25,000 in damages plus $3,000 in costs, and Farmers Union was completely vindicated.

3. THE HOLLAND SMEAR

Six years after the BRIDGES attack, Senator SPESSARD HOLLAND, of Florida, smeared the Farmers Union viciously by associating it pointedly with the Communist program.

Again, Senators jumped up to reply to the attack. When the rebuttal was over, 20 Senators from both parties had risen to defend the Farmers Union. (CONGRESSIONAL RECORD, March 7, 1956.)

HOLLAND is a featured speaker at American Farm Bureau Federation conventions. There are practically no Farmers Union members in his State.

He referred to Farmers Union advocacy of 100-percent price supports for the production from family-sized farms and declared that "the announced program of the American Communist Party happens to be pegged" on those planks.

Here's the reply of a Republican Senator, KARL MUNDT, member of the Senate Agriculture Committee and former member of the House Committee on Un-American Activities: "It certainly does not follow that simply because the Communist Party believes in the law of gravitation, that anyone else who is subject to that law is influenced by Communist Party doctrine."

A Democrat, Senator A. S. MIKE MONRONEY, of Oklahoma, put it this way: "The same situation obtains with respect to every piece of progressive legislation we have enacted during the past 20 years, including social security, unemployment insurance, wage-and-hour legislation, old-age assistance, and many fine programs which the Senator (HOLLAND) has vigorously supported. Most of these programs have been aped by the Communist Party."

Senator JAMES E. MURRAY, of Montana, replied by quoting Edward A. O'Neal, former president of the American Farm Bureau Federation, as demanding in 1941 "a program which will assure full parity not only to

the five basic crops but to all American agriculture."

Senator WILLIAM LANGER, North Dakota Republican, said: "I myself, time and time again upon this floor have stated that I am in favor of 100 percent of parity. I am proud of that fact * * * certainly I cannot be charged with being sympathetic any more than any 1 of the 37,000 farmers in North Dakota can be charged with being sympathetic to the Communists."

WAYNE MORSE, Oregon Democrat, referred particularly to the family-farm aspect of HOLLAND's attack: "The cutoff idea that drew the charge of communism from the Senator from Florida is as American as apple pie. Even the President's farm message contains this philosophy. If National Farmers Union's fight for a farm program is communistic, then I presume by all the rules of logic that President Eisenhower, Secretary Benson, and all the policymakers of the administration are also communistic."

Other Senators who rose to testify to Farmers Union's loyalty and service to family farming in America included: Humphrey, Democrat, of Minnesota; Carlson, Republican, of Kansas; Mansfield, Democrat, of Montana; Case, Republican, of South Dakota; Young, Republican, of North Dakota; Thye, Republican, of Minnesota; Neuberger, Democrat, of Oregon; Kerr, Democrat, of Oklahoma; Lehman, Democrat, of New York; Dirksen, Republican, of Illinois; Fulbright, Democrat, of Arkansas; Kefauver, Democrat, of Tennesese; Douglas, Democrat, of Illinois; Thurmond, Democrat, of South Carolina; and Wiley, Republican, of Wisconsin.

Occasionally, in various parts of the Nation, Farmers Union's foes find some gullible person or group to carry on their scurrilous attack.

Every decent person, of course, deplores these tactics. But there is evidence that the enemies of the strong and effective programs farmers have built are continuing to resort to such tactics.

Recently, a new type of attack has been spread by two sources, both inspired by the Farm Bureau as a device for smearing the Farmers Union program rather than debating its merits.

The Glenn Martz newsletter

Several years ago, a member of the staff of the American Farm Bureau Federation in Washington, Glenn Martz, resigned and moved down the hall to start a newsletter using his own name. He calls it The Lowdown on Farm Affairs from Washington and fills it with long quotations from Communist documents, sandwiched in between quotations from people he chooses to attack, such as Senator Karl Mundt, Senator Milton Young, and NFU President James G. Patton. His stock in trade is guilt by association, viciously handled by distorted imagination to please subscribers.

Farmers Union doesn't have enough time to reply to the scurrilous attacks of Martz, and it refuses to get down into the gutter with him. In most areas, all a farmer needs to know about Martz is that he has been an agent of the Farm Bureau.

"Glenn Martz has joined the AFBF's staff in the Washington office as assistant director of information. The story of the appointment of the former United Press writer appears on this page." (Reprint of announcement below Martz's picture in the Official Newsletter of the Farm Bureau, January 14, 1952.)

Recently, so-called lectures by Martz have been sponsored by the Farm Bureau in several states—Virginia, South Dakota and Illinois. Some of these have coincided with Farmers Union organizing drives, but the smear tactics have failed thus far—just as their negative program for agriculture has failed.

The Philbrick story

Similarly, early in 1957 several lectures were delivered in the Midwest by Herbert A. Philbrick, best known as the author of I Led Three Lives. The book recounted his experiences as an informer for the Federal Bureau of Investigation. A film series based on the book has had long runs on television. Philbrick has made many paid lecture appearances as an expert on communism.

Certain groups and persons, including Farm Bureau, arranged for Philbrick to appear in the rural areas of Iowa and Minnesota during the early months of 1957. The misunderstandings, rumors, and outright lies about Farmers Union that resulted from those appearances caused National Farmers Union to decide to sue Philbrick for slander. The intended suit was dropped when Farmers Union received the letter which is reproduced at the end of this article.

Philbrick has also instructed his lecture agent to halt the use by members of Iowa Farm Bureau of sound recordings made of his Iowa appearances.

National Farmers Union President James G. Patton expressed gratification that Mr. Philbrick has agreed to set straight a record which has damaged the reputation of our 55-year-old farm organization in its vigorous fight for the family farmers of America.

Patton also pointed out that the Philbrick lectures coincided with a membership drive to charter Farmers Union in Iowa and that they were sometimes sponsored—as Philbrick's statement notes—by another farm organization.

"This retraction should put an end to the use of smear and innuendo by rival groups," Patton said, "although we must be prepared for more of the same so long as some people refuse to discuss the farm issue on the basis of fact instead of fiction.

"Farmers Union will go right on fighting for the family farmers of this country, the great bulwark against communism, fascism, or other enemies of our democratic institutions. We will not be detracted for a moment from that most important job because of any smears, whispering campaigns, or other low blows.

"I think the American people realize that the real subversive danger to our country is the attempt to tear down and undermine institutions like the Farmers Union, dedicated as it is to the great pattern of family farming.

"Agriculture is in a depression, and farmers need organization and bargaining power like they have seldom needed them before. Farmers Union offers vigorous leadership in this cause."

OCTOBER 15, 1957.

Mr. JAMES G. PATTON,
President, National Farmers Union,
Denver, Colo.

DEAR MR. PATTON: During the months of January and February 1957 I delivered a series of lectures in the States of Iowa and Minnesota on the subject of the Communist conspiracy in the United States. Some of these lectures were sponsored by the American Legion, others by various schools, and still others by the American Farm Bureau Federation or some local subdivision of that organization.

I wish to state for the benefit of those who were present at any of these lectures, and particularly for those who were not present and may have read or heard erroneous reports concerning my lectures, that I never stated either in my speeches, my remarks during the question periods, or my press conferences, that the Farmers' Educational and Cooperative Union of American, commonly known as the National Farmers Union, was a Communist-front organization or Communist dominated, or that its president, James G. Patton, was a Communist or Communist sympathizer; nor do I believe that the National Farmers Union was or is a Communist-front organization or Communist dominated, or that its president, James G. Patton, was or is a Communist or Communist sympathizer, nor do I believe that Mr. Patton has allowed himself or his organization to be used as a Communist tool.

So far as I know, the National Farmers Union has never been listed as a Communist-front organization by any department or agency of the Federal Government, and has never been so identified by any committee or persons authorized to issue reports on behalf of the Congress of the United States with respect to such matters.

In answer to questions from the audience at certain lectures I did read excerpts of the sworn testimony of William H. Hinton given in 1954 in hearings before the Subcommittee To Investigate the Administration of the Internal Security Act and Other Internal Security Laws of the Senate Judiciary Committee without drawing any conclusions on what he said or refrained from saying, but I did not intend to convey the impression to my listeners that I placed any confidence in the veracity of William H. Hinton, nor that I knew that he ever worked for the National Farmers Union or any lawfully constituted or authorized component or subdivision thereof. This is equally applicable to the testimony of Benjamin Getlow in the report of the House Committee on Un-American Activities from which I read.

I have made a study of the activities of the Communist Party in the United States and know that they have made many attempts to infiltrate farm areas of America. These attempts have been dismal failures and I have so stated in virtually every lecture I have made. Membership in the Communist Party in the farm States is the lowest in the entire country.

It is my belief that the National Farmers Union is a bona fide farm organization with a history of service to the farmers of America for more than 50 years. In May of this year the organization and its president were commended by President Eisenhower for giving voice to America's determination to stand firmly against the menace of international communism.

Yours very truly,
HERBERT A. PHILBRICK.

Association of College and Research Libraries Supports H. R. 13247, the National Defense Education Act of 1958

EXTENSION OF REMARKS
OF
HON. CARL ELLIOTT
OF ALABAMA
IN THE HOUSE OF REPRESENTATIVES
Monday, August 4, 1958

Mr. ELLIOTT. Mr. Speaker, under leave to extend my remarks, I include the following letter:

ASSOCIATION OF COLLEGE AND RESEARCH LIBRARIES,
OFFICE OF THE DIRECTOR,
Columbus, Ohio, July 28, 1958.

Subject: National Defense Education Act of 1958.

The Honorable CARL ELLIOTT,
House of Representatives,
Washington, D. C.

MY DEAR MR. ELLIOTT: The Association of College and Research Libraries, a division of the American Library Association, represents the needs and interests of college, uni-

versity and other types of research libraries in the United States.

The association has studied the provisions of H. R. 13247, known as the National Defense Education Act of 1958, with great interest and general approval. It is our conviction that this bill would strengthen education in this country at a time when it desperately needs stronger support. We endorse the measures provided by this bill and urge you to give it your strong support in debate and to vote for it should it reach the floor this session.

Sincerely yours,

LEWIS C. BRANSCOMB,
President.

Not Role for Government

EXTENSION OF REMARKS
OF
HON. BRUCE ALGER
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 9, 1958

Mr. ALGER. Mr. Speaker, under leave to exten my remarks in the RECORD, I include the following editorial from the Dallas Morning News of Dallas, Tex., Tuesday, April 16, 1957. Here is a succinct and, I believe, an accurate description of the role of Federal Government in business.

NOT ROLE FOR GOVERNMENT

Regulation of business in somebody's favor is always bad unless it is in your favor.

That can be written down as the basis of nine-tenths of business and industrial regulation asked of State legislatures and Congress. Business believes in the capitalistic system. Business believes in the laissez faire relationship between Government and itself. But while advocating noninterference by Government, it is business and industry that invariably come up to the lawmakers with bright ideas of how to interfere with somebody else in the same business.

We have come rightly to the theory that Government has a proper role as an umpire in the business operations of the Nation. Government properly protects against monopoly, fraud, agreements in restraint of trade that act as a cover for price-fixing. Government rightly fosters competition by protecting the business field against these elements calculated to destroy it.

But it is not the proper function of Government to handicap efficiency or sound business methods merely to protect a competitor. No Government should make legal acts illegal under the specious contention that it is protecting competition.

Government itself forbids price-fixing. Government should not even as a nonpartisan indulge in price-fixing. It is difficult to draw the line between monopolistic methods which by price-cutting may destroy competition and legitimate effort to undersell a business rival. It is still wrong to legislate against such traditional and useful sales devices as the loss leader, the bargain lure, the premium gift.

Government's primary responsibility is to protect the public and fair competition. In the long run the public is the best judge of the business with which it deals.

This criticism of price-fixing as not the role of Federal Government is particularly relevant now in view of the fair trade bill just reported by the Commerce and Finance Subcommittee to the full Committee of Interstate and Foreign Commerce. This bill called mistakenly fair trade is simply Federal permission to manufacturers to forget antitrust law and fix prices for retail sale. Price fixing would destroy competition and private enterprise—so the stakes are great as I see it.

The time has come for all Members of Congress to become familiar with the terms of this bill.

Most unfortunate and paradoxical is the fact that in practice, this bill, aimed at helping small retailers could be their epitaph. It is absolutely self-defeating and contradictory to the best interests of the retailers.

The Excellent Work of the Small Business Administration

EXTENSION OF REMARKS
OF
HON. JAMES G. FULTON
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 5, 1958

Mr. FULTON. Mr. Speaker, now that the Congress and the President have seen the wisdom of making the Small Business Administration a permanent Federal agency, and given to it additional authorities for providing service to the Nation's more than 4 million small-business firms, I should like to take this opportunity to pay tribute to the outstanding leadership of the Administrator of that agency, Mr. Wendell B. Barnes of Tulsa, Okla.

It has been my privilege to work with Mr. Barnes on programs of vital importance to small firms in my district, and it has been a refreshing experience to see how this young and energetic executive gets the job done. He has likewise instilled in his staff—both in Washington and in the field—a keen desire to serve small firms fairly and quickly, and I believe the results speak for themselves.

During the past fiscal year, the agency approved a record number of loans to small businesses, it helped to reserve for exclusive award to small concerns a new high in proposed Government contracts, and far surpassed its previous efforts in providing management and technical assistance to small businesses.

In addition, it launched new types of valuable services, such as developing special directories to help small firms participate in missile subcontracting and in Government research and development work.

Space does not permit a more lengthy description of the progress the Small Business Administration has made in all its activities since Wendell B. Barnes became head of the agency in 1953.

Mr. Barnes is a member of the Cabinet Committee on Small Business, the Defense Mobilization Board, and the Interagency Committee for Rural Development Program.

Born in Ponca City, Okla., August 23, 1909, Mr. Barnes is a graduate of Culver Military Academy, Culver, Ind.; Brown University, Providence, R. I., and the law school of the University of Michigan, Ann Arbor. He received his law degree in 1935.

From 1935 to 1939 he was assistant attorney for the Oklahoma Tax Commission in Oklahoma City. In 1939 he moved to Tulsa, where he became a partner in the law firm of Gavin & Barnes. From October 1941 to June 1946, he was general counsel for the Tulsa plant of Douglas Aircraft Co., Inc. Much of his work involved Government procurement procedures, negotiation of prime contracts with the Air Force, and supervision of purchase orders and subcontracts for supplies for small businesses.

Before entering Government service, he was a practicing attorney in Tulsa, and as an adjunct to his law practice, Mr. Barnes organized and managed several small businesses. He served in the house of representatives of the Oklahoma Legislature from 1950 to 1952.

He is a member of the Oklahoma bar, the bar of the United States Supreme Court, the American Bar Association, and the National Council of the Federal Bar Association. He is a member of the Sons of the American Revolution, the Society of the Cincinnati, and Phi Delta Phi legal fraternity.

One of the Small Business Administration's most valuable programs is one which, in cooperation with colleges and universities, it makes it possible for small-business owners and managers to attend management extension courses to brush up on management practices. This program is carried on at no expense to the taxpayers, and to date more than 12,000 persons have taken these courses in all parts of the country.

As a part of this program, Mr. Barnes addressed a meeting of the National Council for Small Business Management Development, held June 24 at the University of Pittsburgh.

The following excerpts from his address there contain a number of valuable suggestions for improving business management:

I see great possibilities for improved management by the way in which big business directly helps small business. Big manufacturers sell through many—sometimes thousands—of smaller firms. At the same time, they buy equipment, parts, and supplies from many smaller firms. The relationship between the bigs and smalls at this point of contact can be so sound and friendly that it would be possible for the larger, more experienced firm to pass on in a number of ways management information of great value to the smaller ones.

While I am talking in this general area of the relationship patterns between large and small units of enterprise, I would like to share with you some thoughts from which I have drawn some definite conclusions. If these conclusions have merit, I offer them particularly as something to which we, as well as the top policymakers of our leading bellwether companies, might give some serious current attention.

For years we have been aware of, and have given lipservice to, the fact that big business could not develop, grow, or even function without the members of smaller enterprises who are their suppliers, subcontractors, dealers, and agents in one way or another.

This is an old truth which is steadily becoming more vitally true and significant as the patterns of our total economic effort

become bigger and more complex. Now, from this broad fact, I have drawn some specific conclusions which, if I were a top executive in any big company, I would begin to think about and to do something about.

For instance, I would recognize that every one of my dealers, or my subcontractors, or my suppliers was, for all intents and purposes, just as vital to the total overall productivity and good will of my company as is any one of my direct employees. Therefore, I would be concerned and do some things to make sure:

That those small companies, essential to the profitable operation of my company, are themselves making a profit and growing.

That these small-business allies of mine knew as much about my company as our own people did.

That they understood our policies and standards and spirit of craftsmanship, service, and quality, and that they identified themselves with them the same as we did.

That when they sold or serviced our products, they gave the final customer a feeling that both they and we stood behind the sale.

In short, that their small company and our big company were a real team, because in actual fact that's what we have to be if we and they are to grow and prosper—if nothing else, such a policy of mutual loyalty and cooperation would cut down on the buck-passing and bad liaison that prevails all too often between manufacturers and the firms from which they must have complete loyalty, their dealers, the sellers of their products and services.

You have all heard the wisecrack, "There is no reason for this, it is just company policy."

It is bad enough when this attitude exists within a company; it is far worse when the dealers or distributors of a company's products show such an indifferent attitude since they are out on the retail firing line presumably selling and servicing the customers whose good will is essential to both the maker and the seller of the product.

* * * * *

No later than last week I was talking with a dealer who sells a product for one of American's biggest and most respected companies—one which has recently introduced an addition to its product line. I got the impression that this dealer almost hoped that the new product would fail, not realizing that such a failure might harm his own economic interests right along with those of the major company involved, and that its success would add luster to the product he handled and permit the manufacturer to give him better services.

There is no need for this kind of attitude. The large company must maintain effective policies in this most important area of modern industrial relations and a few such failures can deteriorate its competitive position. There are enough natural economic problems in our complicated economy today without creating new artificial problems through oversight and neglect of everyday human relationships. We hope the large manufacturers will remember that loyalty in their dealer relations is a two-way street.

"Time does not allow me to go into all of these relationship patterns in detail. However, in passing, I should like to give emphasis and perspective to this timely fact. We have moved into such a dynamic era—one marked by automation; by new demands on research, financing and administration; by new population impact on market patterns, product design and merchandising; by new techniques of distribution; by intense competition—that it now becomes absolutely essential, in my opinion, to have a market place review now and continuously of the entire set of human and economic relationships between the big and small units of enterprise in our society. And, as I said, if I were a top policy man in any large company today, I would put this challenge high up on my list of things to think about with an eye to doing whatever is necessary to bring my company's relationship into step with our life and times.

When I see so much uproar and discussion being generated by new ideas and arguments about economic and human relationships—from guaranteed annual wages and industrywide bargaining problems, to discount houses and drive-in automated selling—these are storm warnings to me that forewarn of change. All of us—whether we identify ourselves with big business or small business—had better examine everything we are doing in both policy and practice to be sure that we are in step with these new forces. And nowhere is the impact of change more critical than at those many points of two-way relationship between the big units and the small units which must work together if this marvelous economy of ours is to go forward.

This idea of mutually helpful relationship between large and small companies that I have been talking about is already in operation in a few instances known to me. For example, there is one large petroleum company which has a staff of management experts who are available at all times to consult with wholesale and retail customers of the firm on their management problems. When it was found out that this advice was given freely, with no hidden gimmick, and that profits often did increase as a result, more and more customers took advantage of the service. The net result has been one of advantage to the big company as well as to its dealers.

When it is more fully realized by big and small business alike that they are interdependent and that the success of one is dependent upon the success of the other, these isolated instances will be the rule, and not only will all business benefit, but the position of the consumer will be enhanced as well.

Needless to add, such observations are themselves an editorial comment on the essentiality of the very kind of meeting, and of the type of creative leadership, which is reflected by your agenda today.

Schedule of Courthouse Visits in 13th District

EXTENSION OF REMARKS
OF
HON. A. D. BAUMHART, JR.
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 5, 1958

Mr. BAUMHART. Mr. Speaker, the legsilative activities of the 2d session are rapidly drawing to a close, and the work of this 85th Congress will soon be concluded. This has been one of the most active sessions of Congress in recent congressional history.

I look forward to returning to Ohio during the coming months to meet with as many of the residents of the 13th district as possible. Through these personal meetings I am better able to acquaint myself with their problems and beliefs, and thereby am in a better position to serve them more effectively.

As in the past year, I have again, through the gracious cooperation of local public officials, been able to arrange for office space during my tour of the district in the courthouses of the four counties of Lorain, Sandusky, Huron, and Erie. I will be at these locations on the following dates:

September 15, 16, and 17: Lorain County Courthouse, Elyria.

September 18 and 19: Huron County Courthouse, Norwalk.

September 22, 23, and 24: Sandusky County Courthouse, Fremont.

September 25 and 26: Erie County Courthouse, Sandusky.

Following this tour of the district, I will again be available at the following two offices for further conferences with 13th district constituents: 206 Felck Building, Sandusky, Ohio; 209 Sixth Street, Lorain, Ohio.

Man of Convictions

EXTENSION OF REMARKS
OF
HON. EUGENE J. KEOGH
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 5, 1958

Mr. KEOGH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Patent Trader, of Mount Kisco, N. Y.:

MAN OF CONVICTIONS

The basic principles of a political party, no matter how constant, inevitably become stirred by the differences in the thinking of the men who believe in these principles. Ironically, while all members of such a party are basically united on the theorems embracing these principles, the source of great division is the attempt to define, reinterpret, and translate them into action.

Such has been the case in the Democratic Party through its history and, more so, in recent years. Fundamentally a party with a credo of liberalism, it finds itself from time to time embroiled in angry and almost irreparable differences over the interpretation of the principles of liberalism. This is a normal course of events, for liberalism is change, and change invariably generates differences.

On Saturday night of last week this fact was highlighted once again on the American scene. Former Postmaster General James A. Farley, past national party chairman and now a candidate for the United States Senate nomination, struck out angrily at critics within his own party who have rejected and opposed his candidacy because they do not think he is a liberal. The occasion was the annual dinner of the Putnam County Democratic Committee at Bear Mountain Inn.

Mr. Farley first outlined the history of liberalism in the Democratic Party from Jefferson down through the 20th century of Wilson and then Roosevelt which was, as he put it, "where I came in." He reminded his audience of the broad social reforms of the New Deal, all with the brand of liberalism.

He quoted Webster's definition of a liberal: "One who is liberal in thought or principle; one who favors greater freedom in political or religious matters, specifically in politics * * * favorable to reform, not bound by orthodox."

Mr. Farley added tersely: "That's good enough for me."

Mr. Farley's presence on the political scene once again brings into sharp and sometimes poignant relief memories of the exciting days when the Democratic Party was under his leadership. Now he finds himself enough of a stranger on so broad a front

of his own party's political scene that he angrily and justifiably sees fit to strike out at his critics and challenge them to match their records against his.

It is ironic and regrettable that a man of the stature, prominence, and influence of Mr. Farley should find himself standing aside from the flock in such familiar pastures. It is because of this position that his fight for the nomination will be all uphill against tremendous odds.

Here again are revealed the differences in interpretations, shadings, and thought and the routes to be followed in the interest of liberalism in action. Here is the paradox of allies believing in the same thing, fighting for its possession; a paradox that offers no solution until one side has overwhelmed the other. Surely Webster's definition of the liberal would elicit the same ready reply from Mr. Farley's critics: "That's good enough for us, too."

Opponents of the former New Deal leader would do well from the standpoint of their own interests, but more so from those of their party, not to view Mr. Farley as a figure from the past with no place in the present scheme of things.

This vigorous, astute, and able man has a reputation among the people that his word is his bond. This applies among the generation that appeared on the public scene almost at the time he voluntarily withdrew from it. Apply this reputation to the man's firm faith in the basic principles of his party and you have a combination that can readily be traded for public support based on trust and good will. These are commodities any political party should covet.

The United States senatorial candidate is capable of bridging the gap of time from his once great position in this Nation to the present, for men of strong convictions are greatly needed in the service of their country now and at any time.

Wilson Versus Gavin

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 5, 1958

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Washington Star of August 3, 1958, which comments on the controversy between former Secretary of Defense Charles Wilson and Lt. Gen. James M. Gavin, United States Army, retired:

WILSON VERSUS GAVIN

Lt. Gen. James M. Gavin, now retired, is as fallible a human being as any of us. So he may be wrong in some of the bleak and unflattering judgments he has set forth in his new book. In effect, the book warns that our country's present military position is for from good, and it blames former Defense Secretary Charles E. Wilson for having made bad decisions that are primarily responsible for that position.

Since this is a field of controversy in which opinions differ very markedly, even among those best qualified to talk about it, the average layman would be foolish to take sides in a dogmatic fashion. Still, General Gavin is unquestionably one of our most distinguished military men, and what he has to say merits respectful attention. Certainly, considering his exceptionally fine record, his views deserve something much better than Mr. Wilson's comment: "I know Gavin and he is just another overly inflated Army officer with an exaggerated regard of his ability. He's just trying to sell his book."

General Gavin, needless to say, is not just trying to sell his book. On the contrary, right or wrong, he is trying to alert the Nation to a situation which he believes to be full of exceedingly grave potential danger, especially so if the Russians actually are as far ahead of us in ballistic missiles as some reports indicate. The former Defense Secretary has not helped to clarify the true status of our position by his slurring comment on General Gavin.

A Transportation System Between the House Office Buildings and the Capitol

EXTENSION OF REMARKS
OF
HON. JOHN F. SHELLEY
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 5, 1958

Mr. SHELLEY. Mr. Speaker, I would like to discuss briefly today the growing need for a transportation system between House Office Buildings and the Capitol. We all agree, I am sure, the need will become more rather than less acute with the completion of another House Office Building.

Most of us, and certainly Dr. Calver's office, are familiar with the number of heart attacks suffered by Members in recent years. Among us are some Members who have difficulties with limbs, and other incapacities brought on by war, accident, illness and age. Moreover, the increasing tensions which we all feel as a consequence of long hours we devote to our work in committees, on the floor, in our offices, in our home districts and in campaigning, tax and aggravate our physical capacities for the jobs we are trying our best to do for those back home who send us here to the House of Representatives.

Members must now rush long distances to the floor of the House to answer roll calls which, as we all know, seem to come more frequently. As one who suffered a heart attack 2½ years ago, and spent 9 weeks in Bethesda Naval Hospital, I can honestly say that I feel the strain of making hurried dashes to the floor. I know that I am not alone. Those of us with heart conditions have been advised repeatedly by our doctors not to rush over long distances at fast paces.

Mr. Speaker, the construction work on the additional House Office Building now speeding along prompts my remarks today. I am sure this new building will be connected by one or more tunnels. Perhaps so many as 3 tunnels will be available between the 3 House Office Buildings and the House of Representatives. Certainly we should use the existing tunnel. But they will not mean any less transportation; in fact they could well mean, dependent on location, more walking.

There have been reports that such tunnels would be equipped with little trolley cars similar to those on the Senate side of the Hill. I think we all, if a vote were taken, would be unanimous in our belief that such trolleys simply will not work on the House side of the Hill. We all know that pedestrian traffic—Members, visitors, secretaries, clerks, service personnel, and others—on our side of the Hill runs many times the volume of that on the Senate side.

Mr. Speaker, what we need, and shall need desperately in the future, is a safe, continuous type of transportation. The kind in which there can be no buildup of traffic entailing long waiting periods, or additional personnel to keep tourists off the conveyance so that Members can get to the floor without delay.

Last year the Carveyor transportation system was demonstrated in the Congressional Hotel. Possibly a third of the Members of the House saw this model exhibit and, generally, so far as I can determine, are still enthusiastic about and desirous that such a system be installed.

Basically, the Carveyor transportation system consists of a number of small passenger-carrying cars riding on conveyor belts. This system provides a safe, continuous, no-waiting, no-crowd build up, transportation service. The existing tunnel could, for example, handle a—four persons in a car—Carveyor system which probably would be installed and operating in the present tunnel by next spring.

Mr. Speaker, with this conveyance I am informed the present tunnel between House Offices and the Capitol could be traversed by members in about 1 minute from the time they step on to the Carveyor to the moment they step off in the Capitol or vice versa.

The Carveyor transportation system is versatile and flexible. Its basic principle, the slowly moving platform which is used to enter the cars, has worked flawlessly and economically in a railroad station tunnel, a steel plant, a baseball park, an airport, a subway station, a coliseum.

Here is a transportation system which, I submit, would be the answer to our transportation—safe, no fumes, no noise, no side sway, no vibration, no bumping and, best of all, never any waiting. Also, I believe the Carveyor could be installed at a cheaper cost, and by maintained more economically, than any other comparable transportation system.

Mr. Speaker, I urge that every member carefully study this matter. It is not only to our advantage, but it is imperative in view of current construction work on the House side of Capitol Hill to examine most carefully our transportation problems. The Carveyor system merits a thorough examination and consideration.

Kelvinator To Close Area Plant

EXTENSION OF REMARKS
OF
HON. MARTHA W. GRIFFITHS
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 5, 1958

Mrs. GRIFFITHS. Mr. Speaker, last week the following appeared in the Detroit Free Press. The area-redevelop-

ment bill now in the Rules Committee, if enacted into law, would assist another industry to locate in this area and therefore assist the some 400 workers and their families that are directly affected:

KELVINATOR TO CLOSE AREA PLANT

American Motors Corp. will discontinue the last of Kelvinator Appliance Division manufacturing at its Plymouth Road plant before the end of the year, it was disclosed Monday.

About 400 workers will be affected, the company said.

A spokesman said the manufacture of compressors for Kelvinator refrigeration appliances would be shifted to the main appliance plant at Grand Rapids.

The move is part of an integration program that has been in progress for several years, the spokesman said.

Several years ago, the company moved home-freezer and ice cream cabinet manufacturing to Grand Rapids.

At present, only the compressor line is operating.

Employees will be informed of the move officially Tuesday. There was no indication how many might be able to get jobs at the Grand Rapids plant.

Much of the space at the Kelvinator plant at 14250 Plymouth is devoted to experimental engineering and office and warehouse space. The building also houses AMC's executive offices.

As We See It

EXTENSION OF REMARKS
OF
HON. EUGENE J. KEOGH
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 5, 1958

Mr. KEOGH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Newburgh News of July 29, 1958:

AS WE SEE IT

In what he described as the harshest statement he ever made in public life, Big Jim Farley has struck back at so-called liberals in the Democratic Party who have attacked the Farley liberalism.

The man who directed the first two campaigns for Franklin D. Roosevelt (the most successful ones, too, from the viewpoint of election results) charges that those who try to cast doubts on Mr. Farley's liberalism are either grossly and inexcusably ignorant or are deliberately untruthful, or both.

Speaking at the annual dinner-dance of the Putnam County Democratic committee, at Bear Mountain Saturday evening Mr. Farley reminded those critics that F. D. R. would never have named the Democratic aspirant for the United States Senate this year as his Postmaster General or backed him for national chairman if Mr. Roosevelt had not been convinced of the Farley liberalism.

There are some today who feel one cannot be described as truly liberal unless he is ready at all times to defend anyone accused of Communist leanings or activities, regardless of the merit behind such charges.

Where there is no merit to such charges, we are sure, Mr. Farley will be among the first to rally to the defense.

Where there is merit to such charges, we are equally sure, Mr. Farley will not rise in opposition.

Such a position is a truly American position and one of which both Democrats and Republicans may be proud.

If the time has come when a man must automatically endorse anyone who favors communism in order to enjoy the liberal tag, then we doubt if Mr. Farley would want to wear the label.

We doubt if any responsible citizen would want to wear it and we are inclined to think that any alternative condidate proposed in lieu of Mr. Farley this year should make his position very clear in that respect.

Invitation to Crater Lake

EXTENSION OF REMARKS
OF
HON. CHARLES O. PORTER
OF OREGON
IN THE HOUSE OF REPRESENTATIVES

Monday, July 28, 1958

Mr. PORTER. Mr. Speaker, Crater Lake, Oregon's only national park, borders the district which I have the honor to represent. It is a place of unique beauty, and I highly recommend a visit there to my colleagues and others who have an appreciation for tall trees, high mountains, white snow, tangy air, and unspoiled grandeur.

Under leave to extend my remarks, I now include an article about Crater Lake which appeared in the Eugene Register-Guard for Sunday, July 27, 1958, and was written by Donn Bonham, the city editor of the Register-Guard:

DEEP BLUE WATERS OF CRATER LAKE FASCINATE 380,000 EACH YEAR—EASY SIDE TRIPS TAKE TRAVELERS TO OTHER SIGHTS

(By Donn Bonham)

Pictures of Crater Lake, with its deep blue water surrounding Wizard Island, appear in travel magazines and geography books and are used as calendar art and framed for display the country over. The lake is a must on the itinerary of virtually every out-of-State tourist and annually attracts some 380,000 visitors.

From Eugene, Crater Lake is an easy 3-hour summertime drive (136 miles). Thus, a 1-day outing to the lake is entirely within reason. But for those desiring a more leisurely trip there is an excellent weekend loop that takes the traveler, first, from Eugene to Crater Lake, then to Medford or Gold Hill, to Grants Pass, Roseburg, and back to Eugene.

The loop trip measures 475 miles, counting short side trips from Crater Lake to Diamond Lake and from Gold Hill to the House of Mystery. All roads are excellent and sightseers are amply rewarded along the entire route by Oregon's majestic scenery.

PLEASANT BREAK

Taking the Willamette Pass (Highway No. 58) from Eugene, a stop at Salt Creek Falls affords a pleasant early break. The falls, about 70 miles from Eugene, are only a few hundred feet off the highway and may be reached by two trails, one leading to the base of the waterfall and the other to a point across from the top.

After reaching Highway No. 97 (Klamath Falls-Bend), it is only 14 miles to the turnoff, or north entrance, to Crater Lake. The 25-mile drive in to the lake is straight save for one 90-degree turn and a few curves on the far end.

At the lake, Rim Village is the hub of tourist activity and accommodations. A concessionaire, working under a lease agreement with the National Park Service, operates Crater Lodge, a cafeteria and store, sleeping cabins, rental rowboats, and sightseeing launches. The park service, with headquarters 3 miles south of the lake, maintains the park and provides a staff of rangers for protective purposes together with a staff of ranger-naturalists who furnish free guide service and information about the famous lake, park, wildlife, and natural history.

Crater Lake, the focal point of Oregon's only national park, was created 7,600 years ago when Mount Mazama erupted, collapsed, and formed the crater that became one of the world's most beautiful bodies of water. Deceptively large (21 square miles), the lake is surrounded by towering walls 500 to 2,000 feet above the water, and is accented by rugged prominences such as Cloud Cap and Liao Rock. The great depth (1,996 feet) of pure snow water makes the lake an exceedingly deep blue that perfectly reflects the clouds and the rich colors of the rim.

INACTIVE CONE

Wizard Island, an inactive cone, and the Phantom Ship are two islands which further enhance the lake's interest and beauty. The Phantom Ship is so named because it resembles a ship under sail.

An elaborate vantage point is provided Crater Lake sightseers at Sinnott Memorial, a building at Rim Village perched 40 yards down the rim and accessible by stone steps. Telescopes are focused on points of interest and lectures are given here five times daily by the ranger-naturalists. Inside the building are exhibits that explain the geology of the park.

Numerous other vantage points are provided at Rim Village to afford easy sightseeing and photography. Rim Drive, a 35-mile trip around the lake, has numerous turnouts for automobiles, and 6 of the turnouts are provided with picnic tables. Each day at 10 a. m., there is a guided bus trip around the lake.

Guided trips afield (the Park Service does not like to call them hikes) may be taken to Garfield Peak and Discovery Point. Both are 1½ miles from Rim Village. Other trails lead to Mount Scott (2½ miles). The Watchman (1½ miles) and to the water's edge of Crater Lake. The lake trail is 1.6 miles, with 19 switchbacks down the side of the crater.

LAKE STOCKED

No fish are native to Crater Lake, but the lake is stocked with rainbow trout and Sockeye salmon. A fishing license is not required. There is a 10-fish daily limit, but this poses no handicap to most anglers; the lake is not very productive.

The park abounds with birds and blacktail and Rocky Mountain mule deer. Black bear are common, and the ever-hungry ground squirrels and chipmunks can easily be coaxed to eat from your hand. In the interest of safety, it is unlawful to feed, tease, or molest the bears; many people have been painfully clawed. The bears may seem tame, but they are not.

Two large areas are set aside for picnickers, one at Rim Village and the other at Cold Spring, which is about 12 miles south of the lake. There are four campgrounds in the park, with trailer space provided. The most elaborate of the four is at Rim Village, where there are washrooms and showers.

Throughout the park there is evidence of Mission 66, a National Park Service program designed to (1) correct the deterioration that occurred at the various national parks during World War II, and (2) provide additional development to meet the needs of ever increasing use. The 10-year program is to run until 1966 (hence its name), the 50th anniversary year of the National Park Service.

PLAN IMPROVEMENTS

For Crater Lake National Park, $5.75 million has been budgeted under Mission 66 to restore and improve park facilities. This

includes road improvements, work on existing campgrounds and construction of at least two new ones, reconstruction of existing trails and the creation of others, construction of a visitors' center building that will house a museum and auditorium, a loop road to reach the vicinity of Union Peak, and installation of interpretive signs throughout the park.

Crater Lake Park Supt. Tom Williams said that the Rim Village concessionaire, H. C. Smith, also is participating in the improvement program. Smith, who with his son, Harry, operates Crater Lake Lodge, the sleeping cabins and the cafeteria-store, is modernizing his present facilities and plans to construct a new trailer park just outside the south entrance to the park.

Noncampers have three choices of accommodations at Crater Lake: (1) Sleeping cottages, with cold running water only; (2) deluxe cottages, with hot and cold running water and private bath, and (3) Crater Lake Lodge, with modern appointments found in any good hotel. For a family of four, the cost runs $5.50 for a sleeping cottage, $9 for a deluxe cottage and $12 for a room at the lodge. Reservations should be made at least 1 week in advance.

POPULARLY PRICED

Meals and short orders are popularly priced in the Rim Village cafeteria, while prices in the lodge dining room run somewhat higher. Again, the family of four can eat dinner in the cafeteria for roughly $5, but the tab will be $10 to $12 in the lodge. Lodge dinners vary between $3 and $4 for adults and a child's plate is $1.85.

While visiting Crater Lake, a measure of diversion may be gained by taking a short side-trip to Diamond Lake, only 15 miles away. This mecca for fishermen has picnic areas and campgrounds, boat launching facilities and a boat dock, stores, a lodge, cabins, and a public swimming area.

Beginning the second half of the loop trip, back to Eugene, travelers should go south to State Highway 62, which follows the beautiful Rogue River much of the way. You may elect to go on to Medford, 89 miles from Crater Lake, but a shortcut is available that will take you through Sam's Valley to Highway 99 at Gold Hill.

Eight miles north of Gold Hill, a right turn off the highway leads to the Oregon Vortex, with its House of Mystery. This is a commercial enterprise that its owner claims attracts 120,000 visitors annually. The 4-mile trip in from the highway and the 60-cent admission price (30 cents for children) are well worth while, for the visit provides a unique experience. In this small circular area, nowhere do you stand normally erect; inevitably the visitor assumes a posture that inclines toward magnetic north. When facing south, you appear to be appreciably shorter than when facing north. A golf ball or a bottle will appear to roll up hill.

Once back on Highway 99, it is only 163 miles north to Eugene—3½ or 4 hours driving time filled with more gorgeous scenery and allowing ample time to reflect on an adventuresome weekend trip.

Quality Regulation of Imported Agricultural Commodities

SPEECH
OF
HON. ALBERT H. BOSCH
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, August 4, 1958

Mr. BOSCH. Mr. Speaker, I am opposed to H. R. 11056 which, if enacted will result in another increase in prices to the American consumer.

The argument that failure to pass this legislation will result in contaminated products being foisted on the public does not hold water, in my opinion. Are the proponents saying that the Food and Drug Administration, the agency now inspecting these products, is passing produce unfit for human consumption? I do not for 1 minute believe this is true.

I think the membership of the House should have the benefit of the views of the Department of Commerce and the Department of State on this bill. We are advised that they oppose enactment of this bill, but we are not given an opportunity to study their reports.

Mr. Speaker, because of my interest in holding the line on prices, I urge defeat of H. R. 11056 in its present form.

PRICE OF THE CONGRESSIONAL RECORD

The Public Printer is authorized to furnish to subscribers the daily RECORD at $1.50 per month, payable in advance.

Remit by money order payable to Superintendent of Documents, Government Printing Office, Washington 25, D. C.

PRINTING OF CONGRESSIONAL RECORD EXTRACTS

It shall be lawful for the Public Printer to print and deliver upon the order of any Senator, Representative, or Delegate, extracts from the CONGRESSIONAL RECORD, the person ordering the same paying the cost thereof (U. S. Code, title 44, sec. 185, p. 1942).

CONGRESSIONAL DIRECTORY

The Public Printer, under the direction of the Joint Committee on Printing, may print for sale, at a price sufficient to reimburse the expenses of such printing, the current Congressional Directory. No sale shall be made on credit (U. S. Code, title 44, sec. 150, p. 1939).

LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any executive department, bureau, board, or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section relating to estimates shall apply to reports or documents not exceeding 50 pages (U. S. Code, title 44, sec. 140, p. 1938).

Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on House Administration of the House of Representatives or the Committee on Rules and Administration of the Senate, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U. S. Code, title 44, sec. 133, p. 1937).

GOVERNMENT PUBLICATIONS FOR SALE

Additional copies of Government publications are offered for sale to the public by the Superintendent of Documents, Government Printing Office, Washington 25, D. C., at cost thereof as determined by the Public Printer plus 50 percent: *Provided*, That a discount of not to exceed 25 percent may be allowed to authorized bookdealers and quantity purchasers, but such printing shall not interfere with the prompt execution of work for the Government. The Superintendent of Documents shall prescribe the terms and conditions under which he may authorize the resale of Government publications by bookdealers, and he may designate any Government officer his agent for the sale of Government publications under such regulations as shall be agreed upon by the Superintendent of Documents and the head of the respective department or establishment of the Government (U. S. Code, title 44, sec. 72a, Supp. 2).

RECORD OFFICE AT THE CAPITOL

An office for the CONGRESSIONAL RECORD is located in Statuary Hall, House wing, where Mr. Raymond F. Noyes is in attendance during the sessions of Congress to receive orders for subscriptions to the RECORD at $1.50 per month, and where single copies may also be purchased. Orders are also accepted for the printing of speeches in pamphlet form.

CHANGE OF RESIDENCE

Senators, Representatives, and Delegates who have changed their residences will please give information thereof to the Government Printing Office, that their addresses may be correctly given in the RECORD.

Chamber Action

Routine Proceedings, pages 14772–14809

Bills Introduced: 9 bills and 1 resolution were introduced, as follows: S. 4229–4237; and S. Res. 356.

Page 14774

Bills Reported: Reports were made as follows:

H. R. 781, to make retirement benefits available to certain persons who rendered active Federal service during the Korean conflict (S. Rept. 2188);

S. 4232, to extend the Mexican Farm Labor Program for 1 year (S. Rept. 2189);

H. Con. Res. 295, favoring the establishment of a Hall of Fame for Agriculture (S. Rept. 2190);

S. 2142, to extend restrictions on imported products to include specific citrus fruits, with amendments (S. Rept. 2191);

S. 3333, to facilitate insured loans for farm ownership and soil and water conservation (S. Rept. 2192);

H. R. 11800, relative to conveyance of certain U. S. lands to the city of Clifton, N. J. (S. Rept. 2193);

H. R. 6542, authorizing conveyance of certain land in Wyoming to the town of Dayton, Wyo. (S. Rept. 2194);

S. 4151, to establish uniform provisions for transfer of acreage allotments from land from which owner is displaced by agency having right of eminent domain, with amendment (S. Rept. 2195);

S. 3858, authorizing Commodity Credit Corporation to purchase flour and cornmeal and donating same for certain domestic and foreign purposes (S. Rept. 2196);

H. R. 7466, to provide for the establishment of a facility of the Vicksburg National Historical Park, with amendments (S. Rept. 2197);

S. 3648, authorizing construction of the Navajo Indian irrigation and San Juan-Chama projects, New Mexico, with amendments (S. Rept. 2198);

S. 2658, to amend the Merchant Marine Act so as to encourage construction of vessels and maintenance of shipyards, with amendments (S. Rept. 2199)—referred to Committee on Finance;

S. J. Res. 188, a private bill (S Rept. 2200);

S. 3224, to improve opportunities for small-business concerns to obtain a fair proportion of Government purchases and contracts, with amendments (S. Rept. 2201);

S. 1887, authorizing construction of San Luis unit of the Central Valley project, California, with amendments (S. Rept. 2202);

S. 3534, authorizing conveyance of certain lands at Fort Crowder Military Reservation to the city of Neosho, Mo. (S. Rept. 2203);

H. R. 13192, fiscal 1959 appropriations for mutual security, with amendments (S. Rept. 2204);

H. R. 6894, amending the Tariff Act of 1930 relative to unmanufactured mica and mica films and splittings (S. Rept. 2205);

H. R. 11346, to include Massachusetts among the States which may divide their retirement systems into two parts—employees desiring social-security coverage and employees not desiring such coverage, with amendments (S. Rept. 2206); and

S. 654, to authorize the enforcement of State statutes prescribing criminal penalties for subversive activities, with amendment (no written report). Page 14773

Bills Referred: Numerous House-passed bills were referred to appropriate committees. Pages 14772, 14839

Bills Placed on Calendar: Two House-passed bills, as follows, were ordered to be placed on calendar: H. R. 4142, relative to construction of a bridge across the Mississippi River at or near Clinton, Iowa, and H. R. 11581, relating to poisoned seed wheat.

Pages 14772, 14839

Vessels—Alaska: Senate disagreed to House amendment to S. 1798, regarding certain vessels carrying freight for hire on inland waters between Alaska and Washington, asked for conference with House, and appointed as conferees Senators Magnuson, Pastore, Lausche, Butler, and Cotton. Page 14787

Federal Aviation Agency: Senate disagreed to House amendments to S. 3880, to establish an independent Federal aviation agency to regulate effectively the uses of airspace over the U. S., agreed to hold conference requested by House and appointed as conferees Senators

Appendix

The Condition of the Railroads

EXTENSION OF REMARKS
OF
HON. GEORGE A. SMATHERS
OF FLORIDA
IN THE SENATE OF THE UNITED STATES
Wednesday, August 6, 1958

Mr. SMATHERS. Mr. President, I ask unanimous consent that there be printed in the Appendix of the RECORD an article entitled "While Many Railroads Slash Service, Mopac Courts Riders Harder," published in the July 31 issue of the Wall Street Journal. The article exemplifies what leadership and the management of a railroad can accomplish if they will aggressively endeavor to improve their services and lower their rates, in such a fashion that they will attract passengers and business.

I should like to add my personal commendation to Mr. Russell L. Dearmont, president of the Missouri Pacific, who, in endeavoring to meet the challenge which all railroads face, is showing what can be done through lower rates and through public service.

I should like to quote from the concluding paragraphs of the article, which read:

What does Mopac's crew think of all this? Chat with Thrift-T-Sleeper porter Robert D. Steward, who makes his home in St. Louis and who's been working on the railroad for 29 years: "I think these economy moves are the only answer to the trains' problem. We've got to get the people back on the trains and this looks like the way to do it.

"Tips? Tips from people who ride the Thrift-T-Sleeper are smaller, yes. Smaller to nothing," Mr. Steward says. "That's okay with me. If it weren't for this economy car, I wouldn't be working."

James Mathews, secretary of the Dining Car Employees, Local 354, in St. Louis, says, "We've had no complaints from our members on the Mopac. The men have been very grateful that the road has made a firm attempt to increase its business—more work and more security on the job."

Mr. Mathews estimates that since January 1 about 30 men who hadn't been working are now employed in Mopac meal cars because of increased business.

Mr. President, I believe that demonstrates that even the brotherhoods are greatly concerned with whether the railroads can operate successfully, because when they do not operate, obviously, men lose their jobs, there is no security, there is no increase in pensions, and there are no tips. The important thing is to have the railroads run efficiently and economically and with vigor, so that jobs will be available for the men who work on them.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

WHILE MANY RAILROADS SLASH SERVICE, MOPAC COURTS RIDERS HARDER—LINE WHACKS FARES, SPRUCES SERVICE, REPORTS IT PAYS OFF IN INCREASED TRAFFIC—OTHERS MEET ON FARES TODAY

(By Roger B. Rowand)

ABOARD THE COLORADO EAGLE.—This sleek Missouri Pacific streamliner, scooting across the countryside toward Denver, has one feature that distinguishes it from many American passenger trains: It's full of passengers.

While mounting passenger losses are leading many railroads to slash service, the Mopac is speeding full throttle in the opposite direction. For the past several months, the road has been slashing fares, offering cut-rate sleeping accommodations, sprucing up service and dishing out low-cost meals to coach passengers.

This fully loaded Eagle is one symbol of the early success of the Mopac campaign. Mopac is pulling passengers from competing railroads, buses and even airlines in its mid-America area.

RAILMEN ASSEMBLE

Its example is at least partly responsible for a meeting in Chicago today; representatives of 80 railroads are assembling there to consider revision of passenger fare schedules. A likely result: A one-fare system, which would toss out the present differential between first-class and coach ticket prices. Mopac already has taken this step on several sections of its line; passengers, of course, still pay extra for sleeping accommodations.

Rail officials are quick to admit the Mopac program has given them something to think about. After recounting lower June passenger revenues, an official of the Wabash Railroad says, "The Mopac's hurtling us." The Wabash and the Missouri Pacific compete directly in some areas.

"We're giving it a real try, not just a lick and a promise," says the Mopac's silver-haired president, Russel L. Dearmont. His eventual goal: To make the Mopac's passenger operation self-sustaining.

LIMITING THE LOSS

For this recession year, however, Mr. Dearmont hopes only to hold the size of his road's passenger deficit to about last year's $17 million level. "As a result of our program," he says, "passenger business this year will be hurt less by generally adverse business conditions than it would have been."

Overall passenger figures for the road so far are of little significance, since the passenger-boosting program is so new and has been initiated piecemeal on various sections of the line. But the results of some of these early moves have been dramatic enough to encourage Mopac officials to push ahead.

In May, for example, Mopac cut the round-trip coach fare on its Houston-to-Brownsville, Tex., run to $15.78 from $20.10 and its first-class fare to the same figure from $28.45. Pullman charges were cut as much as 43 percent. The result: In the first month passenger revenues jumped around 20 percent above a year earlier. And the gains are continuing.

The size of the railroads' passenger problem has been growing steadily. Last year, United States railroads reported a $723,500,000 deficit on passenger operations, up from $696,900,000 in 1956. This year, despite a good deal of strenuous cost cutting, the total loss may run even higher. Such losses, of course, are figured on the basis required by the Interstate Commerce Commission. Some rail critics charge this results in inflated figures. The ICC, for example, requires railroads to allot part of their track maintenance costs to their passenger divisions; these costs would continue, the critics point out, even if the railroads abandoned all passenger service.

REVENUES FALL

Passenger revenues last year totaled $1.2 billion, down 3.5 percent from 1956, and this figure also seems sure to be even lower this year. Last year's figure was down one-third from the record high reached in the World War II year of 1944.

In an effort to trim operating costs, most railroads over the past year or so have been eliminating the heaviest money losers among their passenger trains.

The Pennsylvania, the Nation's largest passenger-carrying road, dropped 36 intercity trains from its schedules in 1957, and has dropped 11 so far this year. The Chicago, Burlington & Quincy's trains traveled 8 percent fewer miles in the first 5 months of this year than they had a year earlier, reflecting the elimination of some trains; the road admits the cuts are at least partly responsible for a 9 percent year-to-year drop in passenger revenues in that period.

The Mopac, by contrast, dropped no trains in 1957 and none so far this year. Nor is it now seeking to drop any trains.

LIMITING OUTLAYS

Mopac officials are quick to admit that their efforts to boost passenger revenues are limited almost solely to plans that require little or no added outlay of the railroad's cash on new equipment.

Typical of such cost-conscious efforts is the Thrift-T-Sleeper. There is one here on the Colorado Eagle as it travels from St. Louis to Denver. It is an old but reconditioned Pullman car. For a relatively small additional charge, a passenger who pays the equivalent of coach fare can get sleeping accommodations. The charges on this run: Upper berth, $2.50; lower, $6; bedroom, $12; drawing room, $15. Comparable costs on a standard Pullman: Upper, $8.65; lower, $11.45; bedroom, $21.70; drawing room, $38.35.

Mopac officials believe the Thrift-T-Sleepers primarily attract passengers who otherwise would ride in the coaches. R. J. McDermott, general passenger traffic manager, says the railroad last month carried about the same number of regular Pullman passengers that it did a year earlier. "The Thrift-T-Sleeper business," he says with conviction, "is plus business."

Since July 10, the railroad has been honoring coach tickets in regular Pullmans between Little Rock and New Orleans and between New Orleans and Houston. Passengers still must pay Pullman fares, and the latter have not been changed on these runs. But the passenger saves the difference between the cost of a coach ticket and a first-class ticket.

An innovation now offered on many Mopac trains is the travel tray, a low-cost meal

served to travelers at their seats or, as on this Colorado Eagle, in a "coach diner," a car without the frills, linen, and service of a regular diner.

These Mopac meals are served in compartmentalized trays. A typical dinner: Salisbury steak with mushroom sauce, creamed corn, mashed potatoes, bread, butter, sliced peaches, and choice of coffee, tea, or milk. The price: $1. The same meal on a regular Mopac diner would cost $2.35.

In January, the first month the travel trays were offered on the Colorado Eagle, dining-car crews served 427. Last month, the total jumped to 3,372.

Other railroads, to be sure, have been offering cutrate meals, but few have gone as far as the Mopac. Few, for example, are even considering serving full meals at coach seats.

Pillows rented aboard the train have long been the coach passenger's chief defense against stiff neck and insomnia. The Mopac in May cut the pillow rental fee from 35 cents to 25 cents in another move to encourage passenger travel.

Reduced coach fares have been given to large parties traveling in groups for years, but ticket sellers on most lines have had to contend with varying rates for many different definitions of what constitutes a group. For instance, there is a student fare, a civic-group fare, and an excursion fare. Mopac says it resolved this situation in March for its harried ticket force by establishing one uniform schedule of reduced fares for groups.

What does Mopac's crew think of all this? Chat with Trift-T-Sleeper Porter Robert D. Steward, who makes him home in St. Louis and who's been working on the railroad for 29 years: "I think these economy moves are the only answer to the trains' problem. We've got to get the people back on the trains and this looks like the way to do it."

"Tips? Tips from people who ride the Trift-T-Sleeper are smaller, yes. Smaller to nothing," Mr. Steward says. "That's O. K. with me. If it weren't for this economy car, I wouldn't be working."

James Mathews, secretary of the Dining Car Employees, Local 354, in St. Louis, says, "We've had no complaints from our members on the Mopac. The men have been very grateful that the road has made a firm attempt to increase its business—more work and more security on the job."

Mr. Mathews estimates that since January 1 about 30 men who hadn't beep working are now employed in Mopac meal cars because of increased business.

Private Nursing Homes—A Shameful Situation

EXTENSION OF REMARKS
OF
HON. JOHN J. SPARKMAN
OF ALABAMA
IN THE SENATE OF THE UNITED STATES
Wednesday, August 6, 1958

Mr. SPARKMAN. Mr. President, the Senate has already passed its omnibus housing bill and I am hopeful that the House of Representatives will soon approve such legislation.

There are many provisions of the omnibus housing bill that are desperately needed. I am confident that we shall pass a housing bill before the end of this Congress and I am hopeful that the President will approve it.

One of the more important provisions of the bill is one of the least publicized. However, it is designed to fill a need that has become critical. I refer to the provision authorizing FHA insurance on loans to proprietary nursing homes.

The Evening Star in an excellent editorial entitled "Shameful Situation," which appeared in its August 5 edition, points out the serious need for proprietary nursing homes in the District of Columbia. This is exemplary of a nationwide situation.

Mr. President, I believe that we too often overlook the fact that there are hundreds of thousands of people, primarily elderly people, who live permanently in these nursing homes. The homes constitute a very grave national housing problem and a national need.

I ask unanimous consent that the editorial be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Washington Evening Star of August 5, 1958]

SHAMEFUL SITUATION

The appalling conditions revealed by a District Medical Society survey of private nursing homes call for strong corrective measures by public and private agencies. Although an investigating committee agreed that no immediate solution could be suggested, the situation as described in the report to the society is such as to warrant a prompt, concerted effort by District authorities and other groups and individuals to improve conditions.

The problem is complicated by the shortage of facilities to care for the aged and chronically ailing in the Washington area. Badly operated homes can be and have been closed by health, fire, or building inspectors—but inevitably great difficulty is encountered in finding other quarters for the displaced patients. The District's Home for Aged at Blue Plains is filled to capacity and has a waiting list. And District General Hospital cannot accommodate all the patients still confined in nursing homes considered by health experts to have serious shortcomings.

According to the committee of doctors, some of these homes are dirty, gloomy, unsafe, inadequately staffed, and carelessly run. Equipment is insanitary, food poor, and supervision virtually lacking in the more deplorable homes. Yet they continue to operate—with or without licenses. Why? Because, according to Health Office Finucane and other officials, there is just no place to send the patients if, as the inspectors often recommend, the places were ordered closed.

Dr. Finucane, welfare officials, and others are properly concerned about this dilemma and apparently are doing what they can to solve it. But they need a lot of help from the community. They have enlisted the aid of the District Health and Welfare Council in a citywide survey to find families which would be willing to take care of 1 or 2 aged or infirm persons. For patients unable to pay, the Welfare Department will contribute up to $110 a month for such care. This plan is modeled after the foster home program for children. The Jewish Social Service Agency already has such a program under consideration. Other organizations could help to relieve the nursing home situation by similar efforts to enlist public cooperation.

Officials say the trouble centers in the proprietary type of nursing homes—those run for profit. The nonprofit homes, usually operated by churches or other organizations, are not a problem. The nonprofit homes, incidentally, are eligible for Federal building and improvement funds, under the Hill-Burton Act. The proprietary homes, however, cannot receive such Federal aid. Many of the profit-making homes are well operated and above criticism—and their fees range from $300 to $400 a month and up. Many patients cannot afford to pay such fees, however. And the lower the charge, the greater the shortcomings.

District authorities say that the worst of the faulty homes have been denied licenses. It was implied that others would be closed if the affected patients could be moved elsewhere. It is evident, therefore, that every governmental and community agency concerned with this problem ought to accelerate its efforts to find suitable places for as many victims of these bad conditions as possible. And the offending nursing homes ought to be shut down at the earliest practicable date.

Proposed Retirement of the United States From the United Nations

EXTENSION OF REMARKS
OF
HON. WILLIAM E. JENNER
OF INDIANA
IN THE SENATE OF THE UNITED STATES
Wednesday, August 6, 1958

Mr. JENNER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Get Out of the U. N." from the Indianapolis Star of August 2, 1958.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

GET OUT OF THE U. N.

The United Nations has never done the United States any good. The U. N. has served communism well in the past, it serves communism even better today. The past should have prepared us for the present, when we are being pushed toward a summit meeting that could not be held at a worse time nor under more adverse conditions.

United Nations defenders claim Korea as a star in the U. N. crown. But what are the facts? The United States acted on its own to send troops into Korea when the Communists swept south. Had it not been that the Soviet Union was then temporarily boycotting the Security Council, the U. N. would not even have given belated sanction to our act. Having done so, however, it exerted every pressure at its command to deny us victory—and succeeded. We were more thoughtful to preserve the United Nations than we were to defend liberty, so North Korea is a Communist slave state.

So it has gone. The U. N. has scrupulously avoided any action to drive the Kremlin out of East Germany. Half of Vietnam went to the Communists, with U. N. approval. The utter shame to the U. N. and to us on account of Hungary is too fresh to need review. India seized Kashmir, and the U. N. did nothing. A million refugees camped on the Palestine borders, and the U. N. would not even talk of settling their claims. It found Algeria too hot to handle.

Today United States troops are in Lebanon and British troops are in Jordan, and again it was through no act of the United Nations that they went there. The U. N. did not send them. Neither did it stop them. To this minute it has not approved, nor has it disapproved. Instead it busies itself preparing a stage upon which the United States can play no other role than that of fool and villain.

The situation could scarcely be more ridiculous. The U. N. in the person of Hammarskjold is trying to arrange a meeting we do not want, but which Khrushchev wants. And what prevents us from saying we do not want it? Our official dedication to the theory that the U. N. must be preserved, even if all else goes by the wayside. So here we are trying to use the U. N. to prevent something the U. N. wants to bring about. If Dulles can bring it off, he rates an immediate position in the magicians' hall of fame.

The U. N. complicates and hamstrings U. S. foreign policy. In fact, it makes a sensible foreign policy impossible, because by slavish devotion to the U. N., we let everybody but Americans formulate our policies. The world is not better off because we do this. It is worse off. Ask the people in North Korea, ask them in Hungary, ask them in the Middle East. They will tell you the United Nations holds no hope of freedom for the world, not unless it changes its ways.

There is not much chance it will change. The realistic alternative is to get out of the United Nations and start running our own affairs again.

Tennessee Valley Authority Financing

EXTENSION OF REMARKS
OF
HON. THRUSTON B. MORTON
OF KENTUCKY
IN THE SENATE OF THE UNITED STATES
Wednesday, August 6, 1958

Mr. MORTON. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Good News for Friends of TVA," published in the Louisville Courier Journal of August 1, 1958.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

GOOD NEWS FOR FRIENDS OF TVA

The House Public Works Committee has approved the bill giving TVA authority to finance its future operations by issuing revenue bonds to be retired from power revenues, and if it can get past the Rules Committee it should become law before Congress adjourns. This is good news. The self-financing measure is a fair one, and it's been a long time coming.

The fight for the bill by Senator JOHN SHERMAN COOPER was, of course, gratifying to friends of TVA, including the thousands of Kentuckians in the 26 counties that get power from the agency. But perhaps the most encouraging note in the battle came from the TVA Board of Directors. The Board is composed of 3 men, 2 of whom have worried TVA supporters by their apparent anti-TVA attitude, and valley citizens were understandably worried about the stand these men would take toward the self-financing bill.

They must feel better today, for during committee hearings on the bill, the Board sent a wire, expressing the unanimous support of the Board for the Kerr-Cooper bill passed last year by the Senate, without any of the amendments that the Bureau of the Budget, the Eisenhower administration, or other foes of TVA have been seeking.

This is a most significant development. It indicates that the men who direct the operations of TVA have, at least in this instance, broken with the anti-TVA forces around President Eisenhower and with the private-utilities lobby whose influence has seemed so powerful in TVA headquarters in recent years. It indicates that the men in charge have recognized their responsibility, and have decided to run TVA rather than run it down. If this be true, as it seems to be, it will be the best news the friends of TVA could have.

A Farmer's View of Farming: It Is a Good Life

EXTENSION OF REMARKS
OF
HON. KARL E. MUNDT
OF SOUTH DAKOTA
IN THE SENATE OF THE UNITED STATES
Wednesday, August 6, 1958

Mr. MUNDT. Mr. President, when one of South Dakota's leading publishers, Ted Burges, went on vacation, he opened his personal editorial column to several of the prominent residents of the community. Ted Burges publishes the Clear Lake Courier, weekly newspaper in Clear Lake, S. Dak. His action in presenting this new feature is typical of his activities as an editor, for his newspaper has been the recipient of several awards for outstanding newspaper achievement, and he also has been honored by his fellow publishers, holding the office of president of the South Dakota Press Association a number of years ago.

I ask unanimous consent to have printed in the Appendix of the RECORD, the article entitled "The Farmer Today," written by John Gauger, of Clear Lake, S. Dak. Mr. Gauger is one of many outstanding farm operators in Deuel County, and provides us with an interesting report and valuable insight concerning the role of the American farmer in our complex society. Too often, in the hectic rush of modern life, we view man as a seeker after only material things, who hungers after the almighty dollar. I am happy to bring to the attention of my colleagues this fine article, pointing out so splendidly the contrast that is often found in our "men of the soil," who demonstrate frequently the proper perspective in which they place their evaluation of the materialistic and that which is spiritual.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

THE FARMER TODAY

(By John Gauger)

When asked by the editor, Ted Burges, to act as a fill-in, in the editor column and to choose my own subject, I finally thought a farmer should present a subject along farm lines.

Farming is one of the oldest and most necessary occupations of mankind. It is perhaps the most important, also, in the economic welfare of a nation. Without the production of foods in this day and age, mankind could not exist.

Early pioneers of this and other Great Plains areas of the Nation settled as homesteaders to supply the necessities of life for their families and perhaps little did they realize that some day all the possible agricultural land would be used to supply foodstuffs for humanity and become agricultural land.

Great changes have taken place in agriculture in the past decade. It has grown from a small family venture for existence to an industry which now, directly or indirectly, employs more labor than any other industry. As agriculture moved across the Nation, the whole Nation moved with it, making necessary the building of railroads and highways, machinery to erect such roads, employed many men to manufacture and erect. As necessity to produce more crops, new methods and more economical methods spurred man on to inventions to accomplish this purpose, the results our modern methods and machinery. Then came the depleting of soils even in our fertile fields that early farmers thought inexhaustible and man again found a new industry in the production of fertilizer, each of these employed more people. Farmers also, because of their necessity to travel the highways and transport crops and stock, buy their share of cars and trucks. Now the call for water to increase production warrants irrigation systems. Although farmers may not wish Government assistance to control and distribute our crops and stock, it, too, becomes a national problem and employs people everywhere. I could go on telling the importance of agriculture nationally.

What qualifies a farmer and cattleman today? These qualifications have certainly changed. From an uneducated to a highly skilled all around efficient people. He must have certain personal qualifications, above all he must have faith in God to reward his labors in the production of crops as he has no control of the forces of nature. He must be a trusting soul that all other industries are charging a fair price for the things he buys. He must trust the buyer of his products that he is giving him fair weights and tests.

The farmer today must be a mechanic and able to study efficiency of machinery he operates. He must be a stockman, a veterinary, milkmaid, showman, and seller of his products and stock.

He must be strong in mind and body to stand the long hours of toil in rush seasons.

He, too, must take his place in community affairs and education. Also today he must be a bookkeeper and stenographer [unless he marries a bookkeeping wife], because the day of just living is past. The tax collector is ever on his trail today. He also must have finances or credit to set himself up in an efficient farm operation. If you don't think so you'd better sit down and study the situation.

Why do farmers continue to farm? I think it a most honorable profession. We like the wide open spaces, the variety in our daily work, the people we come in contact with. The work with nature in a big way as we till the soil and watch nature unfold its handiwork. The satisfaction one has as he leaves a well-tilled field at the end of the day. I like the dust, dirt, and grime as we harvest the crops and come home at night and the satisfaction that comes as we clean up for the night, feeling we have accomplished something at the end of the day.

The breeding and improving of livestock has no end of interest as we watch the gangly young things take their first steps and develop according to our plans.

I like the privacy we can experience at our choosing, or the visits to the cities and towns. Or the pleasure we have in showing what we have accomplished to our friends and neighbors from near and far.

Farming is a good life and with our modern farm homes of today even the farm wife can enjoy every convenience of our city friends and have the pleasure of constant companionship and a place to rear the family with nature. What more can we ask in life?

Recession Lesson—Government Aids Find United States Economy Can Rebound Without Big Federal Hypo

EXTENSION OF REMARKS
OF
HON. JOHN D. HOBLITZELL, JR.
OF WEST VIRGINIA
IN THE SENATE OF THE UNITED STATES
Wednesday, August 6, 1958

Mr. HOBLITZELL. Mr. President, I ask unanimous consent to have printed in the RECORD an article published in the Wall Street Journal of August 6, 1958, under the heading "Government Aids Find United States Economy Can Rebound Without Big Federal Hypo."

There being no objection, the article was ordered to be printed in the RECORD, as follows:

RECESSION LESSON—GOVERNMENT AIDS FIND UNITED STATES ECONOMY CAN REBOUND WITHOUT BIG FEDERAL HYPO

(By John A. Grimes)

WASHINGTON.—The Eisenhower administration has relearned a new set of economic lessons from the recession they believe hit bottom back in the spring.

The biggest, or at least the most specific, lesson is that taxes don't necessarily have to be cut every time business suffers a setback. The second lesson is that the economy has the basic strength to absorb a severe jolt without sliding into a depression, and right itself without the need for large-scale Government tinkering at the controls.

Administration officials now date the low point of the recession as coming as early as April, and see no present probability of a relapse. Indeed, the bottom was reached—if in fact it was—somewhat earlier than had generally been expected. And the pace of the comeback up to now, while not dramatic, has been a pleasant surprise.

EASED CREDIT

This is not to say the Government sat back and let the business slump burn itself out.

The administration, pushed by Congress, poured money into housing and made the terms to home buyers easier. It stepped up the placement of defense contracts, and speeded up Federal buying of supplies and services. The Federal Reserve Board, in comparison with past actions, eased off rapidly on credit.

And despite the so-called antirecession steps it did take, the Government did not move nearly as far in this direction as many lawmakers and others wanted it to. Just a short time ago, Democratic lawmakers were drawing up schemes to pump billions into a massive public-works program. Some frankly labeled it a WPA-type approach, covering everything from town sewers to huge dams. Faster spending by the administration was urged on military and civilian programs already underway. Lawmakers and others kept up a running fire on the Federal Reserve for not freeing more billions in credit. Tax cuts ranging from $5 billion to $10 billion were demanded.

The administration's firm and successful stand against a general tax reduction seemed to be in defiance of established economic theory that taxes should be lowered in the face of a business decline.

Strangely, the Eisenhower administration itself embraced and helped perpetuate this tax cut theory. In 1955, the President's economic report credited the tax reductions of 1954 with helping to end the 1953–54 recession. When the 1957–58 business slide got seriously underway, the theory that taxes should be cut in a period of falling business activity was presented as a necessary step if the recession was to be halted short of a possible depression.

This view came from all sides, both in and out of Government. Government economists at the working level were almost unanimous in favor of a reduction. Former President Truman and Dr. Arthur Burns, former chief of President Eisenhower's Council of Ecoonmic Advisers, both urged a sizable tax reduction before it was too late. The issue finally split the President's official family, with such high officials as Vice President NIXON, Labor Secretary Mitchell and others lining up in favor of the cuts.

Even those who had their doubts about how much good a tax cut would do were saying privately that the next big step the administration took would be to push for tax reduction. But this step was headed off by Treasury Secretary Anderson who, more than any other official, influenced the President against it on the grounds it would deepen the Federal deficits and add to inflationary problems in later years.

Mr. Anderson's master stroke in opposition to the tax-cut pressure was a unique alliance with Speaker SAM RAYBURN and Senate Majority Leader LYNDON JOHNSON which, in effect, put the lid on the move.

"Had we cut taxes this winter or spring," one top official now asserts, "there's no doubt that step would have gotten full credit for ending the recession."

Instead, administration policymakers are citing the lack of a tax cut as proof that taxes don't need to be cut for the economy to work its way out of a recession.

"If there's one thing this recession has taught us," flatly asserts one high official who was inclined toward a tax cut, "it's that you can hold back on a tax cut and not wind up looking like an irresponsible boob."

Officials don't contend that the antirecession steps that were taken turned the recession around. But they do claim that what the administration did not do during the business setback was perhaps more important than what it did do. These policymakers cite the record of the recession as evidence that the basic strength of the economy was the main factor in bringing the slump to a halt.

DOWNWARD FORCES FIZZLED

"Looking back," claims one White House adviser, "it was largely a matter of some of the downward forces just fizzling out." Another gives credit to the fact that consumers kept up a relatively heavy rate of spending all through the decline. In short, policymakers now contend that what turned the recession around was not what the Government did. Instead, they argue, the recovery has resulted from the private decisions of millions of businessmen and consumers.

Old lessons—particularly those relating to tax cuts and public works—die hard. But the lessons from the 1957–58 recession have provided some fresh ammunition for those who, like Mr. Anderson, believe the Government should refrain from rushing off in all directions.

American Policy in the Middle East

EXTENSION OF REMARKS
OF
HON. HUBERT H. HUMPHREY
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES
Wednesday, August 6, 1958

Mr. HUMPHREY. Mr. President, editorial comment continues to pour in from across the Nation concerning American policy in the Middle East. One of the most thoughtful and constructive yet provocative editorials I have read to date appeared in the Huronite and Daily Plainsman of Huron, S. Dak. The editor and publisher of that fine daily newspaper is Mr. Robert D. Lusk. The editor has laid down clear criteria and standards for the development of a Middle East policy.

I ask unanimous consent that the editorial be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

ACTION FALLS SHORT OF MINIMUM STANDARDS

By sending United States military units into Lebanon, Secretary of State Dulles assumed a posture of boldness and firmness in a sudden, even precipitate, action.

And in so doing he risked global war, along with embarrassments, harassments, frustrations, and other less important consequences.

Boldness and firmness are desirable in American diplomacy and so is the willingness to take risks.

And the United States long has needed a more farsighted, less vacillating policy for dealing with its problems throughout the world.

However, boldness is not brashness; firmness is not bullheadedness; the willingness to take risks is not foolhardiness.

Any bold new foreign policy must be predicated on a carefully considered long-term program which follows a coherent line of reasoning to an obtainable goal.

Furthermore, any new policy should be based on a set of principles which is consistent with the historic moral position of the Nation. Any bold new policy should be undertaken only with proper justification and preparation beforehand.

Then there is the matter of risks.

Risks always are necessary but they should be considered risks, based on a thorough knowledge of the conditions as they actually exist.

Finally, the risks undertaken should be in proportion to the importance of the goal sought and/or the issue at stake.

When measured against these criteria, Dulles' bold new policy—if that is what his action in Lebanon is—has fallen far below the minimum standards which this great Nation should insist on being observed by its Secretary of State.

The Case of Paul Bang-Jensen

EXTENSION OF REMARKS
OF
HON. WILLIAM E. JENNER
OF INDIANA
IN THE SENATE OF THE UNITED STATES
Wednesday, August 6, 1958

Mr. JENNER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "These Are Americans?" from the Indianapolis Star of August 3, 1958.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

THESE ARE AMERICANS?

The Honorable James J. Wadsworth, deputy United States representative to the U. N. has issued a statement on the case of Paul Bang-Jensen. Bang-Jensen was fired from his U. N. job chiefly for refusing to give up a list of names of Hungarian freedom fight-

ers who testified before the U. N. Hungarian committee. He promised not to disclose the names to anyone because many would not testify unless assured that only he would have their names. He was never asked for the list until more than 4 months after the report was issued condemning the Soviet Union.

Wadsworth's statement repeats what Ambassador Lodge said in part. He says there was no reason not to trust Hammarskjold and his secretariat to keep the names secret. He says the list has been burned anyway. And he says that the United States cannot interfere because this is an internal matter for the U. N. Secretariat. But worse, he goes on to say, "I believe that Mr. Hammarskjold's letter shows that he was fully justified in dismissing Mr. Bang-Jensen."

This is almost incredible. If we did not know that Lodge and Wadsworth were Americans we would think, from what they say, that they came from some cooky-pushing embassy of one of the captive states.

First, in answer to Wadsworth there is this fact: There are hundreds of employees in the Secretariat from Communist countries. It is just plain nonsense to say that it would be impossible for one of them to get hold of these names once they were deposited in the Secretariat files.

Second, it is true that the list was burned. But it was burned because Bang-Jensen refused to surrender it, not because of anything the United States delegation did or said. If Lodge and Wadsworth had had their way it would not have been burned.

Third, Bang-Jensen charges that two witnesses refused to testify unless assured that Hammarskjold himself would not see their names. This is a fact that ought to be investigated thoroughly for it indicates that Hammarskjold himself may be serving Communist interests.

Fourth, Wadsworth says the affair is entirely internal and he cannot interfere. The United States delegation has already interfered. It interfered when it demanded that the charges against Bang-Jensen be released to the press, which was done. It again interferes when Wadsworth states that he approves of Hammarskjold's action. If he could approve it, why would he not also have authority to disapprove it?

There is something very peculiar about all this evasion and pious claptrap. Here is a man, Bang-Jensen, who served many years in responsible capacities in and out of the U. N., who suddenly is savagely attacked and fired for only one clear reason, he refused to surrender the names of the Hungarians testifying against the Soviet Union. He is denied due process. He is fired in violation of U. N. regulations. He is not allowed to see the evidence against him so that he can conduct his own defense. He is smeared with the accusation, based on no evidence at all, that he is mentally ill. He has answered the charges against him and made serious accusations against the Secretariat which he says the documents in the Secretariat will prove. Yet the United States delegation to the U. N. supports his dismissal, refuses to distribute his answer, but does distribute the charges against him, and ignores all of the irregularities and smears involved in the attacks upon him.

What kind of people do we have representing the United States in the United Nations, anyway?

The Senate Internal Security Subcommittee should find out. There is something very wrong, something very dark and suspicious behind this aberrant conduct of American representatives in this matter. Certainly Americans expect something different from those who are supposed to represent them in the U. N.

Mr. Bang-Jensen says he hopes the U. N. will conduct a thorough investigation of everything involved in his case. We are pessimistic about the chances of that when even the representatives of the country supposed to be devoted to fair play, common justice and decency fail to see the need for it.

It appears that his only hope is in the Senate where enough of the facts can be brought before the eyes of the world and perhaps shame enough delegates from the free world into taking the proper action.

Expansion of Communist Strength in Venezuela

EXTENSION OF REMARKS
OF
HON. JOHN F. KENNEDY
OF MASSACHUSETTS
IN THE SENATE OF THE UNITED STATES
Wednesday, August 6, 1958

Mr. KENNEDY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an excerpt from the most recent issue of News Focus, prepared by Charles Bartlett, the editor.

Mr. Bartlett's penetrating report and analysis point to serious dangers in Venezuela. The political vacuum and Communist drift described in this article deserve our most serious attention, dependent as we are on this source of oil in case of a shutdown in the Middle East.

There being no objection, the excerpt was ordered to be printed in the RECORD, as follows:

DANGERS CLOSE BY

While world attention centered on the continuing tautness of the Near East, United States and Latin American observers noted with growing concern an impressive expansion of Communist strength in the closer republic of Venezuela, which shocked the Western Hemisphere in May with its mob attack on Vice President NIXON and seems now to many to be inviting Communist domination.

Such a development, if it followed the Guatemala pattern, would be extremely serious. With Nasser emerging as a threat to the Near Eastern oil, Venezuela will be regarded as an alternate source. Some $3 billion in United States capital is invested in developing the country's oil and iron resources.

The Communist drift, moving in the vacuum of the ouster last January of Dictator Perez Jiminez, was underlined last week by the abortion of a conservative effort, led by the Defense Minister Castro Leon, to force the ruling junta to change its policy and crack down on the extreme left political groups. The failure of Leon's move to catch fire has been interpreted as a tender of the strength of the Communists who are credited with stirring student and labor mobs against him. Leon was forced to take a job in Washington on the Inter-American Defense Board.

The country has been run since January by a seven-man junta headed by Rear Adm. Wolfgang Larrazabel and elections have been promised in 1959. Communists are in the junta and Larrazabel has declined to take any action against their encroachments. His friends say it is because he wants to avoid actions of an oppressive nature and his critics say it is because he is running for president. The latter derived some comfort when he declared Tuesday that he is not a candidate from a hope that he may now make a belated move.

The Communists are reported to be the best organized party in the nation and to be rapidly infiltrating the largest political group, a labor party named the Accion Democratica. gravure press from behind the Iron Curtain. They are the only party with a firm program for the country. They now have 15 publications, 1 with 100,000 circulation and a roto- and many of the government departments and agencies advertise in these organs. None of the non-Communist papers express opposition to the Communists and the present disposition of the anti-Communist elements is far from unified. The police and security forces, discarded with the dictator, have not been reestablished.

The problem is that the junta, reflecting the national satisfaction at the overthrow of Jiminez' 10-year yoke seems obvious to the Red threat, which is felt in Washington to be extremely real and even imminent.

The Tariff Situation

EXTENSION OF REMARKS
OF
HON. WILLIAM E. JENNER
OF INDIANA
IN THE SENATE OF THE UNITED STATES
Wednesday, August 6, 1958

Mr. JENNER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD, three editorials which have appeared recently in the Indianapolis Star, Indianapolis, Ind. These are entitled "Fitful Trade Winds," "Let's Be Free Again," and "Still Time To Stand Up."

There being no objection, the editorials were ordered to be printed in the RECORD, as follows:

FITFUL TRADE WINDS

The needs of American trade require that Congress make a job of reviewing the tariff situation and the tariff policy. The difficulties with which an extension of the trade agreements program was accomplished in the present session were simply a reflection of the fact that there is no clear concensus either on where the program is taking us or on where we want to go.

The pressure for protective tariffs is not fading away as low-tariff advocates would like to see it fade, because the conditions on which protectionist arguments rest are advancing rather than retreating. American business seems to be firmly committed to persistent inflation. Growth of the Government debt is the rule rather than the exception. The making of a labor contract without periodic rise in wages seems to be unthinkable. Since no concerted effort is made to maintain a stable relationship between the rise in wages and the rise in production, the result is that wages persistently rise faster than production. The annual rise in the wage earner's purchasing power therefore is only partly satisfied by increased production. The rest is satisfied by rise in prices.

This persistently rising price trend makes United States markets increasingly attractive to goods imported from other nations. The higher American prices go in relation to foreign prices, the easier it is to sell foreign goods in the American market. For the exporter, the effect is opposite. The higher American prices go, the harder it becomes to sell American goods in the world markets. Congress is torn between the two. The greater becomes the disparity between American and foreign prices, the more potent is the plea of the protectionist. But the greater this disparity becomes, the greater is the volume of imports required to sustain a trade balance under which American goods can be sold abroad.

Government itself contributes strongly to the inflation. Besides the mounting debt, high and still rising taxes are an unmalleable item in determining prices. Federal aid funds are used in part to bridge the unfavorable trade balance, but the taxes to sustain these expenditures help to make the domestic-foreign price gap wider. Which shall come first? Shall trade policies be tailored to fit the objectives of government? Or shall government be adapted to the requirements of trade?

The trade-agreements program is an attempt to serve both. This is a difficult assignment when the two pressures conflict. Consequently the program, in moving toward lower tariffs, has not moved toward more free trade—free in the sense of being unhampered by restriction by various governments. Tariff is only one method of restriction. Import quotas, export licensing, and currency regulations are equally effective. The development of a broad system of interlocking trade treaties emphasizes these other controls even while the level of tariffs has been lowered. Continuance of the program may bring further tariff cuts, but unless there is a change in philosophy it will not bring a reduction of political interference with trade.

Congress cannot in any case irrevocably delegate its tariffmaking powers to the executive branch. The next Congress can always alter or cancel any such delegation. These other factors make long extensions of tariff-cutting power even less palatable to Congress.

The sooner Congress tackles the problem of making its own revision of tariff policy and the tariff structure, the better. The Smoot-Hawley Act is still the basic tariff law. It hardly fits the mood or the circumstances of the present. Congress neither will nor can abdicate its tariff powers; it ought, therefore, to exercise them. In doing so it might be able to make the firm decisions of trade policy which do not get made by merely extending the Trade Agreements Act from time to time.

Let's Be Free Again

Why are we agreeing to a summit conference with the Soviet Union? Every American knows in his heart that no lasting good, no workable agreements, no benefits of any kind to our own country can come from such a meeting. Why then have we agreed?

It is odd, and frightening, to read the speeches and editorials throughout this once great Nation accepting with resignation the inevitable necessity for a summit meeting. Our allies want such a meeting, we are told. The neutral nations want it. The Soviet Union wants it. The United Nations wants it. Everybody wants it but America. So American must agree.

As the Wall Street Journal put it, much to our surprise, "So we reluctantly go to the summit. Things being as they are, it is probably a better course. But plainly it is a chastening reminder that what we do next must be tempered, if not shaped, by Foreign Offices of other nations.

"The fact is that, whatever it may be, we are no longer master of our own foreign policy."

As we go to the summit, like good little boys, that is the exact truth. We, the most powerful, the richest, the most productive Nation the world has ever seen are no longer master of our own foreign policy. How the mighty have fallen. And we have fallen by our own hand.

But it is still possible to become our own masters again. It is still possible to take the reins of our destiny out of the hands of others and grasp them in our own. It will take boldness and decision.

We must do two things. First we must withdraw from the United Nations which has hung a paper rope around our necks that has strangled our freedom to act in our own interest. Second we must begin to run our own foreign policy show. Let us call our own conferences with those whose destiny is intertwined with our own. Let us make our own proposals and our own plans with friend and enemy alike.

If we wish to settle our affairs with the Arabs let us talk to them face to face with the cards on the table. If we wish to settle affairs with any nation or group of nations let us take them one by one and deal with them, keeping in mind one single principle—what is best for the people of the United States?

We have tried the United Nations course and it has failed us every time, from Korea to Lebanon. We have tried collective security. Yet today our security is less than at any time in our history and those with whom we have shared collective responsibility have failed us in every crisis from Korea to Suez. We have put the best interests of our own people second to the interests of other peoples, pouring out our treasure and skill everywhere in the world and we have reaped only humiliation, insult, disrespect for our flag and our leaders.

It is time for us to cut ourselves loose from those who are the masters of our foreign policy. It is time for America to issue another Declaration of Independence from the U. N. and from friends and foe alike. It is time to put only Americans on guard over America's future and America's present. It is time to acknowledge the plain truth that the policies we have followed year after year since World War II have produced nothing but gains for the Soviet Union and losses for the United States.

The United Nations is rapidly becoming the instrument of Soviet power right here inside our own borders. It is draining away our treasure and preventing us from acting in the interests of our own people. We should abandon it before it abandons us.

Our alliances have become millstones around our necks preventing us from doing what we know is best for our country and our allies. We should begin to disengage ourselves. Our beloved America, once the hope and inspiration of free men everywhere, is becoming the docile milk cow for two-thirds of the world, including even our Communist enemies in Poland and Yugoslavia. We are being sucked dry and left weak by our foreign-aid program. And the beneficiaries of our largess are refusing to support us in any crisis, sneering at our vacillation, and insulting our emissaries.

Cannot our United States shake itself loose from the coils of U. N. intrigue and entangling alliances. Can we not once again seek to become what we once were, the envy and inspiration of all men everywhere who love liberty and justice, honor, and peace?

Cannot our leaders speak again in the thundering tones of past American heroes, "Damn the torpedoes, full speed ahead," or "Pedecaris alive or Rasuli dead" or "Millions for defense but not one cent for tribute."

Wouldn't it be fine to feel, when our country speaks, like W. W. Wollcott felt when he wrote:

"I am a 100 percent American.

"I am, by damn, I am."

Still Time To Stand Up

There has been some comment on the number of Congressmen and Senators whose terms expire this year and who are not seeking reelection. The number is the largest in contemporary times. Maybe it's because Congress isn't the ruling body it once was.

All through this session the Senate has had in its hopper the Jenner-Butler bill to undo some of the mistaken legislation which has been decreed by the Supreme Court. The bill would straighten out the authority of a congressional committee to ask questions, the authority of States to enforce their sedition and anti-subversion laws, the authority of school boards to enforce anti-subversion regulations, and the authority of the executive branch of the Federal Government to dismiss security risks. It would remove State bar qualifications from the appellate jurisdiction of the Supreme Court.

The Jenner-Butler bill is an assertion that Congress is capable of enacting the Nation's laws, as the Constitution empowers it to do, and that it is capable of enacting the laws it wants enacted. It would be a rebuke to the Supreme Court for its invasions of the legislative field.

Where is the Jenner-Butler bill? It still reposes in the Senate, waiting for action. In a day of more forthright action, this bill would have been swept through both Houses within weeks after it was introduced.

There is still time for Congress to stand up and assert itself by passing the Jenner-Butler bill. There is still time for the Senate to pass also the bill to restore to States the power to enforce laws in fields where there are Federal laws, as long as there is no conflict with those Federal laws. This also is an action made necessary by a legislative decision of the Supreme Court.

Congress should make sure that these measures are enacted before it adjourns. By doing so it could restore some of its own stature.

Kennedy-Ives Labor Reform Bill

EXTENSION OF REMARKS

OF

HON. JOHN F. KENNEDY

OF MASSACHUSETTS

IN THE SENATE OF THE UNITED STATES

Wednesday, August 6, 1958

Mr. KENNEDY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an excellent editorial entitled "Last-Minute Union Reform Efforts," written by John Herling, and published in the Washington Daily News of August 5, 1958.

The editorial refers to the efforts being made by Representative GEORGE McGOVERN, of South Dakota, and other Members of the House to secure the passage of the labor reform bill. Representative McGOVERN deserves the thanks of all in the country who are interested in this vital proposed legislation.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

Last-Minute Union Reform Efforts

(By John Herling)

The great story here in Washington this week is the staging of the last minute rescue of the union-management reform legislation.

Last week, the union reform bill—which includes measures to reform certain questionable management practices exposed by the McClellan committee—was tied to the railroad tracks and about to be run over by the locomotive of congressional adjournment.

This week all is changed—if not saved. The legislative mood has switched from a belief that the Kennedy-Ives union-management reform bill was about to be crunched to death into cautious active optimism that the K-I bill will yet pass the House. The legislative transition has been rapid, amazing, and excites the disbelief of disillusioned men who count their casualties before they occur.

In the House, the positive, persuasive voice of war hero Representative GEORGE Mc-

GOVERN, Democrat, of South Dakota, a member of the House Education and Labor Committee, has helped shape the strategy of rescue, aided by Congressman STEWART UDALL, of Arizona.

Speaker SAM RAYBURN, veteran of 45 congressional years, has now signalled his mighty arm and eloquent eyebrow in behalf of the passage of the bill.

The events leading up to the growing conviction that the Kennedy-Ives union-management reform bill will pass, after all, run as follows:

Senator JOHN F. KENNEDY, Democrat, of Massachusetts, last week blasted the National Association of Manufacturers, the Chamber of Commerce, and the American Retail Federation for misleading Congress through a series of misrepresentations as to the intent of the Kennedy-Ives bill. Senator KENNEDY charged that if the bill dies, the employer groups must take the major blame. Chief ally of these groups, he said, is James R. Hoffa, president of the Teamsters Union, main target of the McClellan rackets investigating committee.

Next day, Labor Secretary Mitchell, drawing a long needle, expressed mock surprise that NAM and such groups had such decisive influence on the Democratic Congress, especially on Speaker RAYBURN. As for himself, Mr. Mitchell disclaimed any ability to persuade the NAM or the Chamber of Commerce to call off such attacks. He insisted that if the House leadership is truly interested in legislation it could get it out.

Speaker RAYBURN remarked that Mr. Mitchell was becoming the politician of the Eisenhower administration. He added a few words to indicate that his attention was now thoroughly engaged.

Representatives of organized labor who had recently been fairly inactive on the bill—giving prior attention to the pension and welfare disclosure bill—began to stir their stumps. Despite some misgivings about some language in the bill, the AFL–CIO leadership has signalled all-out support for the Kennedy-Ives bill. Some rail unions oppose the bill because they prefer to operate exclusively under the Railway Labor Act.

In the meantime, some Republicans profess to believe that the Democrats have dug themselves into a pit because of the delay in handling the bill in the House Education and Labor Committee, headed by North Carolina Congressman GRAHAM BARDEN. Other Republicans fear opposition to bringing up the bill for passage would be hard to explain in the coming campaign.

Mr. RAYBURN has begun to maneuver the House machinery into lifting the Kennedy-Ives bill off the tracks. Through a paraliamentary device known as the suspension of rules, Mr. RAYBURN could signal the union-management reform bill to be brought before the House of Representatives. A two-thirds vote is required.

In that way, noses will be counted—Democratic and Republican. The issue will then be made simple, the line drawn. Those who want union-management reform legislation would vote "yes." Those opposed would have to vote "no."

Statehood for Alaska and Hawaii

EXTENSION OF REMARKS
OF
HON. WILLIAM LANGER
OF NORTH DAKOTA
IN THE SENATE OF THE UNITED STATES
Wednesday, August 6, 1958

Mr. LANGER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a resolution dealing with statehood for Alaska and Hawaii.

There being no objection, the resolution was ordered to be printed in the RECORD, as follows:

Whereas the Territory of Alaska has heretofore been approved for statehood by the Congress of these United States; and

Whereas the Territory of Hawaii has long been overlooked by Congress in receiving the due recognition it deserves; and

Whereas several bills are now pending in Congress to give statehood to the Territory of Hawaii: Now, therefore, be it

Resolved, That the North Dakota Junior Chamber of Commerce do hereby urge all action possible by Congress in giving the people of the Territory of Hawaii statehood as soon as possible; and be it further

Resolved, That copies of this resolution be sent to the Representatives and Senators of North Dakota in Congress.

Internal Revenue Service Ruling on Private Power Company Advertising

EXTENSION OF REMARKS
OF
HON. ESTES KEFAUVER
OF TENNESSEE
IN THE SENATE OF THE UNITED STATES
Wednesday, August 6, 1958

Mr. KEFAUVER. Mr. President, in a recent issue of the Saturday Evening Post there was published an editorial attacking the ruling of the Internal Revenue Service that public utilities could not deduct as business expenses the cost of propaganda against public power. The Saturday Evening Post editorial is so full of errors and so lacking in understanding of the facts that I felt it necessary to reply to the editor.

What is perhaps most shocking about the editorial is the revelation that the utility advertisers and the Post itself have worked as a team to oppose public power. The Post argues that the ruling of the Internal Revenue Service imposes censorship on the utilities, an obvious misstatement of fact, but says nothing about its own responsibility to bring the facts and various sides of an issue to the public's attention.

I ask unanimous consent that the editorial and my letter of reply to the Saturday Evening Post editorial be printed in the Appendix of the RECORD.

There being no objection, the editorial and letter were ordered to be printed in the RECORD, as follows:

[From the Saturday Evening Post of July 21, 1958]

SHOULD THE POWER TO TAX INCLUDE THE RIGHT TO CENSOR ADVERTISING?

Few taxpayers know the extent of the authority that has been conferred on the Internal Revenue Service and even less of the added authority which that Bureau has assumed for itself by means of administrative rulings and regulations which Congress probably never thought of.

For example, it is hard to believe that the Nation's lawmakers meant to give tax collectors the right to decide that American business or industry should be penalized for stating its case and defending its right to exist, in the face of Government-sponsored competition, by means of paid advertisements. But that is what the tax authorities are doing, acting under a new interpretation of one of their own regulations, which declares that money spent on advertising for lobbying purposes, for the promotion or defeat of legislation or for the development or exploitation of propaganda cannot be considered ordinary and reasonable expenses deductible for tax purposes.

The victims of the most recent interpretation of this ruling are a group of public-utility companies which call themselves America's Independent Light & Power Cos. These companies have for many years sponsored institutional advertisements—mostly in magazines, including the Saturday Evening Post—which promote the wider use of electric power and occasionally indicate a preference for investor-owned utility companies as against Government-owned plants supported by the taxpayers. Most of the advertisements indicate in some way the advantage of being served by an independent power company. If this is propaganda, it certainly represents an attitude acceptable to some millions of Americans.

Nevertheless, the companies participating in this advertising campaign are being informed that they may not deduct its cost from their taxable incomes. As Senator ESTES KEFAUVER put it, "They can continue to propagandize as much as they want in their advertisements. * * * They can no longer charge the taxpayers and the rate payers for their own brainwashing."

Of course, this does not mean that the taxpayers will be relieved of the cost of being brainwashed by TVA and public power generally. Inasmuch as public power pays little in taxes and indeed is supported out of taxes, deductibility is a small matter. The net of the IRS's ruling is that the private-utility industry, already forced to meet tax favoritism and vast public appropriations for public power, must jump over another hurdle.

Supposing that all the advertisements in the series dealt with the public-power issue, it is difficult to equate them with an effort to influence legislation, or to lobby, or, if propaganda is the charge, to do more than defend what has long been considered the normal way for Americans to do business. Surely if an electric power company may engage in propaganda against competitors who sell gas, or coal, or atomic energy, it ought not to be penalized for defending itself against competition which threatens its ability to stay in business at all.

This editorial will arouse the ire of public-power advocates, who will be quick to point out that the Saturday Evening Post has a financial interest in the matter. This is true, although the amount received by the Post from these advertisements constitutes much too small an interest to justify courting the lambasting we shall probably get for intervening in the controversy.

But the principle involved requires a frank statement of what such rulings can mean to freedom, not merely for public-utility advertising, or even advertising in general, but for freedom to express any views which tax bureaucrats—perhaps stimulated by political demagogs—decide to penalize.

This is the crux of the situation. We have tax authorities, who are assumed to be raising money for public needs, undertaking to dictate to individuals and corporations how they shall carry on their businesses.

Nor is this threat confined to public-utility companies. Other types of business live in jeopardy from the same ukase, including one company which undertook to explain its side of a threatened strike by means of newspaper advertisements.

Like many other aspects of the income-tax law, this effort to censor free expression calls for clarification by Congress. If the people think American corporations and individuals require governmental supervision of the way

they state their case in open advertisements, the way to accomplish that desirous objective is to pass a law—not to pass the buck to the Internal Revenue Service.

AUGUST 1, 1958.

Mr. BEN HIBBS,
Editor, the Saturday Evening Post,
Philadelphia, Pa.

DEAR MR. HIBBS: Your editorial Should the Power To Tax Include the Right To Censor Advertising? contains several misstatements as well as a rather fundamental misunderstanding of the situation upon which you have chosen to comment.

In the first place, the editorial seriously misrepresents the purpose and content of the series of electric-power-company advertisements which the Internal Revenue Service has found not to be chargeable as "ordinary and reasonable expenses" deductible for tax purposes.

You describe the advertisements of the electric companies advertising program (ECAP) as being designed to "promote the wider use of electric power and occasionally indicate a preference for investor-owned utility companies as Government-owned plants supported by the taxpayers." Actually the opposite is indicated by any study of this program: the advertisements "occasionally" promote the wider use of electricity. My authority for this statement is the Saturday Evening Post, which last year issued a promotion booklet reprinting some 169 ECAP advertisements.

The introduction to the Saturday Evening Post booklet contained this explanation of these advertisements: "By the end of 1956, the Post had carried 169 ECAP advertisements—more than any other major publication. They are reprinted here to show how one industry, advertising its cause consistently and persistently, has been able to help shift the great weight of public opinion. * * * ECAP advertising is designed to win public supoprt for the independent electric light and power companies. Most people 15 years ago favored Federal public power. Today, the balance has swung in favor of the electric companies.

"In the August 19, 1950, issue, the Post warned editorially, 'we can't salvage free enterprise without a battle.' The advertisements which follow have been used in the battle along with the editorial comment to help turn the tide of public opinion."

Following the reprints of the advertisements, the Saturday Evening Post booklet adds, "This continuing campaign by the Electric Light and Power Companies is classic proof that advertising can mold public opinion as well as increase the sale of products and services."

Thus, the Post itself defines the purpose of these advertisements in such terms as "to help shift the great weight of public opinion"; "designed to win public support for the independent electric light and power companies"; "turn the tide of public opinion"; and "mold public opinion". Nowhere did the Post mention your observation that the ads "promote the wider use of electric power."

Despite the disclaimer in your editorial about the amount of advertising involved, I was interested to note that the Post had carried more of these ads than any other publication. I also was shocked to find that "The advertisements * * * have been used in the battle along with the editorial comment." I find this teaming of editorial commentary and advertising alarming, if not scandalous, whatever the "battle."

With the hope that this wedding of editorials and advertising does not bar discussion of issues, I want to take exception to several points in the editorial.

I vigorously protest the use of the word "censor" in connection with the Internal Revenue Service ruling relating to "propaganda" advertising. As you quoted from my public statement, the companies "can continue to propagandize as much as they want in their advertisement * * *. They can no longer charge the taxpayers and the ratepayers for their own brainwashing." It seems to me that your editorial ignores the very great distinction between censoring—saying "You can't do that"—and simply saying that you can't deduct it as a business expense and therefore a deduction from taxable income.

You also choose to ignore completely the important distinction between competitive private enterprises—such as the Curtis Publishing Co.—and the privately owned electric power companies which are public utilities. Utilities are generally held to be entitled to charge their ratepayers for their costs plus what is referred to as a reasonable rate of return upon their investment. When these costs include advertising designed in the Posts' phrase, to "mold public opinion," the taxpayers and ratepayers are, indeed, paying for "their own brainwashing," without having the democratic right to determine whether they wish to do so or not.

To the extent that the Internal Revenue Service ruling encourages regulatory bodies to disallow propaganda advertising in utility rate basis, it will result in a desirable reform.

It seems to me that the issue becomes one of subsidy rather than censorship. No one questions the right of the power companies to advertise their views.

Your statement that the ruling "does not mean that the taxpayers will be relieved of the cost of being brainwashed by TVA and public power generally" is not only unsubstantiated but, so far as I am aware, completely inaccurate. TVA and public power generally do not conduct advertising campaigns denouncing the privately owned electric companies. Most of the material issued by TVA and other public power agencies which I have seen has been in the nature of reporting on the conduct of public businesses, a function which I believe we can agree is essential.

In connection with references in your editorial to Government-owned plants supported by the taxpayers, public power pays little in taxes and indeed is supported out of taxes, and tax favoritism, let me cite the record of the Tennessee Valley Authority, which, incidentally, is the largest taxpayer in my State of Tennessee. TVA pays State and local taxes but it does not pay Federal income taxes because it is owned by the Government, by the people of the Nation, the taxpayers. But before we accept the contention of the power companies' advertisements, or even your editorial, concerning such matters as tax favoritism, let us look at the facts.

In the first 23 years of operations, TVA's power system revenues were sufficient to cover all of its operating expenses, depreciation, the cost of money to the Government and $41 million in State and local taxes and earned an additional $183 million for the Government. A private power company in this same period would have paid the Government only $140 million in taxes. Thus, TVA's power system, while selling electricity at rates among the lowest in the Nation, made for the taxpayers $43 million, over and above what a private power company would have paid in Federal taxes.

Compare this record, if you will, with a recent report of the Electric Consumers Information Committee which shows that the private companies participating in the ECAP program, will receive a subsidy over a 33½-year period of more than $3 billion as a result of the use of rapid amortization and liberalized depreciation provisions of the Internal Revenue Code (sec. 168 and similar provisions of previous laws and sec. 167, Internal Revenue Act of 1954).

While I agree with the thesis of your editorial that Congress must continuously review the application of our tax laws, you do not appear to be cognizant of the great amount of work being done in this field by the Members of Congress and particularly the members of the House of Representatives Committee on Ways and Means and the Senate Finance Committee.

Accepting the premise that advertising should be regarded as a necessary business expense, deductible for tax purposes, we do violence to our premise if we permit all advertising to be deducted and do not provide against abuses.

It seems to me that mediums such as the Saturday Evening Post, advertising agencies and advertisers all have an important stake in protesting abuses which jeopardize the prestige and standards of advertising. The Saturday Evening Post promotion booklet referred to above lists seven rules for "How to be a successful advertiser," including "5. Advertise truthfully and in good taste." In my opinion, the ECAP ads can be shown to be neither truthful nor in good taste.

The Saturday Evening Post's description of the design and intent of the ECAP advertisements, as stated in the promotion booklet, confirms my belief that the ruling of the Internal Revenue Service in this matter was entirely proper and that the provisions of the tax law under which the ruling was made are just.

Sincerely,

ESTES KEFAUVER.

Roots of the Middle East Crisis

EXTENSION OF REMARKS
OF
HON. WILLIAM E. JENNER
OF INDIANA
IN THE SENATE OF THE UNITED STATES
Wednesday, August 6, 1958

Mr. JENNER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article by David Lawrence, Roots of the Middle East Crisis, which appeared recently in the Evening Star, Washington, D. C.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

ROOTS OF THE MIDDLE EAST CRISIS—FULL REEVALUATION OF POLICY SINCE 1914 HELD NECESSARY TO AVERT DISASTER

All my life I have been involved in the fate of my country and of mankind, both greater than the fate of any individual amongst us. The so-called crisis in the Middle East has added another dimension of pain and anxiety.

I say so-called crisis because what has occurred and drawn our country into a trap, from which there is no advance but disaster and no retreat but political defeat, is not something that happened when President Chamoun of Lebanon sent an ultimatum to the United States and President Eisenhower sent the Marines to support his embattled government; nor did it occur when the King of Jordan called on Britain to send military aid to his government and, as I write, is threatening to restore order in Iraq, whose lawful government has been overthrown by a military coup.

Nor did it occur when Gamal Abdel Nasser seized the Suez Canal and when Israel, France and Great Britain invaded Egypt.

These are but flashes of revelatory lightning in a sky where dark clouds have been

accumulating for the West since World War I, as the result of solemn promises then made for opportunistic war reasons.

British agents, most notable among them Lawrence of Arabia, raised the first anti-colonial revolt in the Arab world, against the Turkish empire with which Britain was at war, with the promise of freedom and independence for the whole Arab world.

For the same reasons of war, Britain during World War I gave a contradictory but ambiguous promise to world Jewry (with which international Zionism has always identified itself) to establish a Jewish homeland in Palestine, Zionist pleaders having argued that this would cause the defection to the allies of the German Jews.

Subsequently every wartime promise to the Arabs was broken, the Arab world was partitioned and eventually the Jews in Palestine drove the British out by an insurrection using every instrument of terror.

The withdrawal of the British Army and police in the spring of 1948 left the Palestinian Arabs totally unprotected against the Zionists who, though they constituted but a small minority of the population, possessed of a regular army in the "Haganah," plus two armed terrorist bands, the Stern Gang and the Irgun, and were bent on driving first the British and then the Arabs from the country and possessing their lands.

Insurrection and war had thrown the issue into the United Nations, whose General Assembly at the end of November 1947, approved the recommendation of a special committee that the British mandate be terminated and the area divided into a Zionist and Moslem state, linked by economic union, and with an internationalized Jerusalem.

From then on, the British lost all authority in Palestine. In March 1948, Senator Austin, United States delegate to the U. N., suddenly asked for a revised policy that would put a partitioned Palestine under a U. N. trusteeship. Not the most elementary instincts of protection for the Arabs influenced Harry S. Truman, but advices he had received that otherwise Western oil supplies might be endangered.

The Zionists, who possess the most efficient propaganda organization in the United States, immediately raised an outcry from coast to coast, and Thomas E. Dewey, the Republican leader, took advantage of it to woo the Jewish vote. The question was thus thrown into the 1948 Presidential election campaign, with Republicans and Democrats vying with each other for Zionist support—the most disgusting and cynical subjection of honor, decency, and American interest to vote grabbing in my recollection.

On May 14, when the British mandate expired and the U. N. Security Council still was discussing trusteeship, Ben-Gurion of Israel proclaimed the establishment of the State of Israel, and President Truman immediately recognized it. This, again, was totally without precedent. The action was taken for purely internal political reasons.

The Palestinian war had ended in a truce wholly to the advantage of the new Israel which had extended its territory far beyond that included in the U. N. plan. The frontiers of Israel had been fixed by coup de force. Almost the whole Arab population had been dispossessed and become wretched refugees in surrounding states, chiefly Jordan. Every provision of the original U. N. plan had been defied by Israel (and has been, ever since), and the United States had made itself the first champion of this dubious and unreckonable state and its subsequent protector and leading supporter.

This initial American action and those that followed, dictated, I repeat, by the most sordid party-political competition for votes, destroyed the hitherto unsullied reputation of American among the Arab masses and their intellectual leadership, gave the most powerful impetus to pan-Arabism it had yet received, led directly to the army revolt in Egypt, made this latest one in Iraq inevitable, and leaves the West with a toehold in Lebanon and Jordan, fighting, like King Canute, against a tide, bearing upon its crest a new world identity.

Now, if we are not to advance to disaster or retreat to defeat—and we need do neither—we must make a total reevaluation of our Middle Eastern policy, and this demands fearless exposition of long-suppressed facts.

The Case for a Standing U. N. Army

EXTENSION OF REMARKS
OF
HON. JOHN J. SPARKMAN
OF ALABAMA
IN THE SENATE OF THE UNITED STATES
Wednesday, August 6, 1958

Mr. SPARKMAN. Mr. President, in the New York Times magazine for Sunday, July 27, 1958, there was an article written by Sir Leslie Munro, President of the General Assembly of the United Nations, entitled "The Case for a Standing U. N. Army." I ask unanimous consent that it be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THE CASE FOR A STANDING U. N. ARMY—THE PRESIDENT OF THE GENERAL ASSEMBLY ARGUES THAT THE CRISIS IN THE MIDDLE EAST PROVES THE NEED FOR THE U. N. TO HAVE A FORCE PERMANENTLY AVAILABLE FOR EMERGENCY DUTY

(By Sir Leslie Munro)

During these critical days in the Middle East, all thoughtful men and women reflect, in an unhappily divided world, on the ways in which peace may be preserved. I believe that they are ready to take out an insurance policy to avert a cataclysm. I further believe that the insurance policy is a permanent United Nations force.

Reflect on this: On July 15 the United States landed a force of marines in Lebanon for these purposes as expressed by President Eisenhower—"to protect American lives * * * and by their presence to assist the Government of Lebanon to preserve its territorial integrity and political independence." The President went on to say that he hoped "the United Nations would itself take measures which would be adequate to preserve the independence of Lebanon and permit of the early withdrawal of the United States forces."

In other words, Mr. Eisenhower asked for a United Nations force to replace the American marines now in Lebanon. Moreover, the United Kingdow landed forces in Jordan which it is ready to withdraw as soon as the Security Council is in a position to insure the protection of the political independence and territorial integrity of Jordan. Surely these developments raise once again the question whether there should be a permanent United Nations Emergency Force in being.

I think, first, that it is a matter of urgency for the General Assembly to have at its disposal a permanent corps of observers ready at our headquarters in New York to go to any part of a disturbed world at the request of a government threatened with aggression or subject to subversion. Secondly, I believe that the Assembly should consider the establishment of a force which would be immediately available on its authority, or on the authority of the Security Council, and at the request of a sovereign government whose territories are in jeopardy.

This force would be under the immediate direction of the Secretary General, subject to the overall authority of the Assembly (if the Assembly created the force) or of the Security Council (in the unlikely event that the force was the creation of the Council, where the Soviet Union would probably veto its formation). I do not suggest that the international force be stationed in one place. Member states should agree to provide contingents immediately available for stationing in areas where tension has arisen.

How large should such a force be? The United Nations emergency force in Egypt is close to 6,000 men. The marines and other forces in Lebanon number 9,400 at the time of writing. There may be other areas requiring in the future a force of a size similar to those now in Egypt and Lebanon. I would think that at a minimum the nucleus of a permanent force would be 20,000.

Until such a force were called on, its cost would be borne by the various member states holding contingents available. When called into use, then the United Nations would have to discharge considerable costs, which in the case of the United Nations emergency force amount to approximately $20 million a year.

I doubt that the force could be made up of troop contributions from the great powers. The differences among the great powers are, unfortunately, too serious to allow them to contribute except indirectly, perhaps by way of supply. I would hope tht the small powers, which have played so great a part in the pacification of the Gaza strip, could now decide, through the Assembly, to make components available for a permanent force to be effective in any part of the world disturbed by a crisis.

The purpose of such a force would be to stand as a symbol of the United Nations and to act as a deterrent. It would assure the inviolability of frontiers: There are few aggressors who will flout public opinion in an area where an effective U. N. force is either functioning or is about to function.

One concept of this force was set forth in that valuable book, "Strengthening the United Nations," a report of the Commission to Study the Organization of Peace: "If UNEF were to be made permanent, and continued to enjoy the power of world moral opinion, it might become a deterrent to local hostilities or to the spread of such conflicts into global catastrophes. It should remain lightly armed, and would in no case be a combat force. It could not be used to fight a war to stop a war, but it would have certain peace-preserving functions.

"A permanent force of this kind could be used for observation, patrol and guard duty in troubled areas. It could patrol ceasefires, armistice demarcation lines and demilitarized zones maintaining a separation of the parties and preventing breaches of the truce.

Lester Pearson of Canada, who played such a prominent part in the creation of the UNEF, has made the following suggestion in respect to a peace supervision force: "By its very nature such a force would not be expected to fight its way into a country. Indeed, since it would be deployed upon recommendation of the United Nations, it could enter a country only with the consent of the government of that country. This consent would normally take the form of an agreement between the Government concerned and the Secretary-General, acting on behalf of the United Nations.

In a case of direct aggression, especially if it were one of magnitude, probably in the first instance forces of the great powers would be immediately involved and it would be only later that the permanent international force would be used.

But the democracies have been much more successful in repelling direct aggression than they have in resisting subversion. The situations which can arise in respect of indirect aggression are numerous and cannot be defined in advance. In fact, the very definition of aggression has proved one of greatest difficulty and controversy.

A government may have been subverted and overthrown with startling rapidity. The question may then arise and be fiercely disputed as to whether what happened is a matter of purely domestic politics. I could imagine the Assembly being reluctant to call the emergency force into use in a matter where there was a question whether it was domestic in character and where the Assembly would have to weigh the international consequences of an intervention which might lead to a third world war.

In the case of Lebanon, had a permanent force been in being, and had its use been requested by the Lebanese Government, then I think the Council or the Assembly, as the case may be, would have made the force available. This seems to be an inevitable conclusion, since the Council did prove ready to send an observer corps to Lebanon.

The question of a U. N. force is as old as the U. N. itself. In the words of the charter, the Security Council may "take such action by air, sea or land forces as may be necessary to maintain or restore international peace and security." But because of the opposition of the Soviet Union and its power of veto in the Council, that body has been unable to create an international force disposable at its direction.

As long ago as 1947, the Assembly of the U. M. considered the question of keeping order in Jerusalem. My predecessor as New Zealand Ambassador, Sir Carl Berendsen, said most forcefully, then and later, that whether the Assembly decided to create a trusteeship of Jerusalem or open a special temporary regime in the Holy City, the Assembly would require means of enforcement of law and order, just as the enforcement of law and order is an essential requirement in every city of the world, however calm, however peaceful. Apparently and unfortunately, Sir Carl was in advance of his time in suggesting an international force to preserve the peace in and around Jerusalem. But in the light of subsequent events in that area, who can doubt that he was right?

It is true that, following an aggression by North Korean troops in 1950, the Security Council did condemn this attack, and forces under the leadership of the United States and consisting of men from 16 nations successfuly repelled the aggression. These forces formed a great fighting unit, but they were not representative of the United Nations as a whole although they truly represented its ideals and purposes. Their cost, which was great, was not paid by the United Nations. Their commander in chief was not subject to U. N. direction.

Then came the Suez crisis of 1956. The force created subsequent to the intervention of the Anglo-French troops in Egypt and now famous as UNEF, was not one provided by the permanent members of the Security Council. It came from the smaller powers, as I believe a new permanent force would have to come.

The work that UNEF has done and continues to do is of far-reaching importance. Through its supervision as a police force—not a fighting force—it has preserved peace in two most contentious areas of the Middle East—in the Gaza strip and the area of Sharm el Sheikh. Fortunately UNEF still remains in these areas.

Several difficulties arise in respect to supervisory forces like UNEF which are created by the Assembly and not by the Security Council. In the first place, the normal presumption appears to be that they can remain in the country where they are established only so long as the Government of that country thinks fit. One can respect this presumption because a sovereign state is entitled at will to have its territories free of all foreign troops. But in the modern world and in situations such as that of Suez, it seems that we may have to revise our notions of sovereignty. Certainly it was the view of my Government in 1957 that the departure of UNEF from Egyptian territory should be a matter for the Assembly to decide—by a two-thirds majority—not Egypt or any other country.

A second difficulty is the cost of forces like UNEF, which is very considerable. But considerable as it is—the yearly cost of UNEF is roughly half the annual budget of the United Nations—this cost is a trifling insurance premium against the risk of war. It was not without some trouble that the Assembly last year passed a resolution, opposed by the Communist bloc, whereby the expenses of UNEF are to be borne by the members of the United Nations in accordance with the scales of assessments adopted by the General Assembly for the financial years 1957 and 1958. Th passing of this resolution insured that the maintenance of UNEF should be a collective responsibility, resting on the full membership of the United Nations.

This is the principle of financial responsibility which I would advocate if a permanent United Nations force were to be established by the Assembly. The reluctance of many nations to meet the bill for a permanent international force is, I am afraid, one of the greatest difficulties in the way of its establishment.

Even if a permanent international force were established, there would be critics who would say that the United Nations would not act with sufficient speed to use it. There is, of course, much substance to this criticism. Prime Minister Macmillan, in the House of Commons, said that his Government, in sending troops to Jordan could not wait for the United Nations, which in any case had no available force. On the other hand, under the impact of urgency and crisis, the United Nations did act with great energy and speed in the Suez situation.

For all the criticisms and all the difficulties, I still think that the attempt to create a permanent international force and a permanent team of observers must be made. I respect the view of those who say that the U. N. should proceed on an ad hoc basis, dealing with each crisis as it arises and calling for contributions to an international force as it is required. But have not the crises in Lebanon and Jordan shown this attitude to be unsound?

Perhaps when this article is published a special Assembly will be in session. Such a session can deal only with the matters for which it is summoned. Thus, the special Assembly could not set up a permanent force. But the regular Assembly, which will meet in September, will have before it from the Secretary General a study of the experience derived from the establishment and operation of UNEF. This study could serve as a basis for Assembly action.

The next regular Assembly faces an immense responsibility, in which leadership will be expected from the great powers on the establishment of a permanent force on something like the lines I have proposed. The need is great. The time may be short.

Pornography

EXTENSION OF REMARKS
OF

HON. WILLIAM LANGER

OF NORTH DAKOTA

IN THE SENATE OF THE UNITED STATES

Wednesday, August 6, 1958

Mr. LANGER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a resolution adopted by the National Council of Juvenile Court Judges on the subject of pornography.

There being no objection, the resolution was ordered to be printed in the RECORD, as follows:

RESOLUTION ACCEPTING THE RECOMMENDATION OF THE COMMITTEE APPOINTED TO MAKE A REPORT ON THE SUBJECT OF PORNOGRAPHY AND DECLARING IT TO BE THE POSITION OF THE NATIONAL COUNCIL OF JUVENILE COURT JUDGES

The following statements are either quoted from or derived from the interim report of the Senate Committee to Investigate Juvenile Delinquecy. This interim report (No. 2381) deals with pornographic and obscene literature and juvenile delinquency. This report is based on a large number of books and reports from various scientific bodies concerned with this subject, as well as the testimony of several outstanding national authorities in the field of medicine, psychiatry, education, and law enforcement:

"1. It is apparent, from the testimony and evidence presented to the subcommittee in hearings held in every corner of the Nation, that many of the unscrupulous racketeers and degenerates, when driven out of the horror comic field, transferred over to the lucrative business of peddling and selling pornographic material.

"2. From information on hand the subcommittee estimates that this has become a $500 million racket in this country; and similarity of pornographic material gathered in from all over the Nation indicates a central source of supply or wide exchange of material.

"3. As a result of our observation there is no doubt on the part of the subcommittee that a large percentage of the pornographic literature produced in the United States reaches the hands of juveniles.

"4. While the traffic has been growing, sex crimes have increased with almost unbelievable rapidity.

"5. Most of the pornographic material gathered and studied by the subcommittee is devoted to a display of the various sex perversions unspeakably filthy and bestial in character. This is highly traumatic material for children and youth, and particularly for those predisposed to sex deviation or basically unstable and suggestible.

"6. The most diabolical, devastating, and far-reaching evil effects of this material on the minds, emotions, and morals of children and youth is that it tends to create the belief that these loathesome and bestial types of perversion are not only acceptable, but the proper form of sex practices. A greatly increased number of perverts and homosexuals result from this misdirection of the basic sex urge."

SOME RECOMMENDATIONS OF THE SENATE SUBCOMMITTEE

"1. That the Congress of the United States enact pertinent legislation designed to cur-

tail the production, distribution, sale, and possession of indecent, lewd, and obscene material in interstate commerce. * * *

"2. That State laws and municipal ordinances be reexamined and reevaluated in their respective jurisdictions to assure modern, effective, and stringent laws which will deter the production, sale, and/or possession of pornographic material.

"3. * * * that it is respectfully recommended that the judicial branches of the Federal, State, and local governments reevaluate the matter of punishment for said violations in the light of the facts and evidence adduced at the subcommittee hearings and similar State legislative hearings on the subject.

"4. * * * it is recommended that a National Advisory Crime Commission be established as a clearinghouse of pertinent information on violations of laws relating to pornography, narcotics, etc., so that as such a crime is committed it will immediately become available to every peace officer in Federal, State, and local jurisdictions.

"5. * * * The subcommittee therefore recommends that religious, civic and service groups provide the aggressive leadership needed in forming public opinion and inspiring the public in the fight against pornography as they did in the fight against crime and horror comics and lurid magazines and books."

RECOMMENDATIONS OF THE COMMITTEE ON PORNOGRAPHY FROM THE NATIONAL COUNCIL OF JUVENILE COURT JUDGES

"In view of the foregoing data and statements which seem to clear with and be supported by numerous other studies and data available on the subject, your committee recommends:

"1. That the National Council of Juvenile Court Judges commend the Congress of the United States, working through the Senate subcommittee, for its thoroughgoing survey, analysis, and presentation of the insidious threat of pornography to the health, minds and morals of our children and youth.

"2. That the members of the National Council of Juvenile Court Judges, and all other judges exercising jurisdiction over children, be urged to accept the responsibility of warning the parents and those others having charge of children of this undercover effort of the pornographers to use children and youth as their prey and victims in their highly profitable business.

"3. That all judges of children's courts cooperate with all good citizens and organizations, in combating this insidious threat against our children, by every legal and effective means, and through every medium of communication available to them.

"J. P. GOSSETT,
"Judge, Probate and Juvenile Court, Gooding, Idaho.
"W. S. CRISWELL,
"Judge, Juvenile Court, retired, preparing and presenting the report for Chairman Clark, in his absence, and at his request.
"THOS. TALLAKSEN,
"Judge, Juvenile and Domestic Relations Court, Minneapolis, Minn.
"A. A. WOLDMAN,
"Associate Judge, Juvenile Court, Cleveland, Ohio.
"W. T. SCOGGIN,
"Judge, Third District Court, Las Cruces, N. Mex.
"RULON W. CLARK,
"Judge, Juvenile and Domestic Relations Court, Salt Lake City, Utah, Chairman, Committee on Pornography, NCJCJ."

The resolutions committee believes that the foregoing report expresses the feelings and opinion of the National Council of Juvenile Court Judges; And therefore

Resolves, That the report of the committee on pornography be accepted as the statement of the official position of the National Council of Juvenile Court Judges.

This resolution was adopted by unanimous vote at Fort Lauderdale, Fla., June 19, 1958.

The Constitution and the Supreme Court

EXTENSION OF REMARKS
OF
HON. WILLIAM E. JENNER
OF INDIANA
IN THE SENATE OF THE UNITED STATES
Wednesday, August 6, 1958

Mr. JENNER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a story entitled How Supreme is the Court? written by Mr. Walter Leckrone, and published in the Indianapolis Times, Indianapolis, Ind.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

HOW SUPREME IS THE COURT?
(By Walter Leckrone)

Indiana has a law, written into our constitution, that forbids the State to go in debt.

For the 100 years and more that it has been in effect it has kept Indiana entirely free from State debt, a fact that seems constantly to amaze some of the folks from other States which have borrowed and spent and so owe vast sums of money. True, it has ocassionally exasperated a few impatient Hoosiers who wanted to spend money the State did not have but in general it has worked well for Indiana and we like it.

The subject has not come up in this connection and does not seem about to rise, but I, for one, would not give an old revenue bond for its chances if it ever came into dispute before the United States Supreme Court.

The Congress of the United States has passed a good deal of legislation on the subject of public debts, enough so far to mortgage the future of the great-great-grandchildren of all of us now living.

If the Supreme Court ran true to form it would hold that a State has no right to have a law on public debt because the Federal Government has laws on the subject.

That, in its simplest form, is its doctrine of preemption.

The Court has held, not once but a number of times lately, that when the national Congress passes a Federal law on any subject it thereby preempts that whole field and that thereafter no State statute or constitutional provision is valid in that whole area of law.

To cite another possibility, most States and all cities have laws regulating speed on their roads and streets. It has lately been proposed several times that the Federal Congress also pass a law regulating traffic on the highways, particularly on those about to be built partly with Federal funds.

If Congress did pass such a law, under the Court's doctrine of preemption that would automatically repeal all State and local speed laws, if, of course, the Court was consistent in its decisions, which on the record you can hardly count on with much assurance.

Where its new doctrine has been asserted most vigorously, though not exclusively, has been in the field of subversion. In a whole series of decisions in the past 2 years the Court has in effect repealed all the laws on this subject of 42 of the 48 States and the then Territories of Alaska and Hawaii. It has ruled, in case after case, that since there is Federal law on the subject there can be no State law, even though no record appears that any State law was in conflict with Federal.

Taken as a whole the group of decisions represents the most devastating attack on State and local government in United States history. Followed consistently the "doctrine" on which all are based would shortly destroy virtually all State and local government, substitute a fascist-type "nationalism" for local autonomy in local affairs. The "doctrine" is purely an invention of the Supreme Court, without foundation in law or Constitution or custom.

Last week Congress reacted vigorously to halt this trend, move the Nation's highest Court a step back toward its constitutional powers and functions. The House passed (241 to 155) a bill to overrule its "doctrine of preemption" in matters of subversion and restore State laws it had in effect repealed.

It was the third measure recently passed by the lower House similarly reversing various phases of the Court's nationalistic trend, all now awaiting Senate action. The Senate still had not voted on the Jenner-Butler bill further limiting the Court's activities to judicial rather than legislative functions.

The New York Times, a publication I can always count upon to set me right on any erroneous reactionary old notions I may pick up to the effect that Hitler, Mussolini, and Stalin possibly did not have the best type of government that could be devised, takes, naturally, a very dim view of this House action. Last week it called this measure "as weird a piece of legislation as could be imagined" foolishly devised to "protect alleged States rights," and demanded its "immediate unceremonious burial." The only reason the paper advanced against the bill was its statement that it would "unsettle a large body of existing law" and so create "indescribable confusion."

The truth is, of course, that about all the existing law that has or will be unsettled by this action is law that has actually been enacted by the United States Supreme Court itself, much of it in direct violation of some of the plainest language in the Constitution of the United States. In the past couple of years this Court has, in fact, reversed more decisions of United States courts at every level, some of which had been standing for 50 years and more, than all previous Supreme Courts had upset in the whole 169 years of United States constitutional government. Where no laws it considered desirable existed it has simply, in the guise of a court decision written a new one.

Contrary to widespread lay oppinions the United States Supreme Court is by no means as supreme as it sounds.

Most of the powers it exercises are not, actually, bestowed upon it either by Constitution or statute, but merely decisions of the Supreme Court itself. The Constitution which created the Court and which is its only real authority for existence, specifically listed, and sharply limited, the kinds of cases it could hear, both directly and on appeals, leaving the way open for it to hear appeals of others with such exceptions and under such regulations as the Congress shall make.

The very first United States Supreme Court 170 years ago hardly had is bench warm before it began reaching out for more powers so flagrantly that the first amendment to the United States Constitution, after the original Bill of Rights, was adopted within 10 years, placing still further limits on its jurisdiction and powers. Successive Courts have, however, reached steadily for more and more, supporting their claims to them by their own decisions, although none so swiftly nor so extensively as the one now sitting.

The doctrine of pre-emption contradicts the plain language of the Constitution itself, which first carefully lists the powers of the Federal Government, which are not, surprising though it may seem these days, very numerous, and the fields within which the Congress may pass laws. Then it states, unequivocally, that "The powers not delegated to the United States by the Constitution nor prohibited by it to the States are reserved to the States respectively, or to the people."

It was, as I recall it, Justice Felix Frankfurter to whom was attributed the remarkable statement that "just because a law says something in plain language it is not to be construed that that is what it means."

Reports from Capitol Hill last week seemed to indicate that even the learned Justices may ultimately discover that the Constitution does mean what it says.

Fair Trade

EXTENSION OF REMARKS
OF

HON. BRUCE ALGER

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 31, 1958

Mr. ALGER. Mr. Speaker, the time has come for our citizens, no less than Members of Congress, to know the facts about the proposed fair-trade legislation recently passed out of the Commerce and Finance Subcommittee of the Interstate and Foreign Commerce Committee. As a further effort to so inform Members and the citizenry, I am including a statement by Stanley N. Barnes, made when a Fair Trade Act for the District of Columbia was being considered in 1954. These facts are as appropriate today as the day presented.

It is my hope that this statement will shed light generally on the subject of the fair-trade law for those interested in this controversial subject.

The statement follows:

STATEMENT OF STANLEY N. BARNES, DEPARTMENT OF JUSTICE, BEFORE THE SENATE DISTRICT COMMITTEE ON S. 3297, FAIR TRADE ACT OF THE DISTRICT OF COLUMBIA, JULY 15, 1954

I am glad to appear before this committee in response to its request to present the views of the Department of Justice with respect to S. 3297, a bill to provide so-called fair trade for the District of Columbia.

As was made clear in our report of June 3, 1954, to the chairman, the Department is opposed to the enactment of this bill. Under so-called fair trade, a contract between a manufacturer and a single retailer fixes the price of a commodity for all other retailers within a State. Price competition among retailers is thus largely eliminated. Without competitive pricing, the form of competition may remain, but the substance is lost. That is why price-fixing has long been unlawful per se.

The legislation presently under consideration goes far beyond the earlier enabling statutes and would place Congress on record as affirmatively favoring insulation of certain segments of the business community from the rigors of competition. The Miller-Tydings Act exempted from the antitrust laws and the Federal Trade Commission Act vertical minimum price-fixing contracts (1) which involve trademarked or branded commodities, (2) which are in competition with other similar commodities, and (3) when such contracts are valid under the State law of the place of resale. The McGuire Act, following the Schwegmann decision, permitted the binding of persons not parties to the contracts. Both acts, however, were described as merely enabling legislation, which "does not commit the Congress to a national policy. * * *"[1] The House Commerce Committee's report on what became the McGuire Act stated that the bill "would permit the several States to experiment further with fair-trade legislation."[2] The sponsor of the bill, Mr. McGuire, stated on the floor of the House:

"This bill is merely an enabling measure. * * * All we are doing is to make it possible for States which believe in the principles of price maintenance to enact appropriate legislation.[3]

It is apparent that Congress did not intend at that time to do more than permit the States to effectuate their own policies.

The suggestion has been made that this resale price maintenance system permits competition at the manufacturing level where it belongs, the implication being that retailers should be insulated from competition. Experience has richly demonstrated, however, that competition at all levels of our economy is in the national interest. Competition has kept our free enterprise system strong and viable. Its suppression by either governmental regulation or private agreement is inconsistent with basic American principle.

How does suppression of competition result from so-called fair trade? It is obvious that price competition on fair-traded items is eliminated among retailers. What is perhaps less obvious is the fact that competition at other stages of distribution is also impaired. While the so-called fair-trade laws ostensibly prohibit horizontal agreements, the same result is achieved on the manufacturing or distributing level when competing manufacturers or distributors sign similar fair-trade contracts. Parallel vertical contracts make superfluous horizontal agreements not to compete.

While great emphasis is placed on protection of the manufacturer's goodwill, the fact remains that the great impetus behind so-called fair trade comes from retailing groups, not from manufacturers. Fair trading has, in fact, been most effective in those fields in which trade associations are strong enough to persuade manufacturers to fair trade. The Department of Justice has in the past brought criminal cases against a number of trade associations for activities going beyond those contemplated by the Miller-Tydings exemption to the Sherman Act. Defendants in these cases were charged with conspiracies to raise, fix and maintain prices and with persuading producers to enter into agreements to fix prices at a level to give retailers a desired margin of profit. Methods of persuasion included boycotting noncooperating manufacturers. Pleas of nolo contendere were entered in each case and fines were assessed against the defendants.

Under so-called fair trade, price-fixing arrangements are entered into by private parties without public regulation or supervision. The public interest is not represented at any stage of the negotiations. The result, of course, is higher prices for the consumer. While fair trade proponents refer to statistical studies purporting to show that prices are lower under fair trade, it is suggested that the use made of these studies is of questionable validity. For instance, a witness before this committee has implied that a study showing this result will be based on the Consumer Price Index of the Bureau of Labor Statistics. It should be pointed out, however, that the Consumer Price Index gives by far the largest weight (approximately 71 percent) to items which are not fair traded. Frequent reference is also made to surveys by A. C. Nielson, but the report of the survey itself, so far as we can determine, has never been made available.

So far as we know, a complete survey of fair-trade and non-fair-trade prices has not been made. It may be noted, however, that at the time of the hearings on the McGuire Act in 1952, price comparisons placed in the RECORD showed that the consumer paid higher prices in so-called fair-trade States than in non-fair-trade areas. A comparison of prices of drugstore items in April–June 1954, obtained from the advertisements of drugstores in the District of Columbia, showed that on 736 items of ordinary drugstore business the fair-trade price totaled $2,241.10 and the non-fair-trade price on the same items totaled $1,602.44, or a saving of 28.4 percent. In the appliance field, a similar comparison of so-called fair-trade prices and the prices of a low-markup outlet in the District on 245 items showed a total of $6,142.33 under fair trade and $4,442.69 for the same items under the latter's prices, or a saving to the consumer of 27.7 percent.

The retailers selling at the lower price are not using these items as loss leaders; even at the lower price they are taking their markup and making a profit. For instance, a certain mixer costing retailers $29.70 in 1952 was fair traded at $46.50, while non-fair-trade retailers sold it for $34.79. Certain razor blades have a gross margin of about 58 percent as compared with a non-fair-trade margin of about 26 percent. A certain vacuum cleaner shows a gross margin of 93.4 percent, as compared with 29 percent for non-fair-trade areas. The list could be extended, but it is evident that there is a considerable area for price competition below so-called fair-trade prices and above retailer cost prices.

It is evident that fair trade does not benefit the consumer. At the same time it deprives a businessman of his right to decide whether he shall compete by lower prices and less service or by higher prices and more elaborate service. By fixing the price high enough to profit the less efficient, it takes away the incentive of the more enterprising businessman to increase his efficiency.

It has been noted that among the proponents of so-called fair trade for the District of Columbia are representatives of national organizations. Obviously, so long as the District of Columbia is outside the fair trade orbit, it affords consumers a basis for price comparison and makes it a little more difficult to increase markups under fair trade, so it is not surprising that business groups outside of the District are anxious to eliminate this basis for comparison.

In closing, I would like to reiterate the views expressed in the Department's report of June 3, 1954, concerning S. 3297:

"Enactment of this bill would give immunity from the antitrust laws to a segment of the business community. It would further place the Congress on record as favoring elimination of price competition among retailers, with (1) resultant higher prices to consumers; (2) the throttling of initiative of retailers, who would be deprived of the choice of whether to take a small markup and make their profits in volume sales and low overhead rather than in higher markups on fewer sales; (3) advantages to the chains and other large outlets, which can market their private brands below the prices fixed on the fair trade goods of their smaller competitors; and (4) opportunities for boycotting and other coercive tactics to insure cooperation.

"Because this legislation is (1) inconsistent with the basic philosophy of the antitrust

Footnotes at end of speech.

laws, (2) is susceptible of use as a cloak to hide general price-fixing activities, and (3) impairs competition at all levels of production and distribution, the Department of Justice is opposed to its enactment."

H. R. 10, the Self-Employed Individuals' Retirement Act of 1958

SPEECH
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 29, 1958

Mr. LANE. Mr. Speaker, farmers, doctors, writers, lawyers, ministers, small-business men—there are some 10 million of these self-employed in the United States.

They cannot understand why millions of corporate employees are covered by retirement plans at low cost to themselves and their employers while the self-employed are denied these advantages under present law.

It is true that many of the self-employed come under the old-age and survivors insurance program, but so do the vast majority of employees. Millions of employees, however, supplement these benefits from their participation in private qualified pension plans.

Remember that the self-employed invariably serve a long apprenticeship of education and austerity experience before their earning power develops. They find themselves far behind the employees who began acquiring social-security and coverage under private pension plans, in some cases as early as their 18th year.

During his shorter though more lucrative earning period, the self-employed should be permitted to set aside savings for additional annuity revenue in his retirement without being discriminated against taxwise.

H. R. 10 will remove this inequity.

It will give the self-employed, including the dentist, the accountant, the local druggist, the corner grocer, the tax deferment advantages that will encourage and enable them to build up their own voluntary retirement funds.

It will restore them to equality with the millions of their fellow Americans who look forward to additional security in their old age by their participation in company retirement and pension plans.

H. R. 10 will make it possible for the self-employed who have the courage, initiative, and self-reliance which inspire and energize the American way of life to provide for their retirement from their own funds, without having to pay income tax on the money they put aside until the funds start to pay them back in the form of retirement or survivor benefits.

H. R. 10, popularly known as the Jenkins-Keogh bill, will authorize for the self-employed a tax exemption on contributions to a retirement fund of as much as $2,500 per year until such time as the fund builds up to the limit of $50,000.

It is essential for us to pass H. R. 10, not only for the relief and the encouragement of the self-employed but in so doing to establish the precedent that will lead to the gradual inclusion of everyone and provide them with the incentive to save for the future through participation in private pension plans.

I congratulate our colleagues who have given earnest study to the formulation of this bill. Their perseverance, animated by logic and jusitce, has brought this problem to the attention of the Nation.

I consider it a privilege to support H. R. 10 without reservation and to express my sincere hope that it will be enacted into law this year.

Increase in Public Debt Limit

SPEECH
OF
HON. JOHN V. BEAMER
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 5, 1958

The House in Committee of the Whole House on the State of the Union had under consideration the bill (H. R. 13580) to increase the public debt limit.

Mr. BEAMER. Mr. Chairman, the arguments used in support of the increase of the public debt limit provided in H. R. 13580 are very valid but not entirely conclusive. It is true that if the Congress continues its spending policy without any thought of curtailment then the only alternative is an increase in the public debt limit.

The accompanying result of such a spending program and a consistent increase in the public debt limit will mean unlimited inflation. We have had sufficient experience with inflation in our own country where we have found the dollar diminishing in its purchasing power. Fortunately, the present administration has been able to check this inflationary spiral but still it has continued and, apparently, will continue as long as the Congress insists on spending more and more of the taxpayer's dollars.

The other alternative is to reduce expenditures and begin to live again within our income. I join with the other Members of the Congress in the desire to eliminate unnecessary expenditures and to reduce other expenditures to a point where we still can maintain national safety, a progressive economy, and a solvent program. My votes for appropriation reductions or cuts each year have averaged between $6 billion and $9 billion. If these votes had been followed by the majority of the Congress, I feel confident that at the present time, we would have stopped the spiraling inflation and also that we would have been able to reduce the public debt and cut the resultant taxes that have been imposed upon the people.

It is on this basis that I felt it necessary to oppose any further increase in the debt limitation. It is my sincere conviction that in this manner relief can be given to the American public.

Individuals and Incentives

EXTENSION OF REMARKS
OF
HON. WAYNE N. ASPINALL
OF COLORADO
IN THE HOUSE OF REPRESENTATIVES
Wednesday, August 6, 1958

Mr. ASPINALL. Mr. Speaker, one of the most interesting and timely addresses of recent weeks has just come to my attention. It was made by Robert E. Wilson, retired chairman of the board, Standard Oil Co., at Colorado College, Colorado Springs. I am inserting it in the CONGRESSIONAL RECORD so that my colleagues may also enjoy reading it:

INDIVIDUALS AND INCENTIVES

(By Robert E. Wilson, retired chairman of the board, Standard Oil Co. (Indiana), Colorado College, Colorado Springs, Colo., June 2, 1958)

President Benezet, members of the graduating class, and their many friends and relatives, it is a particular pleasure to be at Colorado College today. This fine audience reminds me very much of those at the College of Wooster, whose commencements I have been attending for over 50 years.

In speaking to you today, I shall avoid two approaches which many businessmen employ in speaking to graduating classes. In the first place, while I recognize that you graduates, like all of us, face many uncertainties in these troublous times, I do not think you either desire or deserve any sentimental sympathy when you have had the opportunity, given to only one in a hundred in this war-torn world, of getting a first-class college education in a free country. After all, the only difference between you who are being graduated today and us who were graduated in peaceful 1914, or those in prosperous 1929, is that you know there is likely to be trouble ahead, and may thereby be better prepared to meet it than we were.

In the second place, I do not share the belief, too common among businessmen today, that our universities and colleges are hotbeds of communism or socialism. I do not share it because I know it is not true. There is, to be sure, a healthy belief among our college students that the world can be improved, and some impractical idealism which I hope will never disappear. I do hope, however, that as you gain experience, the impractical part will fade before the idealism does.

One thing that does give me concern about our students, and it was just as true in my day as in yours, is that they are too inclined to take for granted the wonderful advantages which they enjoy. Possibly these advantages came too easily to most of us—we forget the lives and treasure given by our forefathers to win our civil and religious liberty, the sacrifices made by our parents and by those who built our colleges and churches, the hard work and savings of millions who have provided the many material

things which we consider merely normal and natural today. We intend to consider those things as something due us, instead of as something for which we are all deeply in debt. Even though you cannot yet do much to repay that debt, you should begin to appreciate it and resolve to do your part to pass these things along to your children, enriched by your own work and your own sacrifice.

The other, and somewhat related, cause for concern about the situation in our colleges and universities is the fact that so few seem to emerge with real enthusiasm for the American way of life and its amazing achievements. Does our cherished right to freely examine and criticize our leaders and our institutions necessarily result in such lack of enthusiasm? Have we lost our faith in the ability of free men to solve their future problems as they have those of the past, with a minimum of compulsion? Or do we merely dislike to parade our deeper feelings about our country?

Whatever the cause, the all-too-prevalent lack of enthusiasm for our American system is especially disturbing at a time when the Communists seem to have found a way to distort the truth and progandize whole generations of their youth into apparently enthusiastic support for dictatorships which enslave the individual, glorify brute force, decry idealism, and deny the existence of a Supreme Being. Must we plaster our windows and walls with pictures of our leader and turn our schools into propaganda mills in order to match the apparent enthusiasm of their youth? God forbid; but we must do more at all levels of education to better understand what we have, how we got it, and what we must do to preserve it. And we must make sure that our schools build ideals as they build knowledge—there is nothing more dangerous in the world today than high intelligence coupled with low ideals. This point is emphasized by the startling proportion of university graduates among those who have been unmasked as traitors to our Nation.

In order to appreciate our economic system better, let's give a little real thought to some of the problems involved in building and maintaining a happy and productive society. In stressing these two factors of happiness and productivity, I do not mean to say that we should overlook other desirable things, such as freedom, security, leisure, education, equality, etc.; but one of the things we learn in this world is that we can't have everything in equal measure, and I do think that happiness and high productivity must be the primary aims of a really good society. Freedom is, of course, essential because we cannot have a really happy society that does not afford a maximum of individual freedom—not freedom from work or even freedom from worry, but maximum possible freedom from external compulsion in our daily lives.

But how can we get really free individuals to do the work that must be done in such a society? Did you ever stop to think how you would solve that problem, starting from scratch? Let's see "what makes the wheels go round" in a free society.

Some of the forces which act on individuals and help to determine their behavior are internal in nature or what we may term convictions; others are external in origin, which we may call incentives. The best organization of society is that which gives its citizens the convictions and the incentives which will spur each individual to devote his best efforts, be they intellectual, manual, or artistic, toward the work of the world.

Consider first the question of convictions. What are some of the constructive ones? A few of those which seem important to me are:

First. That you have a real chance to achieve and that your success will depend mainly on your own efforts and ability.

Second. That there is no substitute for work, and in the long run a life devoted to useful work is more enjoyable than any other existence.

Third. That not only is honesty the best policy for the individual, but by and large the American people and American business are honest.

Fourth. That our American system of democracy and free enterprise, with its emphasis on the freedom and dignity of each individual, is the best yet devised, even though it should, and will, continue to evolve and improve as it has in the past.

Fifth. That merely making money and achieving power will not give enduring satisfaction unless they are coupled with abundant and unselfish service to your fellow men, and a realization that your life should fit into the master plan.

A young man or woman armed with these convictions, plus enthusiasm and reasonable ability, is well on the road to success.

Systematic attacks on such beliefs are the worst and most subtle form of sabotage; yet one which is being widely practiced by the enemies in our midst. I cannot imagine a young man less likely to succeed, or to be happy, or to be a useful member of society, than one who has let himself be led to believe that success depends largely on pull or luck, that most business is crooked, and that our American system is merely an out-of-date scheme for benefiting the few.

On the other hand, we elders cannot expect you younger people to adopt certain beliefs merely because they, like spinach, are supposed to be good for you—we must be able to convince you that they are true. However, if your training here has not already imbued you with these beliefs, I am not optimistic enough to expect to change your course of thinking by virtue of a brief address. Nevertheless, I do urge, with all the seriousness at my command, that if you are not prepared to enter upon your career with the general outlook I have been commending, you give serious thought and study to these matters before starting out with the heavy handicap of the contrary point of view.

Consider next the external forces or incentives, the other group of influences which largely determine the actions of individuals. In classifying incentives as external forces, we must not forget that what constitutes an incentive to one man may leave another cold, so while incentives are external in origin, they still depend to no small extent on the same internal background of attitude and belief which I have been discussing. Americans working abroad are surprised to find that incentives which appeal to an American worker often fall flat when offered to a native worker.

For example, you may have read about the labor trouble of a small American concern in Panama which employed numerous native girls. Investigating a strike, the management found no complaint as to wages, hours, or working conditions, the trouble being merely that the girls had all the money they wanted and were tired of working. American enterprise solved the problem by making available several Sears Roebuck catalogs, with explanations as to how to use them. Incentives were quickly restored, the girls went back to work, and the economic system, which had momentarily tottered, again began to click.

A scientist making an appraisal of the efficiency of the incentives in any given society naturally favors the practical test of success or failure rather than the endless discussions of the theorists in the field of economics. Even the practical test has its difficulties, however, because we must first define what we mean by success or failure. We must also remember that temporary success for a few years, or even for a generation, does not prove that a given form of organization is free of fundamental weaknesses which will sooner or later undermine it.

If we were to judge a society by the magnitude of its forward steps in philosophy and artistic endeavor, the civilizations of ancient Greece and Rome would stand favorable comparison with any subsequent form of government; yet we know that while the wealth and leisure of the few were largely responsible for their achievements, these were acquired mainly at the expense of slave labor resulting from military conquest, and did not yield either material comforts and happiness for the average man or an enduring base for further progress. Since that time, other strong military powers have played large parts in the spread of what we call civilization, and in the development of science and industry, but too much emphasis upon military might and conquest has always seemed to carry the seeds of eventual destruction.

To provide adequate quantities of goods for a happy and productive society, two principal things are necessary: First, the ability and willingness of the individuals to work hard to produce the necessary goods; and second, the provision and maintenance of adequate tools, facilities, and power to multiply the output of the individual worker without requiring excessive human effort. Both of these essential elements require the proper incentives to insure their continued functioning.

Let us consider first the problem of getting continued and intelligent effort from the worker. Many solutions have been tried. As long as each family produced most of its own food, clothing, and shelter, as in the case of primitive man, or even our own pioneers, the relation between effort and reward was so simple and obvious that the maximum productive effort was made by almost everyone. The right of any individual to own land in fee simple, so strange and wonderful to those coming from Europe, also proved to be a powerful incentive to our pioneer Americans. Our nearness to those pioneer days and their tradition of looking up to those who work, rather than to an aristocratic leisure class, is, to my mind, one of the greatest sources of the strength of our country. We must never lose sight of the fact that the nearer we can approach a clear and direct relationship between effort and reward, the better will be the individual effort. Basically, the best incentives are those most fairly proportioned and closely related to effort and ability.

As more division of labor and more power and tools became necessary in order to increase the total productivity of man's efforts, complications entered which have never been entirely solved. Slave labor was one approach but it not only went against the deepest sensibilities of the human race, but also proved to be an inefficient method of getting work done. The fear of punishment has never been an adequate substitute for the hope of reward.

The broad communistic idea has been written about for centuries and has had its appeal for immature idealists in every generation. The pioneer American settlements at Jamestown and Plymouth both started out on this basis, but soon abandoned it as a failure, due to its lack of incentives. Capt. John Smith wrote shortly after the abandonment:

"When our people were fed out of the common store, and labored jointly together, glad was he (who) could slip from his labor or slumber over his task he cared not how; nay, the most honest among them would hardly take so much true pains in a week, as now for themselves they will do in a day; neither cared they for the increase, presuming that howsoever the harvest pros-

pered, the general store must maintain them, so that we reaped not so much corn from the labor of 30, as now 3 or 4 do provide for themselves."

Isn't it amazing how little human nature has changed since then?

The same basic facts explain why America with only 10 percent of agricultural workers, is worried about food surpluses, while almost all the communistic countries devote 50 percent of their labor to agriculture and still suffer from shortages.

But the idea of equal sharing still had its appeal, and something over a hundred years ago a considerable number of cooperative communities were set up in this country in an effort to escape some of the difficulties inherent in the division of labor. If this basic idea were ever to succeed, it should have succeeded among some of those groups whose backgrounds were similar, whose ideals were high, and whose wants and capital requirements were very modest. In a matter of months or years, however, the lack of adequate incentives to stimulate the efforts of each individual always showed its debilitating effects. The inherently lazy and inefficient began to take too much advantage of their free ride, while those with vigor and ambition were not long content to support the slackers by their efforts. The real workers soon decided either to take things easy themselves or to seek a place where they felt their ability and energy would receive a more just reward. Equality lapsed into dull mediocrity. This lack of appeal to the more ambitious younger generation, and the tendency to retain in the enterprise only those least fit, were the major causes of their failure.

While Soviet Russia naturally comes to mind as an example of communism, it is, of course, not truly communistic, but is a gangster-type dictatorship based on repression, propagandizing, and a communistic lingo. It has apparently succeeded in forcing people to work hard by policing them even more effectively than did the czars. The hammer and sickle are indeed appropriate symbols of the back-breaking labor which results when a nation decides to forswear the incentives for saving which are necessary to provide the power and tools to increase productivity and reduce human effort. However, unless the Slavic spirit is utterly different from the Nordic, I believe the Soviet's rigid repression of the many by the few, its antagonism toward religion, truth, and individual freedom, and its extremely low standard of living will eventually destroy the dictatorship. The Kremlin's desperate concern, and the primary reason for the maintenance of the Iron Curtain and the repression of free speech, is to prevent the Russian people from learning the truth about life in a free country, and to keep them believing the propaganda which is fed them from childhood unto death.

Using as a criterion the freedom and the material and spiritual welfare of the common man, there can be no question but that our own Nation leads the world by a wide margin. Its century and three-quarters of rapid progress and stable government is a tribute both to the sound plans of the Founding Fathers and to the honesty and ability of most of their successors. We have 7 percent of the world's population, yet we give high school and college educations to more people than the rest of the world put together. However, I am sure that I need make no defense of our democratic form of government before this audience. The question to which I would address myself in the time remaining is whether the form of organization of business, usually referred to as our capitalistic system, is fundamentally sound and adapted to the modern world.

I think the worst handicap of this economic system is its customary name, which, together with the usual cartoon image of what is supposed to be a capitalist, starts the system off at a disadvantage in the popular mind. The name is inaccurate if it implies that a return on capital is either the main purpose or the main result of the system. Neither is true. The primary functions of capital are to make jobs, to expand production, and to supply the tools and power to supplement human energy. To show the importance of just this last item: a hundred years ago human and animal energy did 94 percent of the work in this country. Today this country uses about 24 times as much work energy as we did then, but now men and animals together supply less than 6 percent, instead of 94 percent, of the total. As another example: In Italy, 53 million people, hampered by inadequate capital, few tools, and little freedom, turn out only about as much manufactured product as General Motors with only 600,000 employees.

Capitalism should certainly not be judged by what Karl Marx wrote 100 years ago about the European type of capitalistic system then prevalent. That system bears no real resemblance to modern American competitive capitalism, or peoples' capitalism, as it has evolved under generally enlightened and socially conscious leadership. Marx predicted that capitalism would concentrate more and more wealth and income in fewer and fewer hands, with the improverishment of the masses, whereas the exact opposite has taken place in America. In 1941 only 4 percent of the families had incomes of $5,000 or more, while in 1956, only 15 years later, approximately 50 percent of all families had incomes in excess of that amount.

Some would call our system the profit system, but that might seem to imply that profits to capital were guaranteed. I think the most accurate name for our system is the hope-of-profit system. On the average, venture capital really earns surprisingly little—well below 10 percent per annum—after deducting taxes and the losses from unsuccessful ventures; but the holding out to capital of a reasonable chance for a good profit is the best and, in the long run, the cheapest way to get risks taken and new industries built. The guaranty of a fixed return equal to this average figure would be less of an incentive and yet would cost society much more because it would have to subsidize so many unsound ventures.

The Socialists talk about "production for use" as something vastly superior to our system of production for profit, but the real difference is that under socialism the planners try to estimate what the public should use, and if they guess wrong, the public still has to pay. Under the system of production for profit, the individual consumer is the boss, and if the producers guess wrong, it is their loss. And production for profit means that in the long run both the producer and the user must profit from the article, or demand drops off and productive effort is automatically diverted to something the consumer really wants. No better way to really insure production for use has been devised than our hope-of-profit system. And the average cost of the capital is only about 6 percent of the sales dollar.

I think an apt illustration of how our system gets results is the old-fashioned peanut hunt which was a pleasant feature of children's parties when I was a boy. You doubtless remember the scrambling which began when the announcement was made that peanuts were hidden around the house or yard, that each youngster could keep all he found, and that there would be a prize for the one who found the most. It must be admitted that there was some duplication of effort and waste of energy, but the peanuts were found, they were found in a hurry, and best of all, everyone had a good time. Now suppose we substitute a planned economy under a dictator who decides just where each child must hunt, and orders him under threat of punishment to bring in and surrender all his peanuts. If the dictator is a good planner and has enough secret police to force obedience, the peanuts may eventually be found, but I will wager that the total man-hours required, including that for planning and enforcing orders, would be doubled—and all the fun would be gone.

Still less efficient would be the result under a socialistic plan, which would set up committees among the children to decide how to proceed, and particularly just how the peanuts were to be divided after they were found. The Socialists always seem to be interested more in division than in multiplication. Working on this basis, I will wager that half of the peanuts would never be found, and the only participants who would have any fun would be those who got to be nasty little bureaucrats and requisitioned the peanuts from those who did the hunting.

The past few years have fortunately seen a considerable change in the trend toward socialism, both in our Nation and in our educational institutions. We are gradually realizing that so-called governmental subsidies do not come from the Government, but merely involve its taking $2 from Jones in order to give a dollar to Brown, and using the other dollar for the costs of the bureaucracy which must police it all. Private enterprise is the force which really creates productive jobs and improves the standard of living for all who are willing to work.

However, the continued success of our hope-of-profits system will depend upon its ability to maintain a fair and reasonable balance of incentives for labor, management, and capital. Workers must be well compensated in proportion to their abilities, efforts, and output, and the possibility of still greater rewards must always be kept before them. The opportunity to get ahead is the great incentive for the average American, and without decrying the value of a reasonable amount of social security, it will be a sad day for America if it ever puts mere security ahead of opportunity.

Unfortunately, some of the tendencies of actual and proposed legislation during the past quarter century strike at the very roots of the incentives of all classes of society. The incentive for capital to take risks and its opportunity to grow have been greatly reduced by heavy taxation, on both corporations and individuals, and particularly by the double taxation on corporation earnings distributed as dividends. The incentive for management is reduced by heavy income taxes and growing restrictions and regulations on almost every form of business activity. The incentive for labor to work hard and get ahead tends to be reduced if the worker comes to feel that his future welfare is dependent more upon seniority, or his union, or the Government, than upon his own efforts and ability. Even desirable plans, such as old-age pensions and unemployment benefits, when carried too far, reduce the incentive to work. As the colored couple said when offered work on the plantation: "We'd ruther stay on relief and be independent."

Even the incentive to our inventors has been threatened by proposed legislation which would greatly reduce the value of a patent. It seems amazing that such an act of national hara-kiri could be seriously urged in a country whose progress has been so largely due to research and invention and to the rapid development of these inventions made possible by our patent system. As Abraham Lincoln has said, our patent system has added the fuel of interest to the fire of genius.

One of the principal responsibilities of management is to work out and maintain proper incentives for the entire personnel of business. This is not an easy problem. Fair wages are, of course, the first fundamental, but money is by no means the only important

incentive to the average American worker. As Clarence Francis has well said, "You can buy a measured number of skilled muscular motions per hour, but you cannot buy enthusiasm, you cannot buy initiative, you cannot buy loyalty." Good, safe working conditions, pleasant associates, fair and intelligent supervision, and an understanding of how each one's work fits into the whole business, all help to stimulate interest, enthusiasm, and loyalty in an organization.

Management must also be particularly careful to see that all workers, up and down the line, are treated fairly, that grievances are handled sympathetically, and that hard work and ability are recognized. The higher positions should be filled from within the organization whenever possible.

Management, too, is entitled to proper rewards and incentives. Salaries of top executives are sometimes criticized as too high, but don't forget that 91 percent tax on the top bracket. In most industrial companies executives salaries are primarily the result of the law of supply and demand. Where the top positions are recognized as being open to any employee of energy and ability, and not earmarked for a few favorite sons, good executive salaries are a relatively cheap stimulus and incentive to the whole organization. As the poor man's philosopher, Benjamin Franklin, once said in answering some current criticism of luxury as being a great evil, the hope of one day being able to purchase and enjoy luxuries is a great spur to labor and industry.

Finally, adequate incentives for capital must not be overlooked. Timid capital, demanding security above all else, is these days content to work for as little as 3 or 4 percent per annum. However, courageous or venture capital, willing to take risks and incur losses, is what we need for progress. If the return on those ventures which happen to be successful is held down to any arbitrary percentage, or is too heavily taxed, it not only drives capital into riskless and unproductive investments, but it stifles the regeneration of the venture capital which is badly needed to to offset the losses from the many ventures which are not successful. Excess profits taxes and proposals to limit the earnings of a business enterprise to an arbitrary percentage on the capital employed ignore the factors of enterprise, research, and invention, and other manifestations of brains which are certainly as much entitled to a return as money invested in mere bricks and mortar.

When we stop to realize what capital has done in this country to develop new industries and to put such remarkable amounts of power and such amazing tools in the hands of the average American worker, we realize that there must be an end to the long downtrend in the incentives to capital, or the standard of living of all of us will ultimately suffer. It takes an investment of about $20,000 to make a new job in industry today, and we must create more than 800,000 such new jobs each year if we are to take care of our growing labor force. Our Government should be actively encouraging the entry of new capital into industry. This administration has taken some modest steps in that direction, for which it has been unjustly criticized in some quarters. If you and those who follow you are to get good jobs, we need more, rather than less, encouragement of risk capital.

At the outset of my talk I spoke of the importance of enthusiasm. I want to emphasize that again in closing. It has always seemed to me that our hereditary instincts are sadly deficient in that, while they spur us to almost superhuman efforts to avoid the loss of a finger or a toe or other relatively unimportant physical member, we seem to have no instinctive sense of the preeminent value to us of that spirit of enthusiasm which is fortunately so characteristic of youth. In many individuals it gradually atrophies or withers away as middle age approaches, with small effort to nourish it and little notice of its disappearance. Yet how greatly we admire the trait when we see it preserved in some men clear up to a ripe old age, and how much it has to do both with the attainment of success and the enjoyment of life. Guard that treasure as you would your life—if you cannot be enthusiastic about your line of work or the company you work for, after a fair trial, change your work or your company. If you cannot be enthusiastic about our country, try another for a while. If you are critical about some situation in your business or your community, instead of merely complaining, get enthusiastically behind some reform you feel is needed. In such efforts, however, you must learn to expect obstacles and rebuffs, and will need patience and tolerance as well as enthusiasm, if you are to win your point instead of merely antagonizing those who make the final decision.

The unique and vital nature of enthusiasm has long been recgonized—indeed, its very name, from the Greek words "en" and "Theos," literally means "God within." Again I say, guard that divine spark as your greatest asset, temper it with judgment and patience, and your rewards will be both material and spiritual.

Promoting the United Nations Emblem

EXTENSION OF REMARKS
OF
HON. WILLIAM E. JENNER
OF INDIANA
IN THE SENATE OF THE UNITED STATES
Wednesday, August 6, 1958

Mr. JENNER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a letter on promoting the United Nations emblem, which was printed in the July 12, 1958, edition of the Brooklyn Tablet.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

PROMOTING THE UNITED NATIONS EMBLEM

DEAR SIR: Something called the United States Committee for the United Nations—at 45 East 65th Street, New York—is launching a very overambitious program to promote the United Nations and the U. N. emblem.

Already the United Air Lines is carrying the U. N. emblem on their planes, and all airlines in the United States (so they say) will eventually do the same. According to Mr. Roger Enloe, who is promoting this scheme, the plan will include placing this U. N. emblem on all transportation in the country—trains, buses, and boats. He says many New York stores have promised to use the emblem, and big business and industry will soon use it on their stationery. They are issuing a fancy blue-and-white folder—The Air Lines and the United Nations—including an article from the United Nations News for June (reprinted in June 16 CONGRESSIONAL RECORD) telling the whole story.

Where is our national emblem in all this? If you do not wish to see our emblem—Old Glory—so replaced and disrespected, it will be well to help in stopping this before it goes any further. Obtain these folders, and then voice your objections. Already, many letters have gone in to Mr. W. A. Patterson, president of United Air Lines. And a public relations man in New York stated if enough such letters were received, it might change their tactics.

We believe this plan to put the U. N. emblem on airlines and elsewhere in America is a violation of our flag code, passed as an amendment in 1953—I quote: "No person shall display the flag of the United Nations or any other national or international flag equal, above, or in a position of superior prominence or honor to, or in place of, the flag of the United States at any place within the United States or any Territory or possession thereof: *Provided*, That nothing in this section shall make unlawful the continuance of the practice heretofore followed of displaying the flag of the United Nations in a position of superior prominence or honor, and other national flags in positions of equal prominence or honor, with that of the flag of the United States at the headquarters of the United Nations."

Planes are not in the air all the time. When on the ground at our airports, this display of the U. N. emblem in place of ours may be considered a flag violation. At least, it seems unthinkable that any United States businessmen would be willing to promote such a scheme which is most aggressive and an attempt to replace our own national emblem.

The elaborate folders are given to each person who boards a plane, and are being widely distributed, promoting the idea of the United Nations. Symbolically this means, the United Nations over America, as emblems are symbols. Should our United States mail be carried on planes under the U. N. emblem? Give this a little thought, then do your share to stop this one-world scheme, and demand proper respect to the national emblem of America.

HELEN P. LASELL,
Chairman, United States Flag Committee.
JACKSON HEIGHTS.

Social-Security Legislation

EXTENSION OF REMARKS
OF
HON. WILLIAM LANGER
OF NORTH DAKOTA
IN THE SENATE OF THE UNITED STATES
Wednesday, August 6, 1958

Mr. LANGER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a resolution dealing with increases in social-security benefits.

There being no objection, the resolution was ordered to be printed in the RECORD, as follows:

AMERICAN FEDERATION
OF STATE, COUNTY,
AND MUNICIPAL EMPLOYEES,
STATE HOSPITAL EMPLOYEES No. 1441,
Jamestown, N. Dak., June 27, 1958.

Senator WILLIAM LANGER,
United States Senator,
Washington, D. C.

DEAR SIR: We, only 310 members of the 185,000 members of the American Federation of State, County, and Municipal Employees employed here at the Jamestown State Mental Hospital are virtally interested in the passage of H. R. 9467 which will provide sane and sensible increases in social-security benefits for our employees.

We, most heartily and sincerely approve the passage of H. R. 9467 known as the Forand bill.

May we ask your support for and in favor of this vital bill, H. R. 9467.

Most sincerely yours,
DEANE L. CHAPIN,
Secretary, Local 1441.

Effect of the Recession on Automobile Dealers Throughout the Country

EXTENSION OF REMARKS
OF
HON. ESTES KEFAUVER
OF TENNESSEE
IN THE SENATE OF THE UNITED STATES
Wednesday, August 6, 1958

Mr. KEFAUVER. Mr. President, the Wall Street Journal of yesterday contains an article on the effect of the recession on automobile dealers throughout the country. It is apparent that the present slump in business is driving many automobile dealers out of business. They are forced either to give up entirely, be bought out by the automobile companies, or combine their franchise with some other dealers. The National Automobile Dealers Association estimates that 3,500 dealers will go out of business, go bankrupt, or switch franchises this year. So far this year the rate of dealer bankruptcies is double that of last year.

We see that the recession, inflation, and monopoly power tend to work hand in hand. Prices that are higher than necessary have helped to reduce demand; the lack of demand has caused distress to many of these small dealerships; this distress causes many of them to go out of business, resulting in a higher degree of concentration in the industry. The recent rise in steel prices will only make this serious situation more difficult to solve.

I hope the Members of the Senate will read this article so they may be informed about what is happening in this critical segment of the economy.

I ask unanimous consent to have this article printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

AUTO DEALERS' RANKS THIN AS SLUMP BRINGS CLOSINGS, MERGERS, WEEDING OUT BY MAKERS

Auto dealer ranks are being thinned amid the slowest car sales year since 1952.

Some of the pruning is the work of the auto companies themselves—as under the General Motors Corp. program, announced early this year, of buying out dealerships in what are deemed by the company to be obsolete locations.

But bankruptcies and voluntary closeouts also are taking a toll.

And some companies are changing tack in their moves to strengthen and enlarge their distribution systems.

An example is Ford Motor Co.'s setup for marketing the Edsel, which came out in 1957 and ran into a generally rocky market for so-called medium-priced 1958 model cars. Sales of cars in this range totaled 660,000 in the first half of 1958, some 36 percent below a year earlier.

Many Edsel franchises that started out as exclusive dealerships are winding up under the same roof with Lincoln and Mercury.

FEWER EXCLUSIVE FRANCHISES

Although there are currently some 1,200 Edsel franchises, up from 1,150 at the start of 1958, according to James J. Nance, Ford vice president and general manager of the M-E-L division, the number of exclusive Edsel vendors has dropped to 600 from 900 at the beginning of the year.

Is there a policy now of combining the Edsel franchises with Lincoln-Mercury?

Mr. Nance says there isn't. He states the division's dealerships are being realined to get the strongest representation.

He also disclosed some other plans for Edsel: The line, offered in four series when the car made its bow last September, will be curtailed in the 1959 models, says Mr. Nance. He explains "The line was too wide," but gives no details of what the production plans are.

Edsel and Lincoln-Mercury dealers, however, speculate it will be trimmed to reduce conflict with the Mercury price class. These dealers guess that the highest-priced Citation models will be dropped and perhaps the next highest Corsair series, also.

Chrysler Corp.'s program to build up single-line outlets and reduce the percentage of its dealers who handle two or more Chrysler makes also has slowed. The company had particularly hoped to set up exclusive Plymouth dealers to put Plymouth merchandising on a similar basis as that of the Ford car and G. M.'s Chevrolet. But where Chrysler established over 100 exclusive Plymouth outlets in 1957 it has added only a handful in 1958. It now has only 200 exclusive dealerships for Plymouth with over 7,500 Plymouth franchises in all.

Most Chrysler Corp. dealers handle Plymouth plus another of the corporation's car lines.

STRONG DEALERSHIPS VITAL

Auto company officials regard maintenance of strong dealer organizations as a vital part of their business. "We can't even afford to lose one really good dealer," one has been quoted as saying. Over the last 20 years the number of dealers for American makes has trended downward despite the uptrend in auto sales as dealships have grown larger and some makes of cars have disappeared.

After declining some 5,000 between 1941 and 1955 to just over 40,000, the number of dealers in American makes rose to over 41,000 in early 1956. The rise was largely a result of heavy recruiting by auto companies in anticipation of further lush years such as 1955, when 7.2 million cars were sold. But such years did not come and normal attrition dropped the number to just over 38,000 by the beginning of this year. With 1958 sales expected to fall to 4.6 million, the lowest since 4.2 million in 1952, auto companies indicate they've aided the weeding out process to help more promising dealers.

The National Automobile Dealers Association estimates that 3,500 dealers will go out of business, go bankrupt or switch franchises this year. The National Automobile Dealers Association has no estimate of what net loss will be. Dealer bankruptcies in the first half, at 147, were about double a year earlier.

General Motors provides no figures on how many dealers it has bought out but some of the results can be seen in Detroit. Seven Buick dealers have dropped out in that metropolitan area this year out of a former 21, and, according to an unofficial source, 2 quit under the close-out program. Of 5 Pontiac dealers who dropped out to reduce the total to 16, 1 was bought out by General Motors, according to this source. Four of 23 Oldsmobile dealers closed, of which 2, it's understood, were bought out. One Chevrolet dealer was closed by General Motors and no Cadillac changes were reported.

One Detroit Buick dealer estimates his sales in the first 20 days of July were up 50 percent from the like period in June because of the closing of 2 competing Buick dealerships.

DROP IN DEALER FORCE

Chrysler Corp.'s dealer force is expected to drop to around 7,800 to 8,000 this year from 8,600 at the start of the year. Chrysler says it is attempting to reduce the number in an orderly way, rather than let economic forces do the job, so as to retain dealers and locations it wishes to keep.

"If you let economics do it, you don't always lose the right ones," says Byron Nichols, Chrysler's vice president, automotive sales. "Sometimes it hurts. Dealers in strategic areas may fold or go over to a rival." Thus, he says, Chrysler is trying to select dealerships it wishes to close. Former 3-dealer towns are being designated 2-dealer territories, for instance.

Wall Street Journal contacts with dealers around the country indicate that consolidations have been proceeding apace in the Edsel and Lincoln-Mercury lines.

In Salem, Oreg., Edsel dealer Harold Agnew is turning over his franchise to a Lincoln-Mercury retailer and says the Mercury-Edsel-Lincoln plans to tie the two franchises together "rather than have two separate dealers go broke or quit from discouragement."

"We've been approached by Ford Motor Co. with an offer to combine our Edsel dealership with the Lincoln-Mercury outfit," says Bernie Goldstein, owner of Fort Worth's Lone Star Motors. The idea is appealing to Mr. Goldstein. "With Lincoln, Mercury, Edsel and the English Ford under one roof we'd have a good outfit. We'd have one overhead instead of two."

Stanley Steward, vice president of Dan Holahan's combined Mercury-Edsel-Lincoln dealership in Flint, Mich., reports that the Edsel was added April 23.

Richard Hart, assistant Edsel manager for the Greater Boston district, says his office is now approving Lincoln and Mercury dealers for Edsel franchises but will leave some Edsel dealers exclusive. A check with the Ford regional office at Los Angeles showed that of 48 Edsel dealers in southern California last fall, only four are still exclusively Edsel.

Some Edsel dealers, however, reported they are happy with the lone car. Arthur Brady, an exclusive Edsel dealer in Hingham, Mass., said he is not dissatisfied with the Edsel, having sold 10 in May and 12 in June. "I made good money in those months," he said. Other Edsel dealers reported they have been unsuccessful in getting a Lincoln-Mercury franchise to dual with the Edsel, usually reasoning that it was because of a strong Lincoln-Mercury or Lincoln-Mercury-Edsel dealership in a nearby territory.

According to Mr. Nance, the teaming up is being done on a selective basis and will continue to "depend upon the individual circumstances."

He recently announced formation of new general sales organization in Dearborn for the Mercury-Edsel-Lincoln division, which he termed part of a reorganization in preparation for marketing the division's 1959 line of cars. Mr. Nance said that the 1959 Mercury "will be completely different than any previous models in this line, with a fresh and new styling concept."

"Retail auto sales in recent weeks show a definite improvement and the dealer organization handling our products will balance out their 1958 stocks in a very orderly fashion and will wind up the model year with very low inventories," Mr. Nance commented.

C. E. Bowie, former sales manager for the Lincoln and Mercury sales office, was named by Mr. Nance to the newly created position of general sales manager of the division's consolidated sales office. George S. Coats, Mr. Bowie's former assistant, was appointed assistant general sales manager.

Sales managers for the separate car lines in the division were also named. N. K. Vanderree continues as Edsel sales manager, R. F. Williams was appointed Mercury sales manager, E. F. Coll will head Lincoln and Continental sales and H. O. Lund will continues as manager of imported car sales.

Interpreting ADA

EXTENSION OF REMARKS
OF
HON. STEVEN B. DEROUNIAN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, August 6, 1958

Mr. DEROUNIAN. Mr. Speaker, on July 29, the gentleman from New York [Mr. CELLER], who enjoys the respect of all Members of this body and with whom I have served many years, extended his remarks in the RECORD to disagree with my comments about Americans for Democratic Action 3 days earlier.

Certainly, we all respect the great wisdom of the gentleman and agree that on most subjects he is both articulate and knowledgeable. It is unfortunate that he, like so many of those he considers truly patriotic Americans, have a blind spot in their thinking about this group which first infiltrated and then took over the Democrat Party.

It is with considerable regret that I must correct the gentleman, but I feel he will be the richer because of what I say and the people of our great State of New York will be benefited by the replacement of propaganda with facts.

First, the gentleman feels that the policies of greater spending and less revenue, as proposed by ADA will bring a speedy end to the recession into which the Republican administration has plunged this country.

The national center of this so-called recession seems to be Detroit, where the economic dictates of Walter Reuther prevail. Mr. Reuther, who wrote from Moscow, "Carry on the fight for a Soviet America," is one of the principal financial angels of ADA, as well as of the Democrat Party. His economic views, as put into practice in the center of unemployment, can hardly be blamed on this administration.

As for the ADA recommendations that the Government slash its income and spend more money, I can say only that I have never heard of this policy restoring economic stability in the home, in business, or anywhere else. Perhaps the gentleman can tell me of an instance where this formula was effective.

ADA Board Member Reuther apparently preaches this doctrine but does the opposite when the shoe pinches his own badly chewed foot. Recently, to meet the effects of hard times within his United Auto Workers Union, Reuther cut salaries, fired people, and did everything except apply his antirecession formula for government.

The gentleman also objected to my remarks about ADA because many of its officials, such as Eleanor Roosevelt, David Dubinsky, and Robert Nathan—are, as he quaintly put it, "zealously devoted to the cause of democracy in this country."

To this statement, I can answer only that their brand of democracy is far removed from that envisioned by the framers of our Constitution. Otherwise, I am sure, they would not be clamoring so constantly for change.

The gentleman denies that the ADA finds Russian accomplishments greater than our own, but in the next breath says ADA statements to this effect are but to call this Soviet threat to our attention.

The gentleman also denied that ADA has recommended economic aid to Red China and its admission to U. N.

To correct this erroneous impression, I refer him to the annual platforms of this self-professed anticommunistic organization.

For years the ADA has urged that Red China be recognized. Even as late as May of this year the ADA issued a statement which, when the backing and filling is removed, says, "ADA urges immediate negotiations toward diplomatic recognition of the Peking regime."

The gentleman from New York quotes me incorrectly when he says I claimed the "ADA is devoted to a program of full and steady employment." What I said was "the ADA, through its program, promises full and steady employment and production." The inference is quite different. A promise by the ADA is icing on an unbaked cake.

In reading the remarks of the gentleman from New York it is obvious that he has misinterpreted statements concerning the ADA which I made on the House floor, on Monday, July 21. Perhaps he has made this same mistake in evaluating and supporting the program of the ADA.

De Seversky Gives United States 3 Years To Catch Russia

EXTENSION OF REMARKS
OF
HON. W. J. BRYAN DORN
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, August 6, 1958

Mr. DORN of South Carolina. Mr. Speaker, we should have listened to Mr. de Seversky years ago.

The following article tells the story:

DE SEVERSKY GIVES UNITED STATES 3 YEARS TO CATCH RUSSIA

NEW YORK, August 3.—Maj. Alexander P. de Seversky, military analyst and aviation pioneer, said today that the United States has 3 years to prepare to match Russia's armed strength or face possible enslavement or atomic ruin.

The Russian-born former air ace and founder of Republic Aviation Corp. said this country has made very little progress in military preparedness since the Soviet sputniks were launched.

He called the concept of limited war "military nonsense and military trash," and said the armed services must stop their negative missile rivalry and become integrated into a single military force operating as part of a Department of Air and Space.

De Seversky appeared on a filmed and recorded survival-and-freedom interview conducted by Mike Wallace on the American Broadcasting Co. network. The program was produced on ABC in cooperation with the Ford-financed Fund for the Republic.

"We are facing the situation where the enemy has equal, and in some instances superior, capacity," he said. "The only thing that holds him at bay is our Strategic Air Command today."

He said the strides made recently in military preparedness have been insignificant, and certainly not commensurate with the dangers we face.

He predicted that if United States and Russian military progress continue at the present rate, by the end of 1961 the United States Strategic Air Force will be utterly insufficient—about 25 percent of what it should be. The United States will lag behind the Russians in intercontinental ballistic missiles, he said, and the Russians will have a jet bomber force four times greater.

De Seversky said it will be some time before Defense Secretary Neil McElroy will have enough military knowledge to express his own views on preparedness. He said that President Eisenhower, although a veteran military man, does not have the necessary technical knowledge, either, to handle the situation because experience in World War II will have very little value in fighting world war III.

Booklet Has Information on Scholarships and Loan Funds

EXTENSION OF REMARKS
OF
HON. W. J. BRYAN DORN
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, August 6, 1958

Mr. DORN of South Carolina. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the Greenville (S. C.) News of July 20:

BOOKLET HAS INFORMATION ON SCHOLARSHIPS AND LOAN FUNDS

(By W. D. Workman, Jr.)

COLUMBIA.—College-bound youngsters who are long on ability but short on funds should latch onto a small booklet called From High School to College if they are interested in obtaining scholarships or loan funds.

That little 41-page booklet is a veritable gold mine of information and it might well prove to be a mine of gold for students who find it the key to open financial resources they did not know existed. The publication is jammed with factual, practical information which tells the would-be college student how to go about getting a scholarship or a loan, and it lists scores of specific opportunities for such assistance.

For example, every State institution in South Carolina is enumerated with a paragraph explaining the scholarship or loan funds available at each. Another section lists the private colleges and universities in the State, giving the same information for them. And, in all categories, opportunities for Negro as well as white students are listed, and junior colleges are included as well as the senior institutions.

Another section lists 13 separate loan funds which are available to South Carolina students, and suggests where still additional loans might be obtained. There is a listing of 20 specific scholarships available for students who wish to attend college in South Carolina, plus a listing of 31 other scholarship sources which are not restricted to use in this State.

Scholarships and loan funds sponsored by business and professional firms or associations are listed, along with indications as to the qualifications required and the procedures to be followed in obtaining such financial assistance. More than 38 South Carolina firms are itemized as affording

financial assistance to children of their employees, or to unrestricted groups of high-school students.

But along with these invaluable listings, representing the best single compilation of scholarship opportunities yet prepared in South Carolina, is some valuable advice to high school youngsters and to their parents.

Students are told to begin planning early if they wish to attend college, to maintain high academic standing throughout high school, to survey the field of college courses and opportunities to determine where their interests and their prospects for financial assistance lie, and to develop good habits of study, research, library use, and other skills.

The booklet also gives sound advice on means whereby enterprising students can help themselves financially by working their way through college, in whole or in part. Ambitious youngsters are urged to develop skills and services such as typing, operating business machines, waiting on tables, handling switchboards, and similar tasks which enhance their value as part-time employes.

Credit for preparing this helpful aid goes to two agencies, the South Carolina division of the American Association of University Women and the State department of education. A special AAUW committee, headed by Miss Ada M. Moser, of Columbia, compiled most of the scholarship and loan fund data, and worked it into printed form with the help of department of education officials. The department handled the publication problems and has on hand ample supplies of the booklet.

Copies may be obtained by writing to Miss Ellen Lyles, supervisor of guidance services, or to Miss Elizabeth Ketchin, editor of publications, at the State department of education, Columbia, S. C. Their advice to youngsters, and to parents, is to obtain the booklets in advance of school openings, and to begin planning early in a child's academic career, preferably along the 8th, 9th, or 10th grade levels. They, and the booklet itself, point out the increasing difficulty of gaining admission to college, and they urge long-range planning.

TVA

EXTENSION OF REMARKS

OF

HON. JOHN J. SPARKMAN

OF ALABAMA

IN THE SENATE OF THE UNITED STATES

Wednesday, August 6, 1958

Mr. SPARKMAN. Mr. President, in the Washington Post and Times Herald of yesterday, August 5, 1958, there appeared a full page ad, signed and paid for by certain newspapers in the Tennessee Valley region. It is a very fine statement as to the importance and the urgency of completing legislation on the TVA self-financing program which the Senate passed last year, and which is now pending in the House of Representatives.

I ask unanimous consent that the advertisement, together with the newspaper signers, be printed in the Appendix of the RECORD.

There being no objection, the advertisement was ordered to be printed in the RECORD, as follows:

HAVE BALL, WILL CARRY

(The newspapers of the Tennessee Valley signed below have lived with the Tennessee Valley Authority for 25 years and have watched at firsthand the unfolding of its works. The following statement about TVA, and the situation of the people of the valley with relation to TVA, is from that close acquaintance. It is given earnestly and purposefully in hopes that our valley, which has progressed far with TVA, may be permitted the means of continuing this progress.)

The use of electric power in the Tennessee Valley grows steadily and rapidly. The adequacy of its power supply is, of course, vital to the valley's development and to its value to the Nation. To service the mounting demands of defense agencies as well as of civilian consumers, TVA now is using current earnings to finance additions to its power system. This method obviously will not suffice: no great utility attempts to finance its expansion program out of current earnings. Unless a better method is provided for TVA, the valley demand for power will exceed the production capacity of the TVA system within the next few years.

A better method is being sought. There is now before Congress a plan for TVA to meet its future power needs by going into private money market for funds.

The Senate approved this plan last year by a large majority; the question will soon come to a vote in the House.

Under this plan, TVA would issue revenue bonds to finance new generating plants.

These revenue bonds would be paid for solely and directly by the users of TVA power; would not be obligations of the Federal Treasury and would not add to the national debt; would be subject to Federal income taxes; would stand on their merits with any other bonds in the private money markets.

The people of the Tennessee Valley believe this is the best way available for TVA to provide for normal future power needs. Users of TVA power are entirely willing to have spelled out in law their responsibility to pay, through their power bills, for this method of future financing of TVA's power system.

Although the revenue-bond plan would turn the job of financing future power expansion over to the people of the Tennessee Valley, the Nation will continue to own TVA. TVA will continue as a Federal corporation and all its properties will be part of the national wealth. Its tremendous power plant will continue to add to the strength of the Nation for defense and to the overall strength of the national economy.

It is the consensus of the newspapers of the valley that the plan for TVA financing now before Congress is fair and workable. We urge objective appraisal of it by the press of the Nation and favorable consideration of it in the Halls of Congress.

Twenty-five years ago Congress shaped TVA to the job of controlling the Tennessee River (1) for navigation, (2) against floods, (3) to produce electric power. Its success at this assignment is today a top American showpiece, universally admired and widely copied.

The Government has to date invested about $2 billion in the water control and power facilities of TVA, the total divided 8 percent to navigation, 9 percent to flood control, and 83 percent to power.

The navigation investment has added 627 miles to the Nation's inland waterway system and is amply justified by savings in transportation costs.

The flood-control investment is justified by savings from destruction in the valley itself and in the valleys below.

The power investment is being paid for by the users of TVA power.

TVA powe. is distributed in the cities and countrysides of the valley by 152 locally owned systems, including 2 small privately owned systems, at exemplafy rates which have brought about lowered power rates in all the areas surrounding the valley.

The TVA power system is now the country's greatest. All of its net proceeds belong to the Government. Up to last year, the Government thus had realized from its TVA power investment $413 million, representing an average annual return of 4 percent.

FIRST CALL, LION'S SHARE

The Government itself takes more than half—56 percent—of all TVA power. The power is used for defense purposes. The atomic plants at Oak Ridge and Paducah use twice as much power from TVA as is used by the city of New York. The mammoth wind tunnels at Tullahoma use more power than the city of Atlanta. A large block of TVA power goes to the Redstone (rockets) Arsenal at Huntsville, Ala. Others go to heavy industries in the valley closely allied with defense production. A savings of millions of dollars in power costs thus accrues to the Government and all of the people.

The combined load of this ponderous Government demand and the rising needs of civilian users crowds perilously on the heels of the supply. Additional powerplants must continually be planned and provided to meet the demand of the future.

The power users of the valley are willing to pay for this additional capacity through their monthly bills. They are asking that TVA be authorized to obtain capital for new construction by issuing revenue bonds, to be sold in the open-money market.

In sum, the people of the valley are asking for a means of financing TVA's new powerplants outside of the Federal budget, on their own responsibility. They understand that in paying for the necessary additional capacity on the TVA power system they are adding to the value of a great enterprise owned by the Nation.

Signed and paid for by these newspapers of the Tennessee Valley region: The Advertiser, Haleyville, Ala.; Alabama Courier, Athens, Ala.; Ashland City Times, Ashland City, Tenn.; Bedford County Sun, Shelbyville, Tenn.; Belmont Tri-County News, Belmont, Miss.; Camden Chronicle, Camden, Tenn.; Carroll County Democrat, Huntingdon, Tenn.; Catoosa County Times, Ringgold, Ga.; Choctaw Plaindealer, Koselusko, Miss.; the Citizen, Cookeville, Tenn.; Citizen Times, Scottsville, Ky.; Clarksville Leaf-Chronicle, Clarksville, Tenn.; Cleveland Daily Banner, Cleveland, Tenn.; Clinton Courier-News, Clinton, Tenn.; Commercial Appeal, Memphis, Tenn.; Community News, Madison, Tenn.; Courier-Journal, Louisville, Ky.; Crossville Chronicle, Crossville, Tenn.; Cullman Democrat, Cullman, Ala.; Cullman Times, Cullman, Ala.; Daily Herald, Columbia, Tenn.; Decatur Daily, Decatur, Ala.; Democrat-Union, Lawrenceburg, Tenn.; Donelson Diary, Donelson, Tenn.; Dunlap Tribune, Tracy City, Tenn.; Florence Herald, Florence, Ala.; Florence Times, Florence, Ala.; Franklin Citizen, Russellville, Ala.; Franklin County Times, Russellville, Ala.; Fulton Daily Leader, Fulton, Ky.; Gallatin Examiner, Gallatin, Tenn.; Goodlettsville Gazette, Goodlettsville, Tenn.; Green River Republican, Morgantown, Ky.; Hartselle Enquirer, Hartselle, Ala.; Hickman County Times, Centerville, Tenn.; Humphreys County Democrat, Waverly, Tenn.; Huntsville Times, Huntsville, Ala.; Itawamba Times, Fulton, Miss.; Jackson Sun, Jackson, Tenn.; Jasper Journal, Jasper, Tenn.; Kentucky New Era, Hopkinsville, Ky.; Knoxville, News-Sentinel, Knoxville, Tenn.; Lauderdale County Enterprise, Ripley, Tenn.; Ledger & Times, Murray, Ky.; Lexington Progress, Lexington, Tenn.; Limestone Democrat, Athens, Ala.; Maryville-Alcoa Daily Times, Maryville, Tenn.; McNary County Independent, Selmes, Tenn.; Memphis Press-Scimitar, Memphis, Tenn.; Monitor Herald, Calhoun City, Miss.; Moulton Advertiser, Moulton, Ala.; Nashville Tennessean, Nashville, Tenn.; New Albany Gazette, New Albany, Miss.; North Georgia News,

Who Killed Cock Robin?

EXTENSION OF REMARKS
OF
HON. EMMET F. BYRNE
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, August 6, 1958

Mr. BYRNE of Illinois. I commend the Chicago Tribune's phraseology, "Who Killed Cock Robin?" in getting to the cause of the delay in considering labor legislation in sufficient time to take some positive steps in this Congress.

[From the Chicago Daily Tribune of June 10, 1958]

WHO KILLED COCK ROBIN?

Senator JACK KENNEDY, giving a good imitation of heartbreak, arose in the Senate to blubber that the Kennedy-Ives labor "reform" bill was dead and that the National Association of Manufacturers had killed it.

This allegation caused Senator MUNDT, a Republican, to inquire since when Representative SAM RAYBURN, Democratic Speaker of the House, had become an agent of the National Association of Manufacturers. Mr. MUNDT observed that Mr. RAYBURN had kept the bill bottled up for 41 days before submitting it last Monday to the House Labor Committee. This long delay, added to the time required by committee hearings, had the effect of insuring that the House would not act on the bill before Congress adjourns.

Republicans have the impression that, despite Senator KENNEDY's histrionics, the Democrats are glad to see the last of the bill, and that burying it is part of a deal worked out by Democrats with union bosses in return for support in the November congressional elections.

Our own feeling is that Milton Lightner, president of the National Association of Manufacturers, who replied to KENNEDY's charge, was correct in appraising the bill as "woefully inadequate" and an example of "bad legislation." The bill pretended to regulate internal corruption in unions, especially in the handling of welfare funds. It did not strike at major union abuses, such as the exercise of monopoly power, coercive boycotting, or racket picketing.

Little noticed in the bill were some provisions drastically limiting freedom of speech and action by employers. These required reports by employers on attempts to "influence" or "affect" employees in their decision whether or not to join a union. The provisions were sufficiently ambiguous so that voluntary employer action to confer wage increases, fringe benefits, recreation opportunities, and the like could be interpreted as attempts to influence employees by making them so happy they would not want to joint a union.

The principal objection to the bill, however, was that it promoted the idea that Congress had "dealt" with union abuses when only the surface had been scratched. Passage of this legislation would have given Congress an excuse for lying back and saying that no further consideration need be given for an indefinite period to union problems.

On this basis, we cannot share in Senator KENNEDY's grief that the bill is dead. And, if it is dead, it is his own party which killed it. The voters ought to be capable of the simple addition of these facts to arrive at the conclusion that the Democrats again have played matters the way the union bosses wanted them played.

Chicago, my hometown, has had a major role in hearings conducted by the Senate's Labor Rackets Subcommittee. Yes; even my district, Illinois' Third, was represented by restaurant owners who testified.

When rank-and-file labor members want remedial legislation, based on need, it is a sad day when delaying tactics are permitted to be the order of the day.

I am, by background, sympathetic to labor. My father was a member of organized labor in Chicago in the days of Samuel Gompers. Since then, labor has risen to a position of dignity, respect, and great responsibility. However, the past few years, there have been certain unscrupulous leaders whose actions have made all labor the target of severe criticism. As long as human beings govern men, we will know the injustices, inequities, and disappointments the innocent suffer because of the unscrupulous activities of some of the individuals holding positions of power and authority. This is life, but it does not mean that we should not be constant in endeavoring to correct and ameliorate condtions. known to be detrimental to the majority.

The rank-and-file members of organized labor are fearful for the future of the labor movement, and so am I. I have received a great number of letters besieging me to urge Congress to act on labor legislation this session. Many communications are from members of organized labor.

It is lamentable that the most important lawmaking body in the world has not accomplished something in the labor area this session. We must have legislative tools designed with accuracy and precision if we are to protect the future and safeguard personal security of millions of loyal Americans in organized labor.

Both labor and management can work shoulder to shoulder to meet the needs of the future to guarantee America's security.

If all of those in strategic positions of authority would say, we have thrown off the coat of political considerations and we will come forth with proposals based on justice and equality, there is no doubt in my mind that it could be done and would be. The result would bring a new respect and confidence in our labor movement and our Congress.

California Water Development Progress and Problems

EXTENSION OF REMARKS
OF
HON. CLAIR ENGLE
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 5, 1958

Mr. ENGLE. Mr. Speaker, water is not exclusively a California problem because in recent years water has become a nationwide concern. However, because of California's rapidly increasing population and expanding industry I believe that California's problems are more serious and are closer at hand than those in other parts of the Nation. Certainly one of the most important issues facing California, if it is to continue to grow and prosper, is the successful resolution of the many problems relating to the development and control and use of its water resources. These problems are not insurmountable, but they are difficult and if they are to be resolved successfully the State of California must provide positive leadership.

One of the outstanding water authorities in California is Mr. James K. Carr, assistant general manager of the Sacramento Municipal Utility District. Mr. Carr has literally grown up with California water problems, has been connected with water development throughout his professional career, and has a broad understanding of the many factors that enter into the California water program. I am including an excellent talk on California water development made by Mr. Carr recently before the Oroville, Calif., Rotary Club:

CALIFORNIA WATER DEVELOPMENT PROGRESS AND PROBLEMS

Mr. President and fellow Rotarians, Your program chairman has asked me to give a talk on California water development progress and problems. He has given me approximately half an hour to do it. The subject, as you know, has occupied months—even years—of debate in the legislature and elsewhere. As a former Butte County resident and one who worked closely with you on the early studies of the Feather River project, I am pleased to be with you again and to discuss some ideas I have on the subject. Because of the limited time available, I hope you will pardon me if I tend to oversimplify some of the problems. At the outset, let me make it clear that I surely don't have and don't claim to have the answers to many of the complex problems facing us in California's water development. For what they are worth, I am willing to give you my personal views on a few facets of this very broad and complicated subject. I assume you want me to speak frankly and not just tell you the things you might like to hear.

This community followed the headlines on activities of the State legislature in the last session more closely than many other parts of California because of your interest in Oroville Dam. There was very heavy emphasis on appropriations for State construction of water projects. In the rush of events a

person might have easily gotten the impression people were practically dying of thirst, and we were headed for immediate disaster if the State legislature didn't appropriate funds for construction immediately. It would be quite reasonable from some reports to get the impression that all water development in California had come to a standstill.

That is not the situation. The water development program in California is Federal, State and local in character. When it is reviewed in its entirety it is evident progress is being made, but there is a need for a larger contribution through construction of projects by the State.

If you as businessmen were going to sell a product, you would want to determine a few things first. Among these you would want to know the need for the product and the market for it. You would want to know what amount of the product is presently available and how much more could be sold without saturating the market. You would want to know who could produce the product; how much it would cost; whether you could sell it at a price that would repay the cost.

Therefore, if California is going into the water business, we should take a business-like approach to the problem. We should obtain answers to some of these fundamental questions: What area or areas need water now or in the immediate future—say in the next 5 years? What amounts of water are needed in these areas? How can we get the water from its source to the areas of need? How much developed water is presently available for sale and use in these areas in wet years, in average years, in dry years? What flood control is needed? What other uses need to be served? Who owns the water? How can the project works be financed? What agencies can do the job? What will the works cost? Who can pay the cost? Who is willing to pay the cost?

This, I realize, is something of an oversimplification, but essentially, these are some of the questions that need to be asked of the appropriate agencies. The answers need to be fully and widely publicized. In my opinion, the State legislature and the general public do not have the answers to these questions, particularly the amounts of developed water supplies available for use in the next few years. Nor do we have the State's needs for the next few years spelled out as clearly as they should be.

Briefly, here are some observations that I should like to enlarge upon:

1. The State should take positive leadership in establishing and coordinating the total California water program—Federal, State, and local.

2. The State should construct only those projects necessary to meet the requirements which cannot be met from Federal or local projects, both public and private.

3. We are now placing too much emphasis on the California water plan and detailed planning for projects which are several years in the future.

4. We are placing too little emphasis on a California water program, our immediate needs for water, and the amount of water now available from completed storage reservoirs or those under construction.

5. The California water problem is not really a water problem as such, but is essentially a financial problem.

On the question of State leadership in the establishment of a total program: Only recently has the California Water Commission taken a really active part in advocating in Washington projects for irrigation as well as flood control. The commission should take a more active part in pressing the State's views on Federal legislation affecting State water development. No State body to my knowledge, legislative or executive, has in public hearings nailed down the proposed programs of the various construction agencies—Federal, State, and local—particularly the Corps of Engineers and the Bureau of Reclamation. This would be a first step in a State determination of the jobs that can be done by other agencies.

There are those who don't want the Federal Government, especially the Bureau of Reclamation, to construct any more California water projects. To me, they are not realistic. We are aware that Federal funds don't come from Santa Claus. The fact remains, however, that the State of California pays $7 billion annually into the Federal Treasury in taxes. Some small part of this money finances the Federal flood-control and reclamation programs. We have reason to believe that these programs will not be stopped for the other States, and if they aren't stopped for the other States, and if we help finance them through taxes, then California is entitled to its rightful share. Inasmuch as it is unlikely the Federal Government will abandon these national Federal flood-control programs and reclamation programs, I think there is a continuing obligation on the part of the State to say what projects would best meet the State's water needs.

On the second point, if the State is going to construct those projects needed, but not constructed by Federal or local agencies, then we must determine what is in prospect by those agencies. To illustrate the points I wish to make in the few minutes available, I shall take the Central Valley Basin as an example. Let's take Federal projects first.

The Corps of Engineers is working on a program that will enable them to start construction in the next 2 or 3 years on Black Butte Dam on Stony Creek, New Hogan Dam on the Calaveras River, and New Melones Dam on the Stanislaus River. Iron Canyon Dam on the Sacramento River is already authorized and is a possibility for early construction.

The Bureau of Reclamation is completing a feasibility report this year and legislation is pending before the Congress to authorize construction of the Auburn Dam and related works on the American River. It would create a lake as large as Folsom. The Bureau is also preparing a report on the Nashville Dam on the Cosumnes River and another on the Bullards Bar Dam on the Yuba River.

As for local agencies, there are significant projects being constructed or about ready to start. Close to home you have the Oroville-Wyandotte Irrigation District's project being pushed forward in cooperation with the PG&E.

The Sacramento Municipal Utility District, by which I am employed, has started construction of a project that will include 9 dams and 4 powerplants. It will harness water on the south fork of the American River and some of its tributaries. The PG&E has been working to obtain better regulation on the Kings River and developing additional power resources on the Feather River.

The State is also constructing a dam and reservoir 5 miles north of Madera. It is being built under the auspices of the Wildlife Conservation Board. It is a fishing reservoir which will have a capacity of about 5,000 acre-feet. There is quite a difference between this recreation reservoir and the $1½ billion Feather River project whose principal dam alone will cost nearly $500 million. The total Feather River project will cost nearly twice the amount of money that has been spent on the Central Valley project in the last 22 years. We are talking about several other multi-million-dollar projects for State construction in addition to the Feather River project.

In substance it boils down to this: We can't, as a State, assume the total job of water development or in fact a very large part of it all at once. Therefore, we need to establish a total program to meet the needs for a given number of years and subtract from it those projects which can be built by Federal or local agencies. The balance will represent the job the State must do to keep pace with the State's water requirements.

The third point I make is that we are now placing too much emphasis on the California water plan and detailed planning for projects which are many years in the future. The California water plan has been prepared over the past several years and published as an official document of the State. It is a good overall plan. It brings up to date the State water plan as published in 1931. There has been at times heated debate in the legislature and a lot of time has been devoted as to whether the plan should be officially authorized by the State. The California water plan has not been adopted by the legislature and possibly it never will be in all its detail. Inasmuch as it will serve as a guide for State water development to bring about optimum use of the State's water resources, it is probably not necessary that it be adopted or authorized as an overall plan.

As each individual project in the plan reaches the construction stage by either Federal, State, or local agencies, there is nothing to prevent us from scrutinizing the proposal at that time to see how it conforms to the overall State plan. That should give us sufficient protection as we go forward developing the State's water resources.

There appears to be a great deal of effort on detailed planning of projects which cannot possibly be financed for many years in the future. Circumstances will doubtless bring about further changes before these projects are constructed. We should not try to resolve all these problems in every detail too far in advance.

The fourth point I make is that too little emphasis has been placed on immediate needs for water and the water that is now available from completed reservoirs or those under construction. First as to need: Doubtless the San Diego area is more in need of water than other areas in southern California at this time. Noted authorities have differed on the date when additional water needs to be available in other southern California areas. Some have said 1970—others have said 1975. In the Central Valley Basin, the west side of the San Joaquin Valley appears to be the area most in need of a supplemental water supply. This is the area that would be served by the San Luis Canal and Reservoir. It is reported that in an area where they depend upon pumps, the groundwater table is dropping at the alarming rate of 25 feet a year on the average. In some areas water is being pumped as far as 600 feet. The San Luis area is an area that is desperately in need of supplemental water if the State is going to protect the huge gross agricultural production of that area which so vitally affects the San Joaquin Valley. It is reported that other areas of lesser size on the east side of the San Joaquin Valley also are in immediate need of supplemental water supplies. In short, we need to pinpoint those areas that need water in the next 5 years. There is also a need for determining the amount of water now available from completed storage reservoirs or those under construction. To my knowledge, there is not any public statement by the State or the Federal agencies which shows how much water is presently available for use in the Central Valley in average years and dry years.

The Corps of Engineers have indicated that the New Hogan Dam and the Black Butte Dam will add another 100,000 feet of water annually to the regulated supply. But more to the point, Folsom Dam is constructed and operating on the American River. It was estimated to have an annual yield of more than 1,000,000 acre-feet per year. Although a commitment has been made for future

use to the City of Sacramento, the fact remains that developed water supplies at Folsom are not being sold. Canals to use this water were proposed from Folsom North, from Folsom South, and in Alameda County and the Santa Clara Valley. None of these canals has been authorized. The Monticello Dam on Putah Creek, constructed by the Bureau of Reclamation, is now filling. Its entire yield is not yet fully used. Taking into account present use, it appears that over 100,000 acre-feet of water is available for subcontract by the contracting agency. Another 1 million acre-feet will be available when the Trinity River Dam now under construction is in operation. The nine reservoirs of the Sacramento Municipal Utility District will produce additional annual regulated water supplies of about 100,000 acre-feet. This, coupled with purchases from Folsom Reservoir in relatively small amounts, will meet the needs of the Sacramento area for the next 75 years.

As I said, we don't have the specific figures, but it appears clear that at the present time there is a possible million and a half or two million acre-feet of regulated water annually in average years available above the Sacramento-San Joaquin Delta which is not now being put to use. The more important question is, How much water is presently available if we have a return of dry years as in 1930 and 1931? Going back to my question about businessmen who want to sell a product, I said we surely want to know what amount of the product is presently available and how much more can be sold without saturating the market. A reserve is necessary, but we should know what it is at this time.

I am not unmindful that the Federal and local programs of water development may not be enough to keep pace with the State's growth in the future. From a cursory examination it appears the State will have to step in and pick up some share of the construction load. But the first thing we need to do is establish the need, determine what water is presently available to meet those needs under average and dry year conditions, and then outline a program of projects, stage by stage, that will permit the State to keep pace with the growing needs.

Obviously, the most pressing problems we face at the moment are flood control on the Feather River and authorization and construction of the San Luis Canal and Reservoir to put to use water that is now wasting in the Pacific Ocean. This amount of wasting water will increase as soon as the Tinity River project is completed. The San Luis Canal and Reservoir should be so planned and developed that it will without a doubt fit into the growing program for serving water to the upper San Joaquin Valley and southern California.

The fifth point I make is that California's water problem is not really a water problem as such, but is essentially a financial problem. The State department of water resources and its predecessors have made extensive studies over the years which show the State has sufficient water within its boundaries to meet the probable needs for years and years to come. Engineering plans have been worked out which will transport the water from the areas of origin to the areas of deficiency. In several areas of origin these works will develop water for use locally. Everyone is in favor of water development and is in general agreement on it until we get down to the part of the program that raises the question as to who will pay for it. As a State, our big problem is more one of money than total water supply. Mr. Alan Post, the legislative analyst, has estimated we will have a State deficit of about $250 million. The "rainy day fund" will have been used. The needs of schools, highway construction, hospitals, and other obligations of the State make it clear that we need to raise additional revenues. Financing water projects is and will be our most difficult job. The engineering as compared to the financing is relatively simple.

In addition to these five points, I want to discuss another subject of importance to you. There was, naturally, a great disapointment in the Oroville area and other areas when the legislature failed to appropriate funds to start construction of Oroville Dam. This brings up a point that I think needs to be put out on the table. It is one of the difficulties to be faced in getting stared on the dam itself. It was one of the factors that had a bearing on the legislature's decision not to appropriate funds. That is whether the main Feather River Dam should be built at the Bidwell Bar site or closer to Oroville. In the last few hours of the special session a Senate resolution was passed calling for a study of this problem.

Some of you will recall that in 1949 we had a meeting in this hotel and announced agreement by the State of California, the Corps of Engineers, and the Bureau of Reclamation on the Oroville site if the Feather River was to be completely controlled. A year or so after that decision the Bureau of Reclamation engineers discovered an alternative plan and notified the State engineer they were studying it. The implication was the Bureau could no longer give unqualified approval of the Oroville site. Recently the Weber Foundation has reported that substantial savings can be made and the primary objectives can be achieved if the Bidwell Bar site is used instead of the site by the State highway bridge for construction of a dam near Oroville. The Weber Foundation says that studes show the 218,000 second-foot peak in 1955 flood at Oroville could have been reduced to 100,000 second-feet with the large structure near the highway bridge. The same flood could have been reduced to 130,000 second-feet with the Bidwell Bar Dam. This is a difference of 30,000 second-feet in flood control, but a dam at either site would have prevented the Yuba City disaster. The question is whether this little extra flood control and the extra conservation storage is worth the extra cost at this time. As long as this question is unsolved, it will be a continuing struggle to get construction started on a large storage reservoir near Oroville.

The California Water Commission or an appropriate committee of the legislature can perform a real public service by getting the facts out on the table, by bringing out in public meetings the views of the State department of water resources, the United States Bureau of Reclamation, the Corps of Engineers, the Federal Power Commission, and any other interested parties so that it can be determined conclusively which is the best course to follow at the present time in view of present needs, present water supplies, available funds, and sound economy. I, for one, don't have the answer. Like most others, I don't have the full facts.

With the emphasis I have earlier placed on available water supplies, you might easily assume I would favor deferring construction of a large dam on the Feather River. That is not the case. We need to proceed with construction as soon as possible to prevent the angry flood waters of the Feather River from repeating the devastation of December 1955. Your neighbors below have piled enough sandbags. It appears to be an appropriate job for the State to build a large dam on the lower Feather River. In specifying the reasons for proceeding with construction now, we only have to look at Shasta Dam. It was built fortunately before the war at a great saving in dollars by today's standards. The powerplants were on the line and assisting late in the war effort and for some years thereafter it was operated primary as a flood-control and power project. The irrigation demands have been slowly increasing, but in those early years of operation, substantial revenues were obtained from the sale of power. This helped build up a surplus in the repayment program. It also earned its way from flood protection as did the Folsom Dam when it protected the Sacramento metropolitan area even before it was completed. Unfortunately we have continuing inflation. When all of these factors are considered, the State will be well advised to proceed as fast as it can on the contsruction of a large storage dam near Oroville. It won't get any cheaper.

You may think it odd that I have skipped the so-called water rights conflict between the north and the south, the so-called areas of origin, and the areas of deficiency. There just isn't time to discuss them. Suffice it to say that the areas of origin are not as well protected as some people think. I recommend to you for reading a copy of a talk that was given by Mr. William R. Gianelli, principal engineer of the State Department of Water Resources, on April 15, before the Sacramento section of the American Society of Civil Engineers. Mr. Gianelli goes into this subject in a very celar way. I will drop that item with a recommendation to those of you who are interested that you obtain a copy of Mr. Gianelli's talk.

In conclusion let me summarize. First, we have certain fundamental questions that a businessman should ask as we go into the water business in California. In addition, I repeat, the State should take positive leadership in establishing and coordinating the total California water program—Federal, State, and local. The State should construct only those projects necessary to keep pace with our needs which cannot be met from Federal or local projects, both public and private. We are placing now too much emphasis on the California water plan and detailed planning of projects which are many years in the future. We are placing too little emphasis on a specific short-term California water program, the immediate needs for water and a determination of the amount of water that is now available from completed storage reservoirs or those under construction. Lastly, the California water problem is not really a water problem as such, but is a very difficult financial problem. The financial problem requires that we face up to all the difficulties of allocation of costs, the pricing of water and power, the laws giving preference to public agencies, the establishment of "basin accounts" and all the intricate problems of repayment of the cost of water projects. Also, it will require that we determine the values to our fishery resources and the value of the outdoor recreation possibilities that will be created by water development. Some of these costs doubtless should be "nonreimbursable" as far as the water and the power users are concerned.

I believe we can make some sense out of California's water problems if we will put the difficulties out on the table, draw on the experience of all interested agencies, debate the issues fully and publicize the various views widely.

In closing, I call your attention to a quotation that is inscribed on the wall of the House of Representatives above the Speaker's chair in the Nation's Capitol. It should be a constant reminder and a challenge to those of us who are concerned with water problems.

"Let us develop the resources of this land, call forth its powers, build up its institutions, promote all its great interests and see whether we also in our day and generation may not perform something worthy to be remembered."

Revenue-Bond Financing for the Tennessee Valley Authority

EXTENSION OF REMARKS
OF
HON. J. HARRY McGREGOR
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Wednesday, August 6, 1958

Mr. McGREGOR. Mr. Speaker, under leave to extend my remarks, I would like to include the statement of Mr. Philip Sporn, president of the American Electric Power Co., before the Committee on Public Works of the House during hearings on S. 1869, to provide revenue-bond financing for the Tennessee Valley Authority.

Mr. Sporn is a pioneer in the electric-power industry in this country. Furthermore, he is recognized internationally not only as a topflight industrialist but also as one of the world's outstanding electrical engineers.

His testimony in opposition to S. 1869 is a crystal-clear presentation of the compelling arguments against this legislation, and I commend it to the attention of every Member of Congress, particularly those among us who still retain our fundamental belief in the free, private-enterprise system.

The statement follows:

STATEMENT OF PHILIP SPORN, PRESIDENT, AMERICAN ELECTRIC POWER CO., BEFORE THE COMMITTEE ON PUBLIC WORKS, HOUSE OF REPRESENTATIVES, ON S. 1869, TO PROVIDE REVENUE-BOND FINANCING FOR THE TENNESSEE VALLEY AUTHORITY, JULY 1958

My name is Philip Sporn. I am an engineer by profession and president of American Electric Power Co. The American Electric Power system provides electric power in parts of seven States—Virginia, West Virginia, Ohio, Indiana, Michigan, Kentucky, and Tennessee.

The entire physical plant of the American Electric Power system is closely integrated. The plant consists of a number of strategically located, large generating plants of the most modern design, a high-voltage transmission network which ties these plants together, and distribution systems which bring power to homes, commercial establishments, factories, and farms. The boundaries of our system's service area are contiguous to those of TVA in some places—particularly in northern Tennessee and southwestern Virginia—and very close to TVA for substantial distances in other places. We are, therefore, directly affected by S. 1869.

I requested the opportunity to appear before your committee in order to express my opposition to this bill.

The extensive territorial expansion of TVA since its establishment in 1933 goes beyond anything represented or envisioned by its original sponsors and has naturally been a matter of serious concern to me. Its conversion from a hydro system to what is now predominantly a steam system—a development originally disavowed by TVA—has intensified my concern. The original conception of TVA as a hydro system, marketing power which was supposed to be a by-product of navigation works, was self-limiting in that the number of available dam sites is limited. The conversion to steam and the assumption by TVA of the responsibility for supplying virtually all power needs of the territory it has come to serve confront us today with a situation which, in my opinion, would not have been endorsed by the initial sponsors of the undertaking. The TVA generation and transmission system and the associated distribution systems now comprise the largest electric power system in the United States. TVA is 2½ times as large as our own system—which ranks next in order of size.

The radical departures from the original conception of TVA provide good reason for our apprehensions that it could develop into an institution that would seriously damage other utilities and their security holders.

Despite our continuing concern about TVA, American Electric Power Co. and TVA have a long record of cooperative arrangements for interchange of power and for assisting each other in emergencies. I think, too, TVA would not quarrel with the statement that the knowledge obtained in the pioneering work which American Electric Power Co. has done on higher temperatures and higher pressures, with consequent economies in steam generation, has been made freely available by our companies to TVA and has been used profitably by the Authority in developing its own steam plants.

I want to go clearly on record that I do not believe that in matters of this sort we can turn the clock back. Whatever my apprehensions about the Authority, past and present, the fact is that it is now relied upon to furnish electric power throughout an extensive area of the country. As an engineer familiar with utility economics, I know that such power requirements can best be supplied by a central system of strategically located large generating plants integrated through heavy transmission lines. The cost of the new capacity, which must be installed to keep ahead of demand, requires more money, in the long run, than can be derived from operations alone. For many years the extra money needed for TVA expansion has been obtained by appropriations. Now the committee has before it a measure which would enable TVA to finance its expansion by issuing its own revenue bonds. I fully recognize the need to establish a sound legislative policy to enable TVA to install sufficient new capacity to supply the requirements of its existing service area. But I oppose S. 1869 because I think it does not establish a sound policy.

The question of revenue bond financing for a federally owned commercial operation—and that is what TVA is—is a matter which I have studied seriously for a long time. For a variety of reasons it is my considered opinion that revenue bond financing for such activities of the Federal Government is unwise and can be dangerous.

TVA has a virtual monopoly on power supply in the part of the country it serves just as our company has in its service area. In most segments of our economy we can rely on competition to assure efficiency and the best product for the least money. But duplication of facilities is too costly to be permitted in an industry like ours where enormous capital investments are required in proportion to revenues. In the case of the utilities, we are subject to an elaborate system of Federal and State regulation to make sure that the privilege of monopoly is not abused. Our own system is regulated by seven State commissions, the SEC and the FPC. Detailed regulation of business by the Government is not an easy condition to live with. In the utility industry we recognize that it is necessary.

TVA, however, is an unregulated monopoly except for the supervision through the budgetary process of the Government and congressional controls of the purse strings. I am convinced that the dangers which exist in monopoly are not eliminated simply because the monopoly is exercised by Government rather than business. So it seems to me that the traditional process of budgetary controls and congressional controls, is at least as necessary in the case of TVA as the system of Federal and State regulation of utility companies. Generally speaking, these are the considerations that have led me to the conclusion that revenue bond financing is unwise and probably dangerous. Inevitably revenue bond financing will loosen executive and congressional supervision of TVA because it will lessen congressional control of the purse strings. Long experience with unregulated monopolies has taught us that it is no idle fear to be apprehensive about their abuses even when enterprises are administered by well-intentioned and competent men. We have every reason to be afraid that such abuses are likely to occur in proportion to the loosening of congressional control over TVA.

I am opposed to revenue bond financing for TVA. I am aware, however, that the Congress may decide in the end to adopt this device. Because of this possibility, I have addressed myself to the provisions of S. 1869 for the purpose of submitting my views about the worst features of it.

When TVA was originally set up, it was given an autonomy for which there was little precedent in the management of Federal agencies. S. 1869 would greatly extend the already autonomous character of TVA. In the interest of protecting consumers, the public at large, and other utilities from abuses of monopoly, this bill should at least preserve existing measures of congressional control. If TVA is to be given the still further independence that accompanies the revenue bond authority, it ought, in the interest of good government, to have its budget reviewed annually by the Bureau of the Budget. And it ought, also, to be subject to some form of annual review of its operations equivalent to the review now existing in the appropriations process of the Congress and its committees. These two supervisory devices assure that TVA cannot cut loose from executive and congressional control and follow instead the unsupervised and unrestrained control of a 3-man board, each of whom is appointed for a 9-year term. Even with revenue bonds, provision can and should be made to subject TVA to the same supervision as other independent agencies under the Government budgetary procedures and congressional authorization and appropriation measures.

The arguments advanced to support the repeals of existing controls are based on the asserted need for flexibility by TVA in its operation. It is understandable that the agency concerned would urge the elimination or loosening of existing controls. But the original sponsors of TVA certainly thought that they had given TVA all the necessary—and, indeed, a unique—flexibility at the time the agency was set up. The best evidence of the fact that TVA can operate effectively under existing executive and congressional controls is that it has done and is doing so at the present time.

The second essential feature, as it appears to me, if any revenue bond plan is adopted by the Congress, is provision for defining specifically the area which TVA may serve. Only through such action by the Congress will it be possible to avoid the danger of unlimited extension of what is already by far the largest power system in the country.

It is not a difficult matter to draft language that would define the TVA service area, especially since spokesmen of the TVA have said repeatedly over the years that the Authority has no intention of making any except the most minor territorial expansions. A provision in the law which merely codifies in effective legal terms the assurances that TVA spokesmen have given, would go a long way toward minimizing the dangers in the bill before this committee.

S. 1869 does provide that facilities financed with bond proceeds or power revenues should

not be used for the sale or delivery of power by TVA outside the counties which lie in whole or in part within the drainage basin or TVA's existing service area. Exceptions to this provision include service to Federal agencies or interconnection arrangements with other utility systems. There is also a proviso to the effect that any distributor receiving TVA power shall confine the resale of such power within the counties described above and such additional areas—not more than 5 miles from such boundaries—as may be necessary to take care of the growth of communities receiving TVA power. The proponents of this bill have reported the intention of the provision to be to confine TVA to its existing service area with only minor flexibility.

Whatever the intention of the draftsman, a study of the map of TVA's present system quickly reveals that the effect of this provision in S. 1869 would be to permit, and indeed, invite, expansion of TVA's service area into an additional area of some 25,000 square miles—more than 30 percent expansion of TVA's existing service area. The 25,000-square-mile figure is made up of the sections in the Tennessee River drainage basin now served by other utilities and the remainder of the counties now served in part by TVA and in part by others. (The 5-mile further allowance would add to this figure.) A substantial portion of this 25,000-square-mile area in northern Tennessee and southwestern Virginia is now served by two of our operating companies.

Moreover, the expansion permitted under S. 1869 could readily take place over a much wider area than the 25,000 square miles which can be spotted by even casual examination of maps. For example, S. 1869 would permit the use of existing facilities or new facilities financed otherwise than with the proceeds of bonds or with power revenues, such as customer financed lines, to expand TVA's service without any limitation at all. And except for the proviso which refers only to a distributor, the bill does not prohibit the purchase of power within the service area for use outside. There is, for example, nothing in the provision to prevent an industrial customer from taking delivery of power within the loosely defined area and using it outside. Power may also be sold or delivered to a Federal agency wherever located. It is not clear whether the priviso against resale by a distributor would apply to a Federal agency. If it did not, the right to sell TVA power to such Federal agencies as Southeastern Power Administration and Southwestern Power Administration for resale would also permit unchecked expansion of the area in which TVA power could be used.

In sum, the effect of the so-called territorial limitation in S. 1869 is to invite TVA to serve at least another 25,000 square miles of territory in which other utilities are now operating and, because of the looseness with which the provision is drawn, the bill could be construed in such a way as to permit unlimited expansion beyond such 25,000 square miles.

When one recalls TVA's disavowal of any intention to build steam plants, followed a decade later by insistence by TVA that it had to build such steam plants, it is not fanciful to speak of the territorial expansions which I have just described.

I must stress that I am not suggesting that TVA should not expand its capacity within its present service area as fully as may be required by the needs of that area. I am not even suggesting that there may not be occasions where minor territorial expansion might be justified—although I know of none today. I am urging only that, if and when TVA wants to extend its area geographically, it should be required to justify its plans to the Congress and secure specific congressional authorization before it proceeds.

I feel that now in particular great and unjustifiable harm would be done to our company if TVA were permitted to serve that part of southwest Virginia within the Tennessee River drainage basin that we now serve. Some years ago we undertook a development in that section which is costing close to $100 million. The Clinchfield Coal Co. and the Norfolk and Western Railroad are participants in the program. Our company is spending more than $65 million of the total. The immediate result will be a modern 450,000 kilowatt new steam electric plant built by us at Carbo, the development of a 20,000-ton per day new coal mine by the coal company, the building of a new concrete aggregate plant by the same company and the completion of extensive additions and other works by the railroad. We confidently expect other industrial enterprises, stimulated by our work, will establish plants in the area. We provide good electric service in this area. We are leading the area to an industrial awakening. We are making an immense investment for that purpose. It is hard for me to believe that this committee or the Congress would approve a bill that would allow TVA to serve this area. But S. 1869 is just such a bill.

In my testimony I have concentrated on two features of the bill before this committee, namely, the abolition of effective congressional control over TVA and the failure to define the TVA territory in such a way as to prevent unchecked expansion without further reference to the Congress.

These impress me as the worst dangers in the bill. There are other features however which I strongly believe should be changed if the revenue bond financing idea is to be adopted.

The bill relieves TVA of the requirement of Treasury Department approval of its bonds. It is argued that such Treasury control is unnecessary because the revenue bonds are not to be obligations of the Federal Government. But TVA is a Government agency and its obligations and credit are inevitably related to the obligations of the Federal Government; indeed, Senator KERR and other sponsors of the legislation have expressly stated that as a practical matter the credit of the United States will stand back of TVA's bonds. The underlying basis for Treasury approval now necessary under the Government Corporation Control Act is that the obligations of a Government corporation will necessarily affect the fiscal and financial position of the Government. Since the Treasury Department has the primary responsibility for the Government's fiscal and financial policies, the terms of any such corporation's obligations should be subject to supervision by the Treasury. There is no good reason why existing requirements for such supervision should be made inapplicable to TVA revenue bonds.

The bill under consideration would repeal the existing requirement for the 40-year amortization of TVA's appropriation investment which amounts to some $1,200,000,000. The bill would make the Government's investment junior in all respects to the claims of revenue bondholders. It would provide for the payment of an annual return, measured by the average interest rate paid by the Government on all of its obligations—including short-term, low-interest debt. This annual return on the appropriation investment would be supplemented, by payment of $10 million a year to repay such investment. This repayment would thus take a minimum of 120 years. The bill gives no recognition whatever to that part of the Government's investment, amounting to well over $400 million derived from income accumulated by TVA, over the past years as a return on the Government's appropriations—but which has been reinvested in TVA—not paid over to the Treasury.

The effect of these provisions is to provide TVA with the equivalent of a 120-year serial loan of some $1,200,000,000 (the appropriation investment) at a lower interest rate than the Government itself must pay on its long-term obligations and with a permanent grant of well over $400 million (the retained earnings) on which TVA will pay no return or interest at all. At the very least, the requirement of existing law for 40-year repayment of the appropriation investment should be continued and TVA should be required to pay interest or a return on that portion of the total Government investment which has not been repaid. And such interest or return should be at a rate which is at least equal to the interest which the Government has to pay on its long-term obligations.

It will be argued that the measures of control which I urge should be retained will unduly hamper TVA. I submit to the committee that the net effect of the suggestions I have made would produce for the TVA a system of supervision no more onerous than the system of Federal and State regulations with which utility companies must comply. They are measures of control under which TVA has, in fact, operated successfully for many years.

Seely-Brown Will Defeat Bowles

EXTENSION OF REMARKS
OF
HON. ALBERT P. MORANO
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Wednesday, August 6, 1958

Mr. MORANO. Mr. Speaker, I predict the reelection of my colleague, Representative HORACE SEELY-BROWN, JR., who so ably represents the Second District of Connecticut, and the defeat of his opponent, Chester Bowles.

The Second District of Connecticut as presently constituted has never elected a Democrat to Congress in an off-year election, and it will vote Republican again in 1958.

The voters will prefer HORACE SEELY-BROWN, their hard-working, conscientious Congressman. He keeps in personal contact with thousands of his constituents, helps them with their problems, knows how they feel on national issues and votes accordingly. He takes his job seriously for the service he can render his constituents.

In contrast, the congressional nomination is just a consolation prize to Chester Bowles after his failure to obtain the senatorial nomination. He probably regards it as a mere stepping stone to some more glamorous position.

His past history does not recommend him to the voters.

As OPA Director he was responsible for the sorry mess of national controls and rationing. He messed up this job so badly that Connecticut went Republican by 100,000 votes in 1946.

As Ambassador to India, he gained himself a lot of personal publicity, but failed to make Nehru our friend in world affairs.

In both domestic and foreign affairs he has consistently followed the left-wing line of the Americans for Democratic Action, who advocated repeal of the Smith Act which provided for the

conviction of those who would overthrow the Government by force or violence. Bowles served as ADA vice chairman.

As Governor of Connecticut he advocated higher taxes and tried to have an income-tax law enacted. As Governor for a single term he played havoc in 2 years with the traditions of Connecticut attempting to abolish ancient and honorable commissions on which our dedicated citizens serve without pay or emoluments of any kind. There is nothing more dangerous than a little knowledge, as the old saying goes. With little knowledge of State affairs, of State politics he created a situation in Hartford that made even the Democrats welcome his defeat.

When the Democratic Party of the State of Connecticut rejected him for Senator, he had his friends steamroller him into the nomination in the Second District thereby creating a split in his own party and forcing himself down the throats of helpless Democrats.

For the good of the State and Nation, Chester Bowles must and will be defeated as a candidate for the House of Representatives from the Second District of Connecticut.

I am confident that the voters will reelect HORACE SEELY-BROWN, their family type Congressman, dedicated to high principles, a statesman with the personal touch.

Under leave to extend my remarks in the Appendix of the RECORD, I include an article by Connecticut newsman Jack Zaiman which appeared in the Washington Post, August 5. It is entitled "Bowles Must Defeat Off-Year Tradition":

BOWLES MUST DEFEAT OFF-YEAR TRADITION

(By Jack Zaiman)

HARTFORD, CONN., August 4.—Chester Bowles, who wanted to run for the Senate but wound up running for the House, finds himself in the position of not only having to fight a Republican opponent but also history.

For the Second Congressional District, the largest in the State from the standpoint of geography, has never gone Democratic in an off-year. The Second District, as presently constituted, dates from 1912.

There is some evidence that Bowles, when he agreed to run for the House after his defeat for the Senate nomination, was not aware of the Democratic off-year jinx. He knows about it now, however. He promises to wage the most energetic Democratic campaign in modern election history.

The Republican incumbant is Representative HORACE SEELY-BROWN, JR., who has held the seat—except for a 2-year gap—since 1946. SEELY-BROWN is a tall, handsome former private schoolteacher who now is a farmer. His specialty is doorbell ringing and the distribution of potholders to housewives.

MANY SMALL TOWNS

There's plenty of room for such house-to-house activity. For the district covers 64 towns, most of them of the smallest variety. There are 169 towns in the State. The area covers all of eastern Connecticut, which is a depressed textile area in the north, a farming area in all sections, and a Long Island Sound beach resort in the south.

If history is to be followed, Bowles cannot win.

But more than history is involved. There is a feeling that Bowles will break the jinx and become the first of his party to go to Congress in a year when a President isn't being elected.

The extraordinary feature of the statewide election is the strength of Gov. Abraham A. Ribicoff, who is seeking his second 4-year term on the Democratic slate, and of Thomas J. Dodd, the senatorial nominee who defeated Bowles and his former advertising partner, William Benton.

Dodd was born in Norwich, which is in the heart of the Second District, and has lived in other towns in the area. Ribicoff has done well in the district. And the Democratic nominee for lieutenant governor also comes from the Second District. He is Mayor John Dempsey of Putnam, a popular figure who could have had the congressional nomination if he wanted it.

This Democratic strength over east, as the Second District is known, is expected to give Bowles the extra punch he needs. For, in the 1954 election, SEELY-BROWN just squeaked in by 1,980 votes out of more than 150,000 cast. And the Democrats on the State level are regarded as a lot stronger this year than in 1954, the last off-year election.

A switch of about 1,000 votes in the district would give Bowles the victory—on the basis of the 1954 results.

But the Republican nominee for Governor, State Comptroller Fred R. Zeller, of Stonington, also lives in the Second District. And his presence on the ticket may help SEELY-BROWN somewhat.

Bowles has been in Maine since before he was nominated last month in a contest with a young Rockville lawyer, Leo Flaherty, Jr. Flaherty has promised Bowles his support.

FOREIGN POLICY ISSUE

Bowles is expected to make foreign policy one of the features of his campaign. But he has told friends he won't ignore the regional problems of the district—farming, attraction of new industry, new highways, the textile depression, new employment.

Some State Democratic leaders say that Bowles, if elected, will try for a seat on the House Foreign Affairs Committee and that gestures to Democratic congressional leaders already have been made along this line.

Just what made Bowles change his mind about running for the House isn't known. Twenty-four hours after his defeat for the Senate on June 28, he told a reporter flatly: "I'm not interested in the House."

Forty-eight hours after that, he was running for the House nomination in absentia. Perhaps it was a telephone conversation with Governor Ribicoff, who urged him to take it. Or perhaps his own advisers urged it on him. In any event, what was "no" one day became "yes" within a short time, and the contest between Bowles and SEELY-BROWN looms as one of the most interesting in the State.

A Cultural Center for the Nation's Capital

EXTENSION OF REMARKS
OF
HON. EDWIN B. DOOLEY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, August 6, 1958

Mr. DOOLEY. Mr. Speaker, I am enthusiastic in my support of the proposed Cultural Center in Washington, D. C., as provided for in H. R. 13017.

The city of Washington is the focal point of world interest. It is a meeting place literally of hundreds of thousands of tourists. Consequently, the need for such a center for the performing arts is obvious.

Witness after witness of unquestioned integrity, including distinguished Senators, architects, a newspaper editor, and interested citizens, have testified with impressive unanimity that there is a great demand for this worthy enterprise.

I support the measure and hope for favorable consideration from this distinguished body. The Cultural Center which will rise if the Fulbright-Thompson bill is enacted into law will add immeasurably to the well-being of the people of our Nation. It will be an inspiration and a beneficent motivating force for the youth of our country. It will be a symbol of our dynamic democracy, a center for the peaceful arts, and a lasting memorial to the deep sense of appreciation which the American people have for the finer things of life.

A Tribute to Capt. John T. Ferrier

EXTENSION OF REMARKS
OF
HON. FRED SCHWENGEL
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, August 6, 1958

Mr. SCHWENGEL. Mr. Speaker, last August I had the privilege of witnessing an amazing demonstration of precision flying by the Minute Men, the precision jet flying team of the Air National Guard.

This unit appeared at the conservation sports tourney in Davenport, Iowa, sponsored by the Davenport chapter of the Izaak Walton League in conjunction with the Buffalo Bill area council of the Boys Scouts of America.

I had a chance to meet each member of the team at that time. I was impressed by these fliers and proud of the fact that men of this caliber and fitness were a part of our first line of defense.

On June 7, of this year, Capt. John Ferrier, "slot" position pilot on the team, was killed during an airshow at Patterson Air Force Base, Ohio. It is the belief of all who witnessed the accident that Captain Ferrier sacrificed his life to protect the people in the residential section adjacent to Patterson Air Force Base. Although he had ample opportunity to successfully eject himself from the crippled aircraft, he obviously elected to stay with his jet until the last possible moment to divert its course into a nonpopulated area. He was successful in doing so, but in the process was forced to wait too long to have sufficient time to escape.

In an editorial, the Denver Post has called this the highest brand of heroism. I would like to quote a few lines of the editorial which eloquently express the tribute due Captain Ferrier:

It was the kind of heroism that keeps the fine traditions of our fighting forces fresh. Nothing replaces a living father; but Captain Ferrier's children will grow up knowing their father passed the test of heroism as gloriously as anyone has ever done.

The Davenport area will long remember Captain Ferrier. His memory is to

be perpetuated in the Capt. John T. Ferrier Memorial Award Trophy which will be presented to the scout or explorer having the best character, sportsmanship, leadership, and highest score in this year's tournament scheduled for Davenport August 10. Such an award will become a feature of all succeeding sport tournaments sponsored by the Izaak Walton League and the Boy Scouts of the Davenport area.

It pleases me to see this action taken. Captain Ferrier was the prototype of every young American's ideal airman. His heroism will inspire youngsters for generations to come.

Economy Heading Upward

EXTENSION OF REMARKS
OF
HON. BOB WILSON
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Friday, August 1, 1958

Mr. WILSON of California. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the San Diego Union of August 4, 1958:

ECONOMY HEADING UPWARD

Although the recession headache has not been completely routed, there are signs that the sharpest pains are gone and the economic patient is getting better.

The situation might be described as cautiously optimistic. The bottom of the recession was reached in April, 1958, making it the shortest on record. Recovery began 9 months after the onset of the economic downturn, putting it 2 months ahead of the 1949 recession and 4 months ahead of the 1954 business slide.

Among the plus factors present are these:

Farmers' income in the first half of 1958 was up 22 percent from the first half of 1957.

Personal income is running at only $300 million below the peak reached last August when the recession began.

Factory payrolls are up, and the April-June spurt in industrial production was much more vigorous than is customary in the early stages of a recovery.

Another encouraging sign is that consumer confidence has remained strong. The stock market's health is good, an indication that investor confidence is strong.

Economists expect that an expanding population and an expanding money supply will provide the basic supports for a rise in business activity in the months ahead.

There are soft spots. Business appears to be waiting to see which way the wind blows before embarking on great new expenditures for plants and equipment. Questions about better times for hard goods may be answered when the 1959 autos appear in the fall.

Machinery, radio, television, paper products, chemicals, aircraft, missiles and rubber products are making a comeback. Construction has remained strong, as have oil, steel and government spending.

Other plus signs may appear when the railroads begin to realize help from beneficial legislation just passed by Congress.

Meanwhile, the economy is preparing to expand on the gains it has registered on the road back from recession. If the economy can stay ahead of galloping inflation, the future looks bright.

What's Most Important?

EXTENSION OF REMARKS
OF
HON. H. CARL ANDERSEN
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, August 6, 1958

Mr. H. CARL ANDERSEN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Marshall Daily Messenger of August 1, 1958.

On several occasions I have called the attention of my colleagues to the contributions made to public understanding by the editorial pens of our country editors. Without the burdens and pressures of big-city life, our country and small-city editors demonstrate an unusual ability to understand and evaluate the basic problems of people.

The editor of the Marshall Daily Messenger is such a man. Donald J. Olson is a young man who demonstrates in some of his editorials a wisdom and understanding far beyond his years and experience. In the editorial I am including in the RECORD he has made the best case for soil and water conservation which has yet come to my attention.

I commend this editorial to the attention of my colleagues and hope that every conservation journal in the Nation sees fit to bring its clear purpose to the attention of other readers:

WHAT'S MOST IMPORTANT?

Right now it seems most people are thinking of the proposed watershed district as a flood-control plan. Certainly the picture of water flowing knee deep down normally dry streets makes a dramatic and frightening impression. And whatever losses that are sustained in flooded homes and stores are felt suddenly and immediately. That, probably, is the reason last year's heavy June rains are connected with floods, flood control, and watershed districts.

But, in the long run, there are a couple of other aspects to the proposed watershed district that are important to the overall welfare of this community.

We are thinking about soil conservation and water conservation.

An operating watershed district with all of the necessary conservation practices definitely will hold topsoil. This is an economic gain for any agricultural community. Last year's flood moved topsoil in this area in such staggering quantity that it was described in terms of train carloads.

It has often been said that it takes 100 years for nature to manufacture 1 inch of topsoil.

An operating watershed district benefits a community also during the years when there is the exact opposite of a flood: when a drought hits. Shortly after the State of Texas was severely damaged by excessive rainfall a year ago, a short-term drought hit that same area.

On the land that had good soil and water conservation practices, the drought meant little because the earlier rainfall had sunk down to bedrock. On the "untreated" land, the earlier rains had run off the cropland (causing the flood) and had sunk down only a few inches.

Iowa State College has been reported as saying that 3 extra inches of rainfall during the crop-year may mean at least 10 extra bushels of corn if the moisture sinks into the ground and is available to the plants.

If water conservation practices could save three inches of rainfall, holding it on the land, this area could expect higher corn yields. In a dry year it could be tremendously important to each individual farmer.

On a communitywide basis, the benefit could be amazing.

Upstream from Marshall, on the Redwood River watershed, there are about 250,000 acres of land. About 80 percent of that figure is cropland and about 50 percent of the cropland is in corn each year.

Extend these figures and it's easy to see what the impact of this additional wealth could mean to this area.

A program designed to hold topsoil on the land and conserving moisture for use during drought lacks the glamour and drama of giant flood-control works. But just the same we believe the conservation of our basic resources—our farmland—is the most important aspect of the watershed district program.

Fair Trade Is Price Fixing

EXTENSION OF REMARKS
OF
HON. BRUCE ALGER
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Monday, August 4, 1958

Mr. ALGER. Mr. Speaker, in the last session of the Texas Legislature, as in every session since the midthirties, a price-control bill ostensibly aimed at fair trade reared its head.

Editorial cries of outrage from every corner of the State properly shouted down this latest effort of the price controllers.

While these editorial comments were directed toward a State-level offspring of the sort of fair-trade bill currently being pushed in Congress, the comments are pertinent and appropriate to both bills equally, and I submit some of this editorial opinion to you at this time.

The Austin American-Statesman:

The principle of price regulation by law is contrary to free enterprise and free competition. The result of the policy of legislation, whether reached by the first step of preventing price competition indirectly, or by the statutory fiat of fixed markup, is to raise prices.

The Houston Press:

Fair trade has been carried to its ultimate conclusion in England where all sorts of agreements, cartels, price fixing and restrictions are a major part of business life. More than any other one factor, we believe, this has been responsible for England's ills.

San Antonio News:

In practice, we do not think the small grocers would benefit substantially from passage of those bills. Those stores serve a useful and profitable distribution function, but they simply cannot compete directly, in the same area of trade, with the more efficient and economical mass-distribution outlets, which are highly competitive among themselves. And any attempt to make the independents artificially competitive by law is an indefensible disservice to the consumer, who has the economic right to buy wherever he wants to and at the lowest price he can find.

Fort Worth Star-Telegram:

This is a negation of free enterprise, under which the owner of an article may dispose of it as he pleases. And no one can argue convincingly that it is in the interest of the customer.

Seguin Enterprise:

We believe in the good old-fashioned American custom of letting prices seek their own levels through the interaction of healthy competition. And there's no kind of whining that will change the fact, or alter its validity as an answer, that the "big guys" we know right here in Seguin started out just as small and just as broke as anybody, and not very long ago. Those bills are not to protect us, the customers. They are to protect the businessmen who are not sufficiently efficient to meet good competition. Good competition means better prices for you and me. So let's keep it that way.

Corpus Christi Times:

Unless there is some affirmative showing that the practice violates unfair competition regulations, the right of a merchant to sell his products at a loss or at a profit should not be infringed. In any event, in the competitive business society we live in, every businessman should have the privilege of going broke. The market place will inevitably take care of the incautious or imprudent merchant.

Fort Worth Press:

In years past, The Press has consistently taken the editorial position that price-fixing, by any other name, works to the detriment of the consumer. This bill is no exception and needs to be defeated.

Denton Record-Chronicle:

Fair trade legislation, under any guise, is damaging to the consuming public.

Miss Anderson to U. N.

EXTENSION OF REMARKS
OF
HON. BOB WILSON
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Friday, August 1, 1958

Mr. WILSON of California. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Chicago Sun-Times of August 3, 1958:

MISS ANDERSON TO U. N.

President Eisenhower's appointment of Miss Marian Anderson, the world-famous contralto, as an alternate delegate to the United Nations deserves applause. Her recent good-will tour of the Far East for the State Department showed that she has a great and warmhearted talent for making friends among other peoples. As our TV columnist Paul Molloy commented on a TV report of her seven-country tour:

"Miss Anderson made it clear to me that a lot of people love us—not because of what's left of our money, but because this country has a lot of fine people like Miss Anderson."

At the U. N., the personal element is more important than the casual observer might suppose. The chance for making friends and influencing peoples by personal contact is always present.

Miss Anderson, born of poor Negro parents in a humble house in south Philadelphia, is at home with royalty as well as commonfolk. As a child she scrubbed steps to earn spending money. She now commands $2,500 for one performance. She is a wonderful example of the American success story, and her appointment is a fine answer to Communist propaganda about the lot of Negroes in the United States.

Another good U. N. appointment was that of Irving Salomon, retired president of the Royal Metal Manufacturing Co., of Chicago, who now lives in California. He is well remembered here as an active civic worker, who after his retirement was appointed head of a United States delegation to the 1953 Paris meeting of the United Nations Educational, Scientific, and Cultural Organization.

Close to the People

EXTENSION OF REMARKS
OF
HON. KATHARINE ST. GEORGE
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, August 6, 1958

Mrs. ST. GEORGE. Mr. Speaker, the following editorial, appearing in the National Grange Monthly, and written by Herschel D. Newsom, the master of the National Grange, says something that many of us have felt needed saying. Mr. Newsom says it clearly and briefly.

We have gone overboard on the theory that a public official is contaminated or dishonest if he acts like an ordinary human being. If he has friends, if he is helpful, if he tries to be of service to his community, he is accused of taking bribes and of being a crook.

This is carrying suspicion and cynicism altogether too far. If we are going to believe that every kind deed is done with an ulterior motive, that every gift is a bribe, our public life will have reached a new low and very few high-principled men or women will want to go into it.

CLOSE TO THE PEOPLE

Years ago my grandfather resigned as postmaster. He resigned because Federal restrictions made it next to impossible for him to maintain his normal friendly relationships with individuals. Even in that day, grandfather discovered that a public servant must somehow be arbitrary and cold, and he wasn't interested in even trying to meet that requirement.

Attempts to substitute rigid restrictions on individual behavior, for reliance on individual integrity of persons carrying public responsibility is dangerous. Most Members of Congress and individuals in the executive branch of Government know and recognize the difference between right and wrong. They are basically honest, and no rules or regulations can be substituted for a sense of values, honor, and integrity.

To conclude that one must suddenly insulate himself from established and normal friendships upon taking a public post, is to assume that from positions of authority and responsibility, favoritism, or undue influence will automatically flow. This is an unfair assumption that may be vicious.

TREMENDOUS POWER

Our concern must be continually to keep the Federal Government close to the people. Government must be responsive to individuals—and to all segments of society. This is difficult because our Federal Government is now big, complex, unwieldy, and has tremendous power over our lives and property.

Often upon the decision of one official hinges the destiny of an individual, his business, or his whole life.

To insulate public officials and employees from their friends, and from all of the rest of us is to make it extremely difficult to question a decision or finding. It is to short-circuit the right of appeal by pushing the Government out of the reach of you and me.

To be able to complain or make suggestions to your Congressman, Senator, or to the President himself, is a national tradition—a democratic privilege. It is our insurance against unfairness, protection against being pushed around by powerful public agencies, commissions, or persons—a safeguard against abuse from Government; a part of our system of checks and balances.

Let's not be stampeded into a situation whereby a Congressman or Senator or someone at the White House cannot pick up the phone and make inquiry concerning a decision. This need not mean that the inquirer is asking that the decision be changed or reversed. It may well mean that he wants to know the reason for the decision and the background leading up to it.

This is the way to reduce autocratic decisions to a minimum. This is the way to help preserve responsive and responsible government. Public servants must be above legitimate suspicion but they must not be so far above the rest of us that we cannot reach them.

Retirement After 47½ Years of Service

EXTENSION OF REMARKS
OF
HON. EDWARD A. GARMATZ
OF MARYLAND
IN THE HOUSE OF REPRESENTATIVES
Wednesday, August 6, 1958

Mr. GARMATZ. Mr. Speaker, 47½ years of service with one company is an unusual record, but that is what has been accomplished by one of my constituents and good friends, John A. Rupp, of Baltimore. He retired on August 1 after having spent all of these years in the accounting department of the Baltimore & Ohio Railroad Co. I am confident that the loss of his faithful and valuable service will be keenly felt by the company.

How does one feel after working in one place for 47½ years and leaving it for retirement? Mr. Rupp has expressed his feelings in a statement written on the eve of his retirement. Under leave to extend my remarks, I insert his valedictory in the RECORD, and to take this opportunity to wish him a long and healthy life and a well-deserved happy retirement:

VALEDICTORY: WHAT RETIREMENT FROM B. & O. MEANS TO ME

(By John A. Rupp, former corresponding clerk, Baltimore, Md.)

The day of severance from B. & O. I consider with commingled feelings of joy and sadness, because for 47½ years I have been associated with their accounting department, sharing its many problems and spending every spare moment over and above the required time, but time, tide, and ticker tape wait for no man.

With B. & O. I have been attuned to the practice of courtesy, sobriety, and loyalty. To younger employees in B. & O. service I would emphasize that railroad business like any other business is a living thing, perpetually changing and offering the highest awards

to those of creative minds who are resiliant and resourceful.

A fine railroad has to have fine executives and those who report to them, and the B. & O. has both. I found this condition evident in the accounting department as a synonym for cooperation.

I thank God for having allowed me to work for such length of time in the railroad industry, thus to gain valuable knowledge and information. Books can reinforce native intelligence by buttressing it with facts, but cannot supply the spark of intelligence itself. In other words, actual experience counts most in life. It is also a measure of satisfaction now that I am leaving, that the railroads are getting legislative aids so necessary for their surviving.

In conclusion I quote from an article by Dr. Thomas L. Hawkins, of Helena (liaison representative of the Montana Medical Association to the American Medical Association) reading as follows:

"There is no valid reason why old age should not be the best years of human existence. Instead, we find today that millions of our aged are being shelved as a surplus commodity. We feel we should offer the aged hope for a better life, not a crutch. We should offer them a return to usefulness and self-respect, not a one-way trip to isolation and limbo. Because of recent advances in the control of diseases which shorten life, a greater number of Americans than ever before, have survived into retirement years. We are beginning to learn that there is rarely such a thing as true senility."

Respectfully submitted.

JOHN A. RUPP.

BALTIMORE, MD.

(Written on the 31st day of July 1958 (eve of my retirement).)

Hon. John A. Burns

SPEECH

OF

HON. JIM WRIGHT

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 31, 1958

Mr. WRIGHT. Mr. Speaker, I should like to join in the commendations our colleagues are making of the splendid services being rendered to his constituents, his beloved Territory of Hawaii and his Nation by the Hawaiian delegate, Mr. BURNS.

On more than one occasion I have heard our Speaker comment that the House of Representatives is the most critical audience in the world. By this, I think he means among other things that a man cannot deceive his colleagues who serve with him, day in and day out. One's colleagues are apt to know one another's depth and sincerity.

By any test that may be applied, JOHN BURNS has won for himself the respect of those of us who serve with him. He is deeply honest, as all of us know. He has brought to these halls a sincere devotion to Hawaii and the causes of Hawaii. We have observed and admire his ability as Hawaii's spokesman.

Above all, I think we have learned to appreciate JOHN BURNS because there is absolutely none of the demagog in him. He will not stoop to making those idle and meaningless gestures which might superficially appear to those at home to be serving their cause but which, in reality, would hinder their cause in Congress. He is a true and able servant of his people and his country.

Raising the Debt Limit Is Entirely the Result of the Fiscal Irresponsibility of Congress

SPEECH

OF

HON. HAROLD R. COLLIER

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 5, 1958

The House in Committee of the Whole House on the State of the Union had under consideration the bill (H. R. 13580) to increase the public debt limit.

Mr. COLLIER. Mr. Chairman, today the Congress is called upon to increase the debt limit of the United States for the second time within a year. As I cautioned this House back in January, if we had followed a course of fiscal prudence we would not be faced with this issue today. As a matter of fact, throughout the 1st session of the 85th Congress, every Member of the House of Representatives should have known our fiscal situation well enough to have avoided even the first debt limit extension by being sensible in the conduct of our fiscal affairs.

Fiscal prudence is not always politically expedient because one who voted along the lines of sound Government economy is certain to alienate many groups seeking special benefits of one type or another. As has been said many times in the past, Government economy is generally popular except when it deprives some individual or group of a pet project or benefit.

Yet, no one can deny that had a general policy of sound Federal spending been followed throughout the last session of Congress and again in 1958, we could have balanced our budgets and we would not be in a position of having to vote two debt increase bills in 1 year. The situation we now face, in view of the already staggering national debt of $276 billion, is indeed a sad one.

To appease every segment of the voting populace in the interest of political expediency, Congress has become so adicted to the policy of spending more and more money for new schemes and programs that we may well be heading down the "road of no return."

It seems to me that it is about time to lay the cards right on the table. It is time that we give the American people the truth about Federal spending and the cold facts regarding deficit spending. Perhaps even now it is too late—but the fact of the matter is that every dollar the Congress appropriates must be paid by the taxpayers of this country—and the future taxpayers of the next generation. The idea that there is a bottomless pit from which we get money for Federal spending here in Washington is in reality nothing more than a fantasy of bad psychology. Even in the face of the so-called cold war and the repeated emergencies, Government must live within its means. Fiscal responsibility must be returned to Washington as a demand upon both the legislative and executive branches of Government.

Even the big spenders in Government know full well that deficit spending must stop somewhere. If we were to live under the illusion that the astronomical national debt is immaterial, then we have no business taxing the American people at all. To carry this point further, we could further assume the position that we can operate the Government entirely in the "red" and eliminate taxes completely. Obviously, this is ridiculous.

Government is run by money furnished by the United States Treasury. The only place from which this money can come is taxes. When the Treasury runs into debt, it must borrow money to pay its bills or go bankrupt. It is as simple as that. When the Treasury borrows money, it must eventually tax the people to pay this money back. And while it is operating on borrowed money, it is paying interest which again becomes a burden to the taxpayers.

In order to borrow money, the Treasury Department enters the money market to secure a loan. Then inflationary pressure mounts and once again we find this nibbling-away process in operation as the dollar becomes less and less valuable.

Many of us were amazed by stories of the inflation that followed World War I in Germany which became a definite factor in the situation which led to nazism. We were also amazed by stories of inflation which struck Greece and France after World War II. I can recall pictures of men shoveling millions of drachmas into the fire to destroy currency because of inflation in Greece.

And all this boils down to what? Simply that there was never a greater demand upon elected public officials to face the reality of a dangerous situation—a situation which is today worse because we must pay the fiddler for being expedient rather than practical in the handling of Government affairs.

I often wonder how we can impress upon the people of this country the seriousness of deficit spending in Government. How can we impose the philosophy of self-restraint in the interest of preserving the sound internal security essential to the greatness of a nation? The whole matter is disturbing, to say the least—particularly when one views the burden that will be placed upon the shoulders of our children in the generations ahead. Just what good will all the Government-sponsored programs and services be to them if they fall heir to a nation that is tottering on the brink of national bankruptcy—if not already falling into the abyss?

Yes, there are those who contend that this type of fear is something that we never have to worry about. In fact, there is an apathy toward the symptoms of our fiscal sickness. Perhaps even all the facts and figures may fail to dent this apathy or maybe some folks just do not care about the future as long as the doles are served today. If the ma-

jority of the people feel this way, it will be reflected in the attitude of their elected representatives. But, if we continue along the road we have been traveling in the past 30 years, I can only say, "May the Lord help us as a nation."

Aside from the aspect of fiscal disaster, the tremendous expansion of the Federal Government has other implications which may well be destructive to the foundation of free enterprise upon which this great Nation was established.

The only honest way to meet the problem of Federal spending is to let the American people know that each program the Government assumes is going to come directly out of their tax dollars. Going into debt is a way of not only saddling each taxpayer with an obligation for future payments but likewise automatically reduces the value of everybody's dollar. When the Government spends money, it should face up to the fact that it must tax the people to do so. When the Government spends more money than it derives from taxes, it should increase taxes to meet the overspending rather than run into debt. But prudence in the conduct of Government demands that we keep expenses at a minimum and within the confines of good judgment so that taxes may likewise be kept at a minimum. Hence, instead of the Government spending the individual's money in many cases, folks would have more of their own money to spend themselves.

Because I have voted consistently in a manner that would result in the balancing of our Federal budget during both sessions of the 85th Congress, I voted against the increase in the debt limit today. As I pointed out on the floor of the House yesterday, the majority of the Members of Congress, who supported by their vote the many programs which created spending beyond the bounds of our national income, are morally obligated to vote for extension of this debt limit today since the situation we now face is their responsibility.

Dr. Lee A. Du Bridge, President, California Institute of Technology, Endorses H. R. 13247, the National Defense Education Act of 1958

EXTENSION OF REMARKS
OF
HON. CARL ELLIOTT
OF ALABAMA
IN THE HOUSE OF REPRESENTATIVES
Monday, August 4, 1958

Mr. ELLIOTT. Mr. Speaker, under leave to extend my remarks, I include the following telegram from Dr. Lee A. Du Bridge:

PASADENA, CALIF., *August 4, 1958.*
The Honorable CARL ELLIOTT,
Care the House Office Building,
Washington, D. C.:

The national defense education bill, H. R. 13247, is of great importance to the welfare and progress of higher education and to the training of future scientists, engineers, teachers, and other leaders. Urge your active support of this measure.

LEE A. DU BRIDGE,
President, California Institute of Technology.

The People Speak

EXTENSION OF REMARKS
OF
HON. WILLIAM M. TUCK
OF VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, August 6, 1958

Mr. TUCK. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include an editorial by Mr. David Lawrence which is contained in the August 8, 1958, issue of U. S. News & World Report.

Mr. Lawrence in his usual clear and forthright manner has presented incontrovertible truths pertaining to the right of self-government to which the people of every State are entitled. His editorial on the problem of mixing the races in public schools is replete with sound and practical expressions. The text of the editorial is as follows:

THE PEOPLE SPEAK

It was no mob incited by agitators that went to the polls last week in Arkansas.

It was no small group of zealots determined to defy the supreme law of the land that voted overwhelmingly to assure Governor Faubus a third term—unprecedented in more than half a century.

It was the electorate of Arkansas, expressing in a calm and deliberate manner its belief that the wording of the Constitution of the United States must be accepted, rather than any fortuitous ruling by the Supreme Court deviating from the Constitution.

The electorate of Arkansas reiterated by its vote a belief that the 14th amendment should be enforced not by bayonets but by a law of Congress. Such a law has never been passed even though the amendment specifically says:

"The Congress shall have power to enforce, by appropriate legislation, the provisions of this article."

What is the provision that has been deemed pertinent by the Supreme Court? The 14th amendment says that "no State shall * * * deny to any person within its jurisdiction the equal protection of the laws."

For decades past equal protection has been construed by the Supreme Court to mean that equal facilities for education may properly be provided by the States through separate schools.

Ever since the founding of the Republic, education has been considered solely within the right of the States to administer. Nowhere in the Constitution is the word "education" mentioned, and certainly the debates in Congress when the 14th amendment was adopted do not reveal a scintilla of evidence to prove that the amendment was intended to give Congress the power to take away from the States the right to control their own educational systems.

There is nothing in the Constitution, therefore, which prohibits the States from assigning pupils to public schools on whatever basis the State feels will give the best education to the children of its citizens.

From the very beginning of our history—confirmed indeed by a specific decision of the Massachusetts Supreme Court in 1850—the right of a State to set up separate schools for different races has been upheld. In 1896 the United States Supreme Court formally recognized the custom when it said that "separate but equal facilities" do not violate the 14th amendment.

The people of Arkansas have as deep a respect for the Constitution as the people of any other State of the Union. There would not have been cast for Governor Faubus last week the largest percentage of votes ever polled by any candidate in a Democratic primary election in Arkansas—70 percent of the total vote—if the people had not wished to assert their right to interpret the plain words of the Constitution as they are written.

The people of Arkansas have refused to uphold the usurped right of the nine Justices in Washington to say that modern psychology or emotionalism is more important than the letter of the Constitution itself. The people of Arkansas reserve the right to control their own emotionalism, especially inside the schools.

The people of Arkansas have been abused on the radio and on television and in the northern press as lawless. They have been told that their action—in controlling their own educational system—is a blot on America's record before the world, especially in Soviet Russia.

But the free election last week is, on the contrary, a dramatic example of freedom of choice. Nowhere in the Soviet Empire could there be such a vote recorded in opposition to the policies of the Central Government.

Arkansas has not merely upheld its Governor. It has gone beyond any question of personalities. It has upheld a great principle—the doctrine of States rights which Thomas Jefferson gave us.

The 10th amendment to the Constitution declares: "The powers not delegated to the United States by the Constitution, nor prohibited by it to the States, are reserved to the States respectively, or to the people."

The problem of mixing the races in public schools cannot be solved overnight. It is one that is rooted in the customs and habits of the people.

This writer was enrolled for 12 years in integrated public schools in the North and never has had any personal objection to integration. The people of every State, however, are entitled to their right of self-government. If it was intended by the Constitution that there be uniformity of law throughout the States, then, logically, the Supreme Court long ago should have declared invalid all those laws which vary from State to State in different fields of human relations.

The people of Arkansas have spoken. They have said that the Constitution itself is the only "supreme law of the land." By their virtual unanimity, they have advised the Supreme Court to halt its usurpations and to follow the Constitution itself.

The Tennessee Valley Authority

EXTENSION OF REMARKS
OF
HON. JOHN V. BEAMER
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, August 6, 1958

Mr. BEAMER. Mr. Speaker, under unanimous consent, I enclose an editorial from the Peru (Ind.) Tribune dated August 1, 1958. This is a reprint from other editorial pages and thus it is evi-

dent that there are many sincere-minded Americans who are thinking in the same manner that Newsweek, the Peru Tribune, and many other publications are thinking:

FROM OTHER EDITORIAL PAGES

This year the Tennessee Valley Authority celebrates its 25th birthday. Writing in Newsweek, Raymond Moley reviews TVA's activities and purposes, and concludes: "If this is not socialism, then Socialists at home and abroad who have hailed it as a great first step to the abundant life are badly fooled. Certainly to call the TVA 'democracy in action,' as its adherents hail it, is a misnomer because the directorate responsible only to the President and Congress has plenary power—a power that has grown with the years."

The Desperate Need for Federal Aid to Education

EXTENSION OF REMARKS
OF
HON. HAROLD D. DONOHUE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 15, 1958

Mr. DONOHUE. Mr. Speaker, unquestionably one of the most challenging legislative subjects that has faced this Congress, and several preceding ones, is finding ways and means through which the Federal Government can reasonably and sensibly extend desperately needed assistance to the several States to advance their educational standards and provide adequate educational facilities.

It is true that many Members of Congress have entertained deep and sincere convictions in opposition to most of the educationl aid proposals that have been suggested. It is equally true that the administration itself has not demonstrated any great enthusiasm or exercised energetic leadership in the matter.

All of this in spite of the almost unanimous declaration of educational authorities that the plight of our educational system nationally amounts in substance to a national emergency.

However, the dramatic Soviet demonstration of scientific achievement has inspired, I think, a more responsive mind and attitude to this problem, both in the Members of this body and the general public. It would seem that the time has come for us to resolve our differences on such a vitally important national necessity and fulfill our legislative responsibility.

In my opinion, an excellent opportunity to do so is presented to us in the form of the measure I understand is being today reported out of the House Education and Labor Committee, H. R. 13247.

In summary, this bill is designed to provide Federal scholarships and also student loan funds to enable superior students without finances to attend college. Its emphasis is placed upon the teaching and study of science, mathematics, and foreign languages. It would improve testing and counseling in secondary and elementary schools and it would help train more college teachers.

No matter on what other phases of the problem we may have some differences, I believe that there is no single Member of the Congress who would question the foundation importance of education to a progressive future for this great Nation.

I most earnestly hope that both the Congress and the administration will join their efforts toward the enactment of the substance, at least, of this bill as a united action in concern for the basic welfare and continuing development of this country.

Pollution Board Asks for Stronger Federal Aid

EXTENSION OF REMARKS
OF
HON. JOHN A. BLATNIK
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, August 6, 1958

Mr. BLATNIK. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by John W. Stepp which appeared in the Washington Evening Star on August 1, 1958:

POLLUTION BOARD ASKS STRONGER FEDERAL AID

(By John W. Stepp)

The Federal Water Pollution Advisory Board has thrown its weight behind efforts to strengthen, rather than strangle, the Federal aid program to help clean up the Nation's interstate streams.

In a report released today by the United States Public Health Service, the board asserted its firm conviction that the Federal Government has a nationwide interest and responsibility in the quality and quantity of water.

"We believe," the group of nationally known leaders in the field added, "that Federal responsibility includes national leadership of the highest degree in water-pollution control, with particular emphasis on research, technical assistance and consultation. We recommend the continuation and even strengthening of this leadership."

GREAT ASSISTANCE

The pollution abatement-aid program to date was characterized as having proved of great assistance and stimulus to communities interested in building waste treatement facilities. The board noted that already long unmet needs for pollution abatement are being steadily compounded by the surge of pollution, industrialization and urbanization.

The Board's recommendation runs directly counter to the Eisenhower administration's urgings that the grant program be abandoned outright. This, according to the report, aroused misgivings in some of the members. But despite concern that the Board, having been appointed by President Eisenhower, may be officially bound to concur in his recommendation to kill the program, the majority decided to speak out for continuing and strengthening Federal help.

Since the Board's meeting in Washington last May, several bills have been introduced in Congress to achieve that goal. The first of these was offered by Representative BLATNIK, Democrat, of Minnesota, author of the first construction-aid feature in the Federal Water Pollution Control Act of 1956. It would double the present $50 million annual-grant figure, and would also permit two or more communities to pool their grant money to help build waste-treatment works beneficial to both.

In three other resolutions made public today, the Board urged—

1. That industry, too, should receive financial incentives from the United States to encourage efforts to reduce the amount of industrial waste entering streams. Toward this end, legislation was recommended to permit rapid tax amortization, over a 5-year period, of industrial waste-treatment facilities.

SUPERVISION RECOMMENDED

2. That any antirecession Federal-aid legislation that involves construction of waste-treatment plants should be placed under supervision of the Public Health Service in the interest of maintaining a well-integrated nationwide program. Public Health administers the Federal Water Pollution Control Act.

3. That the same agency expand virus research and epidemiological studies involving streams. This would lead to more authoritative guidance for health and waterworks authorities in assuring adequate protection of water supply and public health in all communities.

The Board further, as it has before, stressed an essential need for a fully developed public-awareness program to inform people from school age on up of the serious water-pollution problem in this country.

American Library Association Recommends the National Defense Education Act of 1958

EXTENSION OF REMARKS
OF
HON. CARL ELLIOTT
OF ALABAMA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, August 6, 1958

Mr. ELLIOTT. Mr. Speaker, under leave to extend my remarks, I include the following resolution of the American Library Association in support of the National Defense Education Act of 1958:

RESOLUTION ON THE NATIONAL DEFENSE EDUCATION ACT OF 1958, ADOPTED BY THE AMERICAN LIBRARY ASSOCIATION, JULY 17, 1958

Whereas the American Library Association has an established policy in support of Federal aid to public education without Federal control in order to assist the States and their subdivisions to establish and maintain adequate educational facilities; and

Whereas the National Defense Education Act of 1958 aims to provide scholarship loans to individuals for study at institutions of higher education; grants to the States to strengthen science, mathematics, and modern foreign language instruction in schools; a substantial program of graduate fellowships to encourage individuals to train for a teaching career in our universities and colleges, and authorizes an annual appropriation for research and experimentation in more effective utilization of television, radio, motion pictures, and related media for educational purposes; and

Whereas the broad program encompassed by this legislation has wide implications for the libraries whose interests it touches at every major point: Therefore, be it

Resolved, That the members of the American Library Association at their annual conference at San Francisco, Calif., on July 17, 1958, recommend to the 85th Congress, sitting in its second session, that it enact the

National Defense Education Act of 1958; and be it further

Resolved, That copies of this resolution be sent to the President of the United States, to all Members of the Congress, to the Secretary of the Department of Health, Education, and Welfare, and to the United States Commissioner of Education.

Reconveying the Lands Acquired for Burke Airport to the Former Owners

SPEECH
OF
HON. OREN HARRIS
OF ARKANSAS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 5, 1958

The House in Committee of the Whole House on the State of the Union had under consideration the bill (H. R. 10045) to provide for the sale of all of the real property acquired by the Secretary of Commerce for the construction of the Burke Airport, Va.

Mr. HARRIS. Mr. Chairman, this will conclude the debate on this bill after which we will vote to determine whether or not we are going to try to undo what I think was a very unfair thing perpetrated by our own Government in a rather unfortunate situation.

Now, as others have stated, I do not know any one of the parties involved, but I do not think it is the proper thing for the Government to move in and take over the homes and the property of individuals who have lived there for years and years and then not utilize it or even pretend to use the property for a public purpose and then hold it, deprive the people of the property, and if there might be some advantage because of what transpired in the ensuing years, the Government get the benefit of it.

Now, you talk about principle. Yes, there is a principle involved here. There was 68,000 acres of land taken by the Government out of the heart of my district during the war. I know what it means for a family, neighbors, your own people, to lose their homes that they had owned for generation after generation. And, I will say to the gentleman from Michigan you cannot take a piece of property from a person who has maintained it as a home for a generation and satisfy him on the basis of what little value might have accrued. Sentiment prevails in the minds and the hearts of those people. Yes, there is a principle involved here, and that principle is Should the Government walk in and by condemnation proceedings deprive the people of their own homes and never use it for such lawful purpose?

Mr. HAYS of Ohio. Mr. Chairman, will the gentleman yield?

Mr. HARRIS. I yield to the gentleman from Ohio. He has not had an opportunity to say anything about this yet.

Mr. HAYS of Ohio. I just wonder if the gentleman would care to enlighten us on why the Government did not utilize it after condemning it.

Mr. HARRIS. Because, as events subsequently transpired, the Congress would not permit the construction of the airport there because controversy developed. Everybody got into the act, so a Presidential commission study was requested and selected Chantilly for the site of another airport for Washington.

Now, let us do justice to these people and let them have the property back. They paid capital gains taxes on it. Let us let them have it back for what they paid for it, a fair and reasonable thing to do.

The Cedars of Lebanon

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 17, 1958

Mr. MULTER. Mr. Speaker, I commend to the attention of our colleagues the following editorial which appeared in the Carolina Israelite, May–June 1958 issue:

THE CEDARS OF LEBANON

Several years before Israel was recreated a sovereign state by the United Nations, Hon. Moshe Sharrat (later Foreign Minister of Israel) told a private audience here that of all the states in the Middle East, Lebanon would eventually become the ally of the Jewish state.

There have been many developments in recent years to indicate that this observation was based on fact. Indeed, it is precisely because of this development that the Nasser-Arab-pro-Soviet bloc wants to overthrow the existing Lebanese Government.

The development of political friendship between Christian Lebanon and Israel is not based solely on current politics and the struggle for Middle East power between the East and West. Basically, Lebanon, like Israel, is a western nation, certainly a Mediterranean nation, rather than part of the Arabian world. In fact, the Lebanese have always considered themselves Europeans, and this goes back to the very beginning or recorded history.

This was Phoenicia with its great city of Tyre and King Hiram, the friend of both King David and King Solomon.

The Phoenicians were the great craftsmen of the ancient world—textiles and metals; and Phoenician craftsmen helped build the Temple of Solomon.

Along about 800 B. C. Phoenicia reached the height of its power. Its sailors had made a virtual Phoenician lake out of the Mediterranean, and beyond. There is ample evidence today that the Phoenician seamen had ventured through the Gates of Hercules into the Atlantic and established settlements on the west coast of both Europe and Africa.

The Phoenicians, like many other creative peoples, did not know how to keep an empire together. They were seamen and craftsmen, but they were no colonizers, bookkeepers, or empire builders. And they were particularly lousy soldiers. Most of their colonies broke away by merely saying "boo" to the mother country, but the colonies themselves fell in their own turn because of this same tradition—trade, no fight. Carthage was destroyed for this very reason. No great nation can survive if it has to go out and hire outside soldiers to fight for them. What Phoenicia (and its blood-brother Carthage) overlooked was the fact that while they were in pursuit of commerce and new ideas in building construction, the "have nots" were thinking of only one thing—to take away from the "haves." And so the Phoenicians stretched their seaports through the entire length of the Mediterranean, but the whole business had a very short life span. The Babylonians, the Assyrians, the Romans, and the Greeks under Alexander the Great, each took a wallop at them, almost at will, and with very little resistance from the Phoenician sailors, artists, engineers, craftsmen, scholars, and lacemakers.

Why did the Phoenicians disappear, and why didn't the Jews disappear? This is a big subject. Whole books can be written on it. I think one of the reasons was the process of Hellenization. The Phoenicians lost themselves within the Greek culture. And we can well understand the temptation. Faced with the same development, the Jews said, "No." But it was not all that simple. The Jewish intellectuals were all for it, of course. The chances are that I would have gone to that temple of Zeus myself. Mattathias would have killed me first. But now I am glad that this fellow was such a fanatic about the law, for the maintenance of the Covenant.

This Mattathias must have been quite a fellow to have won a victory against such odds (the young Jews were enchanted by the prospect of becoming Greeks). Many of the young Jews began to appear in the arena in sacerdotal nakedness with artificial foreskins in an attempt to out-Greek the Greeks.

The Phoenicians had no Mattathias and so they fell like a ripe apple off the tree, although many thousands "expressed" their resistance by entering the Jewish world. I have seen the Phoenician forehead and dangling ear lobes on thousands of my fellow Jews in the subway in the Jewish country clubs of Charlotte, Atlanta, Rochester, and Los Angeles (just as I have seen thousands in the same places with the square shoulders of the Egyptian).

The Crusaders finished the remnant of Phoenician culture; the Phoenicians became converts; they were very ardent in their Christianity and suffered for it terribly after the Ottoman Turks took over control of the entire Middle East. In recent years the echo of this age-old culture became the independent state of Lebanon.

There was close communication between the Hebrews and the Phoenicians, and the alphabet which the Phoenicians gave to the world differs very little from the Aramaic and the Hebrew. The Phoenician religion was based on the cult of Adonis (Adon), and ritual and terminology were in many respects similar to the Hebrews.

And this ancient affinity between the two cultures appeared to have been on the verge of a revival in these tumultuous 1950's, and because of the possibility that Lebanon and Israel might come together as "brothers of the Mediterranean" (rather than as Arabic states), the Egyptian Nasser and his pro-Soviet allies seek to pull Lebanon away from its centuries-old "European" attitudes. If Nasser succeeds, it would pose an added problem for the security of Jewish Palestine, and for the peace of the entire Middle East.

Jim Farley in North

EXTENSION OF REMARKS
OF
HON. EUGENE J. KEOGH
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, August 6, 1958

Mr. KEOGH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial

from the Watertown (N. Y.) Daily Times of Wednesday, July 23, 1958:

JIM FARLEY IN NORTH

James A. Farley came to northern New York on Tuesday in the interests of his Democratic bid for the United States senatorial nomination. The former Postmaster General and once the Democratic National Committee chairman made a brief stopover in Watertown and then proceeded to Ogdensburg, Massena, and Tupper Lake.

Mr. Farley received an enthusiastic reception from the Democrats all along the route, some of whom had not been visited or consulted by party leaders in years. Mr. Farley is concentrating his attention on the traditional Democrats. He is a Democrat, first, last and always.

Mr. Farley is "Mr. Democrat" himself. His long association with the party from childhood to the present has instilled him with a spirit of complete loyalty under one banner. He feels that the traditionl Democrats hold the key to his success and have throughout the years.

Whether Mr. Farley is successful in his effort to win the Democratic nod at the August convention is uncertain. But at least Mr. Farley is carrying his fight to every corner of New York State and renewing friendships with Democrats who have been completely bypassed by candidates in other campaigns. The Democrats of northern New York welcome the attention that they are receiving from Jim Farley, long respected and admired for his political astuteness and friendly spirit.

A Fable: The Vicuna and the Mink

EXTENSION OF REMARKS
OF
HON. JOHN C. WATTS
OF KENTUCKY
IN THE HOUSE OF REPRESENTATIVES
Wednesday, August 6, 1958

Mr. WATTS. Mr. Speaker, under leave to extend, I wish to incorporate in the RECORD a poem which appeared in the Lexington Herald, Lexington, Ky., relating to the Sherman Adams case:

A FABLE: THE VICUNA AND THE MINK

The Andes vicuna and the pastel mink,
Met at a stream for a cooling drink;
Said the shy vicuna to his tough old friend,
"I've got a problem and don't know the end;
Just what do you make of this Washington mess?
Sounds pretty bad, I must confess,
But you've had experience along this line,
As I recall, 'twas 'round forty-nine.
Wasn't your relative involved up there,
In some barter of influence affair?
One of my kinsmen, I have just learned,
Into a fancy coat has been turned.
He's now in the White House, wishes he weren't,
Reports say fingers show signs they're burnt."
Said the pinkish-gray mink to his vicuna friend:
"Times sure have changed, for they now defend
These gorgeous gifts they once deplored,
(I guess it depends, whose ox is gored.)
But what I don't get," said the mink with a grin,
"How come a vicuna coat taking's no sin?"

—THE EDITOR.

The Ports of Virginia

EXTENSION OF REMARKS
OF
HON. OVERTON BROOKS
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Monday, June 16, 1958

Mr. BROOKS of Louisiana. Mr. Speaker, the National Rivers and Harbors Congress is truly a national organization devoted to the proper development of the water resources of the Nation, with members in each State of the Union. The 45th national convention was given a most informative address by Rear Adm. David H. Clark, executive director, Virginia State Ports Authority, and I present it for the reading of the Members of Congress:

ADDRESS BY REAR ADM. DAVID H. CLARK, EXECUTIVE DIRECTOR, VIRGINIA STATE PORTS AUTHORITY, TO THE ASSEMBLED DELEGATES AT THE 45TH ANNUAL CONVENTION OF THE NATIONAL RIVERS AND HARBORS CONGRESS, AT THE MAYFLOWER HOTEL ON MAY 15, 1958

Mr. President, distinguished guests, fellow delegates to the 45th annual convention of the National Rivers and Harbors Congress, ladies and gentlemen, I am pleased to be here today and have the opportunity of addressing briefly this distinguished gathering.

When the ports of Virginia are mentioned, practically everyone immediately thinks of Hampton Roads. It is a fact that Hampton Roads is one of the largest and best natural harbors in the United States. In Virginia, we say it is the best. It is a fact that the combined tonnage of foreign waterborne commerce handled by Hampton Roads ports—Newport News, Norfolk, South Norfolk, and Portsmouth, has for the past two years exceeded that of any other United States port. In the calendar year 1957, the ports of Hampton Roads handled just under 60 million tons of foreign waterborne commerce, and the port of New York, which includes Jersey City, Hoboken, Newark, and Yonkers as well as the borough cities comprising New York City, was next with just over 40 million tons. Export coal accounts for approximately 85 percent of Hampton Roades foreign waterborne commerce, and overshadows the significance of the 9 million tons of traffic in other commodities.

The river ports of Virginia are also important to the economy of the Commonwealth and neighboring States. They could be more important if served by wider and deeper channels. Richmond at the head of navigation on the James River provides the western most deep water terminal on the North Atlantic. Richmond and Hopewell (also situated on the James River) handled last year almost 400,000 tons of foreign waterborne commerce, consisting primarily of import sugar from Cuba, newsprint from Canada, and export steel scrap.

Alexandria, situated at the fall line of the Potomac River, is the natural port for the Washington metropolitan area. During the 18th century Alexandria ranked among the six leading ports of the country. Last year Alexandria handled about 100,000 tons of foreign waterborne commerce, mostly newsprint; and nearly three times as much domestic commerce, three-quarters of which were petroleum products.

The Washington metropolitan area is the largest in the world located on tidewater not having adequate regular ocean transportation services. This is believed due to channel limitations. A study is now underway by the Corps of Engineers, United States Army, to determine the economic benefits of increasing the Potomac River channel depth from its mouth to Alexandria from its present 24 feet to a proposed 35 feet depth. The VSPA last year completed a survey to determine the shipping potential through the port of Alexandria. Several thousand questionnaires were sent out to firms in the Washington metropolitan area, and adjacent territory. The survey revealed that 90 firms now importing goods through other ports could save 61 million annually if they could use the port of Alexandria. It also revealed 248 firms that might export some 550,000 tons, and 176 firms that might import more than 500,000 tons through the port of Alexandria if adequate ocean transportation were available. In addition it brought to light 207 firms that might ship or receive from the Pacific coast a million and a half tons of domestic commerce.

In the past 25 years the Washington metropolitan area has nearby trebled its population, and now numbers about 2 million people. The area is unique, in that it is what you might call depression proof. This, because a depression or recession, when private spending is reduced Federal spending as an antirecession measure is usually increased. Despite this, there are relatively few industries in the area. We, of the VSPA, believe that a deepening of the Potomac River channel to permit the transit of large, deep draft vessels would not only benefit the importers, exporters, and consumers in the Washington metropolitan area but would also result in industries locating plants along the Potomac River below Washington, to the benefit of the area and the Nation.

All I have said is preparatory to extending you and your ladies an invitation for a trip by boat from Washington to Mount Vernon and return, as guests of the VSPA. This will afford those attending this Congress the opportunity to see the facilities now at Alexandria, and to visualize the possibilities for the future. Arrangements have been made for this Congress to adjourn within the next few minutes until tomorrow morning. There will be an announcement above the arrangement for this boat trip, and the visit to Mount Vernon where a ceremony is scheduled at the tomb of George Washington to which all are invited. This is particularly fitting because, in addition to being the Father of Our Country, Washington was assuredly the father of our country's system of inland waterways. The Authority, by the way, is not your host at Mount Vernon.

It is hoped that this trip will convince you that the Potomac River could be one of the important waterways of the country for ocean shipping and that the banks of the Potomac River, both the Virginia and the Maryland sides, offer important opportunities for industrial development. And, as I said earlier, Alexandria is the logical port for the Washington metropolitan area.

I thank you.

Renewal of the Wool Act

SPEECH
OF
HON. E. Y. BERRY
OF SOUTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES
Monday, August 4, 1958

Mr. BERRY. Mr. Speaker, this action the House has taken on the farm bill this

afternoon places the woolgrowing industry of the United States in jeopardy. The Wool Act of 1954 expires at the end of this marketing season and this industry which was dying until Congress enacted that Wool Act cannot survive unless this Congress takes action. I believe there is overwhelming support for renewal of the Wool Act but at no time has either House had an opportunity to vote on that one subject alone. This is the second time that a measure to renew the Wool Act has come before this House tied in with other general farm legislation.

The committee knows the woolgrowers stood shoulder to shoulder with the other commodity groups who sought today to pass this bill through a suspension of the rules. Now that this body has turned down that avenue, I would like to express the sincere hope that the committee will seek an immediate rule and bring this measure back to the House, even tomorrow if possible, so it can be debated and a farm bill acceptable to the members can be adopted and we can secure a renewal of the Wool Act before adjournment.

But Jim Farley Could Get Votes Here

EXTENSION OF REMARKS
OF
HON. EUGENE J. KEOGH
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, August 6, 1958

Mr. KEOGH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Yonkers (N. Y.) Herald-Statesman of July 29, 1958:

BUT JIM FARLEY COULD GET VOTES HERE

We don't pose as an unbiased adviser of the Democratic Party in Westchester. We wouldn't dare to presume to be such. For, frankly, we don't support candidates of that political party often enough to warrant any such presumption or to justify ourselves in any such role.

But we do believe that our Democratic friends consider us abreast of political happenings and aware of partisan trends. And it is on that basis we suggest to leaders of the Democratic organization in Westchester that they seem to be unjust to one of the greatest contemporary figures of their party.

We refer to James A. Farley of Nyack, former State and national chairman of the Democratic Party, former Postmaster-General under F. D. R., and now announced aspirant for nomination as his party's candidate this fall for the United States Senate.

If ever there was a man in this State to whom the Democratic Party owes an unlimited debt that man is Jim Farley. If there be any single individual who links effectively the past and the present State party organizations, it is Jim Farley. If there is any man who more than all other Democrats deserves a show of gratitude and a vote of confidence, that one is Jim Farley.

Yet the Democratic organization here in Westchester is reported strangely indifferent to its opportunity to advance Mr. Farley's political fortunes. Attempts to give him endorsement have been squashed, reportedly on the theory that such endorsement might "embarrass" party leaders in the country in efforts to grab off a place on the State ticket for some county resident.

That seems awfully petty and shortsighted to us. After all, isn't it the primary function of a political organization to select as candidate the qualified man or woman most likely to roll up a big enough vote to get elected?

And is there any leader of the Democratic Party who actually believes that some stranger named Dickinson or Finletter could ever roll up here in Westchester a vote even close to what Jim Farley would surely get?

Maybe yes, somebody says? And maybe the Hudson is full of prune juice, too.

Association for Higher Education Urges Support for the National Defense Education Act of 1958

EXTENSION OF REMARKS
OF
HON. CARL ELLIOTT
OF ALABAMA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, August 6, 1958

Mr. ELLIOTT. Mr. Speaker, under leave to extend my remarks, I include the following letter from Dr. Russell M. Cooper, president of the Association for Higher Education, and assistant dean of the College of Science, Literature, and the Arts of the University of Minnesota:

ASSOCIATION FOR HIGHER EDUCATION
Washington, D. C., August 1, 1958.

The Honorable CARL ELLIOTT,
House of Representatives,
Washington, D. C.

DEAR MR. ELLIOTT: As president of the Association for Higher Education (AHE), I want to call your attention to the need for passing the Elliott bill (H. R. 13247), currently before the House Rules Committee. Among other services this bill provides for a national scholarship program involving some 20,000 high-school graduates a year for 4 years.

The Association for Higher Education is an organization of more than 14,000 members from over 1,500 of the Nation's publicly and privately supported colleges and universities. Included in the AHE membership are administrative officers of every kind and faculty members from every academic field.

Since 1945 the Association for Higher Education has been on record as strongly favoring the types of services which are embodied in H. R. 13247. As an example in point, the results of a poll of AHE members, made as recently as 1957, revealed an overwhelming interest in a national scholarship program. Further interest on the part of the association in such a program is evidenced by the testimony which Charles C. Cole, Jr., associate dean of Columbia College, Columbia University, a former member of the AHE executive committee, presented on behalf of the association before the Special Education Subcommittee of the House Committee on Education and Labor, March 24, 1958.

In addition to a program of Federal scholarships, the Association for Higher Education is very much interested in other features of the Elliott proposal, such as title V, foreign language development; title VI, graduate education and fellowships; and title VIII, new educational media.

On behalf of the association, therefore, I strongly urge you, in light of the increasing need for expanded educational opportunities for college-age youth, to do everything within your power to secure passage of the Elliott bill in this session of the Congress. The membership of the association will be deeply grateful to you for any steps which you personally can take to secure these much needed services for the college-age youth of America.

Respectfully yours,
RUSSELL M. COOPER,
President.

Tanker Transportation in Relation to Rivers and Channels

EXTENSION OF REMARKS
OF
HON. OVERTON BROOKS
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Monday, June 16, 1958

Mr. BROOKS of Louisiana. Mr. Speaker, the 45th national convention of the National Rivers and Harbors Congress, held in Washington, D. C., had the privilege of hearing an address by Mr. C. A. Newland, division manager, Esso Standard Oil Co., on tanker transportation. This speech gives those of us who are interested in our waterways much to think about and to keep in mind in our future planning. It is as follows:

TANKER TRANSPORTATION IN RELATION TO RIVERS AND CHANNELS

(A speech by C. A. Newland, division manager, Esso Standard Oil Co., before the 45th national convention of the National Rivers and Harbors Congress, Washington, D. C., May 15, 1958)

When the term "supertanker" was coined about 10 years ago, it referred to vessels in the 25 to 30,000 deadweight tons range. Already, these earlier supertankers have been dwarfed by the very large tankers now in service. An item that appeared recently in our newspapers graphically illustrates the tremendous increase in tanker size that has taken place in the first decade of the supertanker era. It describes the use at Philadelphia of a 32,000 deadweight tons vessel as a lighter for the Harold H. Helm, an 854 foot behemoth capable of carrying 85,000 tons of cargo.

The trend toward tankers of greater carrying capacity and speed has been sparked in part by the increased demand for tonnage. In a larger sense, however, the highly competitive nature of the oil industry has underscored the need for efficient and dependable tanker capacity with ships of a size and technical design best suited to the present and anticipated future needs of the business.

The economic advantage of the very large, fast tanker being readily apparent, the question arises as to how large and how many of these big supertankers may be used. The answer will be found by determining where they can be used or, more specifically, what oil ports will be able to accommodate them and make efficient use of their greater draft and carrying capacity.

A good example of the adaptability of the supertanker to a particular operation is reflected in the movement of petroleum from the Middle East to the United Kingdom and western Europe. Crude oil, loaded at deepwater ports in the Persian Gulf or eastern Mediterranean, is delivered to refineries situated on excellent harbors in England and

on the Continent. These conditions make possible the maximum use of low cost carriers.

In this hemisphere—North and South America—we are not so well situated to make use of the very large supertankers. This is because we have to work with crude terminal and refinery locations which, for the most part, were established many years before the advent of the supertanker. For example, one of our major refineries and ocean-tanker, crude-loading terminals is located on the Mississippi River, 220 miles above the head of the passes.

Some of the very large tankers coming to United States and South American ports spend as much as 6 days in the discharge port. This is due to the necessity for lightering before moving to a discharge berth and to the necessity for awaiting the most favorable tidal and weather conditions for navigation over the bar and in restricted channels. These restrictions can be tolerated in the long-haul trade because the economies to be gained from large size more than outweigh the cost of delays encountered at the loading and discharging ports.

However, in the United States coastwise and nearby foreign service with voyages of about 5 days each way, such delays would soon eat up any advantage gained by using very large tankers. Therefore, in studying the economic advantages to be gained from increasing ship size for these trades, it has been found advisable not to exceed the maximum vessel size which can make efficient port turnarounds, using existing port facilities or foreseeable improvements in such facilities.

As previously mentioned, port limitations in the east coast, United States gulf and Caribbean area are more severe than for most trades originating in the Middle East. With shorter voyages, such limitations have a more pronounced effect on the overall transportation savings to be gained. On the other hand, the generally higher operating costs for United States flag vessels provide a greater incentive for exploring all possible avenues for increasing ship size.

It would be safe to say that the competitive position of the United States tanker industry and of the individual tanker company a decade hence will depend on two factors: first, an effective program for securing new and improved tanker terminal facilities and economically justified harbor improvements. Secondly, imagination and foresight in designing new tankers which will be able to take advantage of foreseeable harbor improvements over the life of a vessel but which, from the time of delivery, may be used efficiently within the limitations of port and harbor facilities then existing.

It is highly important, therefore, that the designing of new tankers by naval architects go forward hand in hand with an active program for study and improvement of harbor and terminal facilities.

A decision as to the maximum length and beam of vessels that can safely navigate in restricted waterways, of course, cannot be determined by any set formula. Instead, it must be based on the experience and judgment of the best qualified people in the field. Esso has on order five 47,400 deadweight ton vessels, scheduled for delivery in 1960 and 1961. In making the decision on the 47,400 deadweight ton size, nearly 10,000 deadweight tons larger than our largest ships now in service, Esso was fortunate in having masters and docking pilots with 8 years of experience in handling 27,000 deadweight ton ships and several months' experience with the first 35,500 deadweight tons vessel in our service. The experience of this gradual approach to large tankers has been a most valuable asset in our planning of the 47,400 deadweight tons building program.

The fact that supertankers can safely navigate the entrance and harbor channels of a great many of our ports is a tribute to the foresightedness of the United States Army Corps of Engineers and also to the efforts of trade associations and, in many cases, of devoted individuals who have worked to show the need for improvcements which are now a reality. The Corps of Engineers has the job of making a fair appraisal of each proposal, determining the cost-benefit ratio and preparing a comprehensive report and recommendation which subsequently forms the basis for congressional authorization and appropriation bills.

The tanker industry has traditionally worked with other segments of the shipping industry through the American Merchant Marine Institute and other trade associations to provide the United States Army Corps of Engineers with needed facts concerning the size of present and projected merchant vessels, tonnages to be moved and the economic benefits to be gained by proposed river and harbor improvements.

Aside from the limitations of improved harbors and channels, the continental shelf imposes a severe natural limitation on the ultimate size of vessels which may use United States Gulf and East Coast ports. The depth of water needed in the approach to a harbor depends on the amount of up-and-down motion which might be expected due to a vessel's pitching in long waves or swells. Also, for a vessel with a 100-foot beam, each 5° roll from the vertical increases the draft by about 4 feet.

A keel clearance of 10 to 12 feet would be desirable for large vessels in the open water prior to reaching the lee of a breakwater or protected channel. However, in many cases, this clearance is not now available and supertankers entering and leaving port are navigating open water with a 6-foot keel clearance or even less in some locations.

For example, one of the principal gulf loading ports—Baytown, Tex., on the Houston ship channel—is reached via Bolivar Roads and Galveston bar channel. Here the outer bar is dredged to 38 feet. This would have to be increased to 44 feet to provide 6 feet of keel clearance for a 40,400 deadweight tons vessel at its maximum draft of about 38 feet. The existing outer bar of 44 feet would require dredging another 1½ miles out to sea.

Again using Galveston bar as an example, dredging for 60,000 deadweight tons, vessels of 41-feet draft would require a total of 4 miles dredging to reach natural depths of 47-feet, whereas for 85,000 deadweight tons tankers of 46-feet draft, 11 miles total dredging would be required beyond the existing channel terminus to reach natural water depths of 52 feet.

However, draft is not the only limitation on the size of vessels which may be used. Large tankers must be able to navigate the restricted channels leading to and from some of the principal terminals. Baytown on the Houston ship channel, Baton Rouge on the Mississippi River and Bayway on the Arthur Kill are examples of Esso terminals reached through long and winding channels in which there is 2-way traffic, including barge tows as well as other large vessels. In deciding the maximum size vessel that can safely transit these waterways, the overall length and beam and maneuvering characteristics must be considered in relation to channel widths, radius of bends in the channel and availability of turning room.

Relatively few ports provide channels of sufficient width to permit the turning of the large vesseles now building or planned, yet most harbors are affected to some extent by tidal currents. To help overcome this problem, we have equipped our 35,500 and 37,800 deadweight tons with stern anchors and the means for handling and stowing them. Similar installations are planned for the 47,400 deadweight tons class vessels.

The concept of a stern anchor is not entirely new. However, in the past vessels so fitted have usually been provided with a stream anchor of relatively light weight which did not meet the full requirements of safely holding the vessel under normal conditions. Our vessels have a stern anchor and chain of the same weight and size as the bow anchors. Thus, they can anchor at the bow, stern or both, as safety dictates.

Since the 37,800-deadweight-ton vessels entered the United States Fleet last year, 2 have reported using their stern anchors on 6 separate occasions, each under a different set of circumstances. In each instance, the master has expressed complete satisfaction with the results. It is our opinion that we have hardly begun to explore the potential of the stern anchor. As more experience and confidence in its use is obtained, we expect that more conditions will be found where its use will render an invaluable service to the vessel and its personnel.

This morning I have attempted to show that the development and use of large tankers must go hand in hand with the development of adequate terminal facilities and channels of adequate depth and width; also, that these factors have a particular importance in the coastwise service where port arrivals and departures are relatively frequent. In our case, a stepwise increase in size of vessels over the past 10 years has assured an efficient functioning of a combination of these factors so that new, large vessels have been brought into service smoothly and without difficulty.

Reconveying the Lands Acquired for Burke Airport to Former Owners

SPEECH

OF

HON. EDWIN H. MAY, JR.

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 5, 1958

The House in Committee of the Whole House on the State of the Union had under consideration the bill (H. R. 10045) to provide for the sale of all of the real property acquired by the Secretary of Commerce for the construction of the Burke Airport, Va.

The CHAIRMAN. The Chair recognizes the gentleman from Connecticut [Mr. MAY].

Mr. MAY. Mr. Chairman, the chairman of the subcommittee has recommended an amendment which I think is in keeping with the precedents established by the Government Operations Committee and the subcommittee that is handling many bills of this nature today. I think if the gentleman's amendment is adopted, we can have a fair solution of this problem. Perhaps it would not do everything the gentleman from Virginia [Mr. BROYHILL] would like, or the committee would like, but I think from all that has been said, the previous cases that have been cited, this amendment should be adopted because it will be a very satisfactory solution of the problem and will preserve the precedent that has been established in handling the sale of Government property as it has been in the past.

The CHAIRMAN. The time of the gentleman has expired.

Ike Holds Secret Weapon

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 5, 1958

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include an article that appeared in the Hearst newspapers on August 3, 1958, entitled "Ike Holds Secret Weapon," which was the editor's report written by William Randolph Hearst, Jr., editor-in-chief, which warrants the reading of our colleagues on a matter which is of grave importance to the American people:

EDITOR'S REPORT: IKE HOLDS SECRET WEAPON

(By William Randolph Hearst, Jr.)

Ike and Foster certainly have their troubles coping with a crazy world that can't seem to straighten itself out, but they have one thing going for them for which they should be grateful.

They have a secret weapon on their side which always makes them look good just when it seems critics of the administration's foreign policy are about to be proved right.

Their friend-in-need is none other than Nikita Khrushchev, the Moscow penpal whose aggressive, abusive letters are in marked contrast to the sober, reasonable communications of our President.

Maybe the rise in postal rates will put a crimp in Nikita's epistolary output, but if he keeps up at his recent rate we'll soon have most of the non-Communist world rooting for us.

It must be granted that the Kremlin held the diplomatic initiative in the days following the Marine landing in Lebanon and that Khrushchev moved swiftly to exploit it.

We were on the defensive before large sections of world opinion, and the Russian Premier emerged in his first letter as a champion of peace eagerly seeking an across-the-table agreement.

But his tone of address to Ike, who is known as a man of decency throughout the world, was so insolent and overbearing that, in my opinion, he generated sympathy for the President even in quarters critical of American policy.

And his statement of the facts was so twisted and insulting to the intelligence that reasonable men everywhere punched holes in its contradictions.

Even so, Khrushchev still held a pretty good hand of cards. But as the letter writing continued, the Kremlin's advantage began to disappear. Pen-pal Nikita was laying it on too thick.

The climax came this past week when he bluntly charged that "Mr. President, you do not work for peace," an insult resented by practically everybody. The evidence was much too strong in the opposite direction.

In addition, the Kremlin's man of letters continually shifted his ground, first demanding a summit conference of five big powers, then seeming to go along with a U. N. Security Council meeting with invited guests, then veering right back to his original plan as if he had never advanced his second suggestion.

And on Friday Ike seized the initiative, it seems to me, by accepting August 12 as a definite date for a meeting of the Security Council with the heads of government present.

It was a put-up-or-shut-up maneuver concurred in by Great Britain, our principal ally, and carrying the support of an overwhelming number of nations.

You may suspect, if you read these columns occasionally, that my well-known admiration for President Eisenhower influences me to say his latest move topped Khrushchev's artful dodging.

But let me quote Senator MIKE MANSFIELD, of Montana, the Democratic whip, on the same subject. The President, he said, had "grabbed the initiative and is now running with the ball."

"His new positive approach will meet with favor throughout the world and will bring strong support from both sides of Congress and from the American people," the Senator said.

Senator THEODORE GREEN, of Rhode Island, chairman of the influential Foreign Affairs Committee, joined MIKE MANSFIELD in nonpartisan praise of the President.

"He wisely reminded Mr. Khrushchev on two fundamentals of international life which the Russians and we long ago pledged to support," said Senator GREEN.

"We both agreed to confer on the United Nations Security Council primary responsibility for the maintenance of international peace and security.

"Mr. Khrushchev's proposal that the big powers alone settle the Lebanon situation derogated from that principle.

"The permanent members of the Security Council also agreed to safeguards so that the interests of small countries, as well as large, would not be disregarded."

This support from both sides of the aisle is one of the most heartening developments of the present international impasse.

The Communists are undoubtedly under the impression that they can capitalize on the normal political disagreements between our two major parties, not realizing that in America politics ends at the water's edge.

And I think the Red leaders are also deluding themselves into believing they can translate normal differences of opinion between the Western allies into political capital. Right now they seem to think they can use General de Gaulle's independent stand as a wedge against Western unity.

In my opinion General de Gaulle's independent judgment is to be welcomed. He has a keen, historical mind and a lucid way of expressing himself. We don't want stooges or satellites—we want vigorous allies.

Let's not be too upset if Prime Minister Macmillan and Premier de Gaulle assert their own ideas in a crisis as difficult as the one now confronting us.

National Congress of Parents and Teachers for H. R. 13247, the National Defense Education Act of 1958

EXTENSION OF REMARKS
OF
HON. CARL ELLIOTT
OF ALABAMA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, August 6, 1958

Mr. ELLIOTT. Mr. Speaker, under leave to extend my remarks, I include the following letter from Mrs. James C. Parker, president of the National Congress of Parents and Teachers:

NATIONAL CONGRESS OF PARENTS AND TEACHERS,
Chicago, Ill., August 5, 1958.

To: Members of the House of Representatives, 85th Congress, Washington, D. C.
From: Mrs. James C. Parker, president, National Congress of Parents and Teachers.

Re the National Defense Education Act of 1958.

It is my understanding that an education bill—H. R. 13247, the National Defense Education Act of 1958—is presently under consideration by the House of Representatives.

The executive committee of the National Congress of Parents and Teachers, meeting here last month, would like you to know of its considered interest and that of many PTA members all over this country in a bill that will make provision for the educational future of many of our more able youth. This is not only a defense measure but a contribution to a higher level of trained citizenship in our country.

We urge immediate action. It will indicate that this session of Congress is aware of its responsibilities to youth.

Thirty-sixth Anniversary of the Recognition of Lithuania As an Independent State

EXTENSION OF REMARKS
OF
HON. EMMET F. BYRNE
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, August 6, 1958

Mr. BYRNE of Illinois. Mr. Speaker, from time to time I have extended my remarks regarding the valiant country of Lithuania. I have the good fortune of having many Lithuanians in my district, and whenever it is possible I join them in observing an occasion important to them and important to all Americans who love freedom. Wherever one finds Lithuanians assembled together, one may know it is for the purpose of recalling the days when they were an independent nation and reminding themselves that though Lithuania is now enslaved by the Communists, the love for and conviction about freemen is still emblazoned in their hearts.

With the Middle East in such a turmoil and the Communists accusing and threatening the United States, it is well for us to recall actions taken by the U. S. S. R. in Lithuania.

The United States continues, and I am sure will continue, to recognize Lithuania as an independent state and a partner with us in the battle to safeguard and sustain the only principles upon which man survive. These are recognition of God, the dignity of man, and freedom of choice and expression as to form of government.

It has been a great pleasure for me to meet the consul of Lithuania in Chicago, Mr. Petras Dauzvardis. Lithuanians can be proud of the work he is doing for them here in the United States.

Mr. Dauzvardis addressed the 36th anniversary of our recognition of Lithuania as an independent state at a banquet in Chicago on July 23. His remarks are thought provoking and timely, as is his statement pertaining to the Middle East situation and the Russian demands. I hope every Lithuanian-American can read them. I am fully confident that Ambassador Lodge will continue to keep the plight of Lithuania and her sis-

ter Baltic Republics prominently in mind in his efforts to again enable these nations to be full-fledged members of the family of free national of the world.

ADDRESS BY PETRAS DAUZVARDIS, CONSUL OF LITHUANIA, AT THE LITHUANIAN ALLIANCE OF AMERICA CONVENTION BANQUET, JULY 23, 1958, HOTEL SHERMAN, CHICAGO

Your 50th convention and this great banquet are taking place in a month that is historic for both America and Lithuania. The independence of the United States of America was declared on July 4, 1776; the treaty of peace between Lithuania and Soviet Russia was signed on July 12, 1920. In addition to these significant events, the United States recognized Lithuania de jure on July 28, 1922; on July 21, 1940, the Soviet puppet diet in Lithuania passed a made-in-Moscow resolution to incorporate Lithuania into the Soviet Union; on July 22 Minister of Lithuania at Washington Povilas Zadeikis lodged a protest against the Soviet acts and designs with the Department of State; on July 23 the Department of State denounced these Soviet acts of aggression in and against Lithuania—labeled them with their true designations as predatory acts and devious processes, whereby the Republic of Lithuania, together with Latvia and Estonia, were to be deliberately and premeditatedly annihilated by the Soviet Union.

These diametrically opposed acts of the U. S. S. R. and the U. S. A. concerning the three Baltic States are of great moral and legal international meaning. They denote the contrasting philosophy and policies of two great world powers in respect to international law, human freedom, and sovereign rights of other nations. The United States respects and defends international law and the independence of other nations, the Soviet Union violates international law and her own pledges—she forcibly seizes and enslaves independent nations.

The outstanding and most vivid illustration of this point is the case of the Baltic States of Lithuania, Latvia, and Estonia. Yet here is a case, however, that has not yet been fully comprehended, evaluated, and exposed to the world, especially to that part of the world which at times is inclined to embrace the Soviet Union as a friend. The case and the plight of the Baltic States and their peoples should be presented in its fullest exposure to these people—starting with the conclusion of the treaties of peace and nonaggression and ending with the perpetration of aggression and genocide by the Soviets.

The present time, when the Soviets are attacking the West, even as they are proposing a nonaggression pact with the West, is an opportune time to do some remembering, to recall their pacts of nonaggression with, and seizure of, the Baltic States of Lithuania, Latvia, and Estonia.

The duty of reminding the world of this Soviet infamy falls primarily upon the free people of the Baltic States and their friends; in fact, upon all friends of justice and freedom. Let this task be started right here, at this convention of the Lithuanian Alliance of America—the oldest and greatest Lithuanian organizaton in America.

Now, when the Soviets are demanding the withdrawal of United States and British troops from Lebanon and Jordan—where they have been placed for the protection of the independence of those countries—we cannot refrain from stating that the Soviet demands are hypocritic. If the Soviets are such great defenders of the security and independence of small nations, as they claim they are, why don't they restore independence to Lithuania, Latvia, and Estonia, whom they forcibly and treacherously deprived of their independence, and whose territory they seized and continue to occupy. We, in turn, demand that the Soviets withdraw their troops, police, agents, and colonists from Lithuania, which they occupy by force and are methodically destroying as an independent state.

STATEMENT BY PETRAS DAUZVARDIS, CONSUL OF LITHUANIA, ON THE OCCASION OF THE 36TH ANNIVERSARY OF THE DE JURE RECOGNITION OF THE REPUBLIC OF LITHUANIA BY THE UNITED STATES OF AMERICA

At the present time, when the dictator of the Soviet Empire is vilely attacking the United States of America, accusing them of aggression and violation of international law, I feel it timely and fitting to bring up the case of Lithuania, which so vividly illustrates the hypocrisy of the Kremlin and the contrasting philosophies and policies of the U. S. S. R. and the United States of America.

By the treaty of peace signed on July 12, 1920, Soviet Russia recognized Lithuania as a self-governing and independent state with all juridical consequences that follow from such a recognition, and in a spirit of free and good will renounced for all time all sovereignty rights of Russia concerning the Lithuanian nation and Lithuanian territory which previously belonged to her. Nineteen years later she broke the solemn pledge.

The United States recognized Lithuania as a sovereign and independent state on July 28, 1922, and continues to recognize it as such.

Soviet Russia, in violation of the above peace treaty and the nonaggression pact of September 28, 1926, entered into a conspiracy (on September 28, 1939) with Nazi Germany, to divide and annihilate Lithuania. In June 1940 she invaded and occupied Lithuania without any invitation, provocation, or justification; arrested the members of the legal government of Lithuania and disbanded its duly elected parliament, replaced them with an illegal Soviet puppet government and parliament, and on July 21, 1940, proclaimed the sovietization of Lithuania and that Baltic country's incorporation into the Soviet Union. The United States of America on July 23 denounced these treacherous Soviet acts, labeling them with their true designation as "predatory acts" and "devious processes" whereby the Republic of Lithuania, together with Latvia and Estonia, were to be deliberately annihilated by the Soviet Union. The United States refused to recognize the forcible and wholly illegal incorporation of Lithuania into the U. S. S. R., and continues to recognize Lithuania as an independent state. The Minister of Lithuania in Washington and the Lithuanian consuls in New York, Chicago, Boston, and Los Angeles are functioning as heretofore with full rights, powers, and privileges.

The Soviet Union, on the other hand, continues to annihilate Lithuania and its people. The prewar population of the present territory of Lithuania was over 3,200,000; the present population is a little over 2,700,000, of which the local and imported Communists do not exceed 40,000, or approximately 1½ percent; over 98 percent of the population are non-Communists—they are virtual slaves of the Communist occupants, without human rights and freedom. If this is not colonialism and slavery, it is difficult to imagine what colonialism and slavery are.

If the dictators of the Soviet empire are honestly demanding freedom and independence for the countries of the Middle East, they should simultaneously propose and grant freedom and independence to the middle east of Europe, beginning with Estonia and ending with the Balkan States.

Lithuanians demand that the Soviets get out of Lithuania with their troops, police, agents, and colonists, and enable them to choose their own government and establish such a political, economic, social, and cultural system as they see fit and appropriate to their desires, without any interference from abroad.

JULY 28, 1958.

What Do the People of Russia Think of Nikita S. Khrushchev?

EXTENSION OF REMARKS
OF
HON. GORDON L. McDONOUGH
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 16, 1958

Mr. McDONOUGH. Mr. Speaker, the people of the United States owe a debt of gratitude and appreciation to Mr. J. Anthony Marcus for the following letter to the editor of the Washington Evening Star.

Mr. Marcus informs us from personal experience how we should treat Nikita S. Khrushchev if he should come to the United States for a summit conference. He also gives us firsthand knowledge of what the people of Russian think of this dominating, arrogant, disgusting dictator who did not hesitate to boast that "We will bury you."

I recommend that all Members of Congress and all readers of the CONGRESSIONAL RECORD read Mr. J. Anthony Marcus' letter carefully. In my opinion, I think he has done us a great service:

HOW TO HANDLE KHRUSHCHEV

To the EDITOR OF THE STAR:

If Nikita S. Khrushchev attends a U. N. summit meeting, it is imperative that we do not come out of this conference cheated and defeated as has been our fate in dealings with the Soviets since 1933.

And if Khrushchev does come to America, how should our press, radio, and television handle the event? Indeed, how would the Russian masses, at least 90 percent of them, want us to treat this unwelcome guest on American soil?

As a native-born Russian who has had extensive experience in the Soviet Union as representative of leading American industrial corporations and in close touch with happenings in Russia since 1917, I know that when the Kremlin mouthpieces Pravda and Izvestia laud a foreign government or people, the Russian masses consider them as mortal enemies of theirs. When the Soviet regime condemns President Eisenhower, Dulles and anyone else in the United States, the average Russian is glowingly happy and considers them as his true friends. American tourists can never hear this from the Russian people who hate and fear their tyrants.

Many a time during my business sojourns there, even high executives in the Soviet Government have said to me: "Why do you Americans come here to deal with our rulers? You are only enhancing their prestige and tightening the noose around our necks?"

En route from Minsk to Moscow in a sleeping compartment with a three-man Russian commission, one of them angrily said to me: "You foreigners fill your mouth with water when you reach this country. You are afraid to see our bitter life for what it is." His colleagues begged him to keep quiet for fear he might be overheard by some agents swarming the sleeping cars and all of them would have had to pay for it.

On the basis of personal experience in the Soviet Union over a period of several years, I would therefore counsel all United States organs of communication to clamp down the tightest boycott of Khrushchev and his entire entourage. There must be no interviews, no TV time at any price. We should ignore them completely. This has been the fate of our diplomatic representatives in Russia since 1933. Let us repay the compliment. We should shun them like the plague, for

they are the carriers of the red plague. This would be the bitterest blow to Khrushchev in his own country. This is the only sensible way to handle the man who has warned us: "We will bury you."

And if we do this from now on and for all time to come, the Russian masses will bless us; they will rejoice and will regain courage to carry on the 40-year war with their oppressors. It is to our vital interest that this should be so.

What should our Government representatives do when facing in the U. N. the leader of the savage war against us?

Since the founding of the U. N. we have suffered endless abuse and insults at the hands of Gromyko, Vishinski, Malik, and the Suslovs. Our delegates have never known and do not know today how to handle them. They lack the necessary Russian background to put up with the Soviet delegates.

Therefore, President Eisenhower, Secretary Dulles, Ambassador Lodge, and their aids must come with ample ammunition. There is plenty of it in the Library of Congress and in the State Department. Most of all, there is priceless material in the reports by the House and Senate committees which have been investigating the Soviet barbarians for two decades. Let us use it on this important occasion, and effectively expose these gangsters before the whole world.

When Khrushchev talks about American imperialism, let us lay bare at the U. N. meeting the history of Soviet murderous imperialism in the once independent nations they have since enslaved, the millions of men, women, and children they have slaughtered. Let us remind them and the world of the 10,000 Polish officers they had buried alive in the Katyn Forest in Russia, the thousands of brave Hungarian fighters for freedom they had shot down and still are torturing in slave-labor camps in Siberia; the Lithuanians, Latvians, Estonians, etc., they have enslaved and exiled. All that and more should be flung into Khrushchev's face over and again. We must never permit them to forget this, and most of all we must not permit the so-called neutralists to forget lest all of us be engulfed by this Red conflagration.

This is how the Russian peoples would want us to act on the occasion of the U. N. meeting and on all other occasions. For years some of us have been urging this course, but to no avail. Our failure has helped embolden the enemy and has frustrated our friends behind the Iron Curtain.

There are plenty native people among us who are indulging in wishful thinking about the possibility of coexistence. This can never be our fate. Not even if we gave them half of the United States and all the gold at Fort Knox would they deviate from their goal—the communization of the entire free world. The tragedy is that the people in this country who have most at stake are the very ones who are helping dig our freedom's grave out of ignorance, stupidity, and either unwillingness or inability to understand the true nature of the Soviet beast.

Our back is now to the wall in all international arenas. There must be no retreat, no appeasement and no defensive action. We must go on the offensive, determined to carry on until victory is won. In this struggle there need be no American blood shed. The fighting and the dying will be done by the enemies of communism within the Soviet empire, if we will only show some backbone and imagination and stop hobnobbing with the tyrants, stop drinking toasts with them. The Red leopard can no more change his spots than the jungle leopard.

Let us not tremble about Kruschev going to war with us at this time. He is far more afraid of his own people if he starts a war and puts guns into the hands of the Russian masses than he is afraid of our nuclear weapons.

This is the message the Russian masses, the silent people, would want every one of us to have. Let us remember that the Russian people have never made peace with their illegitimate regime, have never recognized them, even though governments of free nations have made the blunder of the 20th century by becoming diplomatic bedfellows with the Soviet Communists.

J. ANTHONY MARCUS,
President, Institute of Foreign Trade.
NEW YORK CITY.

The Hour Is Late for the Survival of Small Business—Let Us Act Now

EXTENSION OF REMARKS
OF
HON. HAROLD D. DONOHUE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 15, 1958

Mr. DONOHUE. Mr. Speaker, since the time I have been privileged to be a Member of this legislative body, one of the subjects about which I have heard a great deal of discussion, with proportionately little action, is the extending of reasonable Federal assistance toward the survival of small business.

The urgent need of Federal aid to small business has been practically unanimously recognized, but we are still working on the legislative accomplishment of the help we know is vital to their continuing existence.

The basic requirement for the preservation of our traditional acceptance and encouragement of small business is a means of providing them with equity capital and long-term credit, which commercial banks and the Small Business Administration are not in any position to grant.

This essential need is adequately met in the substance of S. 3651, while at the same time preserving the full structure of our free-enterprise system. Free enterprise has nothing to fear from this bill, and there is certainly no danger inherent in it of Federal control or favored competition.

The provisions for the extension of equity capital and long-term credit are contained in the basic idea to create small business investment companies, fashioned after the accepted establishments of national farm loan associations, the land bank system, the farm cooperatives, and so forth, all of which, in their inception were financially assisted by the Federal Government. A good many of these are now wholly owned by private interests and others are in the continuing process of liquidating Federal ownership.

The independent study contained in a Rockefeller report emphasized the needs of American small business in this advancing economic age by this language:

> The need is primarily for long-term equity or loan funds. As a result of the inability to obtain capital funds, the opportunity for establishing a new firm, or for expanding an established firm, is often lost. Often the established firm merges with a larger enterprise that can command the necessary resources. The past few years have seen a wave of such mergers. Such a condition is neither conducive to vigorous competition nor to economic growth.

Mr. Speaker, I do not believe that there is any one in this body who does not earnestly desire to strengthen free competitive enterprise in the United States and preserve the healthy traditions and contributions of small business in our historical progress in prosperity. I most earnestly hope that the Senate will consider the House amendment in the near future and that a sensible conference agreement will be soon approved so that this Congress will not pass without discharging its duty to the small-business interests of the country in their most desperate hour.

Our Good Neighbor

EXTENSION OF REMARKS
OF
HON. OVERTON BROOKS
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Friday, July 18, 1958

Mr. BROOKS of Louisiana. Mr. Speaker, the Dominican Republic, that great island nation which has for so long constituted the bulwark which has protected our southeastern sea frontier from atheistic communism, has vigorously protested to our Department of State about some remarks made on the floor of this House concerning some of the high officials and military men of that nation.

In these times of great peril which confronts the free world, I believe it to be our duty to not only take cognizance of these protests, but to determine if they are justified. Naturally, Mr. Speaker, it would be quite easy to shrug off the matter by simply saying "So what?". I must confess that if such protests came from one of the great powers, I would feel like doing exactly that.

But, Mr. Speaker, the Dominican Republic, although not a world power, militarily or economically, is, nevertheless, a sovereign nation, and one that has demonstrated over many years that it is our firm friend and our loyal ally. And, of even more importance is the fact that the Dominican Republic is an American nation. All of these circumstances make it imperative that we examine closely the relations that exist between the Dominican Republic and our own country. These circumstances include not only the geographical position of the Dominican Republic in relation to us, but also the ancient and traditional principle of noblesse oblige.

And even more important, Mr. Speaker, from the standpoint of our own welfare and the welfare of the Western Hemisphere, are the continuous and vicious attacks that have been for so long leveled against the Dominion Republic and its high officials. This

constitutes something much more than mere coincidence. It is quite evident to all thinking Americans that there exists some central authority which has determined that our loyal ally, the Dominican Republic and its Government, so long established and so long friendly to us, must be eliminated. It is even more surprising when we remember that this state of things and all of this senseless vituperation has been launched against a small and valiant country, one that has always been our dependable friend and ally; that no such insulting vituperation has been unleashed against any Latin American nation that has, unlike our faithful Dominican ally, failed to openly and continuously condemn atheistic communism and those who support it for the conspiracy of bandits and murderers that they are. We must never forget, also, that it was not in the Dominican Republic that our Vice President, the man who holds the second highest elective office in our land, and his wife, the second lady of our Nation, were mobbed, attacked, spat upon, and ridiculed. On the contrary, when our Vice President and his wife visited the Dominican Republic, they were accorded the most friendly and cordial welcome. Indeed, there is no record of abuse being heaped upon any official visit by any dignitary of our Nation who has visited the Dominican Republic. The Dominican Republic has at all times demonstrated that it is, in fact and not in theory, a good neighbor in the very best sense of that term.

Now, Mr. Speaker, the Dominican Republic has objected, specifically, to the attacks made upon Gen. Rafael Trujillo, Jr., who is the highest military authority in his country, and who, in the past few months, has shown a propension to carry on a friendship with and associate himself with the highest circles of society existing on our west coast. Unfortunately, some of these attacks have shown a tendency to use language that is, to say the least, of questionable taste, if not downright vulgar. I do not intend to imply, nor shall these remarks be construed as criticizing any of those who have commented. On the contrary, there is not the slightest doubt in my mind that those who have engaged in such castigation have had nothing more on their minds than the expression of the saving grace of humor. Be that as it may, in the face of the serious and grave world situation which threatens the very existence of our Christian civilization, the propriety of such humor is also questionable. Such speeches under the conditions now facing us tend to reflect upon the dignity of this country and hold it up to ridicule.

Now, Mr. Speaker, it has been alleged that General Trujillo, Jr., has been guilty of the awful crime of spending some $50,000 a month on certain west-coast actresses, and that this sum is equal, give or take a little, to the amount of foreign aid extended to his country. Those making such statements simply have not bothered, or have not had the time to acquaint themselves with the facts. While I am only one humble Member of this great and important House, I have made it my business to ascertain the facts. Those facts are that we have not made any loan or gift to our friends of the Dominican Republic, nor have the people of that friendly nation participated in any way in the vast foreign-aid program under which we have for so long been distributing the bounty of our own Nation among the other nations of the world. On the contrary, the Dominican Republic, our stanch friend and valiant ally for so long, is and has been one of the few countries which has proudly stood upon its own feet, asking and accepting nothing from us. Actually, all the funds that we have spent in the Dominican Republic, and are spending in that proud and sovereign nation, have been, and are, to pay for our own technical installations there and to pay the salaries of the personnel there. Let us never forget that our guided-missile program, upon which our very survival may depend, is being continuously tested at Cape Canaveral, Fla., and that our testing range extends from Cape Canaveral through the Caribbean and into the South Atlantic. In order to insure the success of this vital part of our Military Establishment, we must have military establishments, or tracking stations in the Caribbean, and we must have them in a nation that is our firm friend and our dependable ally, a nation which has demonstrated its stability and ability to cope with those evil international Communists who are so desperate to infiltrate all of our most secret defense activities and thus warn and enlighten international communism in advance as to what may be expected from us in case the free world is involved in a holocaust which might well mean the end of our Christian civilization in the Western Hemisphere. In this respect, maintaining friendly and amicable relations with the tried and true Dominican Republic may well be absolutely necessary to the survival of our own great Nation.

Mr. Speaker, let me make it quite clear that I ask none of my colleagues and none of my compatriots to approve or pardon the activities of General Trujillo, Jr., in connection with his alleged activities in Hollywood. I am, quite frankly, concerned only with the welfare and survival of our own country. On the other hand, I firmly believe that it is incumbent upon all of us to refrain from vilification of this young man, the commander of the military forces of his nation, a nation which, to us and to every nation in the Americas, occupies a paramount position concerned with the very survival of our Nation, and even our hemisphere. His nation has long been a good neighbor to us. The least we can do is to be a good neighbor to his own country. Being a good neighbor is a two-way street. And, Mr. Speaker, in this instance, as selfish as it may sound, our very survival may depend upon it. And, even beyond that, decency and good manners require that we respect our friends.

Mr. Speaker, it has been alleged that the conduct of General Trujillo, Jr., has offended some of our traditional precepts and morals. May I point out, Mr. Speaker, that even granting, for the purpose of this speech only, that such is the case, such conduct would have been quite impossible without the active cooperation of many of our own compatriots? The alleged exaggerated hospitality of this high ranking military man from a friendly nation, now so vital to us, would have been quite impossible without the willing cooperation of citizens of our Nation, or at least permanent residents. Thus it is that if we single out General Trujillo, Jr., upon whom to cast aspersions, we must of necessity castigate also citizens of our own country.

Finally, Mr. Speaker, I am sure that all of my colleagues will agree that if, as has been alleged, this young military officer from our friend and ally, the Dominican Republic, is spending some $50,000 a month in our country, we should all be very happy. For more than a decade now, we have been scattering our resources over the world—excluding, I am sorry to say, the nations of Latin America, to any substantial extent, and especially the Dominican Republic—and our riches have been depleted accordingly. We are in the process of becoming a have-not nation. It is only a matter of time until we must ourselves seek economic assistance here. Certainly we would be fortunate indeed if we had a host of rich young men from other countries who would spend large sums in our country.

In conclusion, Mr. Speaker, I ask only that my distinguished colleagues and my compatriots concern themselves with the welfare of our country and do not become embroiled in absurd attacks upon our friendly neighbors. Every attack made upon the Dominican Republic can benefit only Moscow and Peking. I earnestly suggest that every one of my distinguished colleagues who has not already done so, read the remarks of our distinguished colleague from Wisconsin, Congressman WITHROW, which appeared in the RECORD on the 19th of June, under the title "The Interest of International Communism Has Been Served."

Mr. Speaker, my first objective is the welfare of our own great Nation, and the second is the welfare of our sister nation of the Americas. Only when those objectives have been achieved can we have any legitimate concern with the welfare of the rest of the world.

Mounting Debt Plunges Nation Into New Monetary Inflation

EXTENSION OF REMARKS

OF

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 5, 1958

Mr. MULTER. Mr. Speaker, the statistics quoted by Leslie Gould, financial editor, in the following article which appeared in the New York Journal American of August 4, 1958, are worthy of the attention of our colleagues.

The Republican administration's failure to control inflation is shown by the growth of debt, both public and private:

MOUNTING DEBT PLUNGES NATION INTO NEW MONETARY INFLATION

(By Leslie Gould)

The country is heading into another kind of inflation.

For the last 2 or 3 years, it has been a wage-price inflation. That continues, as evidenced by the just-announced steel price increases to offset the July 1 rise in wages.

Now, the country is plunging into a monetary inflation. Federal, State and local debts are going up. Spending is going up. Deficits are going up. So is money in circulation.

This is why the stock market has been going up in the face of slack business, lower earnings and dividends, while bonds, particularly governments, have been going down.

PREFER EQUITIES TO CASH

People would rather have equities than money or its equivalent—that is Government bonds. This, even though many stocks are selling far too high in relation to current earnings and dividend returns as well as prospects in the next year.

There is a flight from the dollar.

Here is the picture:

The Federal Government is going to spend $80 billion in the current fiscal year. In the fiscal year just ended it was $72 billion and in the previous year $69.4 billion.

There will be a deficit of $10 to $12 billion, maybe more this year, depending on how much tax receipts from business are off. In the year just ended the deficit was $2.8 billion against a surplus of $1.6 billion the year before.

The Federal debt limit is going up permanently $10 billion to $285 billion, plus $3 billion additional for a limited period. This is only a starter if the present free spending continues, due to the cold war and the pressure to spend for prosperity.

THRIFTY SHUNNING BONDS

State and local spending is rising as is that debt load, now $52½ billion, against nearly $16 billion at the end of the war and $20.3 billion prewar.

In this flight from the dollar, individual savers and institutional investors are turning away from Government bonds. For some time now cashing in of United States savings bonds has been exceeding sales. Individual holdings of United States savings bonds have slipped from $50.3 billion in June 1956 to $48 billion now.

Mutual savings banks, which held $12 billion of Government bonds in 1947 had reduced this investment to $7.6 billion this year, even though deposits have gone in the same period from $15.3 billion to around $33 billion.

Life insurance companies which held $20.6 billion in governments at the end of 1945 now report $6.9 billion, although total life insurance investments have gone from $27.4 billion prewar to $46.4 billion in 1946 and now are close to the $100 billion mark—$96.6 billion to be exact.

Federal Reserve holdings of Government bonds have gone up in the last month $900 million, totaling $24.9 billion for the latest week.

The Treasury has bought and retired since June $456 million of a long term issue publicly offered the first of that month, and additionally bought $133½ million for Treasury investment accounts.

Commercial banks now hold around $63 billion of Government bonds against $55.8 billion in June of last year.

A rise in commercial bank as well as Federal Reserve holdings of Government bonds is inflationary. This is a form of printing press money. It inflates the money supply about twice the amount of bonds placed with banks.

The United States Treasury 4 to 6 years ago missed the boat, when, instead of converting a major part of the debt into long term bonds for investors, it financed with short term securities. Long term securities could have been sold then.

HALF DEBT INFLATION

Today, the Treasury can sell only short terms, as it found out in June when it tried to sell a long-term issue. The Government bond market broke and in 3 weeks the Treasury had to step in and buy back—at lower prices—about half of its long-term offering.

On top of the staggering Federal debt—soon to exceed $285 billion—there is the $52½ billion State and local debt. At the close of the war the Federal debt was $259 billion, compared to $42 billion prewar. The State and local debt was just over $20 billion prewar.

This inflation of the Federal debt—about half of the war debt was due to the Government's failure to control inflation then—is reflected in the tremendous cost of servicing it—interest. The interest cost of the present Federal debt is $7.6 billion and it won't be long before it tops $8 billion. Prewar it was around $1 billion.

Here is the rest of the debt picture:

Consumer credit is now around $43 billion against $27.4 billion 6 years ago, $8.4 billion at the end of the war, and $7.2 billion prewar.

Nonfarm mortgage debts total around $132 billion, compared to $32½ billion at the close of the war and $25 billion prewar.

DEBT NEARING TRILLION

Corporate debt amounts to about $235 billion now against $93.5 billion at the end of the war and $73.6 billion prewar.

To recapitulate, the public debt is between $327½ and $337½ billion and private debt—individual and corporate—around $450 billion.

Today's dollar is a 62-cent one compared to what it was at the end of the war in purchasing power and a less-than-50-cent one compared to what it would buy prewar.

Inflation is becoming more and more a way of life here as it has been so long elsewhere, such as in South America.

Letters From Readers

EXTENSION OF REMARKS
OF
HON. EUGENE J. KEOGH
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, August 6, 1958

Mr. KEOGH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter from Mr. Edward A. Collins which appeared in the New York World-Telegram and Sun of August 5, 1958:

LETTERS FROM READERS—DEMOCRATS BELIEVE FARLEY WOULD ADD DIGNITY TO SENATE

(By Edward A. Collins)

At the turn of the century, the American system of elections had sunk in public esteem to such low ebb that it was described as that legal process by which the American people were permitted to elect to office the previous illegal selections of party leaders.

That such cynical definition is obnoxious to the dignity—to say nothing of the sovereignty—of the American people is apparent from the opprobrium attached to the smoke-filled room of the notorious 1920 manipulations. But the evil of the smoke-filled room was not the aroma of tobacco; it lay in the asphyxiation of the will of the American people.

The fact is the people of New York may witness just such an outrageous operation in this campaign. Indeed, if Democratic Party leaders succumb to what are reported to be heavy temptations, and, of course, pressures, the exercise of their powers of party leadership against the candidacy of James A. Farley will amount to just that.

The smoke-filled room technique is distinguishable from a putsch, as one writer recently characterized the current movement to bypass Farley, only to the degree of physical force used. There is no difference in the application of moral principles; both are used to defeat a decision which would prevail by orderly constitutional and democratic process.

Democrats throughout this State believe that because of his broad national and international experience, Mr. Farley will add dignity to the United States Senate, honor to New York and all its people. Moreover, his record of public service is such as to command the respect and support of a very considerable body of citizens regardless of party affiliation.

Supporters of Farley are now entitled as both a legal right and as a moral duty to advance their reasons for such support. Indeed, it is incumbent upon them, as I find it now incumbent upon me, to persuade those responsible that Farley adherents are well in the majority in the Democratic Party in New York State, that interference with or frustration of the majority will is abhorrent and dangerous.

MANHATTAN.

Our Water Resources as Seen by Senator Mansfield

EXTENSION OF REMARKS
OF
HON. OVERTON BROOKS
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 18, 1958

Mr. BROOKS of Louisiana. Mr. Speaker, the 45th national convention of the National Rivers and Harbors Congress was honored by having Senator MIKE MANSFIELD welcome the members to Washington. While he extended the members a warm and most cordial welcome, he gave the meeting vitally important information on our water resources in his brilliantly delivered speech. I feel all the Members of Congress will be interested in reading his remarks, which I present below:

WELCOMING SPEECH OF SENATOR MIKE MANSFIELD, DEMOCRAT, MONTANA, 45TH NATIONAL CONVENTION OF THE NATIONAL RIVERS AND HARBORS CONGRESS, MAY 15, 1958

It is indeed a pleasure to be here this morning and I bring to all of you the greetings of the Senate of the United States for a most succeeful 45th convention of the National Rivers and Harbors Congress.

During this session of Congress the House and Senate have given considerable time and deliberation to the best and most immediate means of combating the recession which has engulfed the Nation. The Rivers and Harbors Congress has and can continue to do a great job in helping to meet this challenge through its efforts in behalf of water resource development. This Nation's water resources are now recognized for their worth and if this value is to be fully realized it will require a coordinated plan of development and protection.

President OVERTON BROOKS and Executive Vice President William H. Webb are to be highly commended for effective guidance

and counsel in developing our water resources.

The public works programs being considered by Congress as antirecession measures include flood control, rivers and harbors construction, watershed programs, water-pollution control, and reclamation, all of vital concern to you folks.

Water requirements for this country will be much greater in the future than they are today. Water use for domestic and industrial purposes has increased 50 percent in the past 10 years. In many areas supply has not kept pace with the demand and this problem will become more difficult in the next few years.

Rivers and harbors projects are naturals in any antirecession program, they provide employment, they provide a stabilizing influence on local economy and provide multipurpose benefits. The continued growth of our population and the expansion of industry along our waterways are intensifying flood, stream pollution and power problems. This organization can be of inestimable value in assisting the Federal Government and the individual States in meeting these numerous problems. We know that our natural wealth is not endless and this organization has helped and will continue to help guide the policy of the Government in water-resource development.

I do not want to appear to be preoccupied with construction of power project and navigation projects for I fully realize the attainment of our goals in water resource development will require a variety of conservation practices. Among these is the prevention and control of water pollution and the regulation of runoffs to even out stream flows. In addition, we must give consideration to the preservation of our recreation facilities.

I would like to comment briefly on the international aspects of America's water resource development. It is not news to anyone here that the nations of the free world are not only competing with the Communist world on a military and ideological basis but we are also competing with the Soviet Union and her satellites for industrial supremacy, which has definite relationship with the development of rivers and waterways for power and navigation.

In the past year several startling reports have been issued in the Senate pointing up the tremendous progress made in the Soviet Union on the development of their water resources.

A report issued by the Senate Committee on Interior indicated that Russia and China are driving forward river and water resource development programs that are overtaking those of the United States.

After ALLEN ELLENDER, the senior Senator from Louisiana, returned from his most recent trip to the Soviet Union he stated that "As a result of my inspection of installations in Russia I am convinced that in water transportation and hydroelectric power development they are inching ahead of us and in some areas of the tooling industry they are very close to our own standards."

HENRY JACKSON, the junior Senator from Washington made a trip to the Soviet Union in 1957 and he reported that he was particularly impressed by the Soviet advance in the field of hydroelectric power—"one of the vital bases for industrial growth and strength." Senator JACKSON inspected a dam at Stalingrad on the Volga River which, when completed in the near future, will have a generating capacity of 2,310,000 kilowatts—far greater than that produced at Grand Coulee Dam. The Soviet Union already has in operation at Kuibyshev on the Volga a dam larger than Grand Coulee. It is the world's largest single producer of hydroelectric power. Its generating capacity is 2,100,000 kilowatts.

This is only a small sample of what the Russians are doing in the field of water resource development. They have not accomplished what we have in this country with free enterprise, but we cannot be overconfident. We must go on to greater things in the field of water-resource development, so that we can maintain this leadership. We cannot do this standing still and the Rivers and Harbors Congress can be instrumental in seeing that we maintain this lead.

I was indeed sorry that the President saw fit to veto the omnibus rivers and harbors bill. Over 90 percent of the projects included in this general authorization measure were approved in Federal Government surveys and studies. The bill included many Army engineer projects of vital importance to every section of the country, flood-control projects, harbor projects, and multi-purpose power projects.

This legislation has been referred back to the Senate Committee on Public Works and I am confident that the committee will recommend that the Congress override the Presidential veto. An additional year's delay in authorizing these projects will have grave consequences, especially at this time when stimulants and new sources of employment are so badly needed.

The Rivers and Harbors Congress is nearing its half century of service to the Nation in preserving and developing our water resources. Water has been taken for granted for far too many years and largely through the efforts of this organization we in America are becoming water conscious, a major factor in the growth of the United States.

The Senate is truly indebted to the Rivers and Harbors Congress for its advice and counsel. Majority Leader LYNDON JOHNSON and my colleague, the senior Senator from Montana, JAMES E. MURRAY, and the entire membership of the Senate join me in welcoming the Rivers and Harbors Congress to the Nation's Capitol.

Loophole in Law Permits Food Chains To Escape FTC Regulation

EXTENSION OF REMARKS
OF
HON. PETER F. MACK, JR.
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, August 6, 1958

Mr. MACK of Illinois. Mr. Speaker, under leave to extend my remarks I include a letter that the Honorable OREN HARRIS, chairman of the Committee on Interstate and Foreign Commerce, has received from Chairman John W. Gwynne of the Federal Trade Commission, in regard to a serious loophole in our laws that has been construed by the courts as permitting chain food stores, or any other business for that matter, to escape Federal Trade Commission scrutiny of unfair trade practices by the simple expedient of buying a minority interest in a small meatpacking plant.

The Senate has passed legislation to close this loophole and to bring the wholesaling of meat, so far as unfair trade practices are concerned, under the concurrent jurisdiction of the Department of Agriculture and the Federal Trade Commission. At present the Department of Agriculture has sole jurisdiction in this area. Since the Department of Agriculture lacks the experience, and judging from its lack of activity, the will to discharge its responsibility, I believe it is important that Congress complete action on this legislation before we adjourn.

Joint hearings on various proposals to accomplish this objective were conducted by the House Interstate and Foreign Commerce Committee's Commerce and Finance Subcommittee, of which I am privileged to be chairman, and the Judiciary Antitrust Subcommittee headed by the gentleman from New York [Mr. CELLER]. These joint hearings resulted in a determination that the Interstate and Foreign Commerce Committee had jurisdiction in this field, and our committee reported favorably H. R. 11234. The House Committee on Agriculture also reported a bill on this subject, H. R. 9020.

The latter bill was cleared by the Committee on Rules and is now on the House Calendar. I urgently request my colleagues in the House to give serious consideration to this important measure and recommend a thorough study of the views expressed by Chairman Gwynne in the following letter:

FEDERAL TRADE COMMISSION,
Washington, August 4, 1958.

Hon. OREN HARRIS,
Chairman, Committee on Interstate and Foreign Commerce, House of Representatives, Washington, D. C.

DEAR MR. CHAIRMAN: With the 2d session of the 85th Congress rapidly drawing to a close, the Federal Trade Commission desires to call your attention to a most serious and pressing legislative problem which has been constantly increasing and which, in the absence of remedial legislation in this session, could jeopardize a substantial part of the Commission's antimonopoly program.

As you are aware, by reason of the Packers and Stockyards Act, as amended, the Commission has been deprived of jurisdiction over those corporations which qualify as packers within the meaning of that act. Among the corporations so qualifying and by reason thereof completely exempt from the provisions of various statutes enforced by the Commission, are the Nation's seven leading food chainstore organizations.

In a recent examination of our records, we found that we had 36 cases in the investigational stage which involved firms either listed as packers or claimed to be packers under the provisions of the Packers and Stockyards Act.

During the last 60 days, there have been closed or recommended for closing 6 cases on the basis that the proposed respondents were packers. Four of these involved charges of price discrimination or receipt of discriminatory prices by retail grocery chains. One involved a cereal and flour manufacturer allegedly engaged in price discrimination. Another involved one of the largest fruit and vegetable canners in the United States.

Increasingly, other corporations are claiming the same exemption or are taking steps to qualify. In one litigated case a large chain recently purchased 100 shares of stock in a packing organization and immediately filed a motion for dismissal.

At present, we are investigating a buying group engaged in the purchase of frozen foods through a subsidiary which acts as a broker and collects brokerage on purchases made for this group. We recently received a letter from the attorney representing both the buying group and the broker advising us that the buying group had purchased 10 shares of stock in 1 packing company and that the broker had purchased 10 shares of stock in another packing company. The total value of both purchases is less than

$300. In the letter advising us of this stock purchase, the attorney made the following statement:

"Moreover, we think it proper to advise that it is our considered legal opinion that as of this date the Federal Trade Commission has no further jurisdiction or control over either of the respective operations of [the buying group or the broker] since each is now under the jurisdiction of the Secretary of Agriculture by virtue of having become embraced under the provisions of the Packers and Stockyards Act."

In seven cases the Commission's Bureau of Litigation has returned to the Bureau of Investigation files containing a recommendation for complaint, for further investigation to determine whether the Commission has jurisdiction under the Packers and Stockyards Act. Several of these cases involve some of the Nation's largest business organizations.

The Federal Trade Commission appreciates your continued interest in the success of our work, and we earnestly hope you will do all in your power to secure passage of appropriate legislation which would avoid the frustration of a substantial segment of our antitrust laws.

By direction of the Commission.

JOHN W. GWYNNE,
Chairman.

Address of Secretary of State Carmine G. De Sapio

EXTENSION OF REMARKS
OF
HON. LEONARD FARBSTEIN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 6, 1958

Mr. FARBSTEIN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following report and speech delivered by the Secretary of State of New York, the Honorable Carmine G. De Sapio, on July 30 at the Washington Irving High School in New York City. Several hundred members of the civil defense of the borough of Manhattan applauded the utterances of Mr. De Sapio.

SECRETARY OF STATE DESAPIO LAMBASTS THE EISENHOWER ADMINISTRATION FOR FAILING TO TAKE ACTION IN THE CONSTRUCTION OF FALLOUT SHELTERS, CLAIMING THAT THERE IS NO NATIONAL CIVIL DEFENSE PLAN IN EFFECT—ADDS THAT ADEQUATE CIVIL DEFENSE IS VITAL, NOT ONLY AS PREPARATION FOR ANY EMERGENCY, BUT ALSO AS A DETERRENT TO AGGRESSION

At the special award ceremonies honoring civil defense volunteers who have been presented with 5-year service certificates, held at the Washington Irving High School, 16th Street and Irving Place, Wednesday evening, Secretary of State Carmine G. DeSapio, representing Gov. Averell Harriman, criticized the Eisenhower administration for failing to take action in the construction of fallout shelters.

Mr. DeSapio declared that the international situation in the Middle East had shaken the American people out of their complacency and had made them more fully cognizant of the "capabilities and readiness of our civil defense forces."

Mr. DeSapio, in indignant tone, charged the Federal administration with adamant irresponsibility, adding that "there is no national civil defense plan in effect today, much less the means of carrying out such a plan in the event of attack."

Mr. DeSapio's speech follows:

"I am very happy to be here this evening and to participate in these ceremonies honoring a group of my fellow-citizens of Manhattan who have earned the respect, the admiration and the gratitude of every New Yorker.

"Governor Harriman has asked me to extend to each of you ladies and gentlemen his personal good wishes and his very warmest appreciation for the remarkable job you have done, here in one of America's most critical defense areas, to protect our city against the threat of attack.

"There probably is not a man or woman in New York who has not wondered at some time during the past 3 weeks if the terrible moment of war might not be imminent. Surely, there are few of us who can honestly say that we have not asked ourselves what would happen if, suddenly, without warning, the terrible weapons of modern warfare were to come hurtling down upon us from the skies.

"Indeed, the international events of the past few weeks have shaken most Americans out of the complacent attitude which has prevailed for many months, and have brought to each of us a much fuller and immediate personal concern for the capabilities and readiness of our civil defense forces.

"I pray to God that these forces never will be called upon to perform the services for which they have been trained. But, certainly, it is reassuring to know that they stand ready to spring to action at a moment's notice, if necessary.

"Perhaps only as such critical times as these do we truly realize the debt of gratitude which each of us owes to the volunteer workers who man our city's defense system, and to whom civil defense is a matter of personal concern at all times.

"For these are the men and women whose volunteer efforts, and whose dedication to the safety of their fellow citizens, have built in New York State the largest, the best equipped and the best trained civil defense organization in America.

"The members of this vast organization serve entirely in the public interest, without pay or allowances. Their only reward, and I can assure you that it is a considerable one, is the personal knowledge and satisfaction of having accepted a formidable task and having fulfilled their self-imposed responsibilities capably and with distinction.

"The Civil Defense Corps of New York City offers a particularly fine example of the spirited and unselfish devotion that has brought this complex statewide organization into being.

"Under the very able leadership of Maj. Gen. Robert E. Condon, our city has developed a civil defense program which has given training and experience to more than 520,000 civil defense workers, including 325,000 volunteers.

In the past, our civil defense preparations have been seriously limited by the refusal of the Federal Government to recognize and to accept primary responsibility for setting up an adequate civil defense establishment.

"The rule has been 'Every State for itself,' and this, in many areas, means virtually 'Every man for himself.'

"As a result of this adamant irresponsibility, there is no national civil defense plan in effect today, much less the means for carrying out such a plan in the event of attack.

"For 3 years, as chairman of the special committee on civil defense of the Governors' Conference, Governor Harriman has been prodding the Federal Government into recognizing and fulfilling its responsibilities. Largely through his efforts, Congress has passed legislation which establishes joint responsibility between the Federal and State Governments, and provides for Federal contributions to the costs of State and local civil defense organizations.

"This is an important step in the right direction, and one in which every New Yorker may take special pride.

"The Federal Government has refused, however, to recognize any obligation for the construction of fallout shelters. According to reliable press accounts, the Gaither report called for the immediate commencement of a nationwide shelter program. The Eisenhower administration suppressed that report and twice has refused a request by Governor Harriman's committee to release the portion dealing with fallout shelters, so that we might know the dangers facing us. This is but another example of the attitude of certain officials in Washington who seem to feel that the true facts of the world situation are too alarming for the American people to be properly informed about them.

"With such an attitude prevalent among the high officials responsible for the defense of our Nation, it is time that recognition was given to the men and women who have seen for themselves the dangers our country faces, and who have done something about it by offering their services to civil defense. This spring Governor Harriman inaugurated the program of awarding certificates of public service to all civil defense volunteers who have served for 5 years or more. It is the first time, anywhere, that such recognition has been offered.

"Tonight's awards come at a time when it is especially clear to all of us that an adequate civil defense is vital, not only as preparation for any emergency, but also as a deterrent to aggression. These certificates of public service, which have been signed by the governor, and to which he has affixed his privy seal, are presented in acknowledgment of the services rendered in countless hours of emergency, danger, and need when civil defense proved its value in peacetime, and demonstrated its readiness for a vastly greater emergency which, I believe, can still, and can only, be avoided if we are prepared to meet it."

The President Speaks

EXTENSION OF REMARKS
OF
HON. OVERTON BROOKS
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 18, 1958

Mr. BROOKS of Louisiana. Mr. Speaker, the high point in recent meetings of the National Rivers and Harbors Congress has been remarks from the President. At the 45th national convention, held here in Washington, D. C., this year, we were honored by having the speech from the President delivered by Maj. Gen. J. S. Bragdon, special assistant to the President of the United States. The President in his remarks recognized the importance of river and harbor and water resources development. General Bragdon gave us a short, but vitally important speech on his own be-

half and I take pleasure in presenting herewith these two addresses:

REMARKS BY MAJ. GEN. J. S. BRAGDON, SPECIAL ASSISTANT TO THE PRESIDENT OF THE UNITED STATES, BEFORE THE 45TH ANNUAL CONVENTION OF THE NATIONAL RIVERS AND HARBORS CONGRESS, WASHINGTON, D. C., MAY 16, 1958

Mr. Chairman, distinguished guests, ladies, and gentlemen, the President asked me to convey to you his personal regards and to present a message to all in attendance at this conference. It is a great privilege for me to do so:

The Honorable OVERTON BROOKS,
Member of Congress, President, National Rivers and Harbors Congress, Washington, D. C.

DEAR OVERTON: Please give my greetings to those attending the 45th annual convention of the National Rivers and Harbors Congress.

This annual meeting demonstrates the widespread interest of our citizens in the use and conservation of our country's water and land resources. Here too is convincing evidence that there must be the broadest possible participation and cooperation in the development of our resource projects.

This work takes time and skill. It is a real application of Amercian democracy; with all voices heard, all needs fairly weighed.

We begin with a host of problems: the growing competitive uses of water, the thirst of our complex metropolitan and suburban areas, the sometimes overlapping and conflicting responsibilities of Federal, State, and local agencies. In trying to answer these problems there are bound to be honest differences of opinion, but every effort must be made to move forward to new achievements in the public interest.

Our plans should be comprehensive to keep in balance all types of public construction according to their relative urgencies.

Legislation for the 12 interstate compacts recently enacted by the Congress is a good example of the way water resource plans can be hammered out by enlisting the abilities of all concerned. Then as all join in vigorous preliminary participation, there is good reason to believe they will continue to share in the actual development, operation, and maintenance of works of improvement. This healthy process is well known to the members of the National Rivers and Harbors Congress who have long played an active part in this demanding field.

In this spirit, I am delighted to send best wishes to you for another fine convocation.

Sincerely,

DWIGHT D. EISENHOWER.

The President emphasized, as you have noted, what we believe to be one of the fundamental prerequisites for securing the kind of water resource development from which we all can receive lasting satisfaction—broad participation, cooperation, and willingness to share responsibility.

Since time began, man has had to deal with the plain but stubborn fact that his wants are infinite while the resources available to satisfy them have specific limits. History is replete with examples of how societies down through the ages have organized themselves to match resources with needs. Success in this effort has insured survival, as with Switzerland. Failure to do so resulted in decline and ultimate decay as with ancient Syria.

In the United States, we have traditionally recognized the right of freedom of action of individuals. But, in George Bernard Shaw's language, "Liberty (freedom) means responsibility. That is why most men dread it." So the right of each community to enjoy its water resources carries with it also participation in their development—responsibilities which include cooperative action and compromise when necessary for the overall good.

Our public works needs have pyramided. Count the needs of your children and grandchildren and those of your neighbors. In ever-increasing amounts they require additional public facilities, including water supply, water transportation, and all the other blessings that result from the best uses of water.

Their needs are augmented by greater wants for better living, a better car, wider streets, and better lighting. We want our children's standard of living to grow.

When our citizens become cramped in our cities and want the fresh air and greater space of the suburbs, they get on the move. And Mr. Tom Jones, citizen, expects his public servants to provide additional public facilities for him to do so. We believe the expectations reasonable.

These not-so-unreasonable needs, wants, and growth movements have expanded to such gargantuan proportions that our resources have become taxed and we must choose between them. We must determine the relative urgencies of these demands. We need a sound method for this determination.

In a particular sense, when a region's citizens count up their natural water and related land resources and consider their future, should they in an arid region say, "We shall make steel here," or in the midst of the Rockies, "We shall raise cattle here." Should they not rather inquire, "What can we best do with what God has given us? What water resources have we? Are they limited? Can we augment them? Can we use them to transport materials to us and to carry away what we make? Shall we farm, mine, raise cattle, or manufacture? Finally, in view of all factors, what various alternatives have we to choose from to best guide our immediate future and the longer range future of our children?"

We believe a sound answer is that the best path of growth is that which nature dictates with all her assets weighed together. It is not a unilateral approach which springs from a study by any one agency which has been charged with one major function. We believe any region has a right to consider all possible alternative choices for its future growth.

We believe simply that the principles, choice, and selection of "the best for the region," "the best for the basin," "the best for the State," and 'the best for the Nation" should be applied to all planning before decisions are made. And all the folks of the region, basin, or State should have a voice in this planning from the beginning.

Comprehensive planning connotes not only a coordination of the functional planning of agencies and the harmonizing of the efforts of all levels of government, but aggressive participation by those primarily concerned. We have only to look at the $12-billion plan of the great State of California for an outstanding example. Think of it—a $12-billion plan for one State. It is their plan. Of course, they have cooperated with Federal and local agencies in its development and desire the benefits of such Federal assistance as the laws provide. But California has a plan based on California's conception of California's future.

The great State of Texas is, I understand, developing a long-range plan which, too, will be Texas' own plan as Texans see their destiny.

I believe you in this Rivers and Harbors Congress agree in wanting the best plan, not the next best. The recommendations of the President's Advisory Committee on Water Resources Policy, submitted to the Congress of the United States in January 1956, contained policies and principles with attendant organizations to make our water-resources-development programs the best.

They mark out a coordinated course of action whose sole objective is to attain the best.

Our water policies, to a degree, have, like Topsy, "just growed" in a somewhat piecemeal fashion. This was only natural, since the Federal Government has at different historical periods responded to the most prominent pressure of need of the people of that period. Emphasis on functional development through programs of specific agencies with specific duties was natural. But as the country has become more and more closely knit together, and its needs have grown in diversity, complexity, and size, these functions have overlapped and impinged on each other in many regions.

Some years ago a friend of mine told me of the expansion of his company in the food line. It absorbed many smaller food businesses, some of which in turn had several lines which competed with those of other divisions of the mother company. This overlapping took place not only in type of product but soon in the regions served geographically. The law of diminishing returns came into play and earnings fell. Management then had to reexamine their resources and objectives and do some pruning. No major divisions were eliminated but collaboration was secured through establishment of definite policies and a rearrangement of the organization to assure their carrying out.

The need for coordination of our water resource development through adoption of a broad national policy with effective organization to follow up is greater today than ever. We need some more definite charts and guides to follow as programs and projects multiply.

I would like to recall for your consideration a point made by your able President, the Honorable Congressman OVERTON BROOKS, in his statement before the House Public Works Committee several years ago. It is even more applicable today. He stated that the matter of providing a sound policy for the conservation and development of our country's water resources is of broad national interest involving the Federal Government, the States, the political subdivisions, corporate entities, and individuals.

The National Rivers and Harbors Congress has been traditionally a leader in the water resources development of our country. We can take comfort in the knowledge that your organization will continue to advance the common effort for better balanced, more economic, coordinated public construction in which all citizens can participate and from which all will benefit.

Lincoln High School Band Rates Praise

EXTENSION OF REMARKS
OF
HON. WILLIAM G. BRAY
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 24, 1958

Mr. BRAY. Mr. Speaker, the Lincoln High School Band of Vincennes, Ind., is a very outstanding organization. This is not just my opinion; it has been confirmed in the State band contests for the last 8 years, in which the Lincoln band has been among the first division class A leaders in each instance. Two years ago it was chosen as one of two bands to appear before the National Musical Education Association. It is a band with an impressive tradition, a

tradition which is being carried on this year.

On August 23, the Lincoln High School Band will be the featured band at the Chicagoland Musical Festival, demonstrating their marching and playing ability at (in) (on) Soldiers Field, Chicago. This is an honor richly deserved for this fine organization. But even this is not what truly distinguishes this group in my mind.

It costs money to send a band on special trips. The Vincennes community has responded to the needs of the band on several occasions. For this Chicago trip, the band members decided they would not ask the people of Vincennes for additional money, but each would pledge to earn at least $15 to turn over to the general expense fund. As a consequence they offered their services for car washing, lawn-mowing, cleaning and other chores and raised the money on their own.

To me, this kind of spirit and self-reliance are what we most want to see in our young people. It demonstrates the kind of qualities that go into producing the finest American citizens. These boys and girls know how to work together to achieve the things they want, and this ability is not limited to their musical performance. I know Indiana will have good reason to be proud of them when they appear in Chicago.

The Christian Science Monitor Appraises the Work of the Antitrust Division of the Justice Department

---

EXTENSION OF REMARKS
OF

HON. KENNETH B. KEATING

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 15, 1958

Mr. KEATING. Mr. Speaker, the Christian Science Monitor, one of the Nation's leading newspapers, recently published a series of excellent articles by Vartanig Vartan analyzing the antitrust policy and action of the Eisenhower administration. These articles plainly show that the antitrust laws have been enforced with vigor, but that at the same time the program has been fair and well balanced. It is to the credit of Judge Hansen, the head of the Antitrust Division of the Department of Justice, and his predecessor, Judge Barnes, that this work has won such high praise.

Under leave previously granted, I insert this fine series of articles:

WASHINGTON PARADOX—ZEAL FANS ANTITRUST MOVES

As business sails into the second half of stormy 1958, executives pace the deck, fretting about wage contracts and prices, sales, and profits. But they share the conviction that the coming months—give or take a half dozen—will calm the churning waters.

Today, the biggest lingering concern of the businessman is not the economic outlook but the long antitrust arm ("You can run but you can't hide") of the United States. It can dart, quicker than a lashing typhoon, out of a calm sky.

Nary a mention of this ogre creeps into the stately, soothing words of the company annual report, but to his confidants the executive mutters darkly about the ghostly arm from Washington.

PICKLE PACKERS, TOO

The ghost has taken form to reach out recently for such giants as Gulf Oil, Radio Corporation of America, Bethlehem Steel, Continental Can, Procter & Gamble, Foremost Dairies, and dozens of other major firms.

The small fellow is safer but scarcely immune. The Justice Department has moved against waste-rag sellers in St. Louis, pickle packers in New York, and live lobster distributors in Maine.

The antitrust ghost casts a chronic shadow over General Motors, and United States Steel takes infinite care to see that its steelmaking capacity stays below one-third of the industry total.

The corporate Ulysses must hold a firm hand on the sales-and-profit tiller but keep glancing over his shoulder at the shifting antitrust winds which blow from Washington. There is no warning when old laws may receive new interpretations and the businessmen abhors this sort of uncertainty.

A political paradox clouds the sky. The Republican administration of President Eisenhower has hotly patrolled the antitrust lanes in a manner that puts to shame past Democratic regimes.

"What," the businessman cries out, "gives?"

SOME SAY "RED HERRING"

Some observers say the intensified antitrust action constitutes a convenient "red herring" for the administration, which wants to escape any stigma of favoring big business.

This philosophy may pay off at the polls (the Justice Department usually manages to file a well-publicized suit just before the November election). But the procedure scarcely wins the heart of the company executive who often feels that antitrust laws persecute him for superior performance.

The Government's chief trustbusters, interviewed in their paneled offices in Washington, tell reporters they simply seek to enforce the statutes. They deny any veiled plans to shackle business giants and spring the votes.

However, the Nation's Capital is a city where nothing beyond the weather report is issued without some shade of political significance. (Wall Street, for one place, never can quite get this fact through its head.)

Certainly, the Eisenhower regime in its 5½ years, could have gone easier in its antitrust endeavors. Herbert Brownell, Jr., who helped to produce the storm as Attorney General before he returned to his old New York law firm last October, ranked as one of the Cabinet advisers closest to Mr. Eisenhower.

ZEAL EXCITES NOTICE

But there exists another factor in the groundswelling of antitrust activity more important that bold political motives. This factor, which never sees the light of public print, is the zeal of a large corps of lawyers and economists employed by the Justice Department. Attorneys who have watched the inner workings of this mechanism use such terms as "missionary dedication" in describing this zeal.

The Justice Department employs nearly 250 lawyers, and a hardy group of them, coupled with the economists, delight in the pursuit of suits which business claims are aimed to bring big business to its knees.

In fiscal 1952—the year before the Republicans won the White House—the Antitrust Division of the Justice Department filed 30 cases. The number of new proceedings, growing steadily to 55 in fiscal 1957 and the total for the newly ended July-to-June year runs nearly as high.

Antitrust law seeks to promote competition in the open market. It is as distinctively American as the hot dog or the cowboy movie.

CREDO ENUNCIATED

Victor R. Hansen, a mild and kindly faced man who looks like everybody's favorite uncle, is charged with the responsibility today of enforcing the antitrust laws in his post as Assistant Attorney General. He is a former superior court judge in California and has served in his present capacity since July 1956, under appointment by President Eisenhower.

In a speech earlier this year he set forth the following antitrust credo:

"The antitrust laws are designed to preserve the competitive system of free enterprise which is perhaps the country's proudest boast. We reject socialistic schemes of state planning, and a business life dominated by restrictive cartels and regulations. We believe that a large part of the material gains achieved by this country stem from our system of free and open competition under private enterprise.

"We are sure that in the final analysis, a free economy is best for all. And the antitrust division seeks to preserve that free economy through the enforcement of our country's antitrust laws."

CLIMATE OF FREE MARKETS

Mr. Hansen (he is called Judge Hansen by his staff) denies that the administration takes a stand against business—big or small. "Our goal," he says, " is to promote a climate of free markets in which all business can prosper and grow."

He points out that the current administration has brought suits against lead producers, shrimp dealers, airlines, trailer operators, labor organizations, shipping firms, and linen suppliers.

"Antitrust has moved against restraints on the manufacture of eye glasses, false teeth, and vitamin pills," he adds. "It covers the theater and arts as well. Thus, we have proceeded against restraints by the New York City Theater Scenery Haulers as well as the International Boxing Club; and blending theater with sport, as well as with a sense of humor, we have attacked restraints on commercial wrestling."

TOUGH OPPONENTS FOR WALL STREET'S BEST—ANTITRUST LAWYERS HIT HARD AT BIG BUSINESS

The pay scale for trial attorneys in the Antitrust Division of the Justice Department starts at $7,570 and ends at $11,610. When he leaves Washington to try a case in court, the Government lawyer receives $12 a day for all expenses.

"We lose money on these trips," an antitrust lawyer confides. "We get a hotel room for $5.50 a day and we eat in second-rate restaurants. In the end we put out our own money."

When he appears in court, the trustbusting attorney may find his opponent is a top partner in a Wall Street law firm, a man whose pretax income can hit $200,000 in a good year. And these are good years for corporation lawyers whose clients are distressed by antitrust jitters.

FULL BACKING OF UNITED STATES

The salary scale may suggest that the Justice Department attorney begins his court battles with the odds heavily against him. But there is one point in his favor, and nobody—even the Wall Street lawyer—ever forgets it: the might and majesty of the United States Government stands in back of the antitrust attorney. Moreover, the Government is the Nation's biggest banker, landlord, insurance agent, and job giver.

The simple act of filing an antitrust case (the labors are not so simple; in one suit the Government interviewed 2,000 service station operators in its field preparation) places a tremendous pressure on the corporate defendant.

"There's another thing, too," remarks a corporation lawyer. "The Government attorney keeps his job even if he loses the case." Company counsel are not always so fortunate; an official of Madison Square Garden Corp. admits that the Garden switched lawyers after its law firm—a prominent New York brace of names—lost an antitrust case.

Highly paid and highly trained corporation lawyers are articulate men and, in off-the-record discussions, they level some of the more telling criticism at the current trend (lawyers call it "thrust") of antitrust endeavor.

MERGER MORALE SHAKEN

Some see a gathering assault on big business per se. This would follow the reasoning that bigness is tantamount to badness. The Justice Department denies any such course, but many a legal specialist remains skeptical.

The Supreme Court decision last year, that Du Pont violated antitrust laws with its 23 percent stock ownership in General Motors dealt a staggering blow to corporate merger morale in general. This started out as a Sherman Act case, but the decision hinged on a Clayton Act violation. What use the trustbusters will make of this decision remains to be seen, but it certainly strengthens the hand of the administration in antitrust attacks.

"It is very interesting," notes a top corporation lawyer, "that the Union Carbide complaint was issued about a month after the Du Pont-General Motors decision." The Federal Trade Commission entered this action, charging that Union Carbide's acquisition of Visking Corp. either will lessen competition or tend to create a monopoly in the field of polyethylene (the fastest growing plastic and that squeeze bottle miracle) and synthetic sausage casings.

NEW TARGETS LOOM

Today, the FTC and the Justice Department are hammering away at big corporate mergers, citing violations of the Clayton Act as amended in 1950. Within a few years, particularly if the Government loses the key cases, the antitrust guns will swing onto other targets.

The Securities and Exchange Commission might enter the act, too, through a side door. Possible targets the Government may strike at in future years include insurance firms and investment companies.

Observers point out that any growing attack on bigness per se would run counter to the broad swing of economic events. Our population is expected to rise sharply in coming generations. This will demand greater efficiencies in production, marketing, and distribution. The bigger companies are better able to handle this job, its defendants argue. Whether we like it or not, the sweep of economic reality is leading the Nation toward greater uniformity in the manufacture and use of consumer goods.

Just how ecective are the current antitrust actions? Which groups do they help, and which groups do they ignore?

SMILE ON SMALL FIRMS

Some lawyers who have studied the Eisenhower administration's approach to antitrust actions in the past 5½ years argue that big business and the average consumer basically are left out in the cold while small business and medium-size business bask in the warmth of the House.

In virtually every major antitrust case, corporate attorneys say, the Government is concerned about the effects on the small-business man. The American public, these lawyers maintain, has gotten little practical benefit—particularly in terms of lower prices for the products it buys—from all the frenzied antitrust activity.

Victor R. Hansen, Assistant Attorney General, is one man who believes otherwise. In a recent speech he declared: "Many of the actions instituted by the Antitrust Division during the past year have been aimed at conspiracies to fix the selling price of commodities which are of vital importance in the budget of every consumer."

PRICE FIXING CHARGED

As examples, Mr. Hansen points to an action in Oregon concerning a conspiracy to fix prices on milk and to cases in New England in which the Government claimed contractors for concrete form work conspired to boost the cost of building a typical house by $100.

The Government also has charged price fixing on such consumer items as kitchen appliances, hardware, gasoline, and housewares. But it evidently feels the need for selling its antitrust program to the public, a rather puzzled group of some 172 million persons watching prices creep up on virtually every item it buys.

When William P. Rogers held his first press conference last December after taking office as Attorney General, he outlined plans to show the public that trustbusting today helps to keep the cost of living down.

He was asked what form the policy line on antitrust cases will take and he replied: "We will follow pretty much the same policy in the antitrust field as in the past. * * * I do think, maybe, we ought to explain the work of the Antitrust Division more than we have done in the past."

SECTION 7 RENOVATED, TIGHTENED—ANTITRUST DRIVE GETS NEW TEETH

Lawyers speak of old section 7 and new section 7 in somewhat the same manner housewives talk about their old ice box and their new refrigerator.

What is section 7, that vague term that sounds to the layman like an errand somebody forgot to run?

It is the main weapon wielded by the Justice Department and the Federal Trade Commission in their current campaign to batter down business mergers.

The existence of new or amended section 7 of the Clayton Act provided important antitrust ammunition for the Eisenhower administration. The FTC and the Justice Department, in effect, could replace smoke shells with high explosives, thanks to a stronger statute.

The Truman administration filed only a single section 7 case (in June 1952 against Pillsbury Mills for acquiring firms making family flour and flour-base mixes). By mid-1956 the Eisenhower trustbusters had filed a baker's dozen of antimerger cases. By mid-1958 the total ran up to the 30 mark.

MERGERS CONTESTED

Every one of the cases contested a merger or acquisition by some substantial company. The list of defendants reads like a Who's Who in industry. It includes Crown Zellerbach, General Shoe, Owens-Illinois Glass, Union Bag & Paper, A. G. Spalding & Bros., Fruehauf Trailer, Borden, Brillo Manufacturing, and International Paper.

American Radiator & Standard Sanitary Corp., in a Justice Department action, was cited—among other things—for the potential manufacture of steel bathtubs.

Some of the cases (e. g., Farm Journal and General Shoe) were settled by the ordering of limited divestiture. Others like Hilton Hotels and Union Bag gave rise to consent decrees.

But the bulk of the cases are pending. And their fate—as finally decided by court trials and appeals to the Supreme Court—will determine in the immediate years ahead the success of the broadside attack against mergers in this decade.

When the Supreme Court in 1950 approved the acquisition of Consolidated Steel Corp. by United States Steel the weakness of the Sherman Act of 1890 as a standard in preventing mergers became apparent. With its 1950 amendment of section 7 of the Clayton Act, Congress sought to strengthen prior limitations on mergers.

LOOPHOLE

New section 7, also known as the Celler-Kefauver amendment, was broadened to cover corporations acquiring the assets, as well as the stock, of another company. This was designed to plug a loophole in the former statute.

Here is the heart of amended section 7: "Nor corporation * * * shall acquire * * * the stock * * * or * * * assets of another corporation * * * where in any line of commerce in any section of the country the effect of such acquisition may be substantially to lessen competition, or to tend to create a monopoly."

With tooth-comb care the forthcoming antitrust court trials will transform the wording of the new section into the hard reality of specific decisions.

BETHLEHEM CASE CITED

The most important section 7 case went to trial this spring and a Federal court judge will issue his decision in the fall. This Justice Department suit concerns the proposed acquisition of Youngstown Sheet & Tube by Bethlehem Steel. At stake is the consolidation of 2 steel giants with more than $3 billion in assets, the biggest potential merger in business history.

Victor R. Hansen, the administration's chief trustbuster, said in an interview earlier this year that "the Bethlehem case comes closest to what Congress had in mind in amending section 7."

"This case will be a guidepost—one way or the other," he noted. "Even an adverse decision—to the Government—will clarify the law.

"We file cases that we think violate the law. But also we're responsible to try cases that help to clarify the law."

At present, a huge boiling pot of uncertainty confuses the public—and even distinguished lawyers—as to whether the amended section 7 contains teeth, or merely gums.

Declared a prominent attorney last autumn: "One of the few things I may safely say with regard to section 7 is that the extent of its application is not definitely settled."

DUAL ADMINISTRATION

The antitrust horse carries not one Government white knight but a double saddle. Riding along with the Justice Department is the FTC. Both of these administration knights are charging, lances lowered, against corporate defendants in section 7 cases.

The FTC, for example, charged last October that Procter & Gamble (which makes Ivory soap that is lauded as "99⁴⁴⁄₁₀₀ percent pure") was something less than 99⁴⁴⁄₁₀₀ percent pure in acquiring Clorox Chemical Co., described as the Nation's largest seller of liquid household bleach.

This merger, the FTC complaint said, "may substantially lessen competition or tend to create a monopoly." Thus, the Government antitrust knight rides hard in the battle of soapsuds.

VARIETY OF ACTIONS

In addition to its merger suits, the FTC this year has brought such varied actions as a case claiming a New York firm made misrepresentations in the sale of mail-order merchandise and that a Cleveland company used false advertising in the sale of candy vending machines.

In other suits it charged a Holyoke, Mass., concern with failing to reveal that a household detergent is dangerously flammable and a nationwide clothing chain with making

false price claims and misbranding its garments. False labeling on fur and wool garments is another field that catches the FTC eye.

Since the FTC and the Justice Department are given the dual administration of antitrust laws, there can arise some perplexity as to which agency will mount the battle.

Sometimes it boils down to a case of which one gets there first. This has led to a joke among lawyers in Washington that one agency opens its office half an hour earlier than the other so that it can get first crack at the mergers announced in the morning papers.

CONSENT DECREES AID TRUSTBUSTING

Antitrust activity in the Eisenhower administration has placed reliance in some of its most far-reaching cases on a legal device called the consent decree. This provides for the settlement of a suit—legally binding on both the Government and defendant corporations—without the protracted delays, notriety, and expenses of a trial.

In 1956—an election year—the Antitrust Division of the Justice Department closed 54 cases, 22 of them by consent decrees.

The finest flowering came early in the year when within a month's period the Justice Department blossomed out with consent settlements in a quartet of big suits. The defendants were American Telephone & Telegraph, International Business Machines, Hilton Hotels, and General Shoe.

IBM AGREES TO SELL

The strategist in effecting these settlements was Stanley N. Barnes, the tall, husky ex-judge who was Victor R. Hansen's predecessor as Assistant Attorney General. In his college days after World War I, Mr. Barnes had starred in the football forward wall at the University of California and performed in two Rose Bowl games.

The Tournament of Roses, though, never got the kind of headlines triggered by the 1956 set of defense decrees.

IBM agreed to begin selling its electronic machines (instead of only renting them, as in the past), to cut its part of the tabulating card business, and to make available many of its patents on a royalty basis.

A. T. & T. was hardest hit of all the defendants. True, it escaped the shattering aim of the antitrust suit filed in 1949. That complaint had charged A. T. & T. and its manufacturing arm, Western Electric, with conspiring to monopolize the manufacture and distribution of telephones and equipment. The suit sought to separate the two units.

Earlier this year, in testimony before a congressional committee looking into consent decrees, an A. T. & T. executive declared that one patent provision in the settlement "will result in a loss of royalty revenues of between $3 million and $5 million a year over the next 10 years."

Antitrust officials have hinted that the decree represented a better settlement than Uncle Sam could have obtained if the A. T. & T. case had gone to trial.

Critics of the A. T. & T. consent decree, however, have suggested that Western Electric, in effect, was given court approval to dominate the telephone equipment business. Said one critic: "The Government has extended the idea of a regulated monopoly from utilities to manufacturing."

This simply shows that consent decrees (like cases tried in court) fail to make all parties happy. Take, for example, the matter of antitrust and color film.

Eastman Kodak used to sell its undeveloped color film at a price which included a charge for processing, a procedure that limited the business of processing effectively to the firm's own laboratories. The Justice Department filed a complaint and, subsequently, a consent decree barred Eastman from this marketing arrangement.

The decree opened up a field of endeavor for many small firms in a new industry ringing up annual sales estimated at $100 million. Thousands of photo-finishing firms sprang into the new field to perform the service done previously by a single company. But to the camera-fan consumer the results were disconcerting; processing prices actually rose as the neophyte companies tried to master the techniques.

"However," a Justice Department trustbuster said last month, "there can be no doubt that ultimately the competition between this group of rival companies will produce a better service at a fairer price."

Some critics who fail to be captivated by the current antitrust drive like to point out that the post-World War II divorcement of movie producers and exhibitors played right into the hands of that fast-growing giant, television, and accounts for part of filmdom's financial dilemma today.

From the defendant's point of view, the consent decree (it's called a "church-step settlement" when reached just before a trial opens) helps to forestall future law suits by rival companies.

The Clayton Act permits plaintiffs seeking triple damage awards to introduce a court judgment as prima facie evidence, which throws the burden upon the corporate defendant. Exempt from this provision however, are pretrial consent decrees.

PUBLICITY UNFAVORABLE

Already in 1958, the consent decree has figured in antitrust settlements affecting the consumer's palate, if not his pocketbook. One settlement in New York ended a restraint of trade in the sale of sauerkraut. Another ordered Boston-based United Fruit Co., charged 4 years ago with monopolizing the banana business, to form a competing company out of its own assets. But United Fruit has until 1970 to put the plan into effect, after the courts approve.

One thing that bothers corporation lawyers about the consent decree is that these settlements are invariably heralded by the trustbusters as Government victories.

But a development of far greater concern is the growing trend in 1958 for the Justice Department to invoke criminal as opposed to civil suits.

Grand jury indictments this year have leveled the antitrust finger at 29 oil companies, RCA, 3 natural gas firms, and 5 manufacturers of polio vaccine, all in separate cases.

"We don't usually file criminal cases unless we feel there is a willful violation," explains a Justice Department official. "If we don't feel there is a willful violation, we file civil cases." Criminal cases, which can carry heavy fines on conviction, are more onerous to companies than civil suits.

Among concerns which have felt the recent lash of both civil and criminal antitrust cases going against them is Safeway Stores, the Nation's second largest grocery chain.

But the favorite antitrust target these days seems to be RCA, an electronics giant dedicated to preserving its patent system. The Government, in opposition, is equally dedicated to bringing about revisions in this system.

David Sarnoff (who in 1921 supervised the reporting of the Dempsey-Carpentier championship bout by wireless telephone from Boyle's Thirty Acres in Jersey City) made a speech last February 20 at Atlanta.

The RCA board chairman cited the pressing need for clarifying the legal rules of the game in business, particularly as they apply to antitrust action. He said that in the antitrust field "conspicuous achievement in the competitive economy too often becomes suspect."

By coincidence, the next day in New York City, a Federal grand jury—after 11 months of hearing evidence—handed down a four-count indictment. It charged RCA with monopolizing radio, television, and electronic patents.

Dempsey won his fight in 4 rounds—on a knockout. The Justice Department figures the RCA criminal suit may not reach trial for another year or two.

A Tribute to Dr. James L. Hagerty

EXTENSION OF REMARKS
OF
HON. GEORGE P. MILLER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES

Monday, August 4, 1958

Mr. MILLER of California. Mr. Speaker, next month, on September 11, marks the first anniversary of the death of Dr. James L. Hagerty, late professor of philosophy and world classics at St. Mary's College of California, a man who made a tremendous contribution to the intellectual growth of thousands of Americans.

I should like, at this time, to pay commemorative tribute to this great man. It is customary, when eulogizing one who has passed on, to bring out all the laudatory adjectives at one's command. This is a very human and praiseworthy trait. But it makes it difficult, when the occasion comes to pay tribute to true greatness, to find words that will not sound trite and hackneyed. Yet the effort must be made, for this man was not only truly great—he achieved greatness in a field where that quality occurs all too seldom, and is most sorely needed. He was a great teacher.

To Jim Hagerty, teaching was a dedicated job, and he quite literally devoted his existence to it. He graced the faculty of St. Mary's College for over a third of a century and justly earned the admiration, the respect, and the affection of his faculty brethren, his students, educators throughout the country, and the community at large.

For Jim Hagerty was no sterotype of the ivory-tower professor A man of brilliant intellect and profound knowledge, he constantly challenged and explored ways and means to best educate the young men who came within his influence. Tradition, taboo, and curricular fetishes fell before this passionate seeker of the truth.

Dr. Hagerty believed, with intensity, that the function of the educator was to teach young people to think, to develop the essential skills of the growing mind necessary to draw forth its fullest power, to divert the student to the free exercise of his intellectual talent—a view of education more fundamental than studying any subject matter.

As long ago as the 1920's, he rejected the lecture technique of teaching in favor of the seminar method—the classroom equivalent of the bull session. He would gather his students about him in one of the seminar rooms on the campus, toss them a gambit, and then sit back

to watch the sparks kindle and fly from the young minds—adroitly guiding, never stifling. It was the method first established by Sophocles in early Athens, when he would gather a small, informal group of his followers about him to discuss the problems that have always puzzled mankind.

Out of this came the revision of the liberal arts curriculum at St. Mary's in 1942—a revision which resulted in making the study of world classics—the great books and great ideas which have molded our Western civilization—compulsory for all undergraduates at the college, regardless of their major field of study.

Essentially a quiet and gentle person, the only times Dr. Hagerty became belligerent was when the Great Books idea was under fire. He was a member of the executive commission of the Great Books Foundation and assisted in organizing Great Books groups and training leaders throughout the greater bay area. He was always willing to become excited over Great Books because, as he said a few years ago:

> At a time when the American way of life is being challenged, it is a service to intelligent citizens to present to them the ideas fundamental to our political and social system, as well as those competing for the domination of the world.
>
> At a time when government, law, freedom, and the very value of life itself are in doubt, a reading of some of the great ideas that have influenced our civilization may serve to enlighten the future decisions of a democratic society.

Hagerty graduated from St. Mary's College in 1919 and spent his entire teaching career at his alma mater, which is operated by the Brothers of the Christian Schools. In 1950, the teaching order which he served so long paid him the most distinguished honor of naming him a benefactor of the Brothers of the Christian Schools. It was the first time in the history of the college that any layman had received such an honor. It was, in fact, the first time in the history of the Christian Brothers in California that the title had been conferred.

Cultural and religious activities in the bay area found in him an enthusiastic supporter. He was a member of the board of advisers of the Monterey Institute of Foreign Studies, the Philosophy Society of America, the Philosophy Society of San Francisco, founder of the western branch of the American Catholic Philosophical Association and chairman of that organization from 1939 to his death last year.

He served as editor of the famed Moraga Quarterly from 1930 until 1942, associate editor of the New Scholasticism in 1953, and was a contributor to magazines on educational and philosophical subjects.

At his untimely passing at the age of 58, leaders in all walks of life—business, civil, social, and religious—paid tribute to Jim Hagerty for his accomplishments, which remain as a priceless legacy of one who served education faithfully and well.

Val King, writing in the San Francisco Monitor, said:

> Jim was that man of contemplative character who could, and did, get things done. * * * He was a cultured gentleman, who imparted his own love and respect for the beautiful to everyone privileged to have any part of his company. * * * Our times are a bit too swift, too strident, too strenuous, to produce authentic gentlemen. But to me, at least, Jim Hagerty remains the image not only of a gentleman, but of a Catholic gentleman. * * * Yes, he was a gifted mind, an inspiring teacher, a warm and generous friend.

Last spring, the St. Mary's College undergraduate honor society, Alpha Pi Gamma Upsilon, which he founded, established a memorial forum in his honor. Participating on the panel were honor students from eight bay area colleges, with Dr. Mortimer Adler, director of the Institute for Philosophical Research, San Francisco, as moderator. It was supremely fitting that the subject chosen by the students for this first annual forum was, What Makes a Great Teacher?

The college to which he devoted his life has created the James L. Hagerty Memorial Chair of Philosophy to perpetuate the work and the name of this great educator whose concern as a teacher went beyond the textbooks to the ethical and spiritual needs of those whose expanding minds were in his charge.

Perhaps all that Jim Hagerty was, as a man and a teacher, was best summed up by one of his former students, Father Stanley F. Parmisano, O. P., the young priest to whom fell the task of delivering Dr. Hagerty's funeral sermon.

He believed in the workings of the human mind and its capacity to reach the truth of things. And so he was philosopher and teacher. He believed in the love of the human heart, and see what a warm and generous and faithful friend he could be, and was to so many of us. He believed in the dignity of the human person, and see the gentleman he was, never forcing himself or his faith or philosophy on another; wanting to hear what his students found in a given book or life situation rather than tell what he himself found there; wanting them to grow from within rather than be stretched and hammered into misshape from without.

Representative Burdick on Medical Care

EXTENSION OF REMARKS

OF

HON. CHARLES O. PORTER

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Friday, August 1, 1958

Mr. PORTER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial which appears in the August 9, 1958, issue of Labor, entitled "Why Millions Cannot Afford Medical Care":

WHY MILLIONS CANNOT AFFORD MEDICAL CARE

"I soon would be as poor as a starved turkey if I patronized hospitals much longer." That said comment came last week from Congressman USHER BURDICK, Republican, of North Dakota. An oldtime fighting progressive, BURDICK has been in poor health for a number of months. Now 79, he's retiring at the end of this session of Congress.

His statement provided emphatic confirmation of the need for enactment by Congress of national health insurance legislation, which the labor movement has long advocated, but which the doctors' lobby—the American Medical Association—has repeatedly blocked.

Drawing on his own experience and that of many others, BURDICK declared that "the greatest need of the present day is reasonable hospitalization." Lack of such a plan, he added, "is one of the great failures of our Government. What can a world-renowned government amount to finally, without protecting the health of the huge majority of the people."

In his own case, BURDICK said, "In one hospital a doctor looked at me twice and charged me $500, and the second look was more of a squint than a look. Hospital rooms cost all the way from $19.50 a day to $29. Nurses charge from $1.50 an hour to $2. When you add to this the X-rays and doctors' fees you can see that the people with a fund even as high as $5,000 for sickness would find themselves stripped clean in a comparatively short time.

"The private system of medical care," BURDICK concluded, "is all right as far as the well-to-do are concerned, but the system does not reach the average citizen, of which there are many more millions than can be found in the well-to-do class.

"The public health of the Nation demands a different deal from this," he added. "At least an average citizen should have recourse to health improvement that does not make a pauper of him, or the alternative of going without medical care and dying before his time.

"I have always been of the opinion," BURDICK said, "that a public-health bill can be written by Congress that will give the poor man a chance for his life. If we cannot do that we have dismally failed in our legislation.

"Is not this Nation concerned with the general health of the Nation?" he asked. "Shall we abandon the millions who need medical attention just to preserve the present medical system? What is money compared to the results of nonattention to the health of the Nation?"

BURDICK is manifestly right. Moreover, his stirring appeal—and similar ones made by other liberals in Congress—can get results if voters next November will elect progressives with sufficient gumption to resist the selfish medical lobby and to fight for the interests of the people.

Three Hundred and Fiftieth Anniversary of Polish Pioneers in America

EXTENSION OF REMARKS

OF

HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 6, 1958

Mr. LANE. Mr. Speaker, I am pleased to bring to the attention of the Congress, a little-known but important event in our history.

It was on October 1, 1608 that the first Polish pioneers came ashore at Jamestown, Va., more than 12 years before the *Mayflower* brought the Pilgrims to Massachusetts.

Capt. John Smith, founder of the Virginia settlement, had visited Poland before setting out for America. He was impressed by the skill, the industry, and the reliability of the Polish people. When the new colony at Jamestown was

threatened with failure, he sent an urgent plea to England for Polish workers. They came, and established the first actual factory in the new world.

From that day to this, succeeding waves of Polish immigrants have taken part in the building of the United States.

Our development and progress as a free nation owes much to their character and ability. The spirit of these fine citizens is summed up in the old Polish saying: "A Pole shall never be a serf."

God-fearing and devoted to freedom, they have made contributions to our way of life that should be known and honored.

For this purpose I ask unanimous consent to insert in the CONGRESSIONAL RECORD the illuminating document titled "Americans From Poland" that was originally published by the Polish Women's Alliance of America.

It will be a well-merited recognition of the 350th anniversary commemorating the arrival of the Polish pioneers in America:

AMERICANS FROM POLAND

(Published by the Polish Women's Alliance of America in observance of the 350th anniversary of the arrival of Poles in America at Jamestown, Va., October 1, 1608)

The story of immigrants in America—one of the greatest stories ever written—shows how the many people of many lands helped build the greatest nation on earth. It is mainly a chronicle of common people, common but honorable, and always dedicated to the principle that man was created by the Almighty to be free.

Perhaps one of the most interesting chapters in this great chronicle of America's immigrants is to be written about those who have migrated here from Poland. For from the very first days of this rich nation's struggle for independence and progress, the Poles have left their names imprinted on the indelible sands of time.

POLISH PIONEERS

It is impossible to enumerate all of the nameless and fearless Polish pioneers who came to America, toiling endlessly, clearing away forests, laboring the virgin soil, withstanding brutal Indian attacks and massacres, struggling and praying that their efforts could in part contribute to a rebirth of faith in the dignity of man on these barren shores of a new land in the Western Hemisphere.

Yes, among the millions of pages of American history written by the great—and not so great—the dauntless spirit of Polish immigrants can always be found. They came here to pave the way for the future economic and cultural development of the United States.

It would be difficult for us today to mention even all of those Poles in America who have risen above the anonymous crowd and left indelible traces of their activity in the United States. Time would not permit a chronicling of their events, for there are tens of thousands of dedicated Poles who during the past 350 years came here as fearless trappers, brave soldiers and great pioneers of culture.

This booklet is by no means intended to present the full story of Poles in America, for the full story has yet to be written. Instead, we hope through this simple booklet to arouse curiosity to whet the appetite of historians and to inspire among our students of history a rebirth of determination toward chronicling a more detailed story of Poles in America. It is a beautiful story—a rich story—a story of a gallant people whose brave deeds reach down into the very roots of American history.

BETTER UNDERSTANDING OF OUR HERITAGE

We hope also that the young, and the old, will have a better understanding of their own heritage as Americans of Polish descent. It is our earnest hope that during this great jubilee year observing the 350th anniversary of the arrival of Poles in America, all Americans will better understand that their neighbors of Polish ancestry are not a new phenomenon in this country, that they are not a foreign element which only in recent years has found expression, but that Poles have played an integral part in the very birth of these great United States and have contributed to their growth and progress for generations dating back to 1608.

If through these efforts we succeed in doing nothing more than getting all Americans to understand better the very stimulating history of Poles in America, we shall consider this jubilee year a huge success. We shall try—through the cold pages of history—to bring warmth into your hearts.

JAN Z KOLNA

Some of the writers who have tried to tell the story of Poles in America actually go back to 1475, 17 years before Christopher Columbus discovered America. That year one Jan z Kolna, a Polish seafarer and explorer in the service of the King of Denmark, was supposed to have bumped into Labrador and then sailed down to the mouth of the Delaware River. But scholars find no convincing proof of this extraordinary voyage, about which there is a persistent tradition in Polish lore. We will have to leave to more persistent research the task of proving more convincingly whether Jan z Kolna did in fact first discover America.

Our jubilee year begins with the first landing of Poles in Jamestown in 1608. For here we are on firm historical ground. The indisputable personal diaries of Capt. John Smith—founder of the Virginia settlement at the very birth of the 17th century—duly record the great contributions of Polish immigrants in establishing the infant colony's first industry. It is to Captain Smith that we can be grateful for documenting the first authentic description of the early arrival of Poles in America.

CAPT. JOHN SMITH ASKED FOR POLISH WORKERS

An orphan and pretty much on his own since early childhood, Captain Smith had traveled extensively through Europe. During his many journeys, he had visited Poland and learned firsthand of the industrious nature of the Polish people. He had marveled at their skills in lumbering, wood carving, glass making, and the production of tar and pitch—a sticky substance made from the by-products of tar and used for roofing and waterproofing buildings. Shortly after his arrival here in 1607, with a group of vagabond gentlemen, wearing silk and shunning work, Captain Smith quickly realized that without skilled workers the newly formed colony could not long survive. Smith sent urgent pleas to his home office in England to send him workers, particularly Poles because there were larger tar and pitch swamps within a stone's throw of the new Jamestown colony.

Smith recalled how industrious the Poles were. It is no surprise, then, that when he found himself in difficulty, he turned to the Poles.

HISTORIC DATE

The first group of Poles arrived October 1, 1608. As they made their way up the shore from the two ships that brought them through a treacherous voyage from England, their voices rang out with song and joy—they had come to the promised land, where even the air had a new breath of freedom.

While some historians attempt to list the first group of Poles who landed in Jamestown by name, intensive research on our own has failed to confirm these names. It is for this reason, therefore, that we shall satisfy ourselves for the time being with Captain Smith's own references to the Polonians—as he called them—without resorting to their respective names.

LANGUAGE BARRIER

This first group suffered the same handicap that hundreds of Poles who came to America after them in ensuing years, the language barrier. Few, if any, had the slightest knowledge of English, and this factor more than any other—made their early life in America difficult. But, according to Captain Smith, they were skilled and determined, and besides, they turned out to be excellent fighters against the Indians.

Captain Smith lost no time in putting them to work, and he duly credits them with starting the first actual factory in America—a glass works near Jamestown, Va. Today, in that historic American shrine, stands a replica of this first American industry manned by the skillful Poles.

POLES RECEIVE CREDIT

In his memoirs Captain Smith credits the Poles with saving the economy of the infant colony. But after he left the colony, the early English settlers regarded the Poles, and other European laborers as foreigners and inferiors. They were in the community, helping it to survive, but they were not considered of it.

For 12 years, while the settlement swung between success and failure, the Poles worked hard at their jobs, but they were barred from participating in civil affairs and had no political rights. While actually helping the young colony survive these Poles were in effect little better than serfs. This intolerable situation brought violent reactions from the Poles. For there is an old Polish saying which has survived as the very battle cry of Poles since the birth of their brave nation 1,000 years ago—"Polak nie Sluga"—"A Pole shall never be a serf." By 1619, their pride spilled over and the Poles, yearning for equality, went on strike—the first strike ever staged in the New World.

FIRST STRIKE

It is significant, perhaps more significant than would be immediately discernable, that this first strike was not staged by the Poles for economic gains. Instead, they demanded the right to vote, full equality with the others, and the right to own property. In the tiny community, this was equivalent to a major rebellion. It was the first political upheaval in America, for the purpose of extending democratic rights to the common man. Here was the first manifestation that America shall be a haven for the oppressed, a sanctuary for the free, and a bastion against the tyranny of serfdom.

REAL FREEDOM

The future of the Virginia colony—and perhaps the future of America—swung on the outcome of this strike. We know too little yet about how the strike was handled but it is safe to assume that the leading people of Jamestown realized that the community could not survive very long without the goodwill of their most skilled workers. The strike was quickly brought to a successful conclusion. The Poles' grievances were heeded by the first parliament in America, the House of Burgess in Jamestown. According to a contemporary record, "it was agreed that the Poles shall be enfranchised and made as free as any inhabitants there whatsoever." In order to perpetuate the Poles' techniques in making pitch, tar, and glass, it was further agreed that "some young men shall be put unto them to learn their skill and knowledge therein, for the benefit of the country hereafter."

Who, then, is to say today what course the newly born nation on the eastern shores of America would have taken if not for the

gallant action of these determined Poles. We see from the record that the early colonists—the aristocracy which first came here with Captain Smith—had every intention of recreating in America the very system of vested gentry and castes which the common man had left Europe to escape. It cannot be emphasized too strongly that perhaps the very essence of our democratic system, as we in America know it today, may never have been realized if not for the dogged determination of these early Polish immigrants. No measure of praise or glory can adequately describe their unselfish contribution to this Nation's early beginnings, for it was these Poles who with their bare hands and stubborn determination laid the very foundations on which freedom for all men was born in America.

In the middle of the 17th century, perhaps after hearing how valuable the Poles were to the British colony in Virginia, the Dutch settlers of New Amsterdam persuaded others to come here from Poland to help them grow food and fight the British of New England. These immigrants were also very hardy, industrious, effective; Gov. Peter Stuyvesant, of New Holland, was quite pleased with them.

FIRST ACADEMY FOUNDED BY POLE

In 1659, a Polish scholar, Dr. Alexander Kurcyusz came to New Amsterdam on the Hollander's invitation and founded an academy, the first institution of higher learning in what is now New York City. In the history of American education, he is now known as Dr. Alexander Curtius.

By 1662, an exiled Polish nobleman named Albert Zaborowski—later known as Zabriski—came to New Amsterdam. He later moved across the Hudson River to New Jersey where he became one of the first judges of the State and subsequently the owner of considerable land holdings along the Passaic River. Today, the multi-billion-dollar industrial centers of New Jersey stand on land developed by Zaborowski. Today, also, some of the elite families of the eastern seaboard—ranking high on the list of society—number him among their ancestors.

Poles also settled in the Delaware Valley as early as 1650. Pennsylvania archives show them to have been a part of that colony in the days of its founder, William Penn. There was a thin trickle of Poles into Pennsylvania and Virginia for the next 100 years.

The whole world knows the legendary story of America's famous explorer, Daniel Boone. Every American child has seen movies and television shows relating his heroic exploits. But how many of these same American youngsters know that a Polish immigrant played perhaps the most important part in Boone's future fame?

JOHN ANTHONY SADOWSKI

In 1736, John Anthony Sadowski pushed into the wilderness beyond the Allegheny Mountains. Driven by a native curiosity, Sadowski's restless spirit would give him no peace until he could discover for himself what lies beyond the towering mountains. Braving the Indians and wild beasts which roamed throughout this virgin territory—never yet visited by white men—Sadowski pushed westward. He established an outpost on the Ohio River which a century later became one of American great industrial towns—Sandusky, Ohio, for that is how the great name of Sadowski had been changed on English-speaking American tongues.

Sadowski was killed by the Indians in Virginia. Then his son, John, and particularly his son Jacob, carried on the pioneering tradition of their father and distinguished themselves as aides to Daniel Boone in the settling of Kentucky. They were cofounders with Boone of Harrodsburgh, the oldest town in Kentucky. There is a passage about their immeasurable help to Boone in Theodore Roosevelt's book: "The Winning of the West."

Yes, history has played a cruel trick on the Sadowski family by omitting their names from the illustrious pinnacle it has awarded Boone and other American explorers.

And there were many other Polish explorers who distinguished themselves—time and again—in America's infant days.

FIRST RELIABLE MAP

The first reliable map of the coast of New England—a notable and extremely useful document in its time—was drawn by a Polish surveyor, Karol Blaszkiewicz.

Somewhere in the South, a man named Paul Mostowski, of Warsaw, tried unsuccessfully in 1776 to found a New Poland. Scarcely anything is known of this attempt; most likely the rebuffs and obstacles which he had to overcome as a would-be Colonist in the New World were too much for him. We mention this fact only because it indicates there must have been a sizable number of Poles in America at that time.

They played a considerable role during America's Revolutionary period.

The shot at Bunker Hill must have been heard around the world for soldiers and fighters for liberty came from several foreign countries to the aid of the embattled revolutionaries of the 13 colonies.

KOSCIUSZKO: FATHER OF AMERICAN ARTILLERY

A young Polish engineer, Thaddeus Kosciuszko, was among the first to arrive and offer his services to General Washington. "What can you do?" asked the American Commander. "Try me," said Kosciuszko.

The victory at Saratoga was credited to plans which Kosciuszko had worked out. He fortified Fort Ticonderoga and West Point. He was soon made a brigadier general and chief of engineers, but he also excelled in other branches of the military art; in fact, he earned the title "The Father of American Artillery." His friend, Thomas Jefferson, then Secretary of State, said: "I see Kosciuszko often. He is the purest son of liberty which extends to all not alone the rich."

Kosciuszko's superior officer, General Gates, considered him "the only pure republican. He is without any equivocation on the subject of freedom."

CASIMIR PULASKI: HERO OF TWO CONTINENTS

In July 1777, another determined son of Poland arrived at Washington's headquarters with a letter of introduction from Benjamin Franklin, who represented the year-old United States of America in Paris. This handsome Pole was Count Casimir Pulaski, a young Polish nobleman essentially aristocratic in manner and lacking Kosciuszko's genuinely democratic character and personality. Franklin described Pulaski as an officer "famous throughout Europe, for his defense of the liberties of his country." Rising to the rank of general, during the next 2 years—crucial ones in the history of the American Revolution—Pulaski participated with distinction in the Battles of Brandywine, Warren Tavern, Germantown, Trenton, and Haddonfield near Camden. Then he organized his own Polish Legion, which fought at Little Egg Harbor and Charleston. This dedicated apostle of freedom—the hero of two continents—whose very name threw terror into the hearts of tyrants—was mortally wounded at Savannah on October 9, 1779. He died 3 days later.

There were thousands killed during the running battles of the American Revolution—all dedicated to the fundamentals of freedom. But the death of Pulaski drove a deep void into the ranks of the American Revolutionists. Historians agree Pulaski had an uncanny genius for inspiring men into battles against hopeless odds. It was indeed this kind of battle at Savannah that brought death to Pulaski. But he died as he wished to die—in a running battle for freedom. Pulaski was buried with the highest honors a grateful but struggling nation would bestow upon one of its sons of liberty. It is little wonder that thereafter, Americans everywhere have showered him with tribute which is well known to all of us here. Sprinkled liberally throughout the map of America are villages and towns, skyways and byways, monuments and plaques, dedicated to this gallant warrior.

HIGHEST PRAISE FROM GENERAL WASHINGTON

Of both these great Polish warriors, Kosciuszko and Pulaski, General George Washington repeatedly wrote the highest words of praise to the Continental Congress. For through their unselfish contributions, they had helped lay the foundations which today make the United States a symbol of freedom and dignity to mankind throughout the world.

Kosciuszko, perhaps more so than Pulaski, laid down the first principle of equality in America when he instructed Thomas Jefferson to prepare a will in which the Polish warrior instructed that all of his assets in this country—and they were sizable—were to be used for the erection of an institution of higher learning for the American Negro. To this day, the first educational institution built with Kosciuszko's money for American Negroes stands in New Jersey. It would be wise for those who might be tempted to bemoan so-called intolerance among Americans of Polish descent to ponder this historical fact.

MIGRATION TO AMERICA

With the end of the American Revolution, a beleaguered but determined America began building a new continent which would soon attract thousands of refugees from the four corners of the globe seeking freedom. They came here to work and build—and among them again were the Poles. They saw in the American Constitution a document written by honorable men—a document filled with hope and protection for the dignity of man—a document which was to endure time and guide a growing nation on a path of development never before witnessed by man. In contrast to the oppression and persecution which millions were suffering in Europe, America was the dream of the entire world. It is no wonder then, that in this great contingent of oppressed people seeking freedom were also the Poles. The Napoleonic Wars, the uprisings throughout the European Continent, Poland's own ill-fated attempts at freedom, were all a contributing factor for the ever-increasing migration of Poles to America * * * for here truly was the promised land.

FIRST POLISH COMMUNITY: PANNA MARIA, TEX.

In 1854, the first authentic and wholly organized Polish community was established in America when Father Moczygeba and his followers—a group of peasants from Silesia—arrived on the shores of Texas. It was indeed an inspiring sight as this dedicated son of the cloth—an apostle of Christ—led his ill-clothed and nearly famished group of Poles into the sunny but dusty valley of Texas to found Panna Maria—which only a few years ago observed its 100th anniversary. Father Moczygeba and his followers brought with them crudely packed clothing, bedding, carpenter tools, books and yes—the carillon from their church in Poland. It was here in the heart of Texas—some 86 miles southeast of San Antonio—that Father Moczygeba and his colony settled and built the first Polish Roman Catholic church in America. To these hearty pioneers who braved famine and rolling seas went the thanks of a grateful America—anxious to see her turbulent Southwest settled and developed. Father Moczygeba's brave expedition served as an inspiration to thousands

of Americans in eastern States who feared migration to the West because of terrifying attacks by raiding Mexican armies. This determined Polish priest—who had seen his religious teachings being crushed by the Prussians in his native Poland—pioneered a new chapter of heroism not only among the clergy but among oppressed people all over the world.

CIVIL WAR

For almost 75 years after the American Revolution, America's valiant effort to weld into one nation people of many poltical outlooks, religious beliefs, and economic standards underwent a series of crucial tests until 1861, when terror struck the entire Nation; the South clashed with the North over the question of freedom for the American Negro. In the darkest moment of her brief but glorious history, America teetered on the verge of self-destruction. The Civil War struck with all of its fury, pitting brother against brother, man against man, and ideology against ideology. A solemn but dedicated President stubbornly resisted all efforts at compromise, for the principle of equality burned too deeply in Abraham Lincoln's heart to allow for compromise. In his many inspiring messages, one theme flowed from the beleaguered President's lips: America cannot long endure half free and half slave. It was a principle which had inspired Poles through decades of Poland's partitions and suppressions by her warring neighbors. Lincoln's inspiring words fired the imagination of freedom-loving men throughout the world. It is little wonder, then, that in America's darkest moment of history, when survival hung in the balance, that thousands of Polish immigrants flocked to President Lincoln's tragic appeal for help.

While Kosciuszko and Pulaski have won perhaps the widest acclaim in America for their efforts in behalf of this Nation's fight for freedom, two other Polish generals—seldom if ever mentioned in history books—distinguished themselves in this country's tragic struggle for survival. We hope that history will correct this injustice and ultimately place them among the ranks of America's great sons.

GENERAL KRZYZANOWSKI HERO OF CIVIL WAR

Wladimir Krzyzanowski came to America in the 1850's and completed his engineering studies here. He assisted in the construction of three railroads in the Middle West, then settled down as a businessman in Washington. At the outbreak of the Civil War he joined the Union forces organizing a militia company which included many other Poles and quickly expanded into a regiment under his command. He was made a colonel. Known as the Polish Legion the outfit distinguished itself in several battles, among them those of Cross Keys and Bull Run. President Lincoln appointed Krzyzanowski brigadier general but the Senate did not immediately confirm the appointment because none of the Senators was able to pronounce his name. Krzyzanowski's reputation as a leader and fighter increased after the Battle of Chancellorsville and Gettysburg and in minor battles in Tennessee. Consistently democratic, sharing danger, hunger, and fatigue, he was beloved by the Legionnaires who at the end of the war gave him a beautiful sword with an affectionate inscription. Even the Confederates liked him. When he left the occupation garrison at Bridgeport, Tenn., the residents bade him farewell with regret.

POLE—FIRST GOVERNOR OF ALASKA

After the Civil War, Krzyzanowski became the first American Governor of Alaska. He died in 1887. His grave, in Brooklyn, was long neglected but in 1937 his remains were transferred to Arlington Cemetery. President Roosevelt, speaking at the ceremony, expressed beautifully the depth of feelings, linking together Poland and America. The President said:

"Throughout centuries and storms, no matter if the sun was shining or obscured by temporary clouds, Poland forever thought to carry high the light of liberty. As we treasure in common the same idea of liberty, our friendship with Poland was longstanding and uninterrupted. It is an honor and privilege to bear witness how the United States is indebted to people of Polish blood. We acknowledge the merit of the fearless heroes, fighting for liberty, of Kosciuszko and Pulaski, whose very names became the watchwords of freedom. General Krzyzanowski today joins their immortal ranks."

GENERAL KARGE OF UNION ARMY

Joseph Karge was another Pole who rose to the rank of general in the Union army. He made a name for himself in operations against "Stonewall" Jackson in Virginia and in the defense of Washington. Two serious wounds received in 1862 almost compelled him to retire, but he saw the war through. Toward the end he was assigned to cope with guerillas in the South. After the war he was given command of a cavalry unit in Nevada.

Krzyzanowski and Karge were part of the large Polish emigration from German, Austrian and Russian partitioned Poland that began after the ill-fated uprisings—against the rule of the three most powerful emperors in Europe. The several thousand Polish refugees who came to the United States during this period were almost exclusively revolutionists seeking escape from imprisonment or death.

LAND OF PROMISE

The second period, beginning in the seventies was mostly a matter of relatives following the refugees, then of the relatives' kin coming to join their families in the land of promise. For a while, a good many people in countries like Poland really believed that the streets in America were paved with gold. Polish immigration increased annually, until its peak in the year 1912–13 when nearly 175,000 Poles were admitted to the United States.

During the big migration at the turn of the century, the new arrivals in America were astonished that Polish spirit and culture virtually flowed in American streets. In 1893—during the Columbian Exposition in Chicago—the Polish Day held at the exposition grounds attracted 100,000 people. Polish language newspapers flourished, services were being held in the Polish language in many churches and practically every organization had a Polish choral or dance group among its members. To many of the new Polish immigrants America looked like a segment of their native Poland.

BIG MIGRATION

Between 1880 and 1910 many of the Polish newcomers were very poor; landless farmers and urban workers whose earning power in the old country was so low that it kept them hanging on the verge of starvation; others fled from political oppression. Many young Poles emigrated to avoid serving in the German, Austrian, and Russian imperial armies.

Some Poles emigrated to America intending to earn enough dollars to go back home and buy a piece of native Polish soil. But the great majority, whatever their plans were on arrival, never returned. Hundreds of thousands settled here and sent for their wives and children, brothers and sisters, aunts and uncles and cousins.

The majority went into industry—foundries and mines and forests, garment and shoe factories and textile mills. Of the rest, perhaps one-third of the total Polish immigration went into farming; some in the Middle West, some in Texas, others all over the Northeast. In New England, beginning early in the present century, they started taking over farms abandoned by Yankees, abandoned in the belief that the soil was exhausted. Using the instinctive understanding of the land and food-growing skill bequeathed them by the old country, they have rescued hundreds of thousands of apparently hopeless acres for high-grade agriculture.

How important Polish immigrant workers have been for many decades now in steel, coal mining, lumber, and textiles is too well known to need restating.

BUSINESS AND PROFESSIONS

A small percentage of the Poles who came over late in the 19th century went into business and professions. The qualities and achievements of some of them merit attention. There were Col. Casimir Stanislau Gzowski, an engineer who was mainly instrumental in building the first bridge at Niagara Falls; Joseph Turkolski, surveyor of Louisiana and Utah; Capt. Karol Radziminski, who had a hand in establishing the United States-Mexican boundary; Leopold Bocek, reputed to have started the first polytechnical school in America; and the educators Arthur Brabowski and Joseph D'Alfons.

In their day most of these men were famous not only in their own communities, but in other cities as well. A few of them nationally. Their accomplishments, now nearly forgotten, added much to the totality of American life; they also carried on the Polish tradition in America which began in Jamestown back in 1608 and which has helped the bulk of recent immigrants and their American-born children, who together now number upward of 7 million, to feel at home in America.

WORLD WAR I

Great that America is, it has won its greatness only through many bitter and often bloody sacrifices. And so it was again in 1918—when the world's youngest democracy—struggling against time to establish firm roots in a world constantly torn by strife—was called upon for still another sacrifice. World War I struck with all of its fury. And again the Nation's peace was shattered; men had to take up arms to preserve their freedom.

As in previous struggles, Americans of Polish descent were in the forefront—eagerly enlisting in the ranks of the expeditionary force. There wasn't a roll call in the hasty army being formed on American shores that didn't ring with Polish names—frequently badly mispronounced and not too infrequently, boldly changed by a gruff First Sergeant who didn't have time to struggle with a difficult name.

Perhaps one of the great epochs of America's dedication to freedom was mobilization of a Polish Expeditionary Force recruited in America and trained in Canada. The Polish Army volunteers expeditionary force wrote a heroic chapter unparalleled in this country when they first joined the ranks of the allies to crush the Kaiser and then—as if they had not sacrificed enough—plunged against the Bolsheviks under the magnificent leadership of General Haller. Here was the supreme test of loyalty—not only to America—a nation which had embraced them—but to their native Poland in her greatest hour of need.

FREEDOM FOR POLAND

It was perhaps in gratitude for the inestimable service of Poles in America—since 1608—in helping preserve for this Nation the virtues sought by the entire world, that prompted President Wilson to respond agreeably to Ignacy Jan Paderewski's impassioned pleas for restoration of freedom to Poland after the first World War.

The great Polish pianist—virtually crushed by his relentless struggle for liberation of his native land—had implored President Wilson to come to Poland's defense at Versailles.

And, as if with the aid of providence—he succeeded. It was through Paderewski's inspiring efforts, that President Wilson told the Senate of the United States on January 22, 1917: "No peace can last or ought to last, which does not recognize and accept the principle that governments derive all their just powers from the consent of the governed, and that no right anywhere exists to hand peoples about from sovereignity to sovereignty as if they were property. I take it for granted, for instance, if I may venture upon a single example, that statesmen everywhere are agreed that there should be a united, independent and autonomous Poland, and that henceforth inviolable security of life, of worship and of industrial and social development should be guaranteed all people."

It was this profound pronouncement by President Wilson that led to his 14th point at Versailles and Poland again was restored as a full-fledged member of the family of free nations.

PADEREWSKI'S CROWNING GLORY

This was Paderewski's crowning glory. It was America's way of saying thank you to the thousands of Poles who, in the years past, steadfastly fought for liberty and democracy in the new land.

Paderewski himself paid a tribute to President Wilson which time shall never erase when he said: "I hope I may be permitted to say that as the years pass, my reverence, my admiration, my love, my gratitude for President Wilson constantly grow. And so, too, the feelings of my people who almost unanimously regard him as the greatest benefactor of their country and the father of their liberty."

God grant that the world should again see men of such indomitable courage and dedication as Ignacy Paderewski and Woodrow Wilson.

CONTRIBUTION OF POLES TO UNITED STATES

The main body of Polish immigrants and their native American sons and daughters who are forging steel, digging coal, making motor vehicles and planes and tanks and locomotives and farm machinery, or raising food, ought not to feel any special need of hooking onto the Polish tradition created by men like Kosciuszko, Pulaski and Krzyzanowski; for their own day-to-day collective achievement is so great and so necessary that in itself it should make them feel part of America. Their contribution to the present-day United States is as proportionately substantial as was that of the Poles in Jamestown. The common man is apt to be modest, however, and unconscious of his own direct value and contributions. He is often impelled to grasp at something bigger and older than himself, at something hallowed by history, to help him feel comfortable about his place in the American scheme of things. A Polish-American farmer near New Jersey, who is very successful so far as profits from his land and labor go, finds the deepest satisfaction in the sign, Kosciuszko Road, which some years ago he nailed up at the entrance to the lane connecting his farm with the highway. He has spent a lot of time and energy teaching his non-Polish neighbors the pronunciation of the name and telling them the hero's dramatic story which, incidentally, is the partial reason for the high esteem he enjoyed in his community.

SIZABLE PROPORTION OF POPULATION

Most immigrants from Poland are naturalized citizens. Every year many more take out their final papers. In some large cities they form a sizable proportion of the population and are politically important. In Chicago, there are close to 800,000 Americans of Polish descent. They are numerous also in Buffalo, Detroit, Milwaukee, Toledo, Cleveland, Pittsburgh, Boston, and several smaller New England towns; they are more or less thickly scattered outside the big urban centers of Texas, Michigan, Wisconsin, Minnesota, Nebraska, Illinois, Indiana, Missouri, Pennsylvania, New Jersey, New York, California, and Florida.

Over 50 towns in the United States bear such names as Pulaski, Warsaw, Cracow, Polonia, Poland, New Poland.

Polish Americans have about 10,000 fraternal, dramatic, literary, musical, social, religious and athletic societies all over America. A good many are affiliates of the Polish American national organizations whose total membership runs into hundreds of thousands.

NINE HUNDRED AND NINETY CHURCHES AND MISSIONS IN UNITED STATES OF AMERICA

The vast majority of Poles are Catholics. There are 990 Polish Roman Catholic parishes and 80-odd Polish Roman Catholic missions in the United States with over a thousand priests, along with 14 orphanages, 3 seminaries for men, and 3 for women. There are 500 Polish Roman Catholic parochial schools with about 400,000 pupils and over 5,000 teachers. Perhaps one-third of Polish American youngsters go to these parochial schools run largely by Catholic priests and nuns, the other two-thirds to public schools.

There are some 50 Polish language newspapers and magazines, including 7 daily papers, many of which are published by various organizations. Some were started way back in the '70's and '80's. The majority are conservative about American and Polish affairs.

GOVERNMENT, POLITICS, EDUCATION

Americans of Polish descent play an important role in our Government and in politics. This is especially true in Chicago, Detroit, Milwaukee, Buffalo, and parts of New England. Ten Congressmen now in Washington are of Polish extraction, as is a member of the board of governors of the Federal Reserve System, and the Governor of Maine.

The first book printed in English west of the Rockies was written by a Polish American, the famous California pioneer, Dr. Felix Wierzbicki. And there is a growing number of American wriers of Polish descent. In other spheres of contemporary American life, in arts and science, there are significant outstanding Polish names, too numerous to mention here.

Several hundred thousand Americans of Polish descent served in the Armed Forces during World War II. Scores have graduated from West Point. Americans all. But all naturally concerned about the future of Poland whose rich heritage, her gallant sons and daughters gave to the United States during her long march to glory.

Use and Control of Airspace

EXTENSION OF REMARKS

OF

HON. JAMES G. FULTON

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 18, 1958

Mr. FULTON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letters and a statement and recommendations from the Chamber of Commerce of Pittsburgh, Pa., concerning air traffic:

THE CHAMBER OF COMMERCE OF PITTSBURGH,
Pittsburgh, Pa., July 31, 1958.

The Honorable JAMES G. FULTON,
House Office Building,
Washington, D.C.

DEAR JIM: Enclosed is a copy of a letter, statement and recommendations of the Chamber of Commerce of Pittsburgh to Chairman OREN HARRIS, of the House Interstate and Foreign Commerce Committee, offering the support of the Chamber of Commerce of Pittsburgh in enacting legislation for the establishment of a common air traffic control agency.

It is our sincere belief that the future operations of the airlines, private and corporate flying, as well as nontactical military flying, depend largely upon the effectiveness and adequacy of our air traffic control system.

Any assistance that you might offer in gaining the proper legislation to achieve this goal will be appreciated.

Respectively,

SHERMAN P. VOORHEES,
Executive Director.

THE CHAMBER OF COMMERCE OF PITTSBURGH,
Pittsburgh, Pa., July 31, 1958.

The Honorable OREN HARRIS,
Chairman, Interstate and Foreign Commerce Committee, House Office Building, Washington, D. C.

MY DEAR MR. HARRIS: Due to the increasing amount of air traffic, both civilian and military, the Chamber of Commerce of Pittsburgh has become increasingly aware of potential hazards to the air traveling public as the result of the lack of any common air traffic control agency.

Attached is the statement and recommendations of the Chamber of Commerce of Pittsburgh on the use and control of airspace, and it is respectfully requested that every effort be made during this session of Congress to enact immediate legislation to establish effective common control over all air traffic, including non-tactical military flying, and to enforce all flying rules which will limit to the greatest possible extent the hazards of collisions in the air and to maintain the highest possible degree of air traffic safety.

The Chamber of Commerce of Pittsburgh heartily supports the proposed legislation now before Congress. Your cooperation will be sincerely appreciated.

Respectfully,

SHERMAN P. VOORHEES,
Executive Director.

STATEMENT AND RECOMMENDATION OF THE CHAMBER OF COMMERCE OF PITTSBURGH ON THE USE AND CONTROL OF AIRSPACE

INTRODUCTION

Recent midair collisions of civilian and military aircraft, and the increasing incidence of near-misses have served to highlight a serious situation requiring immediate remedial action.

The Chamber of Commerce of Pittsburgh representing a potential air traffic volume of more than 2 million people is vitally concerned with the effectiveness of air traffic control methods. The chamber, along with many individual citizens, believes that the safety of the air traveling public and the future development of a sound air transportation system is being jeopardized by present traffic control methods.

PRESENT CONDITIONS

At the present, the control of air traffic is divided. Civilian flights are controlled by the Civil Aeronautics Administration; military flights by the military. There is no unified control of airspace. Under certain

weather conditions and in certain areas, civilian aircraft may be flying under CAA instrument flight regulations; in other words, controlled by CAA, while military flights are operating under visual flight regulations, observing only the general rule of the pilot's ability "to see and be seen." This has resulted in chaotic and dangerous conditions.

INCREASED GROWTH OF AIR TRAFFIC

Civilian aircraft in the United States increased from a little over 11,000 in 1938 to more than 85,000 in 1956, the last year for which data are available. Thus in 18 years the number had multiplied almost 8 times. While figures for military aircraft are not available, it is well known that beginning with the war and continuing in later years military planes and flying have increased tremendously. In addition, the advent of jet planes has raised the speed of aircraft beyond anything contemplated just a few years ago.

NEED FOR GOOD AIR TRAFFIC CONTROL

Recently published figures indicate that in the 10 years ending with 1957 there have been 159 midair collisions of which 77 had fatal results causing 402 deaths. In 1958 other collisions have occurred, including the recent Las Vegas, Nev., and the Brunswick, Md., catastrophes in which airliners on airways have been hit by military jets, graphically illustrating the results of divided control of flight operations.

In the same 10 years 971 near misses have also been reported. Any of these, plus the unknown number that have not been reported, could easily have resulted in disasters. Thus the need for direct control by one Federal agency has become more and more pronounced.

AIR TRAFFIC CONTROL PLANS

After the recent Capital-military jet collision, President Eisenhower placed five restrictions upon military flying. These are:

1. Military student pilots flying near civil airways are to be placed under the control of the CAA.

2. Military jets will not descend or operate under 25,000 feet near civil airways.

3. Jet proficiency flying will be conducted away from civil airways.

4. So-called itinerant jet flights will file flight plans with the CAA and be subject to flight clearance.

5. All operational training flights must be made under the immediate control of the CAA or must comply with Instrument Flight Rules.

Another measure to improve the problem of our airspace has been the creation by the Civil Aeronautics Board of so-called superskyways. Effective June 15 all flight operations between 17,000 and 22,000 feet on the corridors from Los Angeles-San Francisco to New York-Washington will be conducted under absolute ground control along three separate 40-mile wide transcontinental skyways. The absolute ground control will include specific separation regardless of weather, thus each flight will be in its own "cocoon of space" protected by ground monitoring and separated from other aircraft at least 1,000 feet vertically and 10 minutes flying time horizontally. Plans are underway to extend the number of skyways to meet the conditions of the overall flight pattern as soon as CAA's control capacity can be increased.

The commercial airlines have announced that their pilots will submit voluntarily to ground control in all operations above 10,000 feet and the airlines have endorsed the plans proposed by the Civil Aeronautics Board. The Department of Defense has also endorsed the plan, but no information is available as to where ground control will take over on military flights.

RECOMMENDATION FOR COMMON CONTROL OF AIR TRAFFIC

Due to the increasing number of midair collisions and near collisions, the aeronautics committee of the chamber is most concerned for the safety of the air traveling public. Although legislation has been proposed in Congress and the military have taken some voluntary action, divided control with the proven hazards inherent therein still exists.

Therefore, the Chamber of Commerce of Pittsburgh requests Congress, with the assistance of the Civil Aeronautics Board, the Department of Commerce, and the Civil Aeronautics Administration to enact immediate legislation to establish effective common control over all air traffic, including nontactical military flying, and to enforce flying rules which will limit to the greatest possible extent the hazards of collisions in the air and to maintain to the highest possible degree of air safety.

Life Under the Trade Agreements Act or the Escape Clause—A Case History

EXTENSION OF REMARKS
OF
HON. W. J. BRYAN DORN
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, August 6, 1958

Mr. DORN of South Carolina. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following articles which depict life under the administration of reciprocal trade:

[From the Columbus Dispatch of July 29, 1958]

COLUMBUS VIOLIN MAKER ATTRACTS NATIONAL EYE IN FIGHT TO LIVE

(By Irene Corbally Kuhn)

An American who doesn't know when he's licked is fighting tooth and nail to preserve a 43-year-old business, the only commercial violin factory in the United States.

The story of the struggle of F. L. Daniel, of Columbus, Ohio, is calculated to evoke cheers from other Americans who admire grit and courage. It is certain to rouse them to fury, too, at the Government's indifference to American rights.

In July 1954, the Jackson-Guldan plant in Columbus was being closed because of extreme foreign competition. In the belief that this artistic craft is important to American culture, and that a country as rich as the United States should be able to support such an endeavor, F. L. Daniel bought the unique and vital equipment and retained the old artisans.

Early progress was gratifying, Mr. Daniel says, and for a while it seemed that the art of violin making in the United States was going to be preserved. However, such was not the case, and things went from bad to worse.

On March 20, 1958, after a futile 3½-year fight against the preferential tariffs which favor foreign products at the expense of American-made goods, Mr. Daniel had to discontinue operations and let 30 skilled workers go.

He had tried every means he could think of to fight the ruinous foreign competition. Cheap, European-made commercial violins come into the United States under such low duties that they can be sold for much less than the American products.

Mr. Daniel did not quit easily. When things began to go bad he tried selling violins as planters for greenery in the homes. And he turned to making guitars. But he was no sooner launched on this promising new line than tariff-favored Japanese-made guitars began to come into the country in quantity. Once more, his valiant efforts came to nothing.

He renewed his appeals to Washington for relief from the low tariffs on foreign-made instruments which discriminated against his product. He was determined to hold out until he had not a hope left, for once the unique equipment in the factory was scattered or sold for salvage, violins of the type used by students could no longer be made in this country.

So Mr. Daniel kept on fighting and hoping for a better day. He could not go on as he had before. He reduced his operations to a shop-type business, and recalled 10 of the 30 production employees.

These good people donated anywhere from 2 to 4 hours of work a week to get things underway again. They also accepted a reduced rate of pay. Mr. Daniel moved the office to his home and does the paperwork at night. "We felt we just had to hold on and fight," he said.

The GATT bill (General Agreement on Tariffs and Trade) is in the Senate Finance Committee now. F. L. Daniel and his brother, C. F., have asked for permission to testify. They have also asked their Senators to sponsor an amendment to GATT, which would increase duties on violins and violas to the rates recommended by the United States Tariff Commission on January 29, 1957.

President Eisenhower ruled against the higher tariffs at that time and there the matter stands.

What the Daniel brothers are asking is very little. They want only what the Tariff Commission recommended a year and a half ago, that "duty on violins and violas valued at not more than $25 each be increased to $1.87½ each plus 52½ percent ad valorem."

This increase they say, will make it possible for them to resume full production of a fine quality, low-priced instrument.

It's becoming increasingly difficult, even impossible, for certain American industries to exist against the inroads of cheap labor costs abroad and the preferential tariffs.

The American bicycle, watch, ceramic, and toy businesses are just a few of the industries which have been hit by our overgenerous treatment of foreigners, our indifference to the fate of so many American firms.

The United States citizen has not one but 36 strikes against him. There are 37 member nations in GATT. Since each GATT member has 1 vote, the 36 other nations can decide what our tariffs should be and get their hands on our rich American market.

More and more, Washington officialdom seems to favor foreign countries and individuals. Sometimes it seems they couldn't care less about American interests.

[From the Columbus Dispatch of Friday, June 20, 1958]

VIOLIN FACTORY BACK IN BUSINESS

The Nation's only violin-making factory is back in operation.

F. L. Daniel, president of Jackson-Guldan, Inc., said 10 employes are producing about 60 guitars and 25 to 30 planters and violins daily at 165 West Main Streeet.

"We just can't stop. We are at it again," said Daniel, who suspended operations last March after a 3½-year battle to keep going.

The crowning blow at that time was a decision not to increase tariffs on cheap violin imports.

Key employees, however, returned to the plant about May 15 to work without pay in an effort to keep the industry going, Daniel said.

Since then, product has been improved, output has beeen expanded, not a shipment date has been missed, and the chances of survival are good, the executive said.

With back taxes paid and optimism high, Daniel this week penned letters to Ohio Senators JOHN W. BRICKER and FRANK J. LAUSCHE.

He asked them to sponsor an amendment to the general traiffs and trade agreements bill that would permit raising the duties on violin and viola imports to the schedule recommended last January by the United States Tariff Commission.

Currently, he told the lawmakers, a $4.50 German violin pays duties of only $1.52; a $2.85 Japanese violin pays $1.23.

"Because the recommended duty would apply only to violins costing less than $25 to produce," Daniel explained, "the recommended rates would aid the fine European handmakers of violins.

"They also would help us compete with labor that costs 15 to 30 cents an hour," he said.

He foresaw no problem in foreign relations through the tariff increase on low-cost violins.

Dollar volume is extremely low, he said. For example, 98.9 percent of all violins imported in 1956 cost less than $15.

Daniel said he has asked permission to testify before the Senate Finance Committee on the issue.

[From the Columbus Dispatch]

JULY 7, 1958.

VIOLIN FIRM STILL HOPES

FROM VIOLIN COMPANY'S FOUNDER

To the EDITOR:

I have noted with interest your articles about the efforts to keep the Jackson-Guldan violin factory open. This brings to mind some similar problems that we had in the early days of the factory.

In 1915 I started the factory, then known as the Guldan Co. As with any new venture, the early days were difficult, but progress was rapid, and soon we employed over 50 violin makers.

In the early part of President Harding's administration we were turning out between 250 and 300 violins per day. At that time we employed from 60 to 75 workers.

Later on we had only 15 employees, due to foreign imports; but 6 months later, after $1 tariff each violin, we were able to employ between 70 and 80 people, and could scarcely fill the demand.

Now we find ourselves in a position as we did in the early part of Harding's administration. So, we can now imagine what the higher tariff would mean to us.

GEORGE GULDAN.

COLUMBUS.

COLUMBUS, *June 25, 1958.*

To the EDITOR:

For the past 3½ years we at the Jackson-Guldan Co. have been waging a battle to maintain the cultural and artistic craft of violinmaking in the United States. It has been our conviction that a country as great as ours can support at least one violinmaking factory.

On March 28 production was stopped at our factory.

On May 15 production was resumed with a very small force working hard to preserve the craft. One possibility remained.

The bill for the extension of the General Agreement on Tariffs and Trade was in the Senate. A letter was addressed to Senator BRICKER and Senator LAUSCHE asking them to sponsor jointly an amendment to that bill.

The amendment to specify that the tariff on imported violins and violas be set at the rates recommended by the United States Tariff Commission on January 29, 1957, recognizing that only with this protection will violins continue to be made in the United States.

The $4.50 German violins presently cost $6.02 after all duties; the $2.85 Japanese violins, $4.08. (Add 10 percent for freight.)

The same violins at the recommended rate of duty would cost: German $9.71; Japanese $7.19. Because the recommended duty would apply only to violins costing less than $25 the recommended rates would aid the fine European handmakers of violins.

In 1956, only 1.1 percent of the 45,000 violins which were imported cost $15 or more.

The dollar amount of the total imports could have no possible bearing on United States foreign relations. The increased rates would not affect the price to the American consumer, but would take up some of the slack between the makers and the final purchaser.

With a domestic producer on the scene a quality standard is set through the competitive process. The violin is a blind item and the average purchaser is at a complete loss to know quality.

In addition to our letters to the Ohio Senators we have asked the Senate Finance Committee for permission to testify concerning our experience with the foreign made violin and with the provisions of the escape clause of the present law.

We have been aware of the interest that the people of Ohio have in the only violinmaking factory in this country.

We wanted to take this opportunity to let them and the staff of the Dispatch know that we are still hanging on and fighting hard.

F. L. DANIEL.

GATT ILLEGAL?

JULY 3, 1958.

To the EDITOR:

Mr. F. L. Daniel of the Jackson-Guldan Co. seems to have the wrong idea about the cost of foreign-made violins and violas, in relation to the cost of their American-made ones, and the GATT (General Agreement on Tariffs and Treaties).

In the United States the average hourly earning in industry is $2.08. In Germany it is $0.55. The German violins cost $6.02 in the United States. In Japan the average hourly wage is $0.22. Their violins cost $4.28 in the United States.

It is not important that foreign countries can undersell United States products in the United States due to their sweatshop labor. It is not important that GATT and its tariffs favoring foreign countries at the expense of America, caused the American woolen and worsted mills to go out of business, that the United States pottery business is failing, and that the United States violin business is almost gone due to GATT.

What is important is that all the foreign nations get all the rich American markets that they desire. The safety and protection of our industry does not matter at all.

Recognizing what is important we have dropped our tariffs from an index of 15.8 to 5.4 (while England and France have raised theirs from 21 to 30 and 18.5 to 25.3).

In such a momentous thing as worldwide trade, the United States must step aside. This task of stepping aside is made much easier by GATT.

There are 37 members in GATT. Each nation has only one vote. Thus the other 36 nations can decide on what our tariffs should be. In this way they can get their hands on our lush American markets.

If Mr. Daniel, or someone like him, tries to raise our tariffs and to protect American business and industry, then the 36 to 1 vote of GATT will take care of that. There is no place for people like Mr. Daniel in the one-world scheme.

It does not matter if the United States Congress has never accepted GATT, and that GATT is unconstitutional in that it delegates the regulation of our commerce with foreign nations to a foreign-controlled group (GATT). What is important, I repeat, is that foreign nations get our lush markets, at the expense of our American industry.

In the one-world scheme there is no room for a sovereign nation. Since our leaders will not withdraw from GATT and our people will not demand our withdrawal, Mr. Daniel had better look for a new job.

JOE HACKETT,
Columbus.

Have Cases of Abuse Occurred Under Level-of-Benefits Plans?

SPEECH

OF

HON. ALBERT H. BOSCH

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 22, 1958

Mr. BOSCH. Mr. Speaker, Mr. Meany, president of the AFL–CIO, charged in Senate hearings three cases of abuse under level-of-benefits plans. The three cases involved the Eastern Massachusetts Street Railway Co., General Electric Co., and the Reed Glass Co., Inc. The Senate subcommittee staff upon subsequent investigation of the Massachusetts Railway Co. found that—

This inquiry did not develop any illegal action on the part of the railway or insurance companies or their officials * * * (but that) by failing to disclose * * * (the company) laid itself open to the misunderstanding and criticism contained in the Meany testimony." (United States Senate Subcommittee on Welfare and Pension Plans Legislation hearings, May–July 1957, op. cit. p. 210.)

The charges against the General Electric Co. were also found to be without support, thus leaving only the Reed Glass Co. case, which involved a bankrupt company which had not made payments into its plan prior to the actual date of its bankruptcy. Disclosure cannot prevent bankruptcy. These are the only cases of abuse under level-of-benefit plans which the Senate hearings revealed.

PRICE OF THE CONGRESSIONAL RECORD

The Public Printer is authorized to furnish to subscribers the daily RECORD at $1.50 per month, payable in advance.

Remit by money order payable to Superintendent of Documents, Government Printing Office, Washington 25, D. C.

PRINTING OF CONGRESSIONAL RECORD EXTRACTS

It shall be lawful for the Public Printer to print and deliver upon the order of any Senator, Representative, or Delegate, extracts from the CONGRESSIONAL RECORD, the person ordering the same paying the cost thereof (U. S. Code, title 44, sec. 185, p. 1942).

Appendix

The New Research Professorship in the Humanities at the University of Wisconsin

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Thursday, August 7, 1958

Mr. WILEY. Mr. President, I was pleased to read in the Tuesday, August 5, Madison Capital-Times of a new research professorship in the humanities as a part of a new Institute for Research in the Humanities at the University of Wisconsin.

The chair is to be supported by a grant from the Johnson Foundation, of Racine, Wis. It is named for H. F. Johnson, chairman of the S. C. Johnson & Co., of Racine, and a director of the University of Wisconsin Foundation.

Mr. President, this new Institute for Research in the Humanities is unique in the United States. The institute will serve as a center for scholars in humanistic research, particularly in the areas of history, philosophy, language, and literature.

All too often, in this technical age of earth satellites, jet planes and the like, we forget that man's oldest heritage, his most treasured heritage, is the humanities. It is by these things of the spirit that man truly lives and communicates and expresses his highest ideals.

Man's history is not only the reflection of his past; it is an index and a guide to his future. Man's philosophy is the star by which he reckons his course in this kindergarten which we call life, itself, where we are forever learning more and more in the school of experience.

Man's language is the tool by which he communicates with his fellow man.

Man's literature is the repository of his ideals, his aspirations, his conceptions.

Far more could be said of the humanities, and, thanks to the institute, far more will be done to advance the humanities.

On many occasions I have commended research at the University of Wisconsin into the physical and biological sciences. But part and parcel of the university's tradition is its great contribution in the social sciences and in the humanities. That contribution will now be expanded manifold.

I may say that I am particularly delighted at this new professorship because it comes about through the generosity of a great company, and a great American. Hib Johnson is the finest type of businessman of whom I know. He is a credit to Racine; he is a credit to his State and to his country. He is a success in private business. He worked splendidly in Government, in important assignments in the Foreign Operations Administration. He is generous of his time, his talent, and his resources in the service of his fellow man.

I ask unanimous consent that the text of the Capital-Times article be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

SEVENTY-FIVE-THOUSAND-DOLLAR JOHNSON GRANT—HUMANITIES CHAIR ESTABLISHED AT UNIVERSITY

Establishment of the H. F. Johnson research professorship in humanities as a part of the new Institute for Research in the Humanities at the University of Wisconsin was announced today.

The chair is to be supported by a 5-year grant of $75,000 at $15,000 annually from the Johnson Foundation, of Racine, and is named for H. F. Johnson, chairman of S. C. Johnson & Son, Inc., and a director of the University of Wisconsin Foundation.

The institute, approved by University of Wisconsin regents in May for activation in September 1959, will serve as a center for scholars in humanistic research, particularly in the areas of history, philosophy, and language and literature.

University President Conrad A. Elvehjem, expressing appreciation for the grant, said: "The H. F. Johnson chair is a significant contribution to the advancement of research in the humanities as it represents the first gift to the institute from outside the university. It will result in bringing to the campus men whose scholarship is of the highest caliber."

Prof. Marshall Clagett, chairman of a faculty organizational committee for the institute, said his group now is canvassing distinguished scholars in the humanities all over the country, and hopes to recommend sometime this fall the first appointee to the Johnson chair.

The commitee has described the institute as "an organization unique in the United States." Establishment of the institute is designed to strengthen Wisconsin's position in the humanities.

Johnson, one of the Nation's leading industrialists and philanthropists, said, "The success achieved in advancing the American way of life by adequately training tomorrow's leaders will depend in large part on the quality of the Nation's institutions of learning and the opportunity for young men and women to use them. As our society becomes more complex, research continues to grow in importance in the social sciences and the humanities as well as in the natural sciences."

A graduate of Cornell University, the Racine man is a trustee of Cornell, of Northland College at Ashland, Wis., and of Asheville (N. C.) School. He has been prominent in industrial and business organizations, and has been a leader in civic groups in Racine. From September 1954, through June 1955, he served as director of the Office of Industrial Resources, Foreign Operations Administration of the United States Government.

The Johnson Foundation, a philanthropic, nonprofit trust created in 1937, has contributed substantially to educational, health, welfare, religious, civic, and business organizations and individuals.

The foundation donated 61 percent of its total grants of $400,807 in the 1957 fiscal year to schools, universities, and students for higher education. A total of 242 young men and women received nearly $100,000, an average grant of about $400, to attend college or take postgraduate work.

The foundation's principal contributor is the Racine firm which manufactures wax products and other chemical specialties.

Address by the Secretary of the Army on the 183d Anniversary of the Army Chaplaincy

EXTENSION OF REMARKS
OF
HON. J. ALLEN FREAR, JR.
OF DELAWARE
IN THE SENATE OF THE UNITED STATES
Thursday, August 7, 1958

Mr. FREAR. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the remarks of the Hon. Wilber M. Brucker, Secretary of the Army, on the occasion of the 183d anniversary of the Army chaplaincy at Fort Myer, Va., July 27, 1958.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

REMARKS BY THE HONORABLE WILBER M. BRUCKER, SECRETARY OF THE ARMY, 183D ANNIVERSARY OF THE ARMY CHAPLAINCY, FORT MYER, VA., JULY 27, 1958

Chief of Chaplains, Major General Ryan; General Lemnitzer, Chaplain Tobey, Colonel Edwards, Dr. Harris, Chaplain of the United States Senate; ladies and gentlemen, I congratulate General Ryan, and all of the members of the United States Army Chaplains Corps, and I wish you well in the years to come. It was on that fateful day of July 29 of 1775, just 6 weeks after George Washington had been entrusted with the command of the United States Army on June 14, 1775, that the Chaplains Corps was founded. Since that time, 284 chaplains have given their lives in battle. At the present time, over 1,100 chaplains are rendering service in the United States Army under the direction of the Chief of Chaplains. These chaplains are giving direction and purpose to life. In the midst of battle and turmoil they furnish that quietness of spirit which keeps our soldiers going. They encourage the man who is almost ready to quit, to go on, and to remember his home and family. They look after the dependents, the wife and the children, wherever they accompany the soldier. They take care of the thousands of things that we soldiers understand, because only soldiers can truly appreciate what it means to have a good chaplain in their midst. And so today, on this 183d birthday, the United States Army is proud to take time out to

honor all the members of the Army Chaplains Corps.

It is very fitting that the color bearers and the color guard we see today should be wearing the uniform of the Revolutionary Army of 1775 when the Chaplains Corps was founded. This uniform is worn only by the color bearers and color guards of the Honor Guard of the President of the United States, the First Battle Group of the 3d Infantry. Today all of us, soldiers, laymen, men and women and little children, look up to and admire, revere, and venerate the members of the United States Army Chaplains Corps. May you always retain the affectionate regard of the people of the United States, and those whom you serve so well.

The Supreme Court Decision on School Integration

EXTENSION OF REMARKS
OF
HON. A. WILLIS ROBERTSON
OF VIRGINIA
IN THE SENATE OF THE UNITED STATES
Thursday, August 7, 1958

Mr. ROBERTSON. Mr. President, when Patrick Henry went to the Continental Congress he said he would speak no longer as a Virginian but as an American. I have tried to emulate him in that respect, and even when I have advocated measures of particular concern to my own State, I have tried to retain perspective and relate my position to fundamental principles concerning the welfare of our whole Nation.

That attitude has applied in particular to statements I have made about problems resulting from the Supreme Court's decision on school integration. David Lawrence correctly stated in his editorial in the August 8 issue of U. S. News & World Report:

Ever since the founding of the Republic, education has been considered solely within the right of the States to administer. Nowhere in the Constitution is the word education mentioned, and certainly the debates in Congress when the 14th amendment was adopted do not reveal a scintilla of evidence to prove that the amendment was intended to give Congress the power to take away from the States the right to control their own educational systems.

There is nothing in the Constitution, therefore, which prohibits the States from assigning pupils to public schools on whatever basis the State feels will give the best education to the children of its citizens.

From the very beginning of our history—confirmed indeed by a specific decision of the Massachusetts Supreme Court in 1850—the right of a State to set up separate schools for different races has been upheld. In 1896 the United States Supreme Court formally recognized the custom when it said that "separate but equal facilities" do not violate the 14th amendment.

I am convinced that, while the problems involving attempted racial integration of our schools are at the moment primarily those of Virginia and other Southern States, the principle of judicial destruction of States rights should be of deep concern to every part of our country.

It was gratifying, therefore, when I received recently from a Vermont Republican a letter commending a statement I made last year on the use of Federal troops at Little Rock. The writer of this letter professed a faith in the principles advocated by Thomas Jefferson and George Mason with which I am wholly in accord.

I have obtained approval of the writer, Mr. Albert B. Congdon, to publicize his letter, and I ask unanimous consent that it may be printed in the Appendix of the RECORD.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

DANBY, VT., *July 27, 1958.*

To the honorable SENATOR FROM VIRGINIA,
A. WILLIS ROBERTSON,
United States Senate,
Washington, D. C.

DEAR SENATOR: You may think it strange for an old Vermont Republican to write you, but my niece sent me a U. S. News & World Report, which printed your speech of October 11, 1957, and I wish to express my appreciation and approval of it, and to say that you are on the right road.

I am an oldfashioned Vermonter, living in a little town my folks have lived in for 193 years. My folks were the Green Mountain boys, and Col. Ebenezer Allen who wrote the emancipation proclamation of the Green Mountain boys 1777 was 3 times my great uncle.

My father's folks lived neighbor to Judge Theophilus Harrington when in 1801 he made that famous decision, refusing to return a runaway slave to his master without a bill of sale signed by the Lord Almighty.

To the people of our Northern States, the Dred Scott decision by the Supreme Court was a direct violation of our States right, and the war between the States was the worst calamity this country ever had, and we now realize that after the war those poor Negroes needed much more than constitutional amendments to make them good, reliable American citizens, but in the years that have passed since the war they have made great progress and deserve much credit for it, but they do not deserve all of the credit. They could not possibly have done so well without help from their white friends and neighbors.

Thomas Jefferson was our smartest President. He was Ambassador to France when Washington was elected President and came back to become our first Secretary of State. The French then had two political parties they called Royalists and Republicans. Jefferson brought the name Republican back with him and called his party the Democratic-Republican Party, so now both parties can claim him.

Evidently Jefferson believed in States rights, for he said, "Were we directed from Washington when to sow and when to reap, we would soon want bread, and if we were not already divided into States and the States into towns or parishes, it would be necessary to do so, so that each in its turn could do that for itself which it can do so much better than a higher branch of the Government could do for it."

George Mason, another noted Virginia, said "he would rather cut off his right hand than sign the United States Constitution without the Bill of Rights" which was afterward added as the first amendments.

The problem of the two races living peaceably together is a big one and very difficult, but it is one of those things which the States themselves and the people of each community can do so much better as Jefferson said than a higher branch of the Government can do for them.

We need to restore and preserve the original balance of power between the people, the States, and the Federal Government. As the Constitution says, "We, the people of the United States, do ordain and establish this Constitution." The power, therefore, came from the people, and the 10th amendment says, "The powers not delegated to the United States by the Constitution nor prohibited by it to the States are reserved to the States, respectively, or to the people"; and the 9th amendment says, "The enumeration in the Constitution of certain rights shall not be construed to deny or disparage others retained by the people."

This shows the Court had no right to construe the Constitution so as to increase their power or the power of the Central Government.

But the Supreme Court has so ruled as to abridge or nullify much of the Bill of Rights, especially the 4th, 6th, 9th, and 10th amendments. The fourth amendment says "the rights of the people to be secure in their persons, houses, papers, and effects against unreasonable searches and seizure shall not be violated and no warrants shall issue but upon probable cause supported by oath."

Now, Federal officers claim they do not have to have any warrants.

Five years ago I was doing some carpentering work for a friend in New York State when four FBI men pushed open the doors of the house when the family were at morning prayers, arrested my friend without a warrant at his own breakfast table. Two other men came with trucks. They searched the house and carried off anything they wanted.

I read of a proposed States Right Party. I think we need something more. The right of the people should come first, then the rights of the States, and after that the Federal right. The old Bill of Rights was not quite specific and clear enough. We need amendments to strengthen it.

I do not like the way things were managed at Little Rock. We have some things in our Northern States that are not what they should be, but we would resent it if a Federal bulldozer was sent to clear the weeds out of our garden.

With best regards, I am,
Yours truly,

ALBERT B. CONGDON.

Labor Bill Kept Bottled Up

EXTENSION OF REMARKS
OF
HON. KARL E. MUNDT
OF SOUTH DAKOTA
IN THE SENATE OF THE UNITED STATES
Thursday, August 7, 1958

Mr. MUNDT. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Labor Bill Kept Bottled Up," published in the Watertown (S. Dak.) Public Opinion for July 30, 1958.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

LABOR BILL KEPT BOTTLED UP

Weeks of investigation and hearings by a congressional rackets committee at Washington long ago exposed flagrant abuses, malfeasance and other misdoings of certain leaders within the American organized labor movement that produced big newspaper headlines all across the country. The news made shocking revelations. The congressional investigation and hearings were for the purpose of securing information for guidance in drafting legislation that would safeguard the country and American labor, itself, against these abuses. This purpose of Con-

gress, as it seemed to be reflected in the operations of the McClellan investigation committee, was quickly reflected, also, in a wave of popular demand.

Now, it appears that all this preliminary work which resulted in such a positive showing for the need of remedial legislation, is to come to naught. At least this will be the case if the observation of the Associated Press news analyst, James Marlow, whose column appears regularly on this page, proves correct.

With Congress now hoping for a mid-August adjournment to get home for the fall election campaign, Marlow wrote that "Congress seems certain not to pass a general labor bill. The Senate did but the House is likely to ignore it."

And if this proves true it will bear out a fear voiced by South Dakota's Senator KARL MUNDT back on July 2, when he pleaded for referral of the Senate-adopted Kennedy-Ives labor bill to the House Committee on Education and Labor in time to permit hearings, proposed amendments and the debate, revision and adoption of this legislation on the floor of the House of Representatives in keeping with the American tradition of democratic parliamentary procedures.

The labor bill was adopted in the Senate way back in mid-June. But rather than being then referred to the appropriate committee of the House of Representatives for consideration, amendment or revision as is the customary procedure, it has been kept bottled up. The strategy of this maneuver appears to have been to either delay the legislation so long that it could be allowed to die for lack of time for its proper committee consideration or to bring it to the floor of the House under a suspension of the rules and compel a rollcall on the Senate version without opportunity to consider or adopt amendments.

Senator MUNDT'S July 2 speech placed responsibility for this treatment of labor legislation in the House on the Democratic party control of Congress. After reference to the refusal to refer the labor bill to the House committee, Senator MUNDT said "this would therefore confront us with the ugly un-American alternative of either having no labor bill at all, * * * or, under alternative No. 2, it would mean that the House must vote upon what we in the Senate have enacted on labor legislation without making amendments of any kind. While either of these alternatives would of course be acceptable, and either also favored by certain labor bosses in this country, I am certain Mr. President, that neither of these alternatives would be pleasing or acceptable to the general public, whom it is our duty to try to represent."

MUNDT continued: "If there ever were a warning sign larger than a camel-shaped cloud that labor already has control of the Democratic party in this country, you see it now, and you see it here, and you see it in what is happening to the so-called Kennedy-Ives labor bill over at the other end of the Capitol."

MUNDT, as a member of of the McClellan committee, shared the conviction of many others that the Kennedy-Ives bill as passed by the Senate did not meet the needs for reform brought out in the committee hearings. But he, as did many others, hoped the situation could be remedied when the bill came before the House. "To force the House of Representatives," he said, "to take S. 3974 as it is or to take no labor legislation at all does not seem to me to be compatible with either the record of the House or with the desires of the American people."

The this-or-nothing ultimatum has met strong opposition also from many sources outside Congress, including the National Manufacturers' Association, United States Chamber of Commerce and others. The Rockford Morning Star sums it up this way: "The racket hearings have strongly indicated that the country needs a labor-reform bill. But what was produced under lobbyist influence in the Senate and is now offered on a this-or-nothing basis to the House is at the opposite pole of what the country demanded. At this late hour in the session, there is but one possible course—to vote it down. Let's have a fair, honest piece of legislation or none at all."

Federal Aid To Education

EXTENSION OF REMARKS
OF
HON. STROM THURMOND
OF SOUTH CAROLINA
IN THE SENATE OF THE UNITED STATES
Thursday, August 7, 1958

Mr. THURMOND. Mr. President, the proponents of Federal aid to education, having failed to sell their program to Congress and the Nation by other means, have taken a new approach. The latest argument is that Federal encroachment on this local responsibility is necessary to national security.

This approach is also fallacious. Congress would do well to examine any such program to determine whether it is a program of general Federal aid to education in disguise.

I ask unanimous consent that there be printed in the Appendix of the RECORD an enlightening editorial discussing this point entitled, "Same Purpose—New Approach" which was published in the Aiken Standard and Review of Aiken, S. C., on August 4.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

SAME PURPOSE—NEW APPROACH

One thing you may be sure of, the proponents of Federal aid to education will never stop trying. The new gimmick—following repeated failures to force congressional passage of bills to pay teachers and build schools—is to dress this Federal encroachment on local responsibility in a dashing military cloak.

H. R. 13247, entitled "National Defense Education Act of 1958" will be up for a vote in the House very soon. And considering the gentlemen's preoccupation with the political chores waiting at home, they might admire the soldierly cut of this garment and not look to see what's under it.

But the council of State chambers of commerce, which has made a thorough analysis of Federal aid to education, 1958 style, thinks that in these times of rising Federal budgets and growing deficits, taxpayers should expect Congress to find better uses for their money than an unneeded and undesirable Federal scholarship program.

Eugene F. Rinta, research director of the council, who directed and prepared the study, said of H. R. 18247: "Its passage in this session of Congress would become the opening wedge for future enactment of the kind of program the National Education Association and other proponents of Federal aid really want; that is, a program calling for the Federal Government to become a major participant with the communities and the States in financing the public schools."

Such a program, said Mr. Rinta, contemplates annual Federal expenditures for public education several times the size of the $940 million 4-year cost of H. R. 13247. He noted further that even though any possible defense benefits that might result are years in the future, the gimmick of the cloak seems to have fooled a lot of people in and out of Congress who have been traditionally opposed to Federal efforts to control the schools. Nor have many stopped to realize that the fact that scholarships in the very subjects the bill proposes are going begging now.

Whatever is spent on education must still come out of local pants pockets and pocketbooks and cookie jars. And it will be spent more thoughtfully at home than in Washington. Whether Washington proposes to buy scholarships or schoolhouses, to pay teachers or lend money to colleges, the ultimate purpose remains just what it was—to federalize education.

Last Unsurrendered Confederate Battle Standards Rest in Rio Grande

EXTENSION OF REMARKS
OF
HON. RALPH W. YARBOROUGH
OF TEXAS
IN THE SENATE OF THE UNITED STATES
Thursday, August 7, 1958

Mr. YARBOROUGH. Mr. President, though this country's interest in the episodes of the Civil War has never waned, the approaching centennial of that great conflict is sure to cause even greater study of the circumstances surrounding that great period of national crisis.

An interesting article by Mr. V. H. Torrance in the Fort Worth Star-Telegram of July 27, 1958, points out that the last battle standards of the Confederacy were not lowered until 3 months after Appomattox, and this event took place in Texas on the banks of the Rio Grande.

Then, as now, this country was vitally affected by events taking place elsewhere in the world. France's ambitions for a New World empire were causing the United States Government grave concern.

I ask unanimous consent to have printed in the Appendix of the RECORD this article, which describes the disbanding of the last Confederate unit on the banks of the Rio Grande, and the international complications of the time.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

LAST CONFEDERATE UNIT DISBANDED IN CEREMONY ON BANK OF RIO GRANDE

(By V. H. Torrance)

Copiously annotated works of history tell us the southern Confederacy shut up shop and went out of business at Appomattox April 9, 1865, but do not tell us it was on the bank of the Rio Grande at Eagle Pass 3 months later that the last free, unsurrendered, unreconciled combat element of the Confederate States Army lowered its battle standards forever.

It was a ceremony of proud and scornful men; grim, bitter, and desperate men. It was rather terrible, but it had something of sublime beauty, and it was a ceremony entirely in keeping with the somber history of the Great River.

The scene was set in the Tuileries, where Napoleon III in 1862, using Mexican debts to France as a pretext, sent an army to Mexico. Mexicans thoroughly mauled that force at Puebla May 5. (Now you know why Mexicans observe el Cinco de Mayo—the 5th of May.)

Napoleon sent 30,000 more troops and put an Austrian archduke, Maximilian von Hapsburg, on an emperor's throne in the Halls of Montezuma.

This seriously vexed the United States; it ran contrary to the theme of a letter President Monroe wrote in 1823. It would require an army to persuade Napoleon to read that letter carefully, and at that time, you'll remember, the United States Army had other engagements—and was losing most of them.

Washington could only hope President Pablo Benito Juarez might be able to handle the matter.

Juarez was a Zapotec Indian and a great American. As a barefoot waiter in a Chihuahua posada he had served Santa Anna. As Governor of Oaxaca he refused to permit Santa Anna, who had offered the French his services, to rest overnight within his state. Benito Mussolini and the city of Juarez were named for him.

After Lee surrendered, Napoleon knew he would have to deal with the mighty, veteran Army of the United States; Custer was soon to be in Texas ready to jump with 26 regiments. Napoleon withdrew his support from Maximilian.

Then it appeared that the phony emperor might get some sure-enough help from another source.

Appomattox had no force in Confederate armies west of the Mississippi. Some, as units or as individuals, surrendered when the proximity of Federal troops made it practical. Most of them simply called it a day and went home.

Gen. Joseph O. Shelby's cavalry division neither surrendered nor went home. With their arms, and their bands, and their worn battle standards, they marched to Texas and camped a few miles north of Austin. Shelby made no secret of his intention of going to Mexico, as hundreds of Confederates were doing, but he was painfully reticent about his plans for after he got there; painful, that is, to Washington.

The situation in Mexico was such that Shelby's hard and salty veterans might make the difference one way or the other. If he planned joining Juarez * * *. Need anything, General? Horses? Arms? Rations? But if he intended throwing his weight behind Maximilian * * *. The United States had no great hankering to resume the war by throwing Custer across his road to Mexico.

While Washington worried and fumed, Shelby marched his division to Eagle Pass, and on the bank of the river at sunup July 4, 1865, the Confederate States Army conducted its last formation.

Color Sergeants stood front and center. The drums were darkly omnious, as war drums always are, and the trumpets were arrogant and challenging as four colonels stepped forward and took station at the general's back.

The five officers moved slowly down the line of standards, and Shelby reached up and ripped each faded, ragged emblem from its staff. The colonels received them reverently in their arms, then the officers weighted them and lowered them into the muddy water of the river that has washed so many hopes and dreams down to the gulf.

The division went to Mexico, but as groups and as individuals. Some went one way, some another, and some returned home soon. Those who went to Maximilian were too late to help him. He was captured, and the Zapotec Indian, a gentle, sensitive man, sadly and reluctantly nodded his assent. On the Hill of the Bells musketry riddled the last emperor of Mexico.

The Empress Carlota had gone home to weep for help in the chancelleries of Europe. She went entirely mad, but she lived until 1927. When you are in Austin you can see her said-to-be perfect mirrors in the Driskill Hotel.

And the unsurrendered standards of Shelby's cavalry division are deep in the mud of the restless river.

Tribute to Capt. Laurance F. Safford Retired Navy Cryptographer

EXTENSION OF REMARKS
OF
HON. JOHN J. WILLIAMS
OF DELAWARE
IN THE SENATE OF THE UNITED STATES
Thursday, August 7, 1958

Mr. WILLIAMS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "East Wind, Rain," published in the Chicago Daily Tribune of July 26, 1958. The editorial pays tribute to Cap. Laurance F. Safford, a retired Navy Cryptographer.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

EAST WIND, RAIN

President Eisenhower has signed a bill approving the award by Congress of $100,000 to Capt. Laurance F. Safford, retired Navy cryptographer, for his invention of a score of code systems which were impervious to enemy attempts at code breaking during World War II. Because of security regulations and the fact that his work was done on duty, Captain Safford could not profit by patenting his devices.

The interesting thing about this recognition of merit is that Captain Safford made himself highly unpopular during the Democratic investigations of the Pearl Harbor disaster by his sworn testimony that there was no excuse for the successful Japanese attack. Information available to the highest offices of Government and of the military commands, he said, left no doubt that war was imminent, and this knowledge imposed a responsibility to place American outposts on a full alert against enemy action. This was not done at Pearl Harbor, where our forces were completely surprised.

If anyone was competent to pronounce this kind of judgment, it was Captain Safford. He was chief of radio intelligence in the Office of Naval Communications at the time of Pearl Harbor. Although he has at last been rewarded for giving his country unbreakable means of transmitting its own secret messages, it is not emphasized that his contributions to breaking the Japanese code long before Pearl Harbor were of equal value. So successfully did he and his associates perform that machines duplicating those used by Japan were built by the United States as much as 16 months before Pearl Harbor.

Captain Safford, of course, knew what Japanese secret messages were intercepted by these and other means, for it was a part of his duty to see that they reached high American officials, starting with President Roosevelt, the Secretaries of State, War, and Navy, and going down into the command echelons of the services.

Safford was convinced by the temper of these Japanese messages that war was coming soon. On December 4, 1941, 72 hours before the Pearl Harbor attack, his group plucked from a fake Japanese radio report on the weather, transmitted by prearrangement with Japanese diplomatic agents throughout the world, the coded declaration that Japan would go to war with the United States, Britain, and the Netherlands Indies, but not with Russia. When this intelligence was circulated, no one in Washington had any excuse for further ignorance, yet no unqualified warning was dispatched to the commanders in Hawaii.

This was the famous "east wind, rain" intercept. Its existence was testified to many times in secret service investigations during the war. It became a cardinal principle of policy on the part of agents of the Roosevelt administration to discredit the existence of any such message and to prevail upon those who had already testified to its receipt to change their sworn stories.

By the time of his appearance before the congressional committee investigating Pearl Harbor after the end of the war, Captain Safford was the only witness still prepared to swear that the message had been received and had been fully understood. As a result, the captain did not commend himself to the Democratic majority of the committee, or to his superiors, who were responsive to political influence. He was never promoted to flag rank.

For his honesty and courage alone, Captain Safford deserves the reward Congress has voted him. He also deserves the gratitude of all Americans not only for his great services to his country but for his dedication to truth, whatever the consequences.

Communism in Latin America

EXTENSION OF REMARKS
OF
HON. DANTE B. FASCELL
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
Monday, August 4, 1958

Mr. FASCELL. Mr. Speaker, recent international events have clearly pointed out that the United States and the free world must face for years to come, a continuing struggle.

The principles of our life and Government are under constant challenge. Every moment of disinterest and relaxation will be capitalized upon as the time for a forward encroachment by international Communists and their followers.

The United States has just adopted the largest military budget in our peacetime history. We are all agreed we must be militarily strong to withstand any aggressive action.

Yet the most distressing gains against the free world in recent years have not been made by direct military attacks. The gains have been achieved by indirect means.

We in this country must marshal the forces and efforts of the free world to effectively combat the Communist nonmilitary and indirect methods.

It has been my belief the first place to consolidate and strengthen our mutual efforts is close to home—Latin America. A strong and effective Western Hemisphere will provide leadership and strong moral support for the rest of the free world.

In Florida we have been very conscious of this, particularly in my district.

We know that the Communists have been hard at work in Latin America for years. What have they been doing? How effective are they?

Our two outstanding newspapers, the Miami Herald and the Miami News, are doing a series of stories on this whole situation. I earnestly recommend that my colleagues read these reports:

[From the Miami (Fla.) Herald]

ARGENTINE EDITOR IS LEADER—COMMUNISTS SPREAD WORD RAPIDLY IN SOUTH AMERICA

(By Al Neuharth)

(This is the first of several articles about the extent of Communist activity in South America.)

BUENOS AIRES.—If you doubt that the Communists mean business in South America, come with me to a bustling newspaper office here for an eyeopener.

The place is near the center of Buenos Aires, but the talk and the atmosphere is strictly from Moscow. You get the idea quickly when the Red hammer and sickle greet you from a big street sign.

The boys and girls on the job here talk passionately about their purpose—to rally South Americans to do their part in spreading world communism.

This is the home of La Hora (the Time), South America's only daily Communist newspaper and the mouthpiece for the Reds on this continent.

We walked in unannounced on the office of Ernesto Giudici, La Hora's chief editor. The Reds don't get many Yankee capitalist callers, so we took the place by surprise.

Ernesto is a mustached, 50-year-old intellectual who preaches the Red ideology in a manner which must make his Moscow comrades proud.

We asked him some pointed questions, and Ernesto gave it to us straight.

"Our purpose is to take over Argentina for the Communist Party. Our party line is the same as that in Moscow," he emphasized.

Do he and his comrades actually expect to realize the goal of running this country? we asked.

"Certainly," Ernesto replied. "It is only a matter of time. We are getting stronger every day."

You'd like to pass that off as Red propaganda. But the man has some figures that stop you.

La Hora began publication just 3 months ago. Ernesto and his boys claim they already have over 80,000 circulation daily. They also publish a weekly Red periodical, Nuestra Palabra (Our Pledge).

The Reds audit their own books, so that circulation figure isn't open to inspection.

But you'll find La Hora on sale at most newsstands in this city. It sells for one peso (about 2½ cents), the same price as all other Buenos Aires dailies.

Dardo Cuneo, press relations chief for the Argentine government, insists La Hora has almost no circulation and no real readership. Cuneo, the Jim Hagerty of Argentina, echoes the feeling of most government officials here that the Reds are nothing to worry about yet.

They point out that in a city of 5 million like Buenos Aires, this Communist activity has no great influence.

But many local newspapermen who get around express concern. Some of them estimate La Hora actually may have 50,000 or more daily circulation.

It's not a small-time operation. And there's obviously some big money behind it.

Ernesto says he has a staff of over 60 employes. About 30 newsmen and women were on the job when we called.

It takes money to run that kind of an operation. We asked Ernesto where he gets it.

"It is subsidized by the party," he explained. "We have a deficit of several million pesos a month, but the party is happy to pay the bills," Ernesto said.

We asked him if Moscow picks up part of the tab.

"Unfortunately, not yet," he smiled. "But maybe soon."

Ernesto is no dummy. He was educated at the University of Buenos Aires, has traveled in the United States and lived for a while at Poughkeepsie, N. Y.

A couple of years ago, the boys at Pravda invited him to spend a month and a half in Moscow, to teach him how to spread the party line.

They did a good job.

Ernesto claims his Communist party now has more than 100,000 card-carrying members in Argentina.

He called in three or four lieutenants and a couple of reporter-photographers as he proceeded to tell us about his paper, his ideology and how he and his comrades are going to get the job done.

Helping Ernesto here are a collection of Latins and Europeans who make an impression. Most of them are college educated. They are smart. They are dedicated.

We chatted for more than an hour, while Ernesto's girl, Katherina, served coffee and he and lieutenants took turns talking.

They brought the Red menace disturbingly close to home.

[From the Miami (Fla.) Herald]

REDS TAKE KEY ROLE IN JUNTA DECISIONS

(By Larry Allen)

CARACAS.—With incredible speed the Communists have moved into position in Venezuela where they often dictate the acts of the junta that overthrew a dictatorship last January.

Their organization is close knit, speedy and precise. Unless their tactics are halted soon Venezuelans may awaken one day and find control of the oil-rich nation in Red hands.

The Communists are respected. They have equality with all other political parties. They are consulted by the government. They quickly and easily command the power to whip up tremendous demonstrations.

There are Communist Party members in all the key trade unions, in businesses and industries, in civic and student organizations, and in the offices of government.

The Communist Party is small. But its agitators are descending upon cities, towns, and villages in every strategic sector of Venezuela, enlisting party members. They incite and enforce strikes.

Communist membership might reach 100,000 by the end of the year. At the moment the party rolls show 26,000 to 30,000.

Apparently because the number sounds small, the provisional government, headed by Rear Adm. Wolfgang Larrazabal, waves aside any suggestion the Communists constitute a threat to Venezuela's "new democracy."

Larrazabal said recently Venezuela's Communists were patriotic and nationalistic, and not the byproduct of Moscow's international communism.

As he spoke, two kingpins of the Venezuelan party were in Moscow, presumably getting their orders.

In Larrazabal's views, the Communists helped to overthrow the 10-year-long military dictatorship of Gen. Marcos Perez Jimenez last January 23 and therefore are democratic.

But outside of Larrazabal's governing five-member military-civilian junta, there is rising alarm over the Red riptide, particularly within the army.

That might crystallize into actions, long before national elections expected in November. There are deep rumblings of discontent among some top army officers and talk the Communists must be stopped.

This already has exploded into one abortive coup.

Gen. Jesus Maria Castro Leon, defense minister in the junta, led a conspiracy July 23 aimed at toppling the government. One of his chief aims was an immediate crackdown on the Reds.

But the Communists—and their sympathizers in the far left Accion Democratica—numerically the strongest political party in Venezuela—got wind of the conspiracy.

They immediately mustered more than 100,000 Venezuelans. They chanted for Castro Leon's death and the eradication of all conspirators. Castro Leon was forced out and exiled to a job in Washington. Fifteen other top-ranking army officers also were banished.

While Communist Secretary General Gustavo Machado rides high, the Communist shadow has sealed the lips of many Venezuelans.

The average man fears to say anything critical or to suggest any action against the Communists. It means attack from most of Venezuela's newspapers.

Even the Roman Catholic Church, often the spearhead against communism, is highly cautious in Venezuela. Only occasionally is there the mildest reference to Venezuelan Communists in the church's organ, La Religion.

It is a great change from 7 months ago when the Communists were outlawed, hunted, and generally ignored by the Venezuelan people.

[From the Miami (Fla.) News]

REDS IN LATIN AMERICA, No. 1—SOVIET TRADE HITTING LATIN SOFT SPOTS

(By Hal Hendrix)

(Throughout the world the Soviet Union has launched an economic offensive which is considered an entering wedge for later political penetration. The economic campaign has touched parts of Latin America. Several weeks ago, the Miami News asked its correspondents in Latin America to report on this Soviet offensive and its shape and size. Their reports on this extremely dangerous development will be published during the next few days.)

In the last year, several informed Americans have expressed increasing concern regarding the rising tide of Communist economic influence in the free world.

There is evidence at every turn that the much-heralded Soviet economic offensive has reached into Latin America.

The penetration has been in varying degrees in the 20 Latin Republics. Some of the nations have nibbled at the Red bait, some have taken a fairly good-sized bite, some have turned away.

The dollar value of all the Soviet transactions is relatively small. Soviet business in Latin America, for instance, amounted to $131 million in 1956. United States sales in the same year were nearly $4 billion.

UNDERLYING SIGNIFICANCE

Roughly 2 percent of Latin America's trade was with the Soviet bloc. Although that is not a large figure, there are at least two reasons for not assuming that it is completely insignificant.

First, Soviet bloc trade with Latin America has been growing about 40 percent a year since 1952.

Considering the very low level from which it started, the net gain still is small. But it points up an intensified economic drive in Latin America.

Second, the Soviet Union is directing its trade offensive primarily to soft spots in Latin America—countries that, because of various economic problems, have experienced difficulty in disposing of their exports at declining world prices.

FRIEND IN NEED

The Soviets are thereby able to make an effective show of helping out nations in trouble. There is no doubt that behind the

trade screen the chief purpose is political penetration.

Latin America has been increasingly anxious to find new markets, and the anxiety has grown in recent months due to the depressed free world market in most commodities.

The Latin nations posses some of the raw materials in short supply in the Soviet bloc. They have a large demand for some of the products the bloc has in surplus.

All reports indicate that trade between Russia and its satellites and Latin America will show another gain this year. Red trade missions have been extremely busy in soliciting Latin purchasers and offering to buy Latin products.

TOO LARGE TO IGNORE

If Red trade in the Latin area should increase at the possible rate of 20 percent a year, in 10 years it would amount to about $1 billion. This still would be considerably below the United States volume in Latin America, but too large for the United States to ignore.

A strong and growing Soviet trade offensive in Latin America presents a serious challenge to the West in general and the United States in particular.

For as the Soviet Union's trade grows in the Western Hemisphere, so does its political penetration and influence.

Hugh Scott Urges House Conferees To Improve Bill Protecting Welfare and Pension Beneficiaries

SPEECH
OF
HON. HUGH SCOTT
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, August 6, 1958

Mr. SCOTT of Pennsylvania. Mr. Speaker, the House passed by voice vote yesterday H. R. 13507, the welfare and pensions plans disclosure bill—legislation which means well but which badly misses its mark.

I voted for this bill because it was the best thing that was offered to the Members of the House. But I strongly urge the House conferees to exert some leadership for the protection of union labor and of its membership, as has been suggested by Eisenhower administration supporters.

The welfare and pensions disclosure bill was supposed to protect the working man and woman from the outright looting and larceny that is being perpetrated against some private welfare and pension funds; most of such funds are honestly administered. But because of the technical bumblings and fumblings in the bill, we are offering up legislation that opens the door to fraud and confusion.

The bill we passed yesterday requires administrators of private pension and welfare plans to disclose the form of the plans and how they are administered. As far as it goes, that is a good thing.

However, there are penalties for willful violation of the act, but they are too light. There is no criminal penalty for making a false statement. There is no provision for uniform reporting. The bill is vague on independent audits. It is contradictory on the kinds of information required. It fails to recognize plan variations from State to State. It does not give the Department of Labor the right to investigate wrongdoings. And there are no criminal penalties for embezzlement, kickbacks, and other skullduggery on the part of persons who manage the funds of employee-benefit plans.

The net effect of these and other loopholes could be scandalous.

Since there is no requirement for uniform reports, the working man and woman might get a report that is so full of technical verbiage and intentional misrepresentations that they would be better off not to have requested the report. Stockholders have the benefit of report requirements laid down by the Securities and Exchange Commission. Are not the beneficiaries of welfare and pension plans entitled to the same protection from the Department of Labor?

A beneficiary has the right to sue if he does not get a copy of the plan or annual report. But if he makes such a request and then retaliatory action forces him out of his job, he has lost the right to sue.

The reporting requirements are so vague that the honest administrator is going to have to search his soul to determine whether his report is fully in compliance with the law. It is like asking a man to file an income-tax return without giving him an approved tax form to fill out.

The unscrupulous administrator will have too many advantages in this legislation. Since the penalties for willful violation of this act are so light, it will encourage some administrators to take their chances with this penalty rather than subject themselves to more severe punishment if they made a full disclosure of their nefarious operations.

We all know of the frauds and outright piracy that has occurred among some private pension and welfare plans. Labor will want to keep its house clean; and working people demand it. The Senate and House have held hearings on the subject for about 4 years. The administration and its spokesmen have urged a real reform law.

I urge the House conferees to keep these facts in mind when they sit around the table with Senate conferees to draft legislation which we will have to live with for many years.

United States Unpopularity in Latin America

EXTENSION OF REMARKS
OF
HON. WILLIAM E. PROXMIRE
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Thursday, August 7, 1958

Mr. PROXMIRE. Mr. President, recently the Milwaukee Journal put its perceptive editorial finger on a prime reason for the futility and failure of our foreign policy.

The Journal editorial writers resourcefully checked the recommendations which have recently been made by Dr. Milton Eisenhower, after his 20 day study trip to Latin America, with the recommendations made by the same Milton Eisenhower in July 1953, after a similar trip to South America. As the Journal points out, the recommendations in 1958 are almost exactly the same as the recommendations made in 1953. The point is not, Mr. President, that the recommendations have been repeated. The point is that in 5 long years this administration has failed to take any action whatsoever on any of the recommendations made by an outstanding American, who undoubtedly has the closest possible access to the President. As the Journal concludes:

Maybe this kind of business—words and studies but no action—is one reason for the present unpopularity of the United States in Latin America.

Now let me say, Mr. President, that this kind of business—words and studies, but no action—is the reason why it was necessary for the Senator from Arkansas [Mr. FULBRIGHT] to make his brilliant criticism yesterday of our foreign policy. Lack of constructive, peaceful, consistent action to achieve carefully thought-out foreign policy objectives is a lethal weakness of this administration.

Mr. President, I ask unanimous consent that the editorial from the Milwaukee Journal, entitled "Brother Milton Reports Again," be printed in the Appendix to the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

BROTHER MILTON REPORTS AGAIN

President Eisenhower's brother, Milton, is back from a 20-day study trip to Latin America. He has already made a preliminary report to the White House.

He said the United States must shore up its policies and programs with respect to Latin America. He said there was an imperative need for bankable loans. He said the United States must respond to our neighbor's need for more stable relationships between raw commodity prices and prices of manufactured products. He called for action to clarify United States policies, purposes, programs, and capabilities to the Latin Americans.

All this sounded very familiar, so we asked the Milwaukee Journal library to do some research.

And it did turn out to be familiar. Back in July 1953, the same Milton Eisenhower, brother to the President, made an extended tour of South America. He returned to make a long report to the President. He recommended, among other things, almost exactly what he is recommending in 1958.

This is not to say that what he is recommending now, or what he recommended 5 years ago, is not right.

It does seem fair, however, to ask what happened to the proposals brother Milton made to the administration in 1953. And to wonder whether they will fare any better in 1958.

Maybe this kind of business—words and studies but no action—is one reason for the present unpopularity of the United States in Latin America—as demonstrated by treatment given Vice President NIXON on his recent tour.

Outlook Shifts for Both Parties

EXTENSION OF REMARKS
OF
HON. EDWARD J. THYE
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES
Thursday, August 7, 1958

Mr. THYE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a most interesting article entitled "Outlook Shifts for Both Parties," written by Gould Lincoln, and published in the Washington Evening Star of August 7.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THE POLITICAL MILL
(By Gould Lincoln)

OUTLOOK SHIFTS FOR BOTH PARTIES

HYANNIS, Mass.—Political leaders and strategists of both Democratic and Republican Parties are taking a new look at the situation and the issues. Election day, November 4, is still almost 3 months away and much can happen in that period—just as it has since the beginning of the year.

Earlier the Democrats were riding high, wide, and handsome. The big issues which they counted on to make big gains in both Houses of Congress and to elect Democratic governors of States have somewhat faded. First there was an uproar over the Russian sputniks. The Democrats claimed the Republican administration had permitted the United States to fall far behind the Soviet government in the matter of scientific discovery and accomplishment; that this country was in imminent danger of becoming a second-rate power militarily.

But now we have successfully launched four earth satellites of our own. In addition, and most important from a national defense point of view, we have just had remarkable success with an intercontinental missile, designed to hurl a tremendously destructive hydrogen warhead more than 5,000 miles.

RECESSION MEASURES

Second, according to Democratic prophets earlier, this country was on its way to a depression that would rival that of the early 1930's. All kinds of panaceas, costing billions of dollars, were proposed in Congress.

President Eisenhower and his advisers, however, refused to be stampeded into these huge spending programs. The administration went to work on a saner course. It declined to recommend a reduction in taxes which some of the Democratic economists demanded, too. The economy has taken a distinct turn for the better. And most unexpectedly from the Democratic standpoint, American farm income has gone up and up, until in the first half of this year the net income of agriculture has increased about $3 billion. The Democrats may have to make a new estimate of their party's pulling power in the agricultural States of the Midwest, the East, and South.

Also, earlier in the year, and, indeed, more recently, President Eisenhower's foreign policy was under heavy fire from the Democrats.

They charged that the President was exerting no leadership; that things were at sixes and sevens, and that we had lost both prestige and all our friends, if we had ever had any, abroad. The sudden further development of the Middlee East crisis, however, brought prompt and immediate action by President Eisenhower, who ordered the marines into Lebanon. Even after he had taken this necessary step, he was harshly criticized for imprudence which might hurl the world into a third world war. But that, too, has changed. The Communist nations have taken no steps toward armed conflict, although Khrushchev ordered military maneuvers on the borders of Iran and Turkey, in a further effort to frighten the nations of Europe and the United States. It did not work. The British sent their troops into Jordan.

U. N. SITUATION CHANGES

Now there is strong likelihood of a special meeting of the United Nations General Assembly on the Middle East issue, possibly attended by heads of governments. Should such a meeting be attended by a measure of success in settling the Middle East problem and the world can breathe easier, much of the credit will go to President Eisenhower—and another Democratic issue for the closing campaign will have faded into insignificance.

Since this country became immersed in the Middle East situation, the Sherman Adams-Bernard Goldfine incident, rated by the Democrats as a first-class issue against the Eisenhower administration and the GOP, has assumed more correct proportions. The House investigating committee has tried desperately to tar Mr. Adams, the President's first assistant at the White House. But it has failed to show any corrupt action or attempted action by Mr. Adams.

Mr. Goldfine, the Boston industrialist and the giver of many presents to many men, Democrats as well as Republicans, is still under strong attack. However, Mr. Goldfine has testified that he contributed even more liberally to Democratic campaign funds than to Republican.

So far the Democratic attempt to prove there is a mess in the Eisenhower administration has not progressed. Undoubtedly the House committee will keep at it. Up to date, what it has disclosed is a pale picture as compared to the mess in Washington during the last Democratic administration, when even the head man in the Internal Revenue Bureau was found to have transgressed.

The Republicans who were down in the dumps—far down—a few months ago have plucked up courage. Democrats are wondering if everything is as rosy as they had believed. Early in 1948 and far into the summer the Democrats seemed in for a terrific defeat at the polls. Things changed in the last few weeks of that campaign. It could happen again.

The Need for Individuality in a World of Conformity

EXTENSION OF REMARKS
OF
HON. RALPH W. YARBOROUGH
OF TEXAS
IN THE SENATE OF THE UNITED STATES
Thursday, August 7, 1958

Mr. YARBOROUGH. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD, an editorial from the Lubbock Evening Journal of July 24, 1958, which asks the following question in its title, "Has Culture a Place in the Modern World?"

The editorial is based on the writings of Lon Tinkle, a fine Texas man of letters, who only recently wrote an excellent book about the history of the Battle of the Alamo.

The challenging question which Mr. Tinkle asks, and which others have in recent years become more aware of, is whether we are dulling our sense of individuality through emphasis on sociability. Differences in opinions and manners are suspiciously regarded.

An outstanding educator put the difference in words like this:

There is a difference between the honest heretic and the subversive.

Through every area of our taste and opinion, there is a need for greater diversity, and this thoughtful editorial is another call to awaken.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

HAS CULTURE A PLACE IN MODERN WORLD?

Lon Tinkle, book critic of the Dallas News, calls attention to what looks like a one-man crusade to keep alive something which meant much to our ancestors, but which has drawn the disdain of many moderns—culture.

In reviewing a book by Ashley Montagu, British-born and American-stationed anthropologist, Tinkle says: "It takes a brave man, say a social scientist, to dare talk about culture these days, much less write a book about it. Who will not jeer and scoff (especially those who are civilized) at a volume calling itself The Cultured Man?

"Didn't the phrase die out with Victorian furniture and manners, with the passing of the genteel tradition? Most of us belong, age-measured, to the lost or the beat generation."

In recent years, culture has come into disrepute in many circles because it, somehow, seemed connected with Victorianism, with obsolete traditions and discarded life patterns. Just as the so-called young intellectuals look down upon everything connected with the Victorian period, so they scorn the old concept of culture which seemed to set some men apart from others because they possessed a higher appreciation of the true, the beautiful, and the good. Today, anyone who dares stand apart from the crowd, or refuses to follow the herd, is looked upon as antisocial. The accent is all upon the group, and woe to the person who wishes to retain his individualism.

But Montagu thinks there is as much need for individualism today as there was in the past, if not more. In the past, people who pursued culture usually were those who had leisure time in which to indulge in it. They were the leisure class against which socialistic writers have inveighed so heartily.

Today, however, everyone has more leisure than his forefathers had. When the Declaration of Independence was signed, the average workweek was 90 hours; today it is 40, and in the future may drop to 30. What will Americans do with that spare time?

Montagu suggests that they might spend some of it acquiring culture in its true sense—not just a veneer, but a deep appreciation of the worthwhile things of civilization.

This will not happen so long as the molders of public taste—the novelists, popular entertainers, and others—continue to cast derision on people who seek real culture, calling them squares and long hairs. There is little place for the genteel tradition in a world which prides itself on its toughness.

Seniority Is Valuable

EXTENSION OF REMARKS
OF
HON. OTTO E. PASSMAN
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Thursday, August 7, 1958

Mr. PASSMAN. Mr. Speaker, I recently had opportunity to read an excel-

lent editorial from one of Indiana's most respected newspapers, the Madison Courier. The editor commented, most logically and thoughtfully, on the necessary qualifications of an effective Member of Congress. His emphasis on the value of a Congressman's seniority to his Nation, his State, and his district constituency is well taken. I commend this editorial very highly, and I herewith offer it for insertion in the Appendix of the RECORD:

SENIORITY IS VALUABLE

Indiana now has 2 Senators and 11 Congressmen with a total of more than 150 years of composite service in the United States Congress—a figure unexcelled by many States of Indiana's size and population. These are statistics provided by the United States Library of Congress.

The importance of such congressional seniority for a State was noted recently by one of the oldest veterans of Congress, DANIEL A. REED, of New York, who is now the top-ranking Republican of the House Ways and Means Committee. He said:

"A new Congressman is not worth much to his district under 2 or 3 terms. The longer a Congressman stays in office, the more he can accomplish."

It was further pointed out that Congressmen do not gain high-ranking stature on the major committees, such as Appropriations, Ways and Means, and Rules until they have attained a seniority of at least 10 years. Until that time, the best a Congressman can expect is merely membership on such committees—he does not become a spokesman, a subcommittee chairman, or a top-ranking member of the minority. His influence is relatively negligible.

An example of the power of seniority in Congress can be found in the case of the late Senator Alben Barkley, of Kentucky. Due to his long tenure, his know-how of congressional procedure and his countless contacts among his colleagues and Government officials in Washington's upper strata, Mr. Barkley was able to do more for Kentucky than could have been done by a score of new and inexperienced Members.

Similar influence is exercised by 3 Indiana Members of Congress: CHARLES A. HALLECK, with 23 years of service; EARL WILSON, with 18 years of service, and RAY MADDEN with 16. Mr. HALLECK now is a minority leader in the House and a top ranking member of the powerful House Administration Committee.

Congressman WILSON is a top ranking member of the all-powerful House Appropriations Committee through which all Federal appropriations must clear. He is the top-ranking Republican on the House Subcommittee for the District of Columbia Appropriations. Mr. MADDEN occupies a major influence position on the important Rules Committee.

Statisticians point out that only 1 member of Indiana's delegation has served fewer than 8 years. That exception is Congressman NIMTZ who is now in his first session. The seniority of Hoosiers through the present 85th Congress is shown as follows:

Representative HALLECK, 23 years; Representative WILSON, 18 years; Representative MADDEN, 16 years; Senator CAPEHART, 14 years; Representative HARVEY, 12 years; Senator JENNER, 12 years; Representative HARDEN, 10 years; Representative ADAIR, 8 years; Representative BEAMER, 8 years; Representative BRAY, 8 years; Representative DENTON, 8 years; Representative BROWNSON, 8 years, and Representative NIMTZ, 2 years.

Orders To Fight in Lebanon Touched Off Iraqi Revolt

EXTENSION OF REMARKS
OF
HON. ROBERT W. HEMPHILL
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Thursday, August 7, 1958

Mr. HEMPHILL. Mr. Speaker, under leave to extend my remarks I include an article written by Col. Talbot Patrick, editor and publisher of the Rock Hill (S. C.) Herald.

On Monday, July 28, I had inserted into the RECORD Colonel Patrick's views on the revolt in Iraq and this is a continuation of his analysis of the situation in the Middle East.

ORDERS TO FIGHT IN LEBANON TOUCHED OFF IRAQI REVOLT

(By Talbot Patrick)

(This is the second of three stories by Talbot Patrick, editor and publisher of the Rock Hill Evening Herald, on the revolution in Iraq. Now in Paris, Patrick wrote the following story in Rome shortly after he was evacuated from tension-ridden Baghdad by plane on Wednesday. Patrick arrived in Baghdad 2 days before the Iraqi Government was overthrown. Here, Patrick gives an authoritative report of the spark that set off the revolt.)

ROME.—The revolution in Iraq was executed by troops ordered to go by airlift to Lebanon to support the government of that country.

"We were ordered to fight against our brother Arabs," commented one army officer who participated in the revolution. "Rather than that, when our units were on the way from the base toward northern Iraq, we stopped in Baghdad and asked the king to abdicate and the prince regent to give up his power.

"They fired on us from the palace. We returned the fire. Finally, when they came out from the burning building, they were shot."

It was after announcement of the successful revolution over the Iraqi Government radio, which is monitored in neighboring countries, that American Marines were ordered to Lebanon.

The fact that (Iraqi) orders to go to Lebanon were the spark that set off revolution was not a secret in Baghdad. But I would have hesitated to be so definite about something that Iraqi newspaper acquaintances as well as others told me if I had not been able to confirm them through an individual with unusual contacts.

For his own future protection in the Middle East, I must keep secret the identity of this man. But I can say that for years he has had intimate contact with members of the former government, as well as with leaders of the then opposition which has supplied many officials of the new Iraq Government. And in addition he has had close contact with foreign diplomatic sources, not only in Iraq but elsewhere.

He was absolutely definite about the order. He had talked with men who received it and then rebelled.

"I should not have been surprised," he said, "but I hadn't expected it so soon, even though there had been previous signs that it would come."

At the time that Iraq and Jordan were being joined together, he said, one division planned some sort of action against the Government. But levies of other troops and of tribesmen supporting the Government were sent to camp on either side of the division.

"The leaders in the division suspected that someone had gotton wind of their plot," my informant said, "so the day set for a revolt passed without any action."

On another occasion, he said the king and the prince regent went to inspect army maneuvers. Two artillery shells landed near the royal tent, one quite close. A court-martial was told it was all a mistake. But the king and prince regent hastily left the maneuver area for a return to Baghdad.

"Things had reached such a point," said my informant, "that most of my friends in the Government were trying to ease out—before something happened. Men who once were government supporters had reached the point of themselves being disgusted with the way things ran.

It was said in business and Government circles that if you wanted to start a business of any size the prince regent had to be given 60 percent of the stock before you could start in business. A small clique ran everything for the members personal benefits and the nation and its people got very, very little.

At least at this time, in his opinion, the great mass of the Iraqi people as well as an overwhelming majority of the educated and more advanced groups in the country support the new Government and the ideas for which its spokesmen have said it stands.

Resolution Commending the House Committee on Un-American Activities

EXTENSION OF REMARKS
OF
HON. DONALD L. JACKSON
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, August 7, 1958

Mr. JACKSON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following resolution:

Be it resolved by the executive committee of the Republican State Central Committee of Georgia, the Federation of Young Republican Clubs of Georgia, and the Fifth District Republican Executive Committee, That the Un-American Activities Committee of the House of Representatives of the Congress of the United States, and especially its subcommittee investigating Communist infiltration into the South, be commended upon holding public hearings in this area so that the spotlight of public attention can be focused upon this very real and present danger to the South, and to the Nation. The hearings in Atlanta this week, while conducted with great dignity, have revealed a situation which is of deep concern to every patriotic American, regardless of party, and which should stimulate us all to a deeper appreciation, and defense, of our American system of free enterprise and individual liberty. For this job well done the committee and its subcommittee have our sincere thanks; be it

Resolved further, That a copy of this resolution be transmitted to the Speaker of the

House of Representatives of the United States Congress, and to the chairman of the Committee on Un-American Activities of the House of Representatives of the United States Congress.

W. B. SHARTZER,
Chairman, Executive Committee, Republican State Central Committee of Georgia.

McCREADY JOHNSTON,
Chairman, Georgia Federation of Young Republican Clubs of Georgia.

CHARLES G. MOYE, Jr.,
Chairman, Fifth District Republican Executive Committee.

Veterans' Hospitalization

EXTENSION OF REMARKS
OF
HON. LINDLEY BECKWORTH
OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 7, 1958

Mr. BECKWORTH. Mr. Speaker, I include in the CONGRESSIONAL RECORD some letters about hospitalization for veterans who need hospitalization and about helping those veterans to obtain compensation who are not physically able to work.

It is my opinion the American people favor hospitalizing veterans when hospitalization as shown by competent medical evidence is needed for the veterans of the wars in which our country has engaged. Frequently the delays which transpire before veterans can be hospitalized can mean the difference between getting well and not getting well. Moreover, no sick veteran should be put in a jail if hospitalization is what he needs, and it is not right, fair, or just to compel his family and their relatives to spend their lifesavings while awaiting a bed in a Government hospital. In my opinion this is not what the American people want, and I hope this Congress will proceed immediately to correct the problem faced by veterans along this line.

Not one of us would deprive a service-connected veteran of hospitalization. By the same token it is only fair that any 1 of the other 19 million, when he needs hospitalization, should be hospitalized.

SEPTEMBER 18, 1957.

To LINDLEY BECKWORTH,
House of Representatives,
Washington, D. C.:

Reference your wire September 17, we have contacted Dr. Harrington concerning hospitalization for Carbon Frank Capps, CMM C-5 764 08. Bed situation precludes transfer to VA hospital. We have 2 veterans in jail, 24 emergencies, as well as 118 on regular waiting list seeking hospitalization. Have recommended that Dr. Harrington advise family to seek hospitalization in State institution.

ACTING MANAGER,
VETERANS' ADMINISTRATION,
Dallas, Tex.

WASHINGTON, D. C.,
March 12, 1958.

DEAR SIR: I quote the pertinent part of a letter I received several months ago:

"My husband had a nervous breakdown in July 1957. We kept him in the city hospital for 2 weeks, and in Beverly Hills Sanitarium for 6 weeks. I have been carrying him back for out-patient treatment since that time and he has had a total of 19 electroshock treatments, the last one being given February 8, 1958, in Dallas at the Beverly Hills Clinic.

"We are completely without funds and have filed application, with the help of Ralph Connally, veteran's service officer of Gregg County, with a P–10 to the veteran's hospital in Shreveport for treatment there. This application was received March 5. Today, Dr. Carl Nichols of Gladewater called Dr. Floyd McCullum, admitting doctor, explaining that Mr. Abbott needs hospitalization. The doctor said that they do not have a bed and have no idea when a bed will be available. Dr. Nichols feels that additional treatment is necessary, as my husband has been breaking out in a rash of hives for the last 3 weeks, due to his nervousness."

Any assistance you can give in this matter will be appreciated.

Sincerely,

LINDLEY BECKWORTH.

JULY 17, 1958.

The Honorable LINDLEY BECKWORTH,
House of Representatives,
Washington, D. C.

DEAR MR. BECKWORTH: Reference is made to previous correspondence in regard to Mr. Truman D. Knox, Route 3, Canton, Tex., being in need of hospitalization for a paraplegic condition due to a recent swimming accident.

The adjudication division of the regional office, Dallas, Tex., has made a determination in this case which is as follows: "It has been found that service connection is established for hemorrhoidectomy incurred in peacetime; however, such condition is shown to be less than 10 percent disabling. Fracture, left cervical vertebra, with paraplegia and lamenectomy C–4, 5 and 6 vertebrae and old fracture both ankles and collarbone were not incurred in or aggravated by your military service. Residuals of contusion, thoracic spine, acute, were not found on your last examination."

Existing regulations state that a peacetime veteran must have a compensable disability to be hospitalized by the Veterans' Administration. Mr. Knox had only peacetime service; therefore, he is not eligible for admission to a Veterans' Administration hospital. His application has been canceled as legally ineligible, and he was notified of this action.

Your interest in this veteran is appreciated.

Yours very truly,
W. H. BUCKHOLTS, M. D.,
Manager.

MARCH 25, 1958.

The Honorable LINDLEY BECKWORTH,
House of Representatives,
Washington, D. C.

DEAR MR. BECKWORTH: We appreciate the concern expressed in your letter of February 1, 1958, for veterans in need of hospital care who are awaiting admission.

Veterans who require treatment for service connected disabilities and medically emergent cases are provided prompt hospital care. Within the limits of Veterans' Administration facilities nonemergent non-service-connected veterans may be admitted after the needs of the service connected and emergency cases are met.

The placing of a veteran's application for hospital care on a waiting list is a sound operational method of obtaining maximum utilization of available beds. Nominal waiting lists at hospitals are essential to provide for an even flow of admissions, particularly to even out the seasonal peaks and valleys of demand for hospital care. Except for a few areas, waiting lists for general medical and surgical care are nominal and entirely within the range to insure maximum utilization of beds with a minimal waiting time for the veterans.

In the field of psychiatry, there is a shortage of trained physicians within and without the Veterans' Administration. Most of the more than 20,000 veterans on waiting lists at Veterans' Administration hospitals require care for mental conditions. More than half of these veterans are presently hospitalized in State, county, and other public or private hospitals. These patients are offered admission to Veterans' Administration hospitals as beds become available.

A reduction or discontinuance of compensation benefits to veterans may result from a finding that the original grant of service connection was erroneous or, more frequently, where it is shown by medical examination that the condition has improved. No reduction or discontinuance of compensation is made as an economy move nor is it ever based on a lack of funds.

Where a veteran is unable to obtain employment because of disability, evidence of this fact should be presented to the Veterans' Administration regional office nearest his home. This evidence may result in an increase in service connected compensation benefits or in a finding that he is entitled to non-service-connected pension benefits.

As you requested in your telephone call, of the 22,710,000 veterans, 3,700,000, or about 16 percent, have established service connection for one or more disabilities.

Sincerely,

SUMNER G. WHITTIER,
Administrator.

Anthracite Coal Industry Is Vital for National Welfare

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 7, 1958

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article written by Mr. Arthur A. Schmidt, managing director, Anthracite Information Bureau, which appeared in the Letters to the Editor column of the Wilkes-Barre Record of August 4, 1958:

VOICE OF THE PEOPLE

ANTHRACITE'S SPACE HEATING BID IMPROVED

To the EDITOR:

We were surprised to note a letter in the July 14 Voice of the People signed "Old Timer." We believe it reflects certain misconceptions as to anthracite's ability to compete as a heating fuel for commercial and public buildings, and the intent of legislation proposed by Representative DANIEL FLOOD to insure consideration of anthracite, along with other fuels, in new Federal buildings.

With all respect for the writer's 50 years of experience in anthracite mining, it would appear from his comments that he is unaware of recent equipment developments and how they have improved anthracite's competitive position in the commercial space heating field in recent years.

As has been frequently reported in your newspaper, the introduction of new types of completely automatic anthracite equipment with automatic coal and ash handling has resulted in a steady growth of installations in schools, apartment houses, and public buildings of all types. This is confirmed by the fact that sales of this equip-

ment have more than tripled since 1955 and figures for the first 6 months of 1958 are 30 percent ahead of the same period in 1957, despite the recession.

With an obvious interest in the anthracite industry, the writer will be glad to know that anthracite is competitively priced in markets quite distant from its source. Actually, anthracite has a price advantage over all other competitive automatic fuels in more than 90 percent of its primary marketing area, the Northeastern States.

Interestingly enough, this new equipment, with pneumatic coal and ash handling, has eliminated previous disadvantages in custodial costs. No manual handling of either coal or ash is required—coal is piped to the firing box of the boiler and ashes are removed in the same manner through sealed pipes.

That these advantages in terms of economy and automatic convenience are being widely recognized is evidenced by the fact that anthracite equipment is going into schools and buildings of the most modern design in distant points in New England and New York State. Engineers of Federal and State agencies are also selecting it with increasing frequency for remodeling and new construction. For example, the United States Post Office Department and the New York City public school system are engaged in programs which call for the installation of new automatic anthracite equipment each year.

Congressman DANIEL FLOOD'S remarks in support of his proposed legislation were made with full awareness of the above. As such, they reflect a justifiable concern for Government economy and respect for the taxpayer's dollar.

Unfortunately, many architects (like Oldtimer himself) are not yet fully informed about this new equipment and its advantages, since it has been in general distribution throughout the marketing area for only a few years and comprehensive performance data is only now becoming available. In some areas where modern anthracite would have distinct advantages in economy, not only in fuel costs but also in initial equipment cost and maintenance, architects who might still be thinking in terms of old-fashioned coal installations might not investigate or ask for bids on modern coal equipment.

Congressman FLOOD'S proposed legislation would insure the fact that before money is spent on public buildings architects would secure estimates on modern anthracite, as well as estimates on other locally available fuels, for impartial comparison. If this were done, it could result in millions of dollars of savings for the Government, since each new plant will continue to use the fuel selected for a period of years.

We should also like to call to the attention of Old Timer that Congressman FLOOD'S concern about shortages of fuels other than coal in the event of a national emergency is shared by many others in Government, including the directors of Civil Defense. In New Jersey, New York, and other States in the marketing area, Civil Defense departments have requested the assistance of anthracite retailers in their programs. Public buildings heated by anthracite have been designated as shelters in the event of a hot war, and anthracite homeowners will be asked to provide shelter for their neighbors. In any shooting war, as many people remember from World War II, supplies of fuels other than coal were sharply curtailed.

Despite Old Timer's concern about the reduction of mining facilities, the anthracite industry is today maintaining adequate supply and meeting the fuel requirements of more than 2½ million families and thousands of public buildings. With retail sales of approximately one-half billion dollars, anthracite is still an important factor in the economy of the Northeast. Industry reserves in eastern Pennsylvania adjacent to this market are sufficient to meet present demands for almost 200 years. In the event of any emergency, the industry has proved in the past that it has the capability to increase production and meet emergency demands.

ANTHRACITE INFORMATION BUREAU,
ARTHUR A. SCHMIDT,
Managing Director.

Curbing the Court

EXTENSION OF REMARKS
OF
HON. BURR P. HARRISON
OF VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, August 7, 1958

Mr. HARRISON of Virginia. Mr. Speaker, I need not remind the House that our colleague, the Honorable HOWARD W. SMITH, of Virginia, is one of our most alert and effective defenders of the constitutional lawmaking function of the Congress and of the powers reserved to the States and to the people by the charter of our Government.

Under leave to extend my remarks in the Appendix, however, I include a tribute to Judge SMITH'S leadership in defense of State laws appearing in the syndicated newspaper column of Mr. Raymond Moley, released through United Newspapers:

CURBING THE COURT—HOUSE BILL PROTECTING STATE LAWS AGAINST THEORY OF FEDERAL PREEMPTION BEFORE SENATE

(By Raymond Moley)

By a decisive vote, in which the conservative Republican-Southern Democratic coalition prevailed, the House of Representatives recently passed a bill limiting the power of the Supreme Court to strike down State laws under what is called the doctrine of preemption. This bill with some changes, has been approved by the Senate Judiciary Committee and should reach the Senate floor in the final days of this session. Some such legislation has been urged ever since the Supreme Court, in a series of decisions 2 years ago, reached far into the field of legislation and seriously impaired the constitutional powers of the States to protect their interests, notably in the fields of antisubversive activities.

The terms of the House bill (H. R. 3) are simple. Its first section provides that "no act of Congress shall be construed as indicating an intent on the part of Congress to occupy the field in which such act operates, to the exclusion of all State laws on the same subject matter, unless such act contains an express provision to that effect, or unless there is a direct and positive conflict between such act and a State law so that the two cannot be reconciled or consistently stand together."

Then, apparently to nail down specifically the right of the States on the subject of sedition, a further provision is added on that subject.

The Senate Judiciary Committee's bill as approved limited itself to the latter section of the House bill, but the chairman asserted that members of the committee might offer the more sweeping provision of the House bill in the shape of an amendment on the Senate floor.

Since the Supreme Court went far beyond beyond State laws on sedition in its wholesale emasculation of the powers of States, it would seem the better part of wisdom for the Senate to make the terms of the curb general. For under the impetus of the almost fanatical zeal of a majority of this Court to limit the powers of the States and to extend Federal power, no one can know where it will strike next. To provide in every act of Congress that Federal preemption shall not apply would seem to be a cumbersome way of putting into effect a power clearly within the jurisdiction of Congress. The Constitution clearly gives Congress power to define within certain limits the jurisdiction of the Supreme Court, and it specifically provides that "the powers not delegated to the United States by the Constitution, nor prohibited by it to the States, are reserved to the States respectively, or to the people."

Since the amazing invasion of the rights and authority of the States began 5 years ago, innumerable lawyers whose capacity is just as great as that of any of the present members of the Court, and much, much greater than that of some members, have condemned the reckless course of decisions. In the Nelson case especially, the term "jail delivery" was quite generally used.

A far greater jurist than any of those now sitting, Chief Justice Harlan F. Stone, said of this theory of preemption, now asserted by the Court, in a case in 1942:

"Due regard for the maintenance of our dual system of government demands that the courts do not diminish State power by extravagant inferences regarding what Congress might have intended if it had considered the matter, or by reference to their own conceptions of a policy which Congress has not expressed and is not plainly to be inferred from the legislation which it has enacted."

It is a bit difficult for the layman to understand the reasoning of a Court which interpreted a Federal law on sedition as having excluded the States from legislating on the subject when the original sponsor of that Federal legislation is still alive and able to tell what was in his mind and what he knows to have been in the minds of his colleagues when they voted for it. But that is the precise situation now, and fortunately that sponsor, Representative HOWARD W. SMITH of Virginia, is mostly responsible for the salutary curb of the presumptuous Court which is now before the Senate.

S. 1869, the Proposed Expansion of the Tennessee Valley Authority

EXTENSION OF REMARKS
OF
HON. EDWIN B. DOOLEY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, August 7, 1958

Mr. DOOLEY. Mr. Speaker, the gentleman from New York would like to preface his remarks concerning the proposed territorial and capital expansion of the Tennessee Valley Authority by affirming that he is not opposed to public power projects per se. There are circumstances in which—under our economic system of so-called private enterprise—they fill a definite need.

The TVA as it stands today is a prime example of such a case. Currently it supplies electric power to an area embracing 80,000 square miles, and serves a population of over 5 million. Through

the medium of 151 municipal and rural cooperative distribution systems, power is delivered at wholesale rates to over 1,400,000 customers. TVA has made an undeniable contribution to certain important Federal enterprises which directly and indirectly affected the well-being of the country as well as the posture of our defense.

All of which is well and good. But the question now before us is, "Are we to expand this power system into a monopolistic colossus, covering an area of 105,000 square miles—threatening the very existence of no less than 11 investor-owned companies, and establishing a precedent in fiscal affairs that might well have far-reaching and very damaging effects on the economic system under which we live?"

What may I ask is the justification for this proposed expansion? Reliable witnesses—men of position and substance—have testified before the Public Works Committee on which I am privileged to serve, that there is presently no justification for such expansion. These witnesses to whom I refer have publicly avowed that the TVA currently generates sufficient power in kilowatts to meet all its requirements and still have a substantial unexpended power surplus.

If S. 1869 is enacted into law we will witness the implementation of a proposal to permit a Government-owned corporation to operate independently of any regulatory governmental supervision, either by the Congress or by the executive branch of the Government.

Unless amended, S. 1869 would exempt the TVA from the provisions of the Government Corporations Control Act, and this would be a most perilous precedent.

As one of the Representatives of the Empire State which, I might interpolate, assumes annually some 13.98 percent of the national tax burden, I am interested in seeing that the present investment of, I believe, $1.2 billion of Federal funds is in no way jeopardized. And this tremendous sum of money—enough, if stretched dollar to dollar, to go around the world five times—would be jeopardized if the proposed changes in TVA's status materialize.

Naturally, New York is concerned with this proposal to extend the territorial limits of the Authority beyond the original intent of Congress and to create additional competitive problems for those companies in our State who provide thousands of job opportunities. It is my humble opinion that this viewpoint is not confined to the State among whose Representatives I am numbered, but is characterstic of many other States which are largely dependent on industrial employment. Yes, all too many industries have and are eyeing enviously the cheap subsidized power rates of the TVA.

If S. 1869 is passed by this House in the same form as passed by the other body, and three-quarters of a billion dollars of revenue bonds are issued, the exising inequites of TVA's tax and interest benefits, inequities which result in unjust discrimination between electric customers using TVA power and electric customers of investor-owned companies, will be multiplied many times.

Further, the declared intent of the bill as expressed on page 11, line 25, and page 12, lines 1 through 9, which I respectfully suggest deserves your close scrutiny, remains the same, namely, to aid TVA in discharging its responsibility to assure an ample supply of electric power in the area in which it conducts its operations. I know of no constitutional or statutory mandate which requires TVA to assume the responsibility of furnishing present and future power requirements in the area served by TVA, nor do I believe that the Federal Government should assume such a responsibility as provided in S. 1869. I do not believe that the Federal Government should engage in any proprietary business, including the electric-power business, where taxpaying businesses are willing and able to do the job.

May I recall that TVA was originally projected as a navigation and flood-control project. If I read correctly, its proponents at the time vigorously denied that there was any intention of embarking the Government on a program having as its ultimate objective the expropriation of private power undertakings. But once TVA was established, its sponsors repudiated their earlier avowals and boldly stated that it had become a power project, and nothing else. Today TVA is the largest electric facility in the entire country. And right now it looks bound to increase its area of operations by no less than 31 percent.

The gentleman from New York need not tell you that he is not an expert in the field of public power. He has both deep affection and high regard for the able and distinguished members of the Public Works Committee of the House who supported and motivated this important measure. But he finds it difficult to reconcile their position with that of the long line of witnesses who so vigorously opposed this bill.

The only spokesman he heard in favor of S. 1869 was one of its co-authors whose name does not appear on the printed form.

Repeatedly witnesses stated—and I thought quite irrefutably—that the private power companies are in a position to supply the area with all the electricity that is needed. In other words, the proposed expansion would simply mean a duplication of already existing facilities in order to provide subsidized rates.

If the right thing be done, TVA will be confined to its present area of operation, will meet the needs of that area, and will pay back to the Government in 40 years—as originally agreed—the money due it.

I strongly urge the defeat of S. 1869.

What's Our Goal?

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, August 7, 1958

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Portland Oregonian of Tuesday, July 29, 1958, on the subject of the ballistic missile programs of the United States:

WHAT'S OUR GOAL?

Wernher von Braun, technical director of the United States Army Ballistic Missile Agency at Huntsville, Ala., wrote recently in the American Weekly that he heads the greatest rocket development team in the world.

This is not braggadocio; it is a fact. Von Braun directed the German rocket program in World War II, which yielded the V–2, a weapon far advanced over anything similar in the allied arsenal. After V–E day he and his expert missileers came to this country, and Von Braun has become a loyal and valuable United States citizen.

At Huntsville, Von Braun and his team have developed the only successful United States rockets capable of carrying warheads over intercontinental ranges. When the Navy's Vanguard satellite program went sour, Von Braun quickly modified his Jupiter-C rocket and restored American prestige by shooting the Explorer I into space. Explorers III and IV since have followed it into orbit.

In view of these proofs of ability, one would think the Defense Department would do all in its power to facilitate the work of the Huntsville team. But that is not the case. Rather, determined efforts are continuing to choke off ABMA funds and center missile development efforts elsewhere, under less experienced leadership.

Civilians may regard this as a dangerous and foolish thing to do, and they will be right. But it is being done, and here's why:

The Army thinks of the ICBM simply as a very long range type of artillery. It is trying to develop better rockets at Huntsville to improve its firepower. But unfortunately the Army has not been very eloquest in getting its point of view across in the Pentagon or Congress. It has been outtalked, outbragged and outmaneuvered by its rival, the Air Force.

To the Air Force the ICBM means not merely a better weapon; it means survival. When United States launched missiles are capable of dropping H-bombs on Moscow, there will be no need for the huge and expensive Strategic Air Command. If anti-aircraft rockets take over the chore of the Air Defense Command, there will be small need for a separate air arm of the United States Military Establishment. The flying generals are in desperate need of something to ward off the dreadful fate of being reabsorbed by the Army. So Air Force press agentry has been working overtime to sell Congress and the public on the idea that the Air Force should control rocket development and employment.

The Air Force has been helped enthusiastically in this effort by the military aircraft industry—which has been living off Air Force contracts and gets panicky at the thought of losing them. Major aircraft companies lately have been going all out in rocket experimentation, and their public relations mimeograph machines have been working overtime to turn out glowing reports of progress. The ABMA's contractor on the Jupiter missile, on the other hand, is the Chrysler Corp., which is in the auto business primarily and isn't much concerned over who controls the ICBM or why.

All this might be just another object lesson on what can be achieved by publicity if Air Force plans were working out well for the Nation as well as for the Air Force and its satellite industries. But they aren't. The Air Force's prize missile, the Atlas, has yet to make a successful full-power flight, despite all the overblown claims made for it.

Two weeks ago, the first such flight was attempted, after many delays, and the missile blew up in midair.

It appears to be about time for Congressmen and the public to take a more informed look at this situation. It is very expensive for this country to finance the kindergarten education of southern California aircraft engineers so they can learn the same lessons Van Braun and his teammates learned in Germany 15 years ago. It also can be risky, since we cannot assume the Russians, too, are dumb enough to shelve their existing experts while they develop new sets of experts. Our present policy is all right if our goal is to save the Air Force and its industrial supporters. But most of us have thought the real goal was to save the United States of America.

Public Works

EXTENSION OF REMARKS
OF

HON. EMMET F. BYRNE

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 7, 1958

Mr. BYRNE of Illinois. Mr. Speaker, recently I received the following letter from Mr. HARRY MCGREGOR, senior member of the House Public Works Committee, on which I have the pleasant assignment of serving. This is indeed a thoughtful act on the part of Mr. MCGREGOR, and I am gratified at his words of commendation.

CONGRESS OF THE UNITED STATES,
HOUSE OF REPRESENTATIVES,
Washington, D. C., July 25, 1958.

The Honorable EMMET F. BYRNE,
United States House of Representatives,
Washington, D. C.

DEAR COLLEAGUE AND FRIEND EMMET: Congress will soon be in adjournment, and as senior member of the House Public Works Committee, I want to take this opportunity to express to you my appreciation for the cooperation you have given me.

Your activities and your knowledge of legislation clearly indicates that you have put in many, many hours arriving at decisions which you believe are fair and equitable, not only to your people but the Nation as a whole. I have greatly appreciated having your excellent legal counsel, which is of material assistance in drafting legislation that will be most beneficial to the taxpayers. You have assisted in saving many millions of dollars by helping to hold the line.

You have done an excellent job, and I sincerely hope that the people of your district will acquaint themselves with your record and so insure your reelection. We need you in the Congress.

Best wishes and always with kindest regards.

J. HARRY MCGREGOR,
Member of Congress.

As we are near adjournment, my thoughts naturally turn to my district and what I can with pride report to the people of the Third District as to the accomplishments of the 85th Congress, the Republican administration in particular, and, more specifically, my own record. I have sent my constituents regular monthly newsletters; I have circulated two questionnaires during the 85th Congress; and I have sent other special reports. The purpose of this has been to keep the Third District voters apprised of my activities and views and to ascertain their thoughts on many of the important issues before Congress. I have done everything possible to inform them of every type of service I could give them as their Congressman. This is not just a responsibility any elected official assumes, but it is a privilege to serve one's constituents. The Third District people have been responsive to my efforts, and this is rewarding.

Upon my arrival in Congress, I adopted a policy—in fact, it was a promise to myself—that I would reflect the will of the majority of the people in all matters on which I must vote, but in the event there were any differences of opinion as to the appropriate course of action, I would act in the best interest of the Nation, my State, and my district. It would be incumbent upon me to report to the people on the differences.

President Eisenhower, the Republican administration, and Congress has kept us out of war. Human life is a valued possession in America. Few Americans have escaped having a close look at the cost of war and the irreparable losses incurred. We remember vividly World War I, World War II, the Korean war, and, yes, even the stages of cold war. We want no more. Keeping the peace requires constant vigilance, and it is not achieved without cost in some shape or form. Running the best government in the world, our Republic of America, is a mammoth task with responsibilities growing and changing as the world is almost daily changing face. We must be alert to every new development, whether in the field of outer space, nuclear and other types of warfare and arms, finance, and economics. Nuclear weapons are inconceivably expensive, as well as necessary, for us to remain a first-class power. However, holding our position means that we must be grounded, in fact, rooted, on a firm economic base at home. It is not a pleasant task to have to say no to a child who wants a 10-cent candy bar instead of a nickel bar, but if they only have a nickel, it is the wise parent who insists they keep within their spending limit instead of borrowing from next week's allowance.

PUBLIC WORKS HIGHLIGHTS

Our President is alert to the dangers of public-works programs which are really crash programs or doles, and so am I. No program will have my support unless it meets certain conditions: First, the proposal must have the green light from the necessary Federal agencies involved and my committee as a result of a thorough study and analysis; second, the program must be in the national interest as far as security, defense, and well-being of the taxpayer.

Our country has not reached the pinnacle of a free and sound economy with an abundance of private enterprise under a policy of crash or dole programs. We must not let a few months of a lull and a lag pull us into a floodstream of reckless and wasteful spending. Not only you and I will pay the price, but more important we will be handing a heavily mortgaged legacy to the generations to come, our children.

Twenty-two percent of the budget request for fiscal 1959 is for civil benefits which include public works for Federal and civil programs. Some Federal programs authorize the Government to pay the entire amount, while others require participation by individual States or combined States as well as the Federal Government. Often this type of program is done on a matching, 50–50 basis. Frequently, a State's share is determined by area or population. The estimated $16.4 billion to be spent in the area of civil benefits—including public works—programs in fiscal 1959 is $600 million less than the comparable amount for fiscal 1958. To bring you a clearer picture, I would like to point out that in June the Bureau of the Budget estimates for fiscal 1959 showed that 8.8 cents of every dollar spent will go for public works.

I introduced public works legislation which will continue bridge work on the Cal-Sag project; reimburse the State of Illinois for highway construction; test the effects of diverting water from Lake Michigan into the Illinois Waterway; and carry out construction, repair and preservation of important navigation projects throughout the United States and our Territories. These public works proposals I introduced are important to Chicago and the Third District because:

First. Modifications and alteration of bridges on the Cal-Sag project is necessary to fully utilize the St. Lawrence seaway facilities when it is ready for operation in Chicago in the not too distant future.

Second. Legislation providing for testing the effects of increasing the diversion of water from Lake Michigan into the Illinois Waterway would help protect property owners on Lake Michigan from damages and flood conditions.

Third. I introduced a clean version of the omnibus rivers and harbors bill—the original bill was twice vetoed by the President because of 18 pork barrel projects in it. My bill was devoid of any of the crash type and pork barrel projects so unnecessary and so costly to the taxpayers. Fortunately, on July 3, the President signed into public law a good bill containing countless rivers and harbors and flood control projects which were given the green light in both Houses of Congress, the Army Corps of Engineers and other Federal agencies involved. This was a difficult fight because of the efforts of some who favored crash programs. The President had repeatedly warned Congress that he would not approve any programs not having a clean bill of health. In matters of public works, it is necessary to scrutinize carefully all projects since often they are beaten down in committee, but they come back in a package deal and will sneak through. Fortunately, the Cal-Sag bridge work is included in th omnibus bill, which is now law. Based on 1957 figures, the total cost of the Cal-Sag projects will be $141 million. Illinois' total share amounts to $54 million, making a total overall cost of $195 million.

Fourth. Under my proposal, Illinois would receive a depreciated total of $273 million for toll road reimbursements. Governor Stratton favors my proposal of authorizing additional miles of interstate roads to substitute for equivalent

miles of toll highways which connect with interstate roads. I believe this to be one of the first considerations of the 86th Congress when it convenes in January.

I desire the people of my district to understand our present road and highway systems. The Interstate Highway System was enacted in 1944, authorizing an Interstate System of 40,000 miles. In reality, there was a delay of 12 years between the authorizations by Congress and the enactment of the necessary financing legislation in 1956. The Federal Highway Act of 1956 contained a policy statement of intent on the part of Congress to determine whether the Federal Government should equitably reimburse the 48 States for toll or free highways constructed between August 2, 1947 and June 30, 1957. Three major questions are involved: First. Is a policy of reimbursement economically sound and feasible. Second. What is a fair formula of apportionment. Third. The time and method of reimbursement. An example of how this reimbursement formula would work in Illinois, if enacted, is this. Our great State, which ranks second among the States who had the foresight to go ahead and remedy our traffic problems of safety hazards and congestion between August 1947 and June 1957. Illinois has spent $550 million in interstate roads. I am glad to say that our State has done this without waiting for the Federal Government to step in with the funds for our highways.

I wish to mention the St. Lawrence seaway. No one can dispute the value of this fourth seacoast to the United States and to Chicago. Our share of the cost involved in creating this eighth sea is $281 million. This represents completing the deepening of the Great Lakes connecting channels to a controlled depth of 27 feet. It is the realization of a joint American-Canadian dream. The benefits to Chicagoans will be multiple, increasing trade, new employment opportunities, new business and industry and expansion in other fields. Chicago will be a world port. In September the first passenger ships, steamship *North American* and steamship *South American* will use the completed facilities of the seaway, arriving at Massena, N. Y., on September 6.

I wish to comment on a bill to provide the Tennessee Valley Authority with the power to issue bonds to finance the construction of new generating capacity. I opposed the bill because I believed it paved the way for TVA to expand into areas beyond its jurisdiction, and this would enable TVA to compete with private enterprise.

Know Your Congressman

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, August 7, 1958

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial which appeared in the Wilkes-Barre Times Leader of August 5, 1958:

KNOW YOUR CONGRESSMAN

Periodically, some one notes that a great many voters don't know who their Congressmen are. The situation is serious enough to warrant concern on the part of anyone interested in the democratic process, and ridiculous enough to prompt rather extravagant proposals for solving the problem.

One of our favorites, among such proposals, comes from a reader—doubtless maddened by the spectacle of ignorant, indifferent voters—with a taste for irony. Maybe, he thinks, Congress ought to pass a bill, requiring that the names of lawmakers be posted in post offices. Then a second bill could be passed requiring people to go to their post offices and read the notices telling them who their Congressmen are.

If this is too inconvenient, says the reader, things could be made easier by building new post offices in every block and along every mile of country road. That would give every voter a chance to know who his Congressman is without making the task of discovery too difficult.

This positively won't be necessary in Luzerne County, where the Representative of the 11th Congressional District of Pennsylvania is no mysterious figure to the electorate. In fact, we'd say he is a fairly well known citizen of these parts. If there is a voter who does not know who he is, we have a feeling his education will be brought up to date before November.

Military Reserves Feel Resentment at Neglect

EXTENSION OF REMARKS
OF
HON. PHILIP J. PHILBIN
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Thursday, August 7, 1958

Mr. PHILBIN. Mr. Speaker, under leave to extend my remarks in the CONGRESSIONAL RECORD, I include the text of a recent letter to the editor of the Holyoke (Mass.) Transcript-Telegram, written by my friend, Charles L. Bullock, of Springfield, Mass.

Mr. Bullock presents an excellent treatise on the equalization of benefits bill, H. R. 608, which is sponsored by our distinguished colleague, the Honorable GEORGE HUDDLESTON, JR., of Alabama.

The material follows:

[From the Holyoke (Mass.) Transcript-Telegram of June 11, 1958]

MILITARY RESERVES FEEL RESENTMENT AT NEGLECT

EDITOR, SAFETY VALVE:

This message concerns the quality of treatment between Regulars and Reserves in the military.

It represents one of the most constant and most frustrating tasks which confronts every Congress, and one which is once more before this present Congress in many forms. It is axiomatic with most Members of the Congress that justice as well as the best interests of the national defense require that a soldier, sailor, or airman, of whatever rank, be treated the same for his war service, both while on active duty and after retirement, irrespective of the unit or component in which he served, whether Regular, Reserve, or National Guard. Yet the application of this obviously sound principle is beset at all times by the attacks, overt or covert, of the administrators of our defense machinery, virtually all of whom are of the Regular persuasion—i. e., adherents of the "Old School Tie." In a score of different pieces of pending legislation at this time, notably in the current military pay bill, this 85th Congress, like its predecessors, struggles to make its will in this area effective, and to counter the almost numberless subterfuges by which administrative edicts seek to thwart the congressional intent.

One of the most notable of these administrative evasions has to do with the area of retirement pay, which Congress has repeatedly said shall be equalized between Regular and Reserve component personnel with substantially the same service. For example, in title 10, United States Code, approved in 1956, the Congress expressly said that:

"Laws applying to both Regulars and Reserves shall be administered without discrimination (1) among Regulars; (2) among Reserves; and (3) between Regulars and Reserves."

Yet the plain provisions of the Pay Readjustment Act of 1942, which in that respect were reenacted in 1949, and are still the law, have been consistently flouted by administrative perversion, backed by judicial distortion, some of it positively painful in its absurdity. The law plainly provides 75 percent of base pay as retirement pay for "any officer of any of the services * * * who served in any capacity as a member of the military or naval forces of the United States prior to November 12, 1918, hereafter retired under any provision of law."

By administrative fiat, with later judicial sanction, this has been in effect amended, without benefit of Congress, to read "any Regular officer," etc., despite the fact that the authors of the original law, and of its reenactment in 1949, have clearly and repeatedly stated that they intended no such interpretation.

There are pending in Congress at this time two bills to correct this particular perversion of the congressional intent. They are S. 1085, sponsored by Senators JOHN SPARKMAN, of Alabama, and HENRY M. JACKSON of Washington, and the companion bill in the House, H. R. 689, sponsored by Congressman GEORGE HUDDLESTON, JR., of Alabama. Mr. HUDDLESTON has been joined in this effort of late by several other Congressmen who have introduced duplicate bills, and these stanch supporters include Congressmen JAMES G. FULTON of Pennsylvania; STUYVESANT WAINRIGHT of New York; THOR C. TOLLEFSON of Washington; and Congresswoman COYA KNUTSON of Minnesota. It is the aim of all these to state once more the intent of Congress, and this time so plainly as to make unlikely, or at any rate unsuccessful, any further attempts at administrative amendment.

When the basic law, the Pay Readjustment Act of 1942, was originally enacted by the Congress, it was a part of a vast military recruitment effort then made necessary by World War II, into which this country had just entered as a result of the attack on Pearl Harbor. At that time (June 1942), there were on duty in all about 13,000 regular officers of all the services. At the same time, there were over 120,000 Reserves and National Guard officers on active duty. It would seem, under these circumstances, that any assertion that the expression "any officer of any of the services" was intended by Congress to be restricted to the 13,000 regulars, and to ignore the 120,000 Reserve component officers, should have been so ludicrous as to be laughed out of court at once. It is one of the astonishing vagaries of our administrative and judicial system that such manifest absurdities occasionally creep into our legal system, and in such instances it is the manifest duty of Con-

gress to correct them. Such is the intent of S. 1085 and H. R. 689.

Meantime, it is heartening to all those concerned with such correction to have the sound and energetic backing of so many service and veteran organizations.

By resolution of its national convention of 1957, the American Legion went unequivocally on record for this legislation. So also did the Veterans of Foreign Wars, the Reserve Officers Association, the National Guard Association, the Naval Reserve Association, the Regular Veterans Association, the Military Order of the World Wars, the Veterans of World War I, and Retired Officers Associations in Indiana, Missouri, Texas and elsewhere. Such support is deserved encouragement and inspiration to the sponsors and supporters of this legislation in the Congress, who are battling to remove now, and discourage in future, this form of discrimination against our citizen soldiery, whose performance on the battlefields of every war in which this Nation has been engaged proves that their worth and patriotism deserves every consideration to which any of their fellow service men and women are entitled.

It is hoped and believed that this corrective legislation will receive congressional approval during the present session of the Congress.

CHARLES L. BULLOCK.

SPRINGFIELD.

One Hundred and Eleventh Anniversary of Liberian Independence

EXTENSION OF REMARKS
OF
HON. FRANCES P. BOLTON
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Thursday, August 7, 1958

Mrs. BOLTON. Mr. Speaker, on July 26, Liberia celebrated her independence day for the 111th time. All too few of us here in the United States have any concept of the struggle it has been for her to protect her independence, pressed as she was on one frontier by England, on another by France. But the passion of her people for freedom has carried her through storm and sunshine to this day.

Mr. Speaker, I insert herewith the remarks broadcasted on WUST by her Ambassador, George Padmore, on July 27:

Yesterday the people of my country celebrated for the 111th time the most important anniversary a country can have—the anniversary of its attainment of independence. It is an occasion which awakens in the hearts of all Liberians unusual feelings of gratitude and pride—gratitude for the protection afforded to us, by Divine Providence, over more than a century of hard-won and often imperiled freedom, and pride in the sacrifices which our forefathers made to maintain that freedom, and extend it from our first small beachhead on the Gulf of Guinea until it is now shared by a prospering and peaceful republic of 2½ million people. Our survival has been something of a miracle, for we were for many decades an island of liberty in a sea of colonial states. We believe that part of the explanation of that miracle (if miracles can be explained) lies in this sentence, which is taken from our Declaration of Independence: "Liberia is not the offspring of grasping ambition, nor the tool of avaricious speculation." From the moment of our birth as a sovereign nation we have been scrupulous in respecting the rights of others and conciliatory in asserting our own. So far as it has lain within our power we have sought to bridge and not to widen the chasms of misunderstanding which unhappily still divide mankind.

Freedom is not cheaply bought nor easily defended. For part of our history we were a poor nation because we did not choose to be deceived by those who came bearing gifts but in the end might have taken away much more than they gave. In the past 30 years, however, and especially under the leadership of our much revered President Tubman, we have felt strong enough to open the door to friendly foreign investment, most of it from the United States, the country in which all our Founding Fathers were born.

The result is that today the march of progress in Liberia is rapid. Every anniversary we celebrate sees our country stronger and happier than before. We look back with pride on a past which was not always bright and forward with confidence to a future on which, with God's help, we know the sun of prosperity will continue to shine.

The Simon Bolivar Postage Stamps

EXTENSION OF REMARKS
OF
HON. CHARLES E. CHAMBERLAIN
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Thursday, August 7, 1958

Mr. CHAMBERLAIN. Mr. Speaker, on July 24 the noted radio commentator, Ray Henle, made a statement about the Simon Bolivar champion of liberty postage stamps issued that day by the Post Office Department.

Mr. Speaker, under leave to extend my remarks, I include Mr. Henle's statement in the RECORD:

The Postmaster General, Mr. Arthur E. Summerfield, held an especially felicitous ceremony today to inaugurate two new United States postage stamps.

These are a 4-cent stamp and an 8-cent stamp in the so-called champions of liberty series, intended to honor men who have championed the cause of liberty in foreign lands.

Both stamps issued today honor the Venezuelan patriot, Simon Bolivar, who not only liberated Venezuela, but several other South American countries as well. The stamps carry Bolivar's portrait.

All Latin American Ambassadors or their representatives attended. Present also was Vice President NIXON. Also, Assistant Secretary of State Andrew Burding, who represented Secretary Dulles, and the Venezuelan Chargé d'Affairs.

The speeches made by Messrs. Summerfield, Nixon, Burding, and the Venezuelan representative were keyed to the theme that freedom is a state of living precious to all. Mr. Summerfield said that millions of Americans, and people wherever United States mail goes, will see the likeness of the great South American patriot, and know that the United States honors such men, regardless of their origin.

We spend many billions of dollars round the world to gain friends. It seems to us that with 2 postage stamps and 1 carefully run ceremony, the Postmaster General may have done vastly more than all the planners to win friends for us in one vital area of the world.

The Lures and Baits Bill

EXTENSION OF REMARKS
OF
HON. RALPH W. GWINN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, August 7, 1958

Mr. GWINN. Mr. Speaker, without any further comment I am quoting the above entitled piece "The Lures and Baits Bill," a syndicated newspaper column by Raymond Moley, released by the Associated Newspapers.

He describes the Federal aid to education bills before Congress as a hodgepodge of unnecessary items.

The Federal aid bills change so rapidly with the tides that it is difficult for the United States Office of Education to find suitable titles. The name used this year to describe all manner and sundry of aids contained in the bill, is the National Defense Education Act.

THE LURES-AND-BAITS BILL—FEDERAL EDUCATION-AID BILLS BEFORE CONGRESS ARE HODGEPODGE OF UNNECESSARY ITEMS

(By Raymond Moley)

In making his exit from the Washington scene, Marion B. Folsom, erstwhile Secretary of Health, Education, and Welfare, urged the passage of the aid-to-education plan which he sponsored, saying that it is devised as a system of lures and baits in the form of matching-fund grants to induce States to spend more. This, then, is the philosophy behind the bill, based upon the ridiculous theory that when you give someone something he will thereupon go out and buy the same. I wonder whether, as Folsom resumes his old job at Eastman Kodak, he will propose giving away cameras in order to get people to buy cameras. If so, I imagine that the board of directors would wonder whether 6 years in Washington had not impaired the judgment of their one-time treasurer.

The hot breath of the coming election should not prompt aid-to-education legislation to be rushed through in these dog days at the end of the session.

The bills before both Senate and House (which differ little except in amount) are a hodgepodge of assorted items gathered together by the Folsom Department to do something about education because of the sputnik scare. Congressional semantics designates such legislation with the term "omnibus." This would be a base indictment of a useful and practical mode of transportation. A far more descriptive term in this instance would be "moving van," which brings to mind a conglomerate assortment of bedsprings, mattresses, chairs, bureaus, kitchen stoves, and washboards inside, and tricycles, scooters, cribs, and skis stacked on behind. Indeed, the figure of speech is not inappropriate, for these, too, are "aid" to keep youngsters from worrying about the serious business of schooling.

The House bill, for example, provides for scholarship loans, laboratory trappings, audio-visual materials, foreign language institutes, institutes to discuss scientific testing of students and statistical processes. All these under the guise of a wholly phony title, "National Defense Education Act." Presumably, this is to make the conglomeration a matter of great urgency.

But most of this has no possible bearing on the cold war. The scholarships and loans are available to all, the needy and unneedy alike. They are for any sort of study, not limited to science.

It ought to be noted that title VII of the bill, to give $84 million for testing, is added despite the fact that the United States Office of Education as well as many sound educators have testified that there is still great confusion as to what aptitude test is a valid means of measurement. Until someone has worked out a valid testing method, it would seem somewhat absurd to subsidize on a large scale the doubtful tests already in existence. All we know is that the commonsense of a good teacher and old Dr. Trial-and-Error are the most valid means we have. They ought to do until the States and local communities and foundations have gotten the bugs out of current efforts toward scientific testing.

Finally, there is good evidence, including the opinion of the Association of American Colleges, that our colleges already have adequate means for scholarships and loans. The sudden plunge of the great sums proposed to be provided by the Federal Government would tend to discourage private givers.

Moreover, on the general subject of Federal aid, there is the irrefutable consideration that aid means ultimate control. This sort of bill would put the Federal bureaucracy deeply into the business of education.

Liberian Independence Day

EXTENSION OF REMARKS
OF
HON. FRANCES P. BOLTON
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Thursday, August 7, 1958

Mrs. BOLTON. Mr. Speaker, it is a pleasure to me to insert in my remarks a poem read at the celebration of the 111th anniversary of Liberia's Independence, Liberian Embassy, July 26, 1958.

The land whose birth we mark today
Was founded, by the grace of heaven,
An ocean's frowning width away,
Far back in 1847.

By exiles from this western shore
Who sought to recreate elsewhere
A freedom which they loved the more
Because its joys they could not share.

No hate of potentate or pope
Impelled them, but this simple theme:
To fan to flame the guttering hope
And build again the broken dream.

And on a distant, alien coast,
Across the sundering leagues of foam,
All they had learned to cherish most,
All that reminded them of home.

They planted in responsive soil
And, tending it from hour to hour,
In breathless peril, grinding toil,
Brought this frail seed to wholesome flower.

Ghosts of our gallant pioneers,
Long gone but never out of mind,
We greet you, through the mist of years,
Here in the land you left behind.

See how secure the bonds have grown
That your wide-wandering voyage spun
Twixt both the homes you called your own,
The home you lost, the home you won.

So that, in 1958
With friendship tried and proven true,
We meet today to celebrate
The old republic and the new.

Nearer to that united goal
When, matched in wisdom and in worth,
Mankind will seek, with heart and soul,
Freedom and peace o'er all the earth.

Minnesota Judge Pleads for Continuation of National Guard at Full Strength

EXTENSION OF REMARKS
OF
HON. COYA KNUTSON
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Thursday, August 7, 1958

Mrs. KNUTSON. Mr. Speaker, one of the fine letters I have received on the need and value of the National Guard in our country comes from a judge in the probate and juvenile courts of Jackson County, Minn. The correspondent, Judge William G. Kreger, is also a colonel, Infantry, Minnesota, Army Reserve National Guard. Under unanimous consent, I include his excellent statement on behalf of retaining the National Guard at full and necessary strength:

PROBATE AND JUVENILE COURTS,
Jackson, Minn., August 5, 1958.

Hon. COYA KNUTSON,
House of Representatives,
Washington, D. C.

DEAR MRS. KNUTSON: Many of us citizen soldiers have watched, not only with interest but with sincere concern, the development of Department of Defense plans affecting the reorganization of the Army National Guard. These plans affect the structural strength of the footings upon which the foundation of this Nation is poured.

Time precludes a detailed development of the historical background of the National Guard of the United States. Suffice it to say, however, that we had first a Militia, then an Army, and then a Nation. It is a child of the Constitution of the United States. Its paternity is acknowledged in article I, section 8, of the Constitution. Therein its "care, custody, and control," so to speak, is given to the Congress. This for the purpose of upholding the basic principles enunciated in the preamble to our Constitution, viz, "insure domestic tranquillity, provide for the common defense, and secure (hold and protect) the blessings of liberty to ourselves and our posterity."

For some years past various procedures and means have been proposed which would adversely affect this bulwark of our national defense. Some to the point of almost being a process of emasculation.

The troop basis allotment for the Minnesota Army National Guard, as proposed by the Department of Defense, is neither fair nor proper.

There are 66 communities in Minnesota which have armories. Some of these armories the multiple-unit armories. We currently have 107 units in the State. The reorganization proposed would give us a total of 80 units. The new strength would be about 7,000, a cut of almost 2,000 men.

The troop allotment proposed for our infantry division is short two battle groups. In lieu of the two battle groups we are given a separate signal battalion which would not be feasible for us to maintain because of the high percentage of technical personnel necessary for it. This is the type of emasculation I speak of. Destroying the unit integrity of a fighting division by pulling out two battle groups and replacing them with an infeasible unit to maintain.

You can readily appreciate how very near impossible it would be for Minnesota, or any other State, to meet such requirements. Instead of the reorganization requirements and troop basis allotments being practical and simple they are just the opposite. This apparently has not been invited to your attention by the Department of Defense.

The following is respectfully submitted for your consideration in obtaining fair and workable troop basis allotments for your National Guard:

1. Maintain 400,000 strength, as prorated by the National Guard Bureau of the States, Territories, District of Columbia, and Commonwealth of Puerto Rico on June 30, 1958.

2. Retain State headquarters and headquarters detachments at present strengths.

3. Retain 27 fully organized pentomic-type divisions at approximately 65 percent of tables of organization and equipment.

4. Maintain antiaircraft onsite units at 54 percent of tables of organization and equipment.

5. Maintain and concert existing nondivisional units and obtain additional nondivisional units to absorb the remaining strength. These units to be of the type required by the Army and to be maintained by 65 percent of tables of organization and equipment.

6. All of the foregoing to be accomplished with the approval of the Governor of each State concerned.

I should like to add that it is my privilege and honor to command the 135th Infantry Regiment, of Minnesota's 47th (Viking) Division. I first enlisted in this regiment in 1924, rising through the ranks and serving 9 years during World War II and Korea.

Many of the members of the Minnesota National Guard are sons and grandsons of former members. In Stillwater, Minn., one of our company commanders is the fourth generation of one family to serve as commanding officer. We must not subject the will of the citizen-soldier to serve to the type of dissolution proposed.

Minnesota has the unique distinction of having twice tendered volunteer Militia or National Guard regiments for service in war. Both times, Civil and Spanish-American Wars, they were the first volunteer regiments of the United States Army. It is the regiment I command.

I have faith in the American militia man. He costs less to maintain and produces more, because of his inherent qualities of citizenship, than his professional counterparts. In addition he is locally available within the State for any type of service.

Respectfully,

WM. G. KREGER,
Colonel, Infantry, Minnesota, Army Reserve National Guard.

The Veterans Hospital Radio Guild

EXTENSION OF REMARKS
OF
HON. RICHARD BOLLING
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Thursday, August 7, 1958

Mr. BOLLING. Mr. Speaker, the President of the United States, Members of Congress, and heads of veterans' organizations have on numerous occasions congratulated the Veterans Hospital Radio Guild on its work over the past 10 years among hospitalized servicemen. This national nonprofit organization sends its representatives—actors, writers, producers, musicians and technicians—into veterans' hospitals all over the United States as a voluntary service. The hospitalized veterans are trained by the VHRG professionals to produce and per-

form in their own radio programs which are broadcast over their hospital bedside networks. Group participation in VHRG activities has helped many veterans to want to get well, and thus to be started along the road to recovery and normal living.

The latest such tribute to the valiant work of this volunteer arm of the entertainment industry comes from Richard L. Roudebush, commander in chief of the Veterans of Foreign Wars, whose national headquarters are in Kansas City, Mo. I am happy to join the VFW in their commendation of the splendid work the Veterans Hospital Radio Guild is doing, and to include below the letter of commendation which Mr. Roudebush has written to Alex Kramer, president of the Veterans Hospital Radio Guild, on behalf of the 1,300,000 members of the Veterans of Foreign Wars:

VETERANS OF FOREIGN WARS
OF THE UNITED STATES,
Kansas City, Mo., July 15, 1958.

Mr. ALEX KRAMER,
President, Veterans Hospital Radio Guild, New York, N. Y.

DEAR MR. KRAMER: There have been many remarkable rehabilitation programs instituted throughout the Veterans' Administration since the end of World War II, but I can think of none that can exhibit a greater record of achievement than the program of the Veterans Hospital Radio Guild. On this, your 10th anniversary, it gives me great pleasure to extend the heartfelt thanks and congratulations of the 1,300,000 members of the Veterans of Foreign Wars for a job well-done.

Unlike so many rehabilitation programs which were started during and immediately following World War II, you have not fallen along the wayside. It has distressed me in recent years to note that, more and more, the volunteer VA programs are slowly slipping out of existence. For that reason, I am especially gratified to note your continued interest and continued enthusiasm for those men who are still paying the price of war.

I honestly believe that your 10th anniversary publication will gain you increased support so that your activities can be extended to all VA facilities. I feel confident that the Veterans Hospital Radio Guild will have the full cooperation of V. F. W. Posts wherever they might be. The V. H. R. G. is performing a real service, please keep up your good work.

My best wishes for your continued success.

Sincerely,
RICHARD L. ROUDEBUSH,
Commander in Chief.

Republic of Liberia

EXTENSION OF REMARKS
OF
HON. FRANCES P. BOLTON
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Thursday, August 7, 1958

Mrs. BOLTON. Mr. Speaker, these are days of tensions across the world—days when misunderstanding and suspicion becloud the sun of friendship. It used to be that one took friendliness for granted. Alas, that these days are over. So it is a particularly happy experience to find that our effort to answer the call of a small country in the Near East in her moment of need has been understood and welcomed by another small country in Africa. At a time when the United States is none too well fortified with support from other nations in defending its policy in this greatly disturbed area, the rather courageous intervention of the President of Liberia, Dr. Tubman, deserves more attention than has been accorded it in the press.

This support is doubly significant coming as it does from a small nation in a position to appreciate both Lebanese fears and American motives.

On July 26, in addressing the Liberian people during their independence day celebration, President Tubman said:

The Liberian Government regrets the conditions and circumstances in the Middle East which made it necessary for the United States Government, in the interest of peace and stability, to have landed United States troops in Lebanon upon the request of Lebanon and in support of the sovereignty of that country. But we sympathize with this action since it seeks to assure the protection of smaller nations, and we note with a great degree of gratification that no acts of violence or depredation have been perpetrated by these troops. While there may be great risks involved, yet the greater dangers which may have developed appear in our opinion to justify the risks.

All nations should firmly resolve to lend their strongest efforts toward finding a solution to the complicated and tense world condition and not pursue a course of conduct for purposes of expediency for national or self-aggrandizement, thereby resulting in greater and additional complications. We, the nations of Africa, should strive to adhere to this principle.

The Liberian Government feels that the United Nations should as soon possible replace both American and British troops in Lebanon and Jordan, the reason being that the Liberian Government maintains that it is the duty and obligation of the United Nations to protect the sovereignty and integrity of all nations against direct or indirect aggression and subversive intrigues that tend to create coups d'etat.

It is good to know that there is this strong bond of understanding between Liberia and the United States.

Medical Rehabilitation—A New Specialty of Medicine for Helping Injured People To Become Self-Sufficient

EXTENSION OF REMARKS
OF
HON. LUDWIG TELLER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, August 7, 1958

Mr. TELLER. Mr. Speaker, medical rehabilitation is a new and significant specialty of medicine. There is a widespread lack of knowledge about the availability and effectiveness of this important branch of medical treatment. Therefore, I offer an explanation of its great possibilities which was given to me by Dr. Frederick Ziman, of New York City.

Dr. Ziman is a distinguished medical practitioner who specializes in rehabilitation medicine.

Dr. Ziman's communication follows:

AUGUST 1, 1958.

The Honorable LUDWIG TELLER,
House Office Building,
Washington, D. C.

DEAR SIR: The purposes of this communication are to explain to you what is meant by medical rehabilitation, what can be done with this new specialty of medicine, and to point out the necessity for a centralized organization for medical rehabilitation for those of New York City's employees who become injured or disabled. I select New York City solely for purposes of illustration, for our city under Mayor Wagner's leadership, has evidenced substantial awareness of the need for medical rehabilitation. New York City employs over 250,000 people. This includes not only the members of the uniformed forces—the fire, police, and sanitation departments, but the schoolteachers, transit workers, hospital workers, and all the other civil-service employees, administrative as well as clerical. New York City is a self-insured employer under the workmen's compensation laws. This is administered by the workmen's compensation department of the corporation counsel's office. Our city spends a great deal of time and money choosing and training its employees. The complete rehabilitation of the injured and otherwise handicapped members of this work force, therefore, is an important consideration for all of us, as citizens. The example set by some of the big insurance companies in their work with medical rehabilitation should be studied and followed by the city of New York.

Because of the tremendous strides made in modern medicine and surgery the lives of many people with severe injuries have been saved, but many have been left with permanent physical disabilities. It is not enough to preserve these lives. Having saved lives, it becomes necessary for the medical profession, with the help of the rest of society, to give these individuals the opportunity to become self-sufficient again, to become independent, to assume their responsibilities so that they may be able to discharge their duties in a capable manner. It is also obvious that for the disabled wage earner of a family, if a complete medical program, which includes rehabilitation, is not utilized, and if the various services and agencies designed for such tasks are not called upon, the effect of this neglect becomes far-reaching. It goes beyond the individual and beyond his family. The taxpayer pays a tremendous cost, for these disabled and their families inevitably become public welfare cases.

Mr. Congressman, it is not enough to talk of rehabilitation in terms of saving money, of time, and of increased efficiency, although getting skilled, capable people back to their jobs, for which they have been trained, is a practical aim. There is something much more important than all this—savings in terms of human misery, of frustration, of destitution. It is impossible, unless one has been in that position himself to fully realize the frustrations and to know what the handicapped person goes through, who wants to become self-sufficient, but cannot get work. The costs in human misery are greater than all the cost to the taxpayer in terms of dollars and cents. There is a cost to society—the miserable, broken-up homes.

Thus, the physical disability is compounded right down through the family and the rest of our social structure. It has been proven that many of the disabled can be helped by medical rehabilitation. Training with special aids and devices, helping them solve the problems of housing and job-finding, all these help them assume their place in the world and become self-sufficient human being, again able to take care of themselves and their families. It is the tragedy of our civilization that having saved

lives we deny livelihoods. It seems easier to leave the crippled as beggars than to get them up from the depths of despair, helplessness, and uselessness. Medical rehabilitation could prevent a lot of these far-reaching effects. The specialist in medical rehabilitation is trained to know that he is not through with the care of his patient until that patient is gainfully employed, within the limits of his disability.

Our mayor, Robert F. Wagner, in an executive order on March 6, 1958, to all city agencies, said, "Such employees who have been handicapped through illness or injury and have received adequate rehabilitation care and training, and have been declared employable and who are competent to perform the duties of their positions should be restored to their regular duties or other duties appropriate to the titles they hold. Within limits fixed by existing law and civil service rules where an employee cannot perform the duties of his title he should be given every opportunity for transfer to a position with duties which he is able to perform. Such policy is in line with the most progressive thinking in industry and government as evidenced by the expression of public policy in section 25B of the Civil Service Board, which encourages the hiring of physically-handicapped applicants to civil service positions where they are competent to perform their required duties.

"The policy has proved beneficial to the employee whose usefulness is continued thereby, to the agency which will have experienced persons assigned to duties which they are physically able to perform, and to the public generally."

This is an example not only for other municipalities and State governments but for all other employers to follow. The excuse offered by employers for not hiring handicapped workers is that there is increased liability. Statistics and the carriers themselves belie this.

There are thousands upon thousands of cases of successfully rehabilitated handicapped and numerous sets of statistics that prove that amazing results can be achieved with complete medical rehabilitation. To quote some of the authorities, quoting from Sommers and Sommers from the Council Clearing House in Rehabilitation and Workmen's Compensation, Chicago, 1954, pages 78, 79: "Both local and Federal Governments received a profit on rehabilitation moneys expended, in the form of reduced welfare payment and new tax revenues." While all authorities on the workmen's compensation are agreed that an important goal in the rehabilitation of the injured worker is to return him to productivity, Dr. Alexander P. Aitken, chairman of the subcommittee of industrial relations of the American College of Surgeons, in the Bureau of Labor Standards Bulletin No. 167, pages 205, 206, said: "True rehabilitation of the injured worker * * * is virtually nonexistent under our present workmen's compensation system."

There are several important reasons for the lack of medical rehabilitation for the injured employee. In our own city and State some of the fault lies with my own profession; doctors that handle industrial cases either are not fully aware of the possibilities, or they do not have the facilities available for rehabilitation. To quote Dr. Alexander P. Aitken again: "Most cases of prolonged disabilities are due either to errors in diagnosis or to inadequate and insufficient treatment, or to both. True rehabilitation can begin only when such errors and diagnosis and treatment have been corrected."

Dr. Willis M. Weeden, medical director of the New York Workmen's Compensation Board, says, "Because of its newness and lack of knowledge of possible results, rehabilitation is still not being used in as fully effective a manner as it should be. Just as 40 years ago when modern surgery first started its first strides, many physicians continued to treat cases of appendicitis by medical means rather than calling in a surgeon, today many physicians are treating severe disabilities with outmoded methods and not calling in the specialist in rehabilitation." This was from the National Conference on Workmen's Compensation and Rehabilitation Proceedings, 1950, United States Bureau on Labor Standards, Bulletin No. 122, page 52. "Rehabilitation of the disabled is assuming more important aspects as time goes on. In Dr. Howard A. Rusk's words, "If we do not do something about providing more opportunity for the disabled to be trained and to take their place in our economy, and the same for the chronically ill, by 1980 for every able-bodied worker in the labor force there will be one in this category on each laborer's back."

There are several insurance carriers that have done very important work in rehabilitation. The New York State Insurance Fund is one of the most important. In its Statistical Summary of Rehabilitation Activities for 1957, there are several very illuminating and very heartening facts. A special department has ben set up devoted to rehabilitation. With careful followup of cases and educational programs for its claims examiners, long drawn out cases are brought up early and frequently for review. The result is that where this is indicated there are earlier referrals for physical medicine and rehabilitation. This introduces another fact that has become increasingly important—unless rehabilitation is started early the possibility of getting full rehabilitation is poor.

Quoting from this same report: "Our experience clearly demonstrates that carrier savings are not achieved at the claimant's expense; carriers and claimants are not opposing camps. A successful rehabilitation program primarily benefits the claimant and his dependents. The secondary savings that accure to the employer and carrier ultimately also go to the claimant's benefit. The employer's savings are passed along to the consumer through a reduction in cost. This when compiled with the claimant's earlier return to useful productivity and his increased buying power contribute to the social and economic betterment of his community." For the actual dollars and cents savings I should like to quote from their table on incurred cost estimates: Before rehabilitation $875,185; after rehabilitation $606,395; the net reduction in incurred cost estimates was $268,790. In other words, the fund's reserves were reduced by this tremendous amount and this meant a large saving that was passed on right down the line.

In the Moreland Commission's Report of January 28, 1957, to Gov. Averell Harriman, Commissioner Joseph M. Callahan states: "A more positive approach to the field (medical rehabilitation) which is the means not only of lowering compensation costs but also of converting injured workers from welfare recipients to productive, wage earning, taxpaying individuals, will, therefore, be beneficial to employers, employees, and the community.

"Statistics comparing costs with results dramatically demonstrate that rehabilitation affords the greatest single opportunity to improve the workmen's compensation system. Thus, the State insurance fund was able to cut its compensation costs by more than $170,000, following the rehabilitation of 40 handicapped persons" (the U. S. Department of Labor Bulletin, No. 180, 1954, p. 40), and the Department of Vocational Rehabilitation, in its 1952 report, states it was able to rehabilitate 1,017 persons at a cost of $197,000, to an extent sufficient to increase their total income from $433,000 to $2,336,000. Of the 66,273 persons undergoing rehabilitation in fiscal 1955, through the Department of Health, Education, and Welfare Office of Vocational Rehabilitation, 13,000 of them had been receiving welfare assistance totaling $11,100,000. Their estimated total wages increased from $17 million to $119 million, while the total and nonrecurring cost of rehabilitation was only $9,200,000. Nor is the process limited to a small number of individuals or a few types of cases. Dr. Howard Rusk, director of the Institute of Physical Medicine and Rehabilitation of the New York University-Bellevue Medical Center, indicates that 90 percent of the back cases, caught early enough for effective work, were back on the job in 6 weeks * * * and that 90 percent of all handicapped persons can be trained to do some useful work."

Again quoting from the same report: "Rehabilitation cannot be considered as a last resort measure. All competent authorities agree that the first 60 days after injury are the most important. During this period the handicapped must be appraised and the medical and psychological phases of therapy begun. If not, neuroses and regressive, hostile, and depressive attitudes may develop, and these can make belated treatment useless. Further, mere ameliorative treatment without a definitive rehabilitation result in mind can become overtreatment and can also lead the patient to think that he is unfit for further work. On the other hand, early referral gives the worker the reassurance concerning his economic future and is more likely to produce the necessary attitude of cooperation on his part."

Mr. Congressman, our city's workers, as do all persons, need a rehabilitation program. This should operate under the corporation counsel. A well administered rehabilitation program will result in a profit in dollars and cents to the city and its taxpayers, and a profit in terms of increased human satisfaction and happiness to the injured and disabled. Whatever we do in this great city of ours is watched eagerly by the rest of the country and the rest of the world. The results we get, and I am sure we will get good results, will encourage others to follow our pattern. Our efforts to benefit mankind will be magnified many times.

Very respectfully,

FREDERICK ZIMAN, M. D.

Address Delivered by Maj. Gen. A. J. Drexel Biddle, the Adjutant General of Pennsylvania, Before the Tatra Club, at Kingston, Pa., July 24, 1958

EXTENSION OF REMARKS

OF

HON. DANIEL J. FLOOD

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 7, 1958

Mr. FLOOD. Mr. Speaker, I am more than happy to place in the RECORD of Congress a great speech made by a great American diplomat and soldier, the distinguished Adjutant General of Pennsylvania, Maj. Gen. H. J. (Tony) Drexel Biddle, delivered at the annual dinner of the Tatra Club of Luzerne County, Pa., John Cresko, president, an organization of leading citizens of Slavonic, Lithuanian, and Magyar ancestry at which time I had the high honor and great privilege of presenting my dear friend Lenard Biddle to the gathering:

ADDRESS DELIVERED BY MAJ. GEN. A. J. DREXEL BIDDLE, THE ADJUTANT GENERAL OF PENNSYLVANIA, BEFORE THE TATRA CLUB, AT KINGSTON, PA., JULY 24, 1958

Mr. John Cresko, president of Tatra Club, I deeply appreciate the warm welcome so graciously accorded me by Congressman FLOOD. I greet his heartening message with a sense of humble satisfaction—and doubly so since it comes from a distinguished American, for whom I have an abiding admiration, affection, and esteem. Indeed, I have the greatest respect for his understanding and his sustained interest in the importance of realistically relating our Nation's military capabilities to our commitments, as well as to our own political, economic, psychological as well as military objectives—this, in addition to his devout and fruitful efforts to advance the interests of the community.

It's not surprising that free world attention has centered upon Soviet Premier Khrushchev's announced willingness to attend a meeting, under certain conditions, within the framework of the U. N. Security Council.

The pace of events leading up to this development has been so swift that it might be useful to remind ourselves that on July 18, only 3 days after our landing of troops in Lebanon, in response to the Lebanon Government's call for assistance, the Soviet delegation, sitting in the U. N. Security Council, vetoed 2 resolutions: 1 offered by the United States to replace our forces in Lebanon by a U. N. security force; another proposeed by Japan calling for a strengthened U. N. observation team. We may further recall that the following day, July 19, Khrushchev urged a heads-of-government meeting in Geneva, but so timed as to preclude the careful preparation necessary for some measure of assurance of accord. It was clear that, by attempting to exploit the current wave of free world anxiety over Middle East developments, Khrushchev hoped to accomplish, in short order, what he had been doggedly striving to attain during the past 8 months of diplomatic maneuvering; namely, an unprepared summit conference.

In response, President Eisenhower proposed that the conference take place within the framework of the U. N. Security Council. And it was on the 23d that Khrushchev dispatched his acceptance, under certain conditions. These are that the U. N. accept Arab and Indian representation, and that the meeting take place on July 28, only 5 days distant—hardly time for proper preparation. Moreover, the fact that Khrushchev left open the question as to what would be discussed, strongly suggests that he seeks opportunity not to work out any constructive solution, but to charge the United States with aggression in Lebanon, Britain with aggression in Jordan, and perhaps to harangue western policy all along the line. For, he's already been loud in erroneous arraignment of our two countries on this score. Yet, when his U. N. delegation had opportunity to support resolutions which would have made way for the withdrawal of our troops, it vetoed them. If it were a peaceful solution of the Middle East problems that Khrushchev were seeking, his delegation would have supported either the United States resolution for a U. N. security force to replace our troops, or the Japanese resolution to augment the U. N. observation team. So, it's a strange spectacle of the old hands at the boring-from-within technique with its current practice of employing assassins in civilian clothes, as well as the threat of the use of soldiers in uniform—posing as advocates of noninterference. It's obviously because our action serves as a roadblock across Nasser's path of undercover aggression that Moscow and Cairo are trying to paint it as interference in Lebanon's internal affairs.

Certainly, if any solution is to be found for Middle East troubles, the scope of the discussions would have to include not just part but the whole area, and—very importantly—the underlying causes; for example, for Lebanon's and Jordan's respective calls for assistance against underground aggression. And, what this would boil down to would be an unmasking of Soviet-supported Nasser imperialism as the menace to the independence of the several states in the general area.

Maybe there's some significance in Khrushchev's having omitted the inclusion of Israeli representation when he cited his conditions for attending the contemplated meeting—maybe not. But one thing is clear: any conference dealing with the shape of things in the general area of the Middle East would be meaningless without the participation of Israel.

At any rate, it would be for the Security Council, not Khrushchev, to determine the timing, the composition, and the rules of procedure governing the conference.

And, I am confident that within the next 24 hours President Eisenhower will have placed the whole matter in its proper perspective.

Should the meeting take place, it would be our prayerful hope that it might lead at least to a lessening of tensions in the Middle East. And, we may be sure, there would be no lack of readiness on our part for an honorable accommodation of differences.

Before giving way to these fond hopes, however, let us consider a few stark facts.

As I read the developments, Khrushchev had become dissatisfied with the pace at which Nasser, his man on the other end of the telephone, was advancing Khrushchev's program for gaining control of the Middle East. So he called upon Nasser to accelerate his pace from a walk to a gallop.

This, then, brought on the trouble in Lebanon and Iraq. Under Nasser's orders, a group of outsiders dressed up as insiders and, claiming to be Lebanese rebels, strove to effect the removal of the pro-Western chief of state from office.

While our attention was focused upon this shameful spectacle, the scene was being prepared for the assassination of King Faisal of Iraq and a number of pro-Western leaders.

Now, what's behind all this? A plan of vast bearing—and it's this: to swiftly gain control over the Arab States—thereupon to effect the nationalization of their respective sources of oil, and the pipelines that pass through their lands; this with a view to their conditioning continued oil supply to Western Europe upon the latter's withdrawal from NATO, and its denying the United States further use of its presently leased overseas bases. This would be accompanied by a closing of the Suez Canal.

The plan envisages gaining a throttle hold over Western Europe whose economy has, since World War II, become largely dependent upon Mideast oil. A longer range objective is thus to isolate the United States from its allies and important sources of raw materials.

So—had the United States stood by with hands in pocket, and not lent assistance to Lebanon, and had the British not aided Jordan, it would have been but a matter of time before these two countries would have fallen victims of the machinations of the combined Red and Nasser imperialism.

President Eisenhower's decision to land our Marines was both intelligent and courageous—and it was consonant with the authority invested in him by the Congress, as well as with the principles contained in the U. N. Charter.

These things, Khrushchev obviously knows. Yet, what he seeks is a hastily convened summit conference which might provide him with a sounding board for further denunciations, mainly of the United States.

Any such spectacle could hardly lead to more than a facemaking, name-calling contest—what with Khrushchev falsely accusing us, and with our exposing—but with justification—the Soviet record of subversion and coercion, broken promises, and abrogated accords.

But Khrushchev would be apt to lose his enthusiasm and to back away from his declared sense of urgency for the meeting once he were to find that instead of the swiftly summoned, hence unprepared, top-level gathering he had been envisaging as an opportunity to further arraign us for action in Lebanon, full opportunity would be granted all concerned in an orderly and adequately prepared conference within the Security Council.

Yes, this is a possibility for which it would be well to allow.

Then, too, there's another possibility that should not be excluded: some diversionary activity while our attention is focused on the Middle East—perhaps in the form of some Soviet-perpetrated trouble in Indonesia, Indochina, or Korea. But I also have in mind that just as the eventual liquidation of Israel, with Soviet blessings, is held out as bait to the Arab States by Moscow, so the capture of Formosa, with Soviet blessings, is held out as bait to Communist China.

You see, it's been a long time now that Khrushchev has been maneuvering to have himself included as a major consultant concerning Mideast problems. Should he come to feel that it was his fomentation of real trouble that enabled him to muscle his way, and that of his designees, into the high councils concerned with the problems of the Middle East, he might conceivably resort to similar methods in the Pacific area, in the hope of attaining the long-sought inclusion of Red China's representation in the councils dealing with Pacific problems. It is my belief that, in dealing with the leaders of despotism, it is wise to prepare for the worst, in order not to be caught off balance.

Now, to return to the issue of a summit conference. From the outset, President Eisenhower has made it clear that we are open to any carefully prepared, hence measurably promising, top-level conference. Meanwhile, however, events have borne out his wisdom in having rejected Khrushchev's previous attempts over the past 8 months to rush us headlong into an unprepared meeting.

At the same time, there are those who continue to encourage the thought that the Kremlin is seeking a fresh approach to disarmament and coexistence. I wonder whether they might not have forgotten some things and overlooked others. Part of their argument is that the Kremlin would welcome, just as would we, relief from the heavy burden of military costs. Well, maybe so, at some presently unforeseeable time, but not until the Soviets might have achieved world preeminence through the threat of their excessive armed strength, or through its use in battle. Besides, the effect of military expenditures upon the economy and psychology of the people of Soviet Russia is not the same as in our country. The question of bettering the standard of living of the individual in our free country is not a matter of similar importance in the Soviet police state, where the individual is merely another number. And, whereas our dollar economy is tied to gold, the Soviet economy, as in the case of that of the former Nazi regime, is an economy of totalitarian despotism, which is, in effect, tied on to the back of labor, which, with a gun in its kidneys, steps up its production, or else.

I'm sure some of us will recall the no doubt well meaning, yet unrealistic estimate from western sources in the years leading up to World War II, to the effect that Hitler's economy, and, among other things, his comparatively low steel production would

not permit him to make war. Yet, he was able so to exploit what steel production he had at his disposal, and so to harness labor's back to his military requirement, as to cause the world a pack of trouble. These are just some of the things that seem to have been forgotten.

And still another angle: again, as in the years leading up to, and including 1939, an expansion-hungry totalitarian government rules in a powerful military country. Instead of Hitler—this time it's the unscrupulous Khrushchev, who seems to have taken many a leaf from Mein Kampf, and, what is even worse, Kreminized their content. Hitler used to talk as Khrushchev does now. He would proclaim his desires for peace and his wishes to avoid war. It was not until 1937 that Hitler's despotic actions prompted Britain and France to conclude that they could not hope to endure in a Europe dominated by Hitler. Meanwhile, however, all actions in the nature of appeasement, including the statement published following the Godesburg Conference between Prime Minister Chamberlain and Fuehrer Adolf Hitler, were proclaimed as "peace in our time."

In the mid and late thirties, Hitler had flaunted his tanks and his bombers in the faces of visiting foreigners. The purpose of the show was, of course, to intimidate other countries into believing resistance would be useless. Consequently, safeguarded by the fear generated by his vast armed strength, Hitler pocketed one country after another—while others helplessly looked on, each with the prayerful hope that it might not, in turn, become the victim of Hitler's expansionist intentions.

It was at about that juncture that from ingenuous, timid, credulous and defeatist sources in Britain and France, and even in the United States, voices were heard to proclaim that "You can do business with Hitler." Just as today, there is an audible refrain that "You can negotiate with Khrushchev."

Sure—maybe we can. But it would be only prudent, I think, that those of this school of thought not overlook the importance of realistically evaluating the Communist doctrine and the mentality of those who direct the thoughts and actions of militant communism. The answer is that experience has shown, and documentary evidence has borne out that the Communist doctrine is one of irreconcilable, total, permanent conflict between classes, and between the capitalist and Marxist concepts.

For the Communists, war is a continuation of policy and vice versa. The Soviets have but one combined command over political, economic, psychological, and military strategy. The product is a centralized, coordinated front. The war this combined command is directing is a war to the hilt. As a means to this end, "cold" war is only a part of the game.

And I wonder how frequently we pause to realize that for some years now, this sometimes hot—sometimes cold war has been waged on free world territory—and what is more—that it continues to be waged on the territory of the free world.

Contrary to the illusions so many of us have harbored since the close of World War II, what we have been living through, can hardly, I think, be called peace. I'll go along with the idea that it's in a state of very "shaky" peace that we've for some years lived with the Soviets. But, we've seemed unduly ready to overlook such local wars as that of Korea and other uprisings in distant places.

It was probably only natural, in our abhorrence of war, and desire for peace, that we grasped for the phrase "cold" war, when it was first suggested as a characterization of the troubles, through which we and the rest of the world were passing.

But, we may be sure that our Communist opponents do not share this view—for in their minds, the so-called cold war is merely a part of their deliberate total war to the bitter end.

Even since the Communist tyranny went on the march, its operations have been marked by grim determination to gain power—and this, through proficiency in the study and exploitation of weakness of the potential victims of the Soviet's expansionist program. And it's equally important not to overlook the mentality of those who direct the thoughts and actions of militant communism.

Today sees the world in a continued struggle between believers, regardless of faith, and those who would deny the soul and its relation to God. It is to overrun and subdue mankind that the imperialist-minded oligarchy in the Kremlin is exploiting this Godless faith.

The conflict between atheist communism and religion may be summed up as a battle between hate and love, between egoism and social justice, between tyranny and freedom.

Moscow's most recent blast against religion is a charge that belief in God is a basis for superstition—that only the gullible believe in God. This indeed is further evidence that in the struggle for men's minds, communism, as a totalitarian and materialistic philosophy, just cannot tolerate competition with spiritual force.

Now it's my conviction that, tied in very closely with the belief in God, is the honoring of solemn undertakings between men of good will. It follows, then, that we could hardly look to the Godless to fulfill their engagements—unless, of course, there were established the necessary systems of inspection and control, and unless we possessed the will and the military capability to back up these systems.

Then, too, ours was a hard experience in dealing with Stalin. How, therefore, should we expect to fare any better with his survivors, whose chief claim to significance, at the time they took over, was, in effect, to turn "state's evidence" against their former partners in misdeeds against God and humanity.

The realistic answer is that moral suasion has no impact upon the unscrupulous—that the only deterrent is strength, which entails armed force, and the will as well as the capability to use it, if need be.

This, indeed, is essential in order to keep the confidence of our Allies, as well as to command the respect of our potential enemies. It is no less essential in order to back up our diplomats in their ofttimes delicate negotiations.

In measuring the effectiveness of our diplomacy, in forwarding our foreign policy, we have only to evaluate the response of the free and noncommitted nations, to our established policies, under trying circumstances. We may be sure that their reactions to our policies, insofar as these concern their interests, mirrow a shrewd appraisal of our capabilities, and mood to back up these policies in a showdown. Any wavering, on their part, would reflect their lack of confidence.

I saw a clear example of this in the years leading up to the outbreak of World War II. Anytime a country in Eastern or Central Europe failed to respond to Britain's and France's "Stop Hitler" policy, it meant that, in the realistic appraisal of that country, the major nations of Western Europe were not yet of the mood, or of the state of military preparedness to support their policy with the requisite effective punch. It furthermore indicated that that country doubted whether, if it came to grips with Hitler, the West would consider it the cause for which Democracy should march. In short, all I had to do, to measure the state of Western Europe's preparedness, was to watch the reaction of the states in Eastern and Central Europe to Nazi pressure.

And, this brings me to our own position. We have, as you know, military alliances with some 48 nations.

It's impossible to foresee when these ominous sight bills might be handed us for payment. And, it's equally impossible to forecast the form or scope of performance these commitments might demand of us.

One thing is certain: The growing tensions in several widely separated cirtical areas of the world point up the importance of realistically relating our capabilities to our commitments, as well as to our own political, economic, psychological, and military objectives.

If, then, in the course of weighing this question, the conclusion was reached that saturation in nuclear potential, on both sides, might lead to a greater likelihood of limited war, consideration would necessarily be given the capability of coping with more than one limited engagement at the same time—probably in widely separated and relatively inaccessible places. For the potential enemy would be apt to try to stretch our capabilities to the maximum.

Yet, even in event that such a conclusion were reached, our capability of fighting total war with every weapon, would, nevertheless, have to be in the wings.

And—what's more—it's essential that we make it clear to all that we wouldn't hesitate to resort to our big weapons, if need be. For, as you know, the Soviets have a preponderance over the free world in conventional weapons. And, I have long attached great significance to the fact that, at the same time the Soviets have been hurrying to improve their nuclear potential—they have also been modernizing and further strengthening their conventional forces. Moreover, we may count upon it that they are not undertaking this double burden just to gaze into the free world's blue eyes.

No doubt, their actions reflect some fairly subtle speculation. Already we've seen evidences of their efforts to rally world opinion behind a move to abolish nuclear weapons. This would, of course, remove an effective factor from the West's war deterrent, and unblock the Soviet's conventional forces presently checkmated by the nuclear stalemate. It is these considerations that point up the importance of our military authorities being afforded a broad selection of military means to deal effectively with the flexibility of the Soviet military potential.

It is well to bear in mind, moreover, that in pursuing its ends, Soviet strategy counts upon the free world peoples' so wearying under the constant threat of war, that they will resort even to the false bargaining of appeasement. So, it is, that while constantly keeping alive the threat of war, Moscow announces from time to time its terms for the removal of the threat.

In all likelihood, the men in the Kremlin might hope to achieve their diabolic purposes through something tantamount to surrender. At the same time, we must remain on guard lest a fanatic, such as Khrushchev, might, if ever allowed to think he could do so, without risking his country's suicide, resort to the force of arms.

In waging the cause of freedom for the capture of men's minds, we must be prepared to defend ourselves in the new forms of so-called cold-war techniques, whether they be propaganda, psychological, or subversive attack. But these unconventional weapons will not be successful without the backing of armed power. Armed power is at the core of a nation's protective shield. It may never be used, but we must have it up our sleeves.

In our tried and proven democracy, the role of armed power is not an end in itself—but rather, a recognizedly necessary means to several constructive ends; namely, to keep the peace—shaky as it is—and eventually to achieve an enduring peace, consonant with our indestructible faith in freedom under the guidance of God.

Meanwhile, we should never overlook the fact, in our preoccupation with the troubles of the moment, that our Nation has the resources, the technical skills, the scientific knowledge, the creative imagination, to get the essential job done—and that our people have proven themselves equal to every demand which has ever been placed upon them.

Indeed, there are no challenges the future may hold in store for us, which we cannot master, provided, so long as the threat of militant communism remains, we will oppose it with energy, wisdom, and determination. I am confident our people will so decide.

Unpaid Balance of Philippine War Damage Awards, Debt or Gift?

EXTENSION OF REMARKS
OF
HON. GEORGE P. MILLER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, August 7, 1958

Mr. MILLER of California. Mr. Speaker, I have just read an article entitled "Unpaid Balance of Philippine War Damage Awards, Debt or Gift?" which I believe is most enlightening in view of our desire to help the Philippines in their day of need and since a bill on the subject of Philippine war damage payments is now pending before us. The authors are two well-known lawyers, John A. O'Donnell, formerly Commissioner of the Philippine War Damage Commission, and Ernest Schein, who was chief examiner of claims of this Commission. They have both been widely recognized for their familiarity and friendship with the Philippines and their words are entitled to high respect.

Mr. Speaker, under unanimous consent to extend my remarks, I include this article in the Appendix of the RECORD:

UNPAID BALANCE OF PHILIPPINE WAR DAMAGE AWARDS, DEBT OR GIFT?

(By John A. O'Donnell and Ernest Schein)

Widespread attention drawn to efforts of the Republic of the Philippines to tap sources of additional United States economic aid has obscured what actually amounts to an asset of the Philippines long frozen due to failure of Congress to provide funds necessary to liquidation. The credit consists of the unpaid balance of awards made by the United States Philippine War Damage Commission nearly a decade ago of more than $100 million which if released would have a substantial stabilizing effect on the Philippine economy.

It is true that the President of the Philippines during his recent state visit emphasized his purpose to obtain help which would not require immediate congressional action. According to the communique made public after official talks in Washington, "The Export-Import Bank informed the Philippine Government that it will establish a new line of credit of $75 million for financing private and public development projects," and the Development Loan Fund "would examine specific projects submitted to it to determine whether they would merit * * * financing in an amount not to exceed $50 million." Upon analysis it becomes clear that the Export-Import Bank only added to resources in existence which had not yet been completely exhausted for the purpose of importing materials from the United States to maintain Philippine industrial projects on schedule. The amount which the Development Loan Fund financing, if approved, would require depends upon congressional action in the form of additional appropriations for this fund.

President Garcia in a speech before the National Press Club of Washington on June 19, 1958 mentioned claims among the avenues of potential financial assistance which he would explore, stating "we hope that at a propitious time a careful and definitive review shall be undertaken of a number of outstanding financial claims which the Philippine Government has pressed in the past. The sums involved in these subsisting claims are rather substantial and if considered and granted in a spirit of mutual understanding and equal justice, would go a long way in strengthening our financial and economic position. Among these are our veterans' claims and it is our confident hope that they can be met in a manner that is not piecemeal, but that a policy can be laid down that will decide once and for all this problem, the satisfactory solution of which is so vital to Philippine-American relations."

Presumably an undetermined volume of claims of almost infinite variety still unrecognized and undischarged by the Government and courts of the United States will require either legislation, judicial determination, or the settlement of new policy by our executive agencies. These claims include not only those of veterans and their families but for procurement of money and supplies from Filipinos by the guerrilla forces, for compensation for property destroyed and reimbursement for requisition and confiscation. Whatever the amount and whatever the category unpredictable complications lie in the path of disposition of these items.

On the other hand, payment of the balance still owing upon the war damage awards made by the Philippine War Damage Commission involves none of the intricacies implicit in the presentation and procesing of other types of claims. The Commission, a legally constituted body, has already examined and finally approved claims for war loss and damage. Allowances up to $500 have been paid. Moreover, approximately $250 million appropriated by Congress for the purpose has been paid upon the excess over $500 of larger claims. Remaining now are relatively simple procedures once Congress appropriates the funds necessary to discharge the unpaid balances.

This article is intended to throw light upon the whole Philippine war damage picture which may be fading in the memories of our citizens and public officials. Bringing the subject into clearer focus may assist us in reaching an answer to the all-important question of whether the payment of the balance of Philippine war damage awards constitutes an immediate obligation or is simply an act of grace dependent for execution upon discretion and political determination.

I. EARLY PROPOSALS FOR COMPENSATION OF WORLD WAR II DAMAGES

Congress became concerned very soon after the commencement of the war with the problem of compensating its victims. On March 27, 1942, Public Law 506 of the 77th Congress was enacted, authorizing and directing the War Damage Corporation, then in existence, to provide premium insurance effective as of July 1, 1942, against certain losses. By September 30, 1944, the War Damage Corporation, under these provisions, was notified of prospective claims for losses alleged to have occurred in the Philippines aggregating more than $135 million. Coverage had not been extended to property in these far-off islands because of lack of control of the United States during the period of Japanese occupation. No payments, therefore, were made to Philippine claimants. An added consideration for withholding war-loss compensation in the Philippines was the general sentiment in Congress that this subject should be dealt with on a special basis when the occasion should arise.

II. PROVISION FOR WAR DAMAGE PAYMENTS IN THE PHILIPPINES

Early in 1945 it was proposed to amend section 5 (g) of the Reconstruction Finance Corporation Act relating to the War Damage Corporation by (1) broadening the definition of war damage; (2) extending automatic free insurance on property in the Philippine Islands (with designated exceptions) beyond the date of July 1, 1942. In connection with this proposal, the Senate Committee on Territories and Insular Affairs read the following from a letter of Jesse Jones, Chairman of the Reconstruction Finance Corporation:

"To summarize, it seems to me that Congress should enact legislation with respect to the overall Philippine situation and should provide for the payment of appropriate compensation for property damage due to combat operations in the islands throughout the period of enemy attack, enemy occupation, and our reoccupation. Since such compensation will have close connection with general relief and rehabilitation in the Philippines, it may be that Congress would want the whole Philippine problem handled by a Filipino rehabilitation commission, the members to be appointed by the President and approved by the Senate." (See Report of proceedings, hearings before the Senate Committee on Territories and Insular Affairs on S. 104; 79th Cong., 1st sess.; 1945.)

Hearings before the committee disclosed that the War Department proposed to pay out of customary appropriations any claims for private property taken for military uses in the Philippines according to common wartime practice. Such claims would not include those based upon property destroyed to prevent capture or seized or destroyed through enemy action. Naturally, therefore, the settlement of losses as a military measure fell short of what was proposed to be done in the direction of compensation for the vast war damage suffered in the Philippine Islands. Moreover, the payment of claims for such losses on the basis of insurance adjustments appeared to be woefully inadequate.

The Senate committee soon recognized that it could not act along traditional lines and at the same time provide fully for war damage compensation and the restoration of property under circumstances prevailing during the battle in the Philippines. It was decided to defer action on S. 104, the bill contemplated for this purpose, pending examination in detail of all of the requirements of the Philippines in connection with its war losses in the effort to develop a program constituting a constructive solution of the whole complicated problem.

Early in 1946 a bill, S. 1610, was introduced in the Senate for the purpose of implementing the proposals emanating from many sources not only to compensate war victims for specific losses but in general to restore the economy and rehabilitate the physical structure of the Philippine Islands. From this bill there emerged the Philippine Rehabilitation Act of 1946 (60 Stat. 128).

The Philippine War Damage Commission consisting of 3 members, 2 from the United States and 1 from the Philippines, was created to administer the provisions of the law, which in effect had the following threefold purpose: (a) to restore in full the property of the very humble consisting usually of a nipa hut, carabao, and the simplest equipment; (b) to adjust more substantial war

losses in a manner analogous to the payment of insurance benefits; and (c) to make available funds for the purpose of furthering the program of physical rehabilitation adopted by the Republic of the Philippines, which came into existence on July 4, 1946.

III. SUMMARY OF THE PROVISIONS OF THE PHILIPPINE REHABILITATION ACT OF 1946

The War Damage Commission, under the terms of the law, was charged with the function of receiving, investigating, approving or disapproving war damage claims covering property lost, destroyed or damaged during and as a consequence of World War II in the Philippines, and make payment, replacement or restitution for such losses in accordance with the provisions of the act. The time limit on the activities of the Commission was set at 2 years after the expiration of the period allowed for the filing of claims, in no event later than 5 years after April 30, 1946, the date of enactment.

Losses to be considered by the Commission must have resulted from: (1) Enemy attack; (2) action by or at the request of the forces of the United States to prevent property from coming into the possession of the enemy; (3) action by civilian or military representatives of enemy or governments cooperating with it; (4) action of the Armed Forces of the United States in opposing, resisting or expelling the enemy; (5) looting, pillage or other lawlessness or disorder accompanying the collapse of civilian authority determined by the Commission to have resulted from any of the other perils or from control by enemy forces.

Qualified claimants were: (1) Those who had an insurable interest in the property alleged to be lost, as owner, mortgagee, pledgee or lien holder; (2) any heir, devisee, legatee or distributee of a deceased person's interest; (3) executors or administrators of the estate of a deceased person for the benefit of such heir, devisee, legatee, or distributee.

Furthermore, the claimants had to come under one of the following categories: (1) Citizens of the Philippines or the United States on December 7, 1941 and continuously to the date of the filing of the claim; (2) citizens of a nation not an enemy of the United States in World War II, if he had been a resident of the Philippines at least 5 years prior to December 7, 1941, provided that the country of which he was a citizen granted reciprocal war damage payments to the United States citizens resident therein; (3) persons who served honorably in the Armed Forces of the United States or Commonwealth of the Philippines or the merchant marine; (4) churches or religious organizations; (5) unincorporated associations, trusts or corporations (or their successors if already dissolved) organized puruant to the law of the several States of the United States or territories or possessions including those organized pursuant to the law in effect in the Philippines but excluding corporations wholly owned by the Philippines.

Specifically disqualified from receiving war damage compensation were: (1) Enemy aliens; (2) convicted collaborators and disloyal persons; (3) any unincorporated association, trust, corporation or sociedad anonima owned by any such persons.

Payment was barred: (1) If loss or damage to the property was insured except for the excess of the value over the face value of the insurance; (2) if the loss or damage was one for which the War Department or Navy Department was authorized to make payment; (3) if the loss or damage was payable or had been paid or authorized to be paid by the Government of the United States or the Government of the Philippines unless such payment was declined; (4) if the claimant did not file a claim in reasonable conformity with the law within 12 months after the opening date set by the Commission for filing.

The law provided for compensation of all property lost and damaged with the following general exceptions:

1. Accounts, bills, records, films, plans, drawing, formulas, currency, deeds, evidences of indebtedness, securities, money, bullion, furs, jewelry, stamps, precious and semiprecious stones, works of art, antiques, stamp and coin collections, manuscripts, books and publications more than 50 years old, models, curiosities, objects of historical or scientific interest and pleasure aircraft unless such were included in the inventories, supplies or equipment of a regularly conducted business in the Philippines.

2. Vessels and watercraft, their cargoes and equipment with certain designated exceptions.

3. Intangible property.

4. Property diverted to the Philippines by the authority of the United States Government or otherwise as a result of war conditions.

5. Property in transit which was insured against war perils or with respect to which insurance was available.

The amount which was payable in compensation was based either on actual cash value at the time of loss, destruction or damage, or the actual cost of repairing, rebuilding or replacing with other property of like quality, whichever was less. In lieu of cash payments the Commission could at its option make payment in whole or in part of the amount payable by actually replacing lost, damaged or destroyed property with any other property of like or similar kind; and the Commission was authorized to acquire such property, to have the necessary work done, to make contracts and to take such other action as might be necessary for the purpose; and surplus property of the United States was to be transferred to the Commission at a fair valuation for this purpose.

Before payment was made to claimants, the Commission might require that lost, destroyed, or damaged property be rebuilt, replaced, or repaired, provided that in the event that the Commission determined that it was impracticable to do this, payment might be made subject to such further requirements as the Commission might impose to insure the application of the awards to the rehabilitation and economic development of the Philippines.

Claims up to $500 each, which would cover the cases of the great mass of war victims, were to be paid in full immediately upon allowance. On larger claims the amount above $500 was arbitrarily reduced under the act by 25 percent. A pro rata, not exceeding 80 percent applicable to all claims was authorized to be paid immediately upon allowance. Whatever funds remained available to the War Damage Commission were to be distributed pro rata among allowed claims. Upon notification of the approval or disapproval of claims and the amount of the allowance, the claimants were given the opportunity to appeal decisions and to have a hearing, but the decisions of the Commission after the claims were finally resolved were final and not reviewable by any court.

Penalties were provided for fraud and a 5-percent limit was placed upon fees for services in conenction with the presentation and collection of claims.

Congress authorized the appropriation of the sum of $400 million for the payment of claims based upon property lost or damaged of which $12 million was earmarked for administrative expenses. As a matter of fact, all of the administrative expenses of the Commission were defrayed for a much less amount and ultimately $2,500,000 was returned to the Treasury of the United States.

The act further provided for the payment into the Treasury of money or bullion received by the United States from Japan for reimbursement of the sums appropriated for the payment of claims first to satisfy unpaid balances, then to make up the deficiency of 25 percent by which the claims were arbitrarily reduced. Recovery from Japan never took place.

There were provisions in the act concerning the disposal of surplus property, the restoration and improvement of public property and essential public services and the designation of appropriate agencies to assist within their respective jurisdictions in reaching the goal of complete physical rehabilitation of the Philippines. All of these items of the law as well as amendments subsequently adopted in furtherance of its objectives based on subsequent practical experience will be omitted from the present discussion which is limited to the disposition of claims for loss and damage of private property and the full payment of the awards made by the Philippine War Damage Commission.

IV. DISPOSITION OF PRIVATE PROPERTY CLAIMS UNDER THE PHILIPPINE REHABILITATION ACT OF 1946

The War Damage Commission immediately after organization adopted rules and procedures for the filing and processing of private claims. The period from March 1, 1947, to February 29, 1948, was set for the presentation of all claims. A staff of personnel recruited in the United States was installed in Manila early in 1947 and a working force of several hundred Filipinos and some Americans residing in the Philippines was added to the organization in order to handle the vast workload which was in prospect.

A claim not exceeding $2,500 received a thorough office examination and settlement was based on standard values of property lost which recurred frequently in this class of claims. When data in support of a claim was insufficient to justify determination or there was any indication of fraud or other irregularity, the claim was referred to a branch office in the locality of residence of the claimant for investigation. Moreover, about 10 percent of claims of this size received a field investigation or spot check in order to furnish an occasional reading as to overall validity.

Claims between the amounts of $2,500 and $25,000 were investigated by branch offices; and all claims in excess of $25,000 were checked by qualified personnel actually in the field. Obviously, in postwar Philippines the difficulties involved in considering and settling claims were many and complex. No records were expected from the vast number of claimants for small amounts. Industries with larger claims had lost their books during the fighting and occupation. The best that could be expected was an estimate of damage based on replacement charges which were not compensable in full under the law. Efforts to make a fair appraisal faced such obstacles as the destruction of many buildings and the age of others which had been built during the Spanish occupation. Items of personal property embraced an assortment much of which was foreign to the experience of the appraisers and absent from any known tables of valuation such as abaca, copra, and yautai, an indigenous vegetable.

In a project of the magnitude of war-damage compensation there was bound to be an incidence of ignorance, mistake, and even fraud which accounted for substantial disallowances. Many claimants who felt that they were entitled to recovery were actually ineligible according to the wording of the law; some property forming the basis of claims was acquired after December 7, 1941, and, therefore, not compensable. In many instances, property was overvalued on the basis of standards adopted by the Commission. As of June 30, 1950, the disallowance rate averaged about 56 percent and this proportion did not decrease substantially during the remainder of the operations of the

Commission. Total disallowances of about 91,000 claims were principally on the basis of the ineligibility of the claimants by reason of nationality. It was observed with some satisfaction that the cases of outright fraud were negligible in proportion to the total volume and dollar amount of claims.

V. PHILIPPINE WAR DAMAGE PAYMENTS

By December 31, 1950, the War Damage Commission had substantially completed its program. The following figures as of that date with respect to private claims were included in the report published by the Commission in March 1951:

Amount group	Number of claims	Amount approved	Amount paid	Unpaid balance
$500 or less	997,924	$132,091,620.40	$132,091,620.40	
$500 to $25,000	247,586	172,172,987.22	130,021,286.83	$42,151,700.39
$25,000 to $50,000	1,676	23,859,876.01	12,850,989.08	11,008,886.93
$50,000 to $250,000	1,374	55,481,604.90	29,344,266.63	26,137,338.27
Over $250,000	338	158,610,481.85	83,181,411.66	75,429,070.19
Total	1,248,901	542,216,570.38	387,489,574.60	154,726,995.78

The final computations of the Commission made in March 1951, do not vary appreciably from the foregoing. The Commission received in all 1,248,901 private claims valued at approximately $1,250 million. Total payments aggregated $388,150,000.

Complying with the provisions of the law and in accordance with a preconceived plan, the Commission, commencing in September 1947, paid up to $500 on all claims allowed. On the basis of an analysis of its resources and a projection of prospective claims requirements, the Commission began in May 1948, to pay 30 percent of the amounts of claims in excess of $500 each. In order to maintain a margin of safety, the Commission continued this conservative policy until August 1950 when it determined that the $400 million authorization of funds for the disposition of private claims would permit a second and final payment amounting to an additional 22.5 percent of each claim in excess of $500. The claimants, therefore, received payment in full up to $500 on each claim and 52.5 percent of each award in excess of that amount.

It will be recalled that the act provided that "in case the aggregate amount of the claims which would be payable to anyone * * * exceeds $500, the aggregate amount of claims approved in favor of such claimant shall be reduced by 25 percent of the excess of $500." In other words, each claimant was expected to receive 75 percent of the amount of his award above $500. The proportion of 52.5 percent paid by the Commission, therefore, still left unpaid an amount equal to 22½ percent.

Even taking into account the considerable disbursement and unpaid balance, the total does not measurably represent fair compensation for the war ravages suffered by the people, agriculture, business, physical structure and industrial plant of the Philippines. Such damage has been variously estimated as from $800 million to $1,250 million and by some experts at $2 billion.

A voluntary report by 1,328 of the larger claimants of the use of their war damage payments as compared with overall expenditures for rehabilitation and reconstruction indicates that although the Commission had paid them about $137 million, they had actually expended $513 million for necessary repairs and reconstruction.

Much of the responsibility for the financial dislocation represented by the war damage awards as compared with actual losses lies in the provision of the law to the effect that "no claim shall be approved in an aggregate amount which exceeds whichever of the following amounts, as determined by the Commission, is less: (a) The actual cash value, at the time of loss, of property lost or destroyed and the amount of the actual damage to other property of the claimant which was damaged as a direct result of the causes enumerated in this section; (b) the cost of repairing or rebuilding such lost or damaged property, or replacing the same with other property of like or similar quality."

Obviously, the cash value at the time of loss was always less than the cost of replacement at postwar prices in the Philippines. The Commission contributed to the further construction of war damage payments by deciding that the value of a piece of property at the time of loss had to be measured in terms of age and depreciation according to tables adopted by the appraisal experts of the agency.

A fair analysis of the awards made by the Commission including both payments and the unpaid balances reveals that the total compensation did not represent much more than half and possibly no more than one-third of the destruction wrought by the war in the Philippines.

VI. STATUS OF UNPAID BALANCES OF WAR DAMAGE AWARDS

The complexity of the subject of war losses and war claims necessarily evokes careful scrutiny by interested governments of the method and amount of compensation. There is no definable rule under recognized principles of international law requiring a government to indemnify even its own nationals for the deprivations incident to armed conflict. Irrespective of any rigid requirements of foreign or domestic law, international agreements, treaties or conventions, the United States in a characteristic attitude of fair dealing has always studiously observed its obligations, moral if not legal, to make whole in some measure the victims of war loss and damage. In connection with the devastation of the Philippines during World War II, Congress extended its solicitude beyond legal and historical grounds for indemnification because of the peculiar circumstances surrounding our relations with the distant archipelago which not only had been for many years our political responsibility but during the war formed a glorious battlefield in the conflict with a common enemy.

The Philippine Rehabilitation Act of 1946, as we have observed, was a speedy and expedient answer to the pressures of our sense of legal obligation as well as a manifestation of our irrepressible emotions. The legislative history of the act shows unmistakably that the Congress contemplated further action permitting greater deliberation to fulfill the undertakings upon which we embarked through the provisions of the initial legislative step. The report (No. 1921) of the Committee on Insular Affairs of the House of Representatives states: "While the committee feels it is urgently necessary to provide through this legislation (S. 1610) for the rebuilding and restoration of the physical plant of the Philippines, it is generally realized that additional legislation will probably be necessary in the future to augment and supplement the benefits which will be accomplished through S. 1610 * * *. It is expected that proposals for additional legislation will be made from time to time by the agencies of the United States Government, by the Government of the Philippines, and the Filipino Rehabilitation Commission to meet needs for legislation as they arise."

Since the purpose was clearly expressed to augment and supplement the benefits to be accomplished through the act, it may fairly be assumed that Congress intended that first of all, the benefits actually provided by the act should be completely dispensed.

Continuously since 1946 the subject of war claims has occupied the time of our lawmakers. A notable report was made to the President of the United States under the requirements of section 8 of the War Claims Act of 1948 broadly covering claims arising out of World War II. Additional laws have from time to time been enacted making provision for prisoners of war, internees in the Philippines as well as religious institutions not adequately compensated under the provisions of the Philippine Rehabilitation Act. While activities in the field of war claims have been sustained without abatement in interest, the operation one of the earliest of the war damage compensation acts has been left half suspended.

In each Congress since 1953 bills have been introduced seeking to provide for the appropriation of sufficient funds to discharge the unpaid balance of 22½ percent of the awards in excess of $500 each made by the Philippine War Damage Commission. In the 1st session of the current 85th Congress, H. R. 8791 was submitted by Representative GEORGE P. MILLER, of California, providing in effect that the sum of $100 million be authorized to be appropriated for the payment of private claims shown by the records to have been approved by the Philippine War Damage Commission to complete the payment of a maximum of 75 percent of the full awards of these claims. No action has been taken upon any of the proposals.

VII. CONCLUSION

Whether or not there was any legal obligation for the reimbursement of World War II victims in the Philippines and whatever the motivation behind the adoption of the Philippine Rehabilitation Act of 1946, it is still true that certain forces were set in motion upon its enactment which may not at this late date be stemmed. War damage claimants were invited to file statements of their losses; administrative machinery was set up for the examination and investigation of their claims; funds to the extent of $400 million were authorized to be appropriated for the purpose of satisfying the claims based upon the loss of private property. More than an implication resulted that the awards made by the War Damage Commission under the act would be paid in full.

It would be idle for our purposes to explore through legal reasoning just what rights arose from the awards of the War Damage Commission. It may be asserted on one hand that the whole compensation program being in the nature of an act of grace, whatever was paid in fact under this program constituted the fulfillment of our undertaking. On the other hand, it may be argued that an award granted a right on the part of the claimant which was measured by not less than 75 percent of the total amount allowed under the law upon the claim by the Commission so that the payment of 52½ percent of the claim above the initial allowance of $500 comprised satisfaction only in part. From this viewpoint, a claimant stands in the position of a judgment creditor against the United States whose judgment has been only partially satisfied.

Considering the intensity of the Philippine war damage effort at its inception and early implementation and the nature of the individuals and corporate organizations receiving the awards, it is reasonable to conclude that the second attitude prevails among them, that is to say, the holder of

an award which has not been paid in full feels that he possesses a valuable piece of property in the form of a judgment against the United States upon which a substantial portion of the face value remains owing and unexcuted. Under such an interpretation, Congress may well wish to make immediate provision for the full payment of Philippine war damage awards just as it never fails to appropriate funds for the satisfaction of judgments entered by the courts against the United States.

At least three cogent considerations weigh in favor of the enactment by Congress of legislation necessary to provide for the payment of the balance of the awards made by the Philippine War Damage Commission between the years 1948 and 1951:

1. The desire of the United States to extend aid on a reasonable and justifiable basis to the Republic of the Philippines to bolster its faltering economy.

2. The purpose of the United States expressed in the Philippine Rehabilitation Act of 1946 and in the legislative record behind its enactment, to compensate losses and damages incident to World War II in the Philippines at least to the full extent of the awards made under that act.

3. The necessity for maintaining the credit of the United States, even if moral rather than legal in concept, by paying in full awards of a Government agency which in the hands of the holders assume the character of judgments against the United States of America.

It has been observed that other claims of great volume and variety arising from the war in the Philippines still remain unsatisfied. These, however, are either controversial in nature, questionable as to validity against the United States, unliquidated in amount and often inestimable because of faulty records and other supporting evidence. At best, they require further legislation by Congress or the adoption of new administrative procedures for adjudication and settlement. On the other hand, the war damage claims contemplated and provided for in the act of 1946 have been presented, screened, pared down and determined as to authenticity and amount. Substantial payments on account had been made. All that remains to be done is the appropriation by Congress of further funds required to liquidate the awards to the extent provided by law. Only in this way can we balance an account which according to a respectable body of opinion entertained not only in the Philippines but in our own country constitutes a valid obligation of the United States Government.

Miners' Medical Plan: Model for the Future?

EXTENSION OF REMARKS

OF

HON. JOHN H. DENT

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 29, 1958

Mr. DENT. Mr. Speaker, inasmuch as the city of New Kensington, which was the subject of an article appearing in the Washington Post, Sunday, August 3, is in my congressional district, I want to put into the RECORD this very interesting observation.

This Congress this week passed legislation dealing with welfare and pension funds and the subject matter of this article is in direct interest with this legislation. This is another example of the many ramifications and facets which pertain to welfare and pension plans and attempts to legislate on a national basis.

I have watched this controversy in the Allegheny-Kiski Valley since its beginning and, like every other citizen, either in public or private life, I am vitally interested in the eventual outcome.

With this in mind, and knowing the interest of Congress in this explosive subject, I am taking the liberty of placing in the RECORD, the excellent feature story of Nate Haseltine:

MINERS' MEDICAL PLAN: MODEL FOR THE FUTURE?

(By Nate Haseltine)

PITTSBURGH, PA.—In this city, scene of past bloody strikes, labor is again locked in head-on conflict—this time with another giant: Organized medicine.

At stake is an emerging form of medical care, one which may be what the people rather than the doctors are ordering. It is the United Mine Workers' Welfare Fund operations, scornfully called third-party medicine by physicians opposing it.

Such opponents regard third-party medicine as the opening door to nationalized, or socialized medicince. Its proponents see it more as a compromise, or at least a buffer to forestall medical care by Federal fiat.

Forgetting ideals and destinies for the moment, both sides of the controversial movement admit that more people are getting more and better medical care today than before the start of the labor organization's ambitious move to protect miners and their beneficiaries medically.

Those who oppose fund operations the most see it as an unhappy model for other powerful labor unions. They envision the medical profession of the future honeycombed with stables of doctors, price cutting themselves and others for funded dollars, undermining the standards of medical care.

The model, the 10-year-old UMW welfare fund, pays hospital charges and attending medical and surgical bills for coal miners and their families, numbering nearly a million individuals. In its last full year of operation, the fund spent some $60 million for such full-scale medical protection.

What has infuriated the medical profession is that the fund specifies which doctors and which hospitals are available to its beneficiaries. These doctors must bill the fund, not the patients. And the fund-approved list of physicians and hospitals is growing smaller and smaller with each issue, they protest.

The center of the controversy is in Pittsburgh. Here the problems between the doctors and hospitals and the fund administrators are shouldered by a careerist in medical care programing. He is Dr. Leslie A. Falk, area medical administrator, whose territory takes in western Pennsylvania, Ohio, the northern panhandle section of Kentucky, and other scattered regions.

The Pittsburgh area is a powderkeg in fund operations. It is in the mining communities—as close as a long ambulance run away—that fund checkers have amassed perhaps most of their "ammunition" against the professional cry that the fund violates free choice of physicians.

In the Nation's Capital, Dr. Warren Draper, chief medical officer of the program, holds the inventory of that ammunition. Dr. Draper says that he is ready to give the details of fund investigations to "properly constituted authorities." It would be improper for him, he said, to make them public.

But both he and Dr. Falk have publicly generalized on the subject.

The investigations showed, they have reported, that when the fund accepted any doctor who wanted to service UMW beneficiaries, an undisclosed number of such doctors performed needless surgery, prescribed unnecessary hospitalization and gave inferior services at luxury-rate prices for miners and their dependents.

Vague as the fund disclosures have been, there are some hints to the nature of the findings. Like the miner's wife for whom the fund was charged for removal of her appendix—five different times. Or the miner's family whose "sickly" children were hospitalized because the mother and father were going away for a time and had no babysitter.

Then, too, there's the oft-told story of the physician who hospitalized almost all his UMW patients, because it was more convenient to have them in one location than make house calls to so many widely scattered homes. The fund does not pay for physician services not associated with hospitalization.

What rankles the outside doctors most is that not all the doctors who were removed from the fund-approved list are guilty of such doings. But the implication is there, and the fund administrators, they say, are taking advantage of the situation to the discredit of the whole medical profession.

The opposing doctors also talk darkly about fund administrators operating in such a manner as to encourage participating doctors to work for lower fees, or salaries, in order to retain their status as program participants.

The UMW welfare fund medical care program started operations 10 years ago with an open door policy. It provided its beneficiaries with unlimited free choice of physician, payment to the physicians on a fee-for-service basis only, and a promise that it would not develop new hospitals or clinics unless the need was indicated.

In the Pittsburgh regional area, about half of the 4,000 available physicians signed up as being willing to participate. Today, the list is down to about 700, and none can say how many withdrew voluntarily or were peremptorily cut off by administration order.

Some noncooperating hospitals, too, were cut off, and clinic groups sprang up in some mining communities. The new groups operated from their start with blessings of the fund. Opponents charged that the clinic doctors were imported for the purpose.

One such clinic, the Russellton Medical Group, began operation in northeast Allegheny County. Another was formed as the Centerville Medical Group, in southeast Washington County (also a captive mine area), and a third, the Bellaire Medical Group, was set up in Ohio, across the river from Wheeling, W. Va.

All have run into opposition from their medical colleagues who shun the medical program.

The Russellton Medical Group has been under the greatest fire from the Allegheny Medical Society, a constituent member of the American Medical Association.

Dr. David Katz, immediate past president of the society, accused the UMW welfare planners with setting up in a secret way the Russellton Medical Group, and blacklisting, by omission, doctors who wouldn't compete with their lowered prices.

While all this was going on, he said, the UMW "began to channel the bulk of the area work to the Russellton group." The UMW, he said, then wrote the area doctors that their fees were not in accord with other doctors of the area, even though the prevailing fees were the same as those billed Blue Shield and Blue Cross subscribers.

"This move," he declared, "could be interpreted only as a bid for cheaper fees. The

doctors began to realize they were dealing with a type of medical service that sooner or later would be controlled by a small group."

Dr. Katz has charged that the UMW has conducted "a tremendous public relations campaign, telling their members and the public that the doctors are cheating, doing unnecessary surgery, and prescribing needless hospitalization." Fund officials, he said, have never shown that the doctors who remain on the UMW program "have not done what those who were dropped were charged with doing."

The controversy between the county medical society reached its greatest public volume when the 230-bed, voluntary nonprofit hospital in nearby New Kensington, Pa., refused to give staff privileges to the Russellton Medical Group doctors.

Then Dr. Falk wrote his famous, or infamous (whose side are you on?) letter notifying the hospital—Citizens General Hospital—to admit the group's eight qualified physicians for staff privileges, or the fund would drop it from its approved list after October 1, 1956.

Citizens General didn't; the fund did.

Subsequently, each April 1—Miners' Day, commemorating the 8-hour work day—miners around New Kensington have staged protest parades.

The embittered UMW beneficiaries say that the hospital is part theirs, in that it is a community hospital supported by Community Chest funds. And the miners, up to now at least, have been contributing 2 days' pay each year as their part of the Community Chest drives.

The effect on the Russellton Medical Group members is that they must send nonemergency UMW beneficiaries to Pittsburgh hospitals. They also suffer in prestige in their communities, and among some complaining UMW beneficiaries.

A few other hospitals are bucking the fund's medical care program elsewhere. But the New Kensington deadlock stands out.

By contrast, the UMW welfare fund built, equipped, and staffed its own hospital chain in Kentucky, West Virginia, and Virginia, and relations with the doctors there are relatively serene. The chain consists of 3 major hospitals, and 7 satellites which lean on the 3 big ones for supply and specialty services.

In New Kensington, the community hospital keeps the Russellton Medical Group doctors out with the simple proviso that all applicants must obtain the written endorsement of three members of its attending staff. And not one attending staff member will sign endorsements for these particular applicants.

Similarly, in Allegheny Valley Hospital, Tarentum, also about 6 miles from Russellton, the UMW physicians cannot obtain hospital privileges on the ground of "the controversy" between the Allegheny County Medical Society and the UMW medical plan.

The program is also having trouble in Belmont, Ohio, where the Bellaire Medical Group was set up.

No physician on the UMW-approved list has been expelled from medical society membership.

Some threats toward such action have been voiced, but the rumblings have quieted down. Legal opinion is that such expulsion, with its economic impact on the expelled physicians, might provide grounds for a conspiracy suit, with punitive damage awards.

On the effects of the various resistance to fund operations, Dr. Falk said:

"Naturally, there are some miners and their beneficiaries who are unhappy over the fact that the fund won't pay just any doctor or just any hospital they'd like. But the overwhelming majority are sympathetic (to the fund's problems with organized medicine)."

Dr. Campbell Moses, director of the Addison H. Gibson Laboratory (medical research) at the University of Pittsburgh, is more liberal minded than his colleagues in the Allegheny County Medical Society. He sees faults on both sides.

"Freedom of choice of doctors," he said, "is already a myth."

"Compensation case patients," he added, "are directed to specific physicians. The patient doesn't question the practice or even ask if he can go to his own doctor."

Dr. Moses maintained that a high percentage of patients either have no doctor of their own or have one they became associated with more by accident than choice.

Dr. Moses said that medical societies should develop effective means to police their members on the quality of medical care. But he saw little hope that they will. Hospitals, however, he said, can do this effectively through tissue committees (which determine the persistent question: Was this operation necessary?).

The Pittsburgh medical researcher, who is not engaged in private practice now, said the necessary medical policing could be done by a special panel of long-qualified and respected physicians, of at least 65 years of age, who are no longer in medical competition.

The American Medical Association stand on the matter is that "every physician, duly licensed by the State, is assumed to be competent in his field unless considered otherwise by his peers and not by any third party."

In all his talks with operators of the program, this writer has found no indication that the fund would want such an inclusive physicians' roster. There was every indication that Dr. Draper and his regional administrators are satisfied they have more than enough participating physicians to fill UMW needs, and that the rosters will be further reduced more readily than increased.

Third-party medicine, as practiced by the UMW welfare fund may be a shadow of, or beacon to medical practice of the future.

Czechoslovak Independence and the Death of Jan Masaryk

EXTENSION OF REMARKS
OF
HON. JAMES T. PATTERSON
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Thursday, August 7, 1958

Mr. PATTERSON. Mr. Speaker, geography has placed Czechoslovakia in the heart of Europe, and the Czechoslovaks have thus been in the center of everything European. They have enjoyed the benefits and blessings of European civilization, to which they have contributed their full quota; and they have also shared Europe's misfortunes. Their modern history is inextricably woven into the long series of European wars, and more often than not the Czechoslovaks have found themselves at the mercy of their more powerful and ruthless neighbors.

For centuries their country was dominated by foreign powers, and they were subject to oppressive foreign regimes, but the sturdy Czechs and Slovaks never seemed to have wavered in their determination to fight for liberty and independence. Inured to hardships and reared in the school of adversity, their independent spirit served them well under almost unbearable conditions. They have never entertained any doubts about the righteousness of their national cause, and they have ceaselessly struggled for its attainment. At the end of World War I they attained that goal and the freedom-loving world was overjoyed to see the rise of the Czechoslovak Republic as the handiwork of the great Thomas Masaryk. Unfortunately, that Republic became a casualty of the last war, and now the fate of Czechoslovakia is subject to the whims and dictates of Moscow. Yet, even under the most oppressive tyranny the Czechoslovak spirit of liberty, of freedom, and of independence still remains alive. They are not permitted to celebrate the 40th anniversary of their independence, but we in the free world do so with due solemnity, and pray that soon those freedom-seeking Czechoslovaks will do the same in their homeland.

In commemorating the 10th anniversary of the death of Jan Masaryk we honor the memory of a great public servant of Czechoslovakia, one who was also a great servant of Europe's fight for freedom and democracy. For almost two decades this great son of a greater father held most of the important Government posts in Czechoslovakia and in all of them he served with distinction. By his affability and amiability, by optimism and profound faith in the eventual victory of good against evil, he has become and was known as one of the most convival and pleasant of European statesmen for more than a decade. But against the overwhelming steamroller of the forces of evil, those of Communist totalitarianism, even his tough and robust nature had to give way. Though tragic, his was a noble and glorious death, a living protest in behalf of freedom and democracy. It is just and proper that the 10th anniversary of his death be observed on the occasion of the 40th anniversary of Czechoslovak Independence Day, for to the end of his life he was the true embodiment of Czechoslovak freedom. Honor and glory to his blessed memory.

House of Representatives Praised for Doing a Good Year's Work

EXTENSION OF REMARKS
OF
HON. WATKINS M. ABBITT
OF VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 5, 1958

Mr. ABBITT. Mr. Speaker, for years, the United States Senate was known as the conservative body of the Congress. The House of Representatives was looked upon as being more liberal and having less regard for sound, fundamental principles and fiscal sanity. For the past few years, however, the opposite has been true. Particularly has this been so with the present Congress.

There appeared a most interesting article in the Monday, August 4, 1958, Richmond News Leader by Mr. Holmes

Alexander. I desire to include the article, which is as follows:

HOUSE OF REPRESENTATIVES PRAISED FOR DOING A GOOD YEAR'S WORK

(By Holmes Alexander)

The worm will turn. Even the patronizingly called lower House will rise up in its wrath and strike back.

This was the session of Congress at which the House of Representatives outdid the Senate in using its cerebral powers and earning its salary. On quite a few bills—I expressly have in mind Defense Department reorganization, reciprocal trade agreemeents, and Supreme Court curbing—the House cogitated while the Senate merely orated.

Anybody who wants to take a pile of CONGRESSIONAL RECORDS to the hammock will soon find this out for himself. Most of the work that was thoughtful, penetrative, remedial, stimulative, and activating was done on the House side—and this is unusual enough for special notice.

Even the House hearings were more informative (the space scientists) and more sensational (Sherman Adams and Bernard Goldfine). I am not one who believes that Congress has done its duty when it fills the caucus chambers with spectators or passes a large number of laws. As a matter of protest, I stayed away from the Adams-Goldfine hearings, which seemed absurdly unimportant with the world half afire. And it is my Jeffersonian opinion that the fewer laws the better.

But if anybody is looking for the best single bill passed on Capitol Hill, it would be a House measure—one called H. R. 3 by HOWARD W. (Judge) SMITH, Democrat, of Virginia. Its off-the-floor manager was EDGAR W. HIESTAND, Republican, of California. Its legislative rewrite man was DE WITT HYDE, Republican, of Maryland. The bill is short and important enough to quote in full:

"No act of Congress shall be construed as indicating an intent on the part of Congress to occupy the field in which such act operates, to the exclusion of all State laws on the same subject matter, unless such act contains an express provision to that effect, or unless there is direct and positive conflict between such act and the State law so that the two cannot be reconciled or consistently stand together."

The Smith bill is aimed at a doctrine which the Supreme Court attempted to lay down in the Steve Nelson case, Nelson is a notorious Communist who was prosecuted and convicted under the Pennsylvania antisedition law. The Supreme Court ruled that the Federal Government preempted the antisedition field, so the State law was not constitutional.

Judge SMITH is also author of the Federal law against sedition, the well-known Smith Act. A stalwart States rights man, Mr. SMITH was indignant that a bill of his could be construed to invalidate a State right.

There was a 3-day debate, July 15, 16, and 17, on H. R. 3, which any American would profit himself by reading. But before that there was a real parliamentary battle off the floor to bring this bill out of committee. Both the committee chairman, EMANUEL CELLER, Democrat, of New York, and the ranking Republican, KENNETH KEATING, of New York, opposed the bill. It took some dedicated scuffling to round up enough committee members to override these leaders. On the floor the bill won with the votes of 138 Republicans and 103 Democrats. All this was done while the Senate was mumbling and stumbling over a similar bill, by Senators JENNER and BUTLER, which thus far remains in committee.

H. R. 3, if I have read the signs right, is even more important for what it promises than what it actually delivers. It promises, as I am told by its sponsors, that we may be in for a restoration of the famous old conservative coalition between the southern Democrats and right-wing Republicans. It is shattering to contemplate what would have happened to the country if this combination of fundamentalists had not stood and fought all these years against the spendthrifts and try-anything extremists of the New Deal, the Fair Deal, and now modern republicanism.

About this time last year, however, the grand alliance was split on the administration's civil-rights bill. Southern Democrats have taken to looking the other way when old-guard Republicans need votes to hold down Federal spending. On H. R. 3, the sponsors moved, as somebody once wrote, "as if the floor was sanded with gunpowder." Every care was taken to avoid even the suspicion that this was either a southern or a Republican bill. One Virginian, DICK POFF, of Radford, agreed to forego a long speech, although he entered it in the CONGRESSIONAL RECORD. The GOP leader, former Speaker JOE MARTIN, purposely kept away from the microphone in the well of the House Chamber, although his influence in the cloak room was paramount.

But the bipartisan passage of H. R. 3 performed invisible healing upon the wounds of the coalition—perhaps just in time to make a big difference here at the end of the session. There are a number of money-mad measures coming over from the Senate. The reunified coalition may be able to kill or modify the worst of them.

President Nasser's Opinion of the United States of America

EXTENSION OF REMARKS

OF

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 29, 1958

Mr. MULTER. Mr. Speaker, President Nasser is continuing his anti-America propaganda. The following article which appeared in the summer 1958 issue of Prevent World War III magazine, is worthy of the attention of our colleagues:

THE UNITED STATES IS THE CHIEF EXPLOITER OF ARAB PEOPLES

On April 12, 1958, the New York Times correspondent in Cairo reported that President Gamal Abdel Nasser had put a stop to propaganda attacks against the United States and the Eisenhower administration. This news was printed in other papers and was subsequently hailed as a significant turning point in United States-Egyptian relations. Editorials praised President Nasser and confidently asserted that the Egyptian strongman had begun to see the value of friendly relations with the West.

One can understand the enthusiasm of the editorial writers and many other people who greeted the news from Cairo. It appeared to them as a welcome relief from the constant barrage of insults and abuse against the United States. Particularly after Nasser's seizure of the Suez Canal did these attacks grow with unprecedented ferocity in the government-controlled press. The United States was cast in the invidious role of the chief exploiter of the Arab peoples.

One can hardly exaggerate the magnitude of Nasser's propaganda assault against the United States and its impact among the Arabs. A sampling of Cairo's propaganda shows the length to which Nasser went in order to distort the policies of the United States in the eyes of the masses in the Middle East who are kept ignorant of the true state of affairs.

On January 20, 1958, the Egyptian newspaper Al-Ahram accused the United States of resorting to wholesale bribery and corruption in the Middle East at the expense of the Arab peoples: "America has now become the enemy of peace, the enemy of security and the enemy of the peoples who are fighting for world peace and for the peace of America itself."

On February 27, 1958, Nasser himself delivered a speech in which he harped on the theme that the Arab peoples were being sold down the river by a clique of "Arab collaborators of imperialism." These collaborators were betraying their country so as to please their "imperialist masters and the dollars."

On March 13, 1958, Al-Ahram accused the United States of threatening other countries with nuclear bombs in an obvious attempt to whip up new fears and hatreds against the United States. This paper reminded its readers of the sufferings experienced by the Japanese in Hiroshima.

On the same day the Egyptian newspaper Ash-Shab wrote: "It appears that America will never keep still. Imperialism is still seeking to tamper with the structure and independence of small countries. America either tries to dominate their economies and markets after having been expelled from the markets of countries which freed themselves from imperialist domination and exploitation, or it attempts to snatch air and naval bases from these countries in order to be able to shift the battlefield from its own territory to the small countries and use the people of these countries—to spill their blood and that of their children instead of the blood of people of the imperialist countries. Often America seeks to tie these countries to imperialist military alliances and control their military and economic resources so that in the event of a third war, the people of these countries would be forced into the holocaust. Events which attest to these facts take place every day."

On March 22, 1958, Ash-Shab turned its attack on the Arab "collaborators" of "Western imperialism." These people, the paper declared, "March behind Britain and America. Their interests are the same and they have a mutual aim, that is, to subjugate the Arab people, exploit them, and drain their resources."

On March 25, 1958, Ash-Shab lashed out against the United States on the Algerian question. It accused the United States of being the ring leader of the conspiracy to subjugate the Algerian people and to bring them under the yoke of Western colonialism: "We see imperialist forces grouping under the leadership of America and mobilizing reactionary elements, traitors, conspirators, and collaborators in North Africa to end the liberation struggle in Algeria in order to maintain North Africa and the African continent under imperialist domination."

When the New York Times reported that this hate inciting propaganda was at an end, as noted above, many well intentioned people expressed the opinion that Nasser, at last, had been converted. But can a regime which has been responsible for the propaganda of such diabolical lies and distortions as quoted above, be trusted?

Only a few days after reports of Nasser's change of heart had been widely publicized, a huge rally took place in Damascus, the second capital in Nasser's United Arab Republic. Once again, the United States and her leaders were targets of vilification and abuse. One of the speakers, Nasir as-Said, denounced "agents of American imperialism." He boasted that Syria had fought and won against all kinds of imperialism, especially "the criminal American imperialism."

The United States, he charged, was responsible for practically all of the ills in the Arab world. He heaped scorn upon American technical aid programs, the point 4 program, and "the imperialist Marshall plan." His fulminations against the United States did not stop there. He called the President of the United States "the criminal accursed devil Eisenhower." It should be pointed out that he was not the only speaker to rail against the United States in this vein. Moreover, it is significant that the rally took place in the presence of Nasser's leading henchmen, including the commander of the first army of the United Arab Republic.

Those who would like to believe the best in Nasser may regard this incident as a lapse. Unfortunately, this is not the case at all. Let us cite some examples: On May 6, 1958, the American aid policy was blasted by Damascus: "The aim of United States aid is to obstruct progress in various fields in other countries and to keep them always dependent on aid, and consequently subject to American influence."

On May 11, 1958, Damascus described American imperialism as the chief culprit in the troubled Middle East and, for that matter, in the world: "Through its present policy, the United States is trying to extend its political, economic, and military influence throughout the world, and in order to realize this aim, it sets up military alliances and implements programs known as United States economic aid."

On May 13, 1958, a commentary from Damascus warned against the machinations of the stooges of imperialism: "The gang, and we do not mean the nationalist gang alone, but also all the agents, traitors, and hired persons—from the nationalists and others, to Nuri as-Said, ar-Rifai, the British and American spies, and the agents of the information offices—this gang will not succeed in silencing the voice of our people."

On May 14, 1958, the Cairo paper Ash-Shab charged that the United States was intervening in the Lebanon crisis. "There is talk about the American 6th Fleet being ready to move to protect United States interests. * * * The United States is yearning to apply the Eisenhower plan."

In another article from the same paper the President of Lebanon is denounced for conspiring with his imperialist masters: "It also is not strange that he has informed the three western imperialist states—the United States, Britain, and France—that he is in an exposed position."

Despite these vicious slanders against the United States optimism still remained the keynote among certain United States officials and newspaper correspondents. On May 20, 1958, the New York Times reported that even though Cairo newspapers were portraying the leaders of Lebanon as traitors, "there has been no direct attack against the United States. This was considered of major significance among diplomats who are trying to assess the present complicated situation in the Levant." Ironically, on the very same day of the Times dispatch from Cairo, the Damascus propaganda machine told its listeners: "The United States wishes to dominate various parts of the world. It considers as enemies those nations which refuse to pursue policies identical to American policy and carry out its orders. The United States favors division of the world into two groups, continuation of crises arising from the cold war, and perpetuation of the threat of atomic war."

How much longer could the mounting evidence be ignored? Four days after the Times had announced that all was well, it was obliged to report: "The Cairo propaganda machine has started once again with even greater fury its attacks against the United States."
